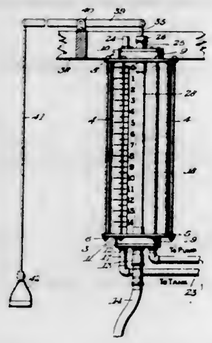
1,377,833. HOG CATCHING AND HOLDING DEVICE. WILLIAM R. HOISINGTON, Walthill, Nebr. Filed Apr. 3, 1920. Serial No. 371,001. 8 Claims. (Cl. 119—99.)

1. An animal catching and holding device comprising a pen including a wall movably mounted for swinging movement from a vertical to a horizontal position, feet engaging elements connected with the movable wall and each having relatively stationary jaws, relatively movable jaws, the movable jaws and stationary jaws having their

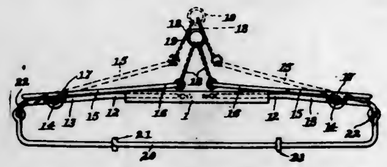
adjacent faces cut to provide foot receiving sockets and means for moving the movable jaws into and out of operative relation to the stationary jaws and releasably holding the movable jaws in an operative position.

1,377,834. LAY-SWORD. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 26, 1919. Serial No. 347,369. 1 Claim. (Cl. 139—74.)



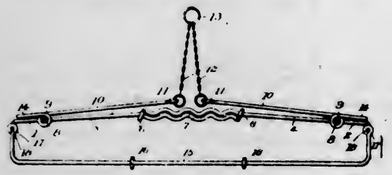
In a loom having a lay and a rock-shaft, a lay sword comprising a cylindrical member having threads of opposite hand at its two ends, a casting threaded on the upper end of said cylindrical member and secured to the lay, a second casting threaded to the lower end of said cylindrical member and mounted on the rock-shaft, and means to firmly secure said member against rotation in adjusted position in said castings.

1,377,835. OUTLET-VALVE FOR GASOLENE-DISPENSING APPARATUS OF FILLING-STATIONS. CHARLES H. HUGHES, Denver, Colo., assignor of one-half to Fred C. Cramer, Denver, Colo. Filed June 25, 1920. Serial No. 391,762. 11 Claims. (Cl. 221—100.)



1. In an apparatus of the character described, the combination with a closed liquid-measuring container having a liquid outlet pipe in its lower end and an air inlet pipe at its upper end, of a gravity tube, the end portions of which are slidably mounted in said pipes, the portion of said tube in said outlet pipe having outlet openings,

means for lifting said tube to expose the outlet openings therein, means for closing the air inlet, simultaneously

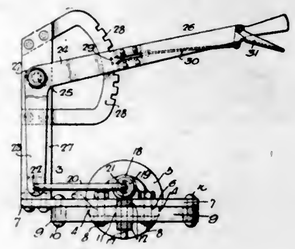


with the opening of the liquid outlet, and a vent in the container.

1,377,836. ADJUSTABLE GARMENT-HANGER. THEODORE KAUFER, New York, N. Y., assignor to Kaufer Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed July 31, 1920. Serial No. 400,327. 8 Claims. (Cl. 211—13.)

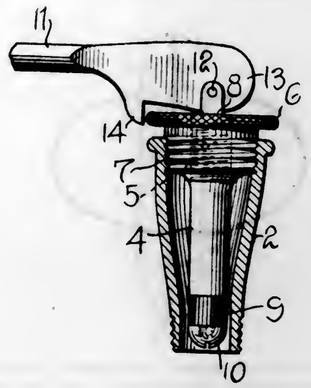
1. In a garment hanger, the combination with a central connecting member having spaced openings arranged at different distances from its ends, of shoulder members having lateral projections to engage any of said openings for adjusting the hanger to fit different sizes of garments.

1,377,837. ADJUSTABLE GARMENT-HANGER. THEODORE KAUFER, New York, N. Y. Filed Oct. 15, 1920. Serial No. 417,099. 4 Claims. (Cl. 211—13.)



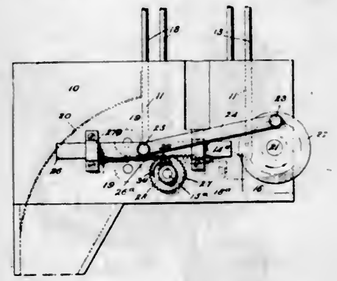
1. The combination, in a garment hanger, with shoulder members having corrugated overlapping portions, the corrugations of one member interfitting with those on the other member, of means on each member embracing the overlapping portion of the other member, and means for supporting the hanger.

1,377,838. CEREAL COFFEE. THEOPHILUS KLOSS, Mankato, Minn. Filed Oct. 2, 1920. Serial No. 414,167. 2 Claims. (Cl. 99—11.)



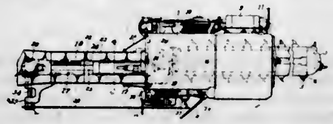
1. A process of making a coffee substitute which comprises crushing clean whole grain, moistening but not saturating the crushed grain with a solution containing sugar, pressing the moistened mass into a cake, allowing the cake to stand for 24 to 48 hours, disintegrating the cake to a powder, drying the powder and roasting the product to a coffee-brown color.

1,377,839. DRAFT APPLIANCE FOR TRACTORS. WILLIAM E. LAW, Philadelphia, Pa., assignor of one-half to William D. Gash, Philadelphia, Pa., and one-half to Gideon M. Stull, Chester, Pa. Filed June 10, 1920. Serial No. 387,946. 4 Claims. (Cl. 213—67.)



3. In a hitching device, the combination with a bracket to be secured to a tractor, of a horizontal rail rigid with said bracket, a trolley mounted on said rail and constituting a hitching member, a pivoted lever carried by said bracket, a pivoted link connecting said lever with the trolley, a toothed segment, and a detent carried by said lever to engage the toothed segment.

1,377,840. PIPE-STOPPER. FRANK W. LATHAM, Alexandria, Va. Filed Sept. 2, 1915. Serial No. 48,603. 1 Claim. (Cl. 137—76.)

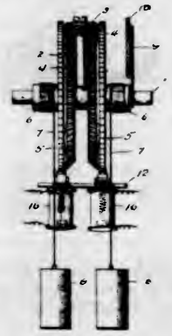


In a pipe stopper of the class described, a series of thumb nuts of different sizes, each provided with a screw threaded opening through the center thereof, a tube provided at its upper end with a screw threaded portion and adapted to be retained by the screw threaded portion of the thumb nut, a rod provided with screw threads at its lower end extending through said tube, a cam shaped lever pivoted at the upper end of said rod, a cap nut threaded on the lower end of said rod, a rubber gasket positioned on said rod between the end of said tube and cap nut and adapted to be laterally expanded by the movement of said cam shaped lever, as and for the purpose set forth.

1,377,841. BLANK OR SHEET FEEDING MECHANISM. FRANK W. LEV, Astoria, N. Y., assignor, by mesne assignments, to Lillian Swainson Escobales. Filed Sept. 13, 1917. Serial No. 191,232. 3 Claims. (Cl. 271—41.)

1. In mechanism for feeding blanks or sheets from the bottom of a pile and in combination, a blank segregating and advancing instrumentality for delivering a blank or sheet from the pile, said instrumentality including a stationary supporting member for the pile of blanks, and means carried by said member and adapted to engage a plurality of the lowermost blanks or sheets from the pile for restraining said sheets against advancing movement, said means being ineffective to prevent advance of the lowermost blank or sheet under the operation of the advancing means of the instrumentality, said restraining means comprising a stud of substantially circular contour projecting downwardly from said member, a sleeve positionable on the stud, and a pointed rod or needle adapted to be clamped by said stud and sleeve and project above the top plane of said member.

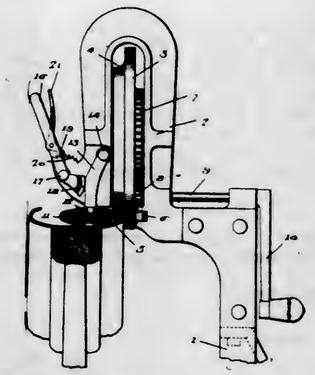
1,377,842. MINING APPARATUS. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 8, 1917, Serial No. 153,471. Renewed Apr. 2, 1921. Serial No. 458,088. 8 Claims. (Cl. 262—30.)



1. In a mining apparatus, the combination with a mining machine adapted to be moved along the face of the coal to form a kerf at the base thereof, a supplemental frame detachably connected to and movable with said mining machine, conveying mechanism mounted upon said supplemental frame adapted to receive the coal cuttings from the mining machine and remove them from proximity therewith.

1,377,843. SOAP. LEONARD MERRITT LIDDLE, Pittsburgh, Pa., assignor to Andrew Jergens Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 7, 1919. Serial No. 309,080. 8 Claims. (Cl. 87—16.)

1. A solid soap composition of a neutral or nearly neutral character, comprising soap and alkali metal salt of a lower alifatic acid.



1,377,844. SYNCHRONOUS TRANSMITTER. BRUNSON S. MCCUTCHEN, U. S. Army, and HAROLD E. WILLIAMS, Carthage, Mo. Filed Sept. 10, 1919. Serial No. 322,993. 8 Claims. (Cl. 235—92.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

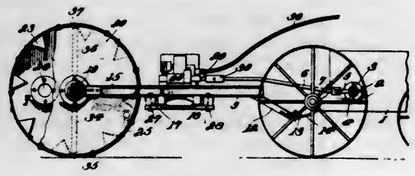
1. In a device for duplicating and indicating the motion of a remote rotating body, the combination with a pair of reversely and independently rotatable ratchet-wheels, of a rotatable shaft upon which said ratchet-wheels are loosely mounted, a pair of reversely and independently rotatable gear-wheels also loosely mounted on said shaft

and each movable with its complemental ratchet-wheels, means controlled by the rotation of said gear-wheels for rotating said shaft, and electrically-controlled mechanism for rotating said ratchet-wheels.

1,377,845. RIM-REPAIRING MACHINE. LEWIS CASCO MCDONALD, Page, Nebr. Filed May 15, 1919. Serial No. 297,275. 4 Claims. (Cl. 153—29.)

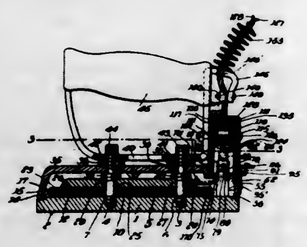
1. A machine for repairing clencher rims of vehicle wheels having their edge portions bent outwardly and toward one another, comprising a wheel formed to fit one of said edge portions of the rim on the exterior thereof, a second wheel of a diameter less than the distance between the edges of said rim and having its edge portion arranged to fit within said edge portion of the rim, means for mounting the wheels and providing for the movement of the second wheels to and from a position between the edge portions of the rim to move into and out of the rim, and for supporting the second wheel in operative position with its axis substantially radial of the rim between the edges thereof, and means for applying pressure to said wheels.

1,377,846. BINDING-STRIP. HARLEY J. MEGLEY, Chicago, Ill., assignor of fifty per cent. to himself and fifty per cent. to Leigh G. Nelson, Chicago, Ill. Filed Apr. 12, 1919. Serial No. 289,677. 2 Claims. (Cl. 229—43.)



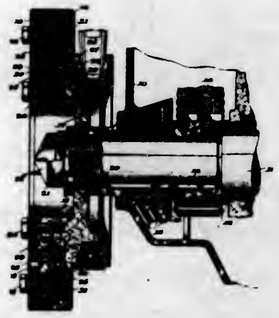
1. A cover for a receptacle comprising a round drawn wire having a relatively narrow slot cut longitudinally in

the body thereof and a sheet of flexible non-metallic material of substantially uniform thickness lying in the slot,



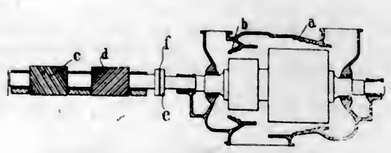
the sides of the slot being crimped upon the sides of the sheet, said slot being of a width substantially equal to the thickness of a sheet before crimping.

1,377,847. TRACTOR-PROPELLED SPRAYING APPARATUS. SAMUEL J. MILLER, Winter Haven, Fla. Filed Sept. 13, 1920. Serial No. 409,789. 3 Claims. (Cl. 299—45.)



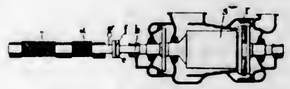
1. A spraying apparatus comprising a frame having coupling means adapted to detachably connect said frame with a tractor, a mixing drum carried by said frame and rotatable as said frame is propelled, a pump mounted on said frame, a shaft connected to said pump and extending forwardly of said frame and provided with means for detachably connecting said shaft with a driving member on said tractor, connections from said pump to said drum for withdrawing solution therefrom.

1,377,848. THERMAL CIRCUIT-CONTROLLER. NAGAKATA NISHI and NAGASUMI NISHI, Berkeley, Calif. Filed July 5, 1919. Serial No. 308,783. 7 Claims. (Cl. 200—138.)



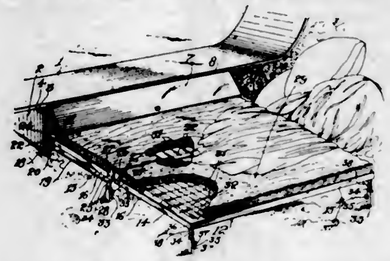
1. In a thermal circuit controller, a base, an expansible and contractible stud mounted on said base, a threaded shank on said stud, a threaded sleeve screwing on said shank, an indicator on said sleeve, a scale to which said indicator points, a cap screwing on said sleeve, a pivotally mounted arm, a contact, a second contact on said arm for engaging said first contact, said arm being located to be engaged by said cap to swing the arm and disengage said contacts when said stud has expanded under predetermined degree of heat.

1,377,849. VIBRATION-DAMPING DEVICE. FRANK W. OFELDT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 29, 1919. Serial No. 300,708. 8 Claims. (Cl. 74—6.)



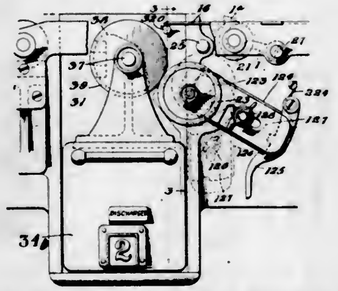
1. A vibration damper having an inner member, an outer member composed of two axially separated parts, said inner and outer members being frictionally connected, and spring means for connecting the two parts of said outer member.

1,377,850. GEARED-TURBINE SYSTEM. CHARLES ALGERNON PARSONS, STANLEY SMITH COOK, and LOUIS MORTIMER DOUGLAS, Newcastle-on-Tyne, England; said Cook and said Douglas assignors to said Parsons. Filed Oct. 31, 1918. Serial No. 260,552. 1 Claim. (Cl. 74—7.)



A geared turbine system comprising in combination, a turbine rotor, a pinion shaft, a fixed coupling between said rotor and shaft, double helical teeth on said pinion cut at different angles, the longitudinal position of said turbine rotor being determined by said helical teeth being cut at different angles, as and for the purpose set forth.

1,377,851. GEARED-TURBINE SYSTEM. CHARLES ALGERNON PARSONS, STANLEY SMITH COOK, and LOUIS MORTIMER DOUGLAS, Newcastle-upon-Tyne, England; said Cook and said Douglas assignors to said Parsons. Original application filed Oct. 31, 1918, Serial No. 260,552. Divided and this application filed Aug. 11, 1919. Serial No. 316,921. 4 Claims. (Cl. 74—7.)

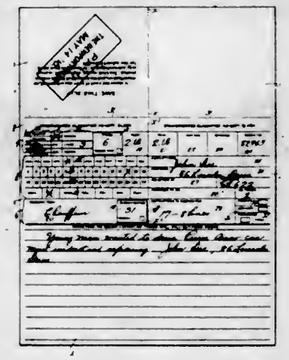


1. In a geared turbine system, a rotor, a shaft co-axial with the rotor and connected to it by a rigid coupling, a double helical pinion mounted on said shaft, the oppositely inclined parts of said pinion being of unequal length whereby the pressure per unit length of tooth of the intermeshing double helical pinion will be uniform, substantially as described.

1,377,852. FOLDING BED FOR AUTOMOBILES. JOHN WILLIAM PATTERSON, Oklahoma, Okla. Filed Sept. 11, 1920. Serial No. 409,555. 3 Claims. (Cl. 5—72.)

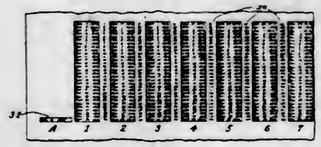
1. In a foldable bed, a housing to be supported on the running board of an automobile, a sectional foldable bed frame having guide connections with the bottom of the housing, means for detachably latching one of the sections of the bed frame to the housing, and legs for the sections of the bed frame.

1,377,853. INKING MECHANISM. ARTHUR H. PITNEY, Wilmette, Ill., assignor to Pitney-Bowes Export Corporation, Stamford, Conn., a Corporation of Delaware. Original application filed Mar. 25, 1920, Serial No. 368,701. Divided and this application filed June 1, 1920. Serial No. 385,681. 9 Claims. (Cl. 101—352.)



1. In a machine of the character specified, a printer; an inker; an adjustable support for said inker, whereby it may be moved into position to contact with the printer or out of position to contact therewith; and means for setting the inker when out of operative position so that when so set it will properly ink the printer when moved into inking position.

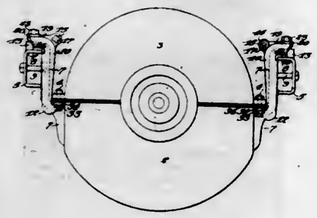
1,377,854. SPARK-PLUG. ARTHUR K. ROBERTS, Quincy, Mass. Filed Apr. 15, 1919. Serial No. 290,127. 3 Claims. (Cl. 123—169.)



1. In a spark plug, the combination, of a shell, a central electrode extending axially through said shell, a second electrode adjustably carried by the inner end of said shell for adjusted movement toward or from the terminal of said central electrode, a set screw extending through said adjustable electrode and adapted for biting engagement with said casing to lock said adjustable electrode against movement.

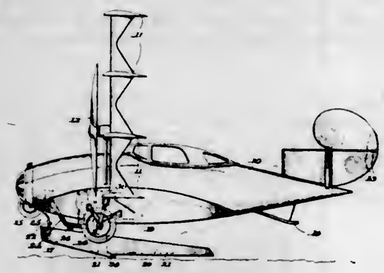
1,377,855. STANDARDIZED CLASSIFIED-AD-COPY BLANK. BASIL L. SMITH, Philadelphia, Pa. Filed July 16, 1918. Serial No. 245,174. 3 Claims. (Cl. 283—1.)

1. A standardized classified ad-copy blank consisting of a sheet formed of three horizontally extending sections, one end section having a portion thereof left blank for the reception of a written ad and the other end section and the middle section each being vertically divided and provided with printed matter to constitute a reecipt section and a bookkeeper's section, the said printed matter on the two sections being similar in substance and arrangement but upon opposite faces of the sheet, a dividing line between the latter two sections such that when the end section is folded back thereon against the middle section the corresponding printed matter upon the respective sections is brought into registration and carbonized material upon the back of the middle section for transferring to the said end section matter written on the middle section when the said end section is folded thereunder.



1,377,856. TIME-CALCULATING MACHINE. EDWARD MAYBERRY SMITH, Kansas City, Mo., assignor of one-third to Bettie Waddell Smith, Kansas City, Mo., and one-third to Robert Emmart Smith, St. Louis, Mo. Filed July 14, 1916. Serial No. 109,400. 1 Claim. (Cl. 235—86.)

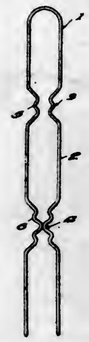
In a time calculating machine for computing interest, a series of columns of dates, each of said dates naming a month, a day of the month and a certain year, numerals running successively from 1 to 390, inclusive, and arranged parallel with said columns of dates with thirty of the numbers indicated by said numerals to each column of said dates, and means to display said dates so that said numerals, counting from and not including the initial date, will instantly and simultaneously indicate the day the month and the year of terminal dates of thirty



days, sixty days, and ninety days following the initial date, and multiples of thirty days, sixty days, and ninety days from and after the initial date and simultaneously indicate any and all terminal dates including the year from and after the initial date to and including three hundred and ninety days from the initial date.

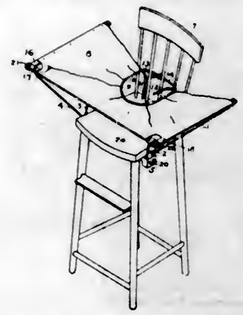
1,377,857. CRANK-CASE SUPPORT FOR AUTOMOBILES. WILLIAM STORRIE, Providence, R. I., assignor to Apco Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed June 26, 1919. Serial No. 306,949. 10 Claims. (Cl. 180—64.)

1. In a motor-vehicle construction, the combination with the chassis-frame having longitudinal side-sills, and a flanged power-plant housing arranged therebetween, of a two-part support for said housing comprising right and left-hand complemental members adapted to rest on the side-sills in joined relation and provided with arms reaching down beneath the flange of the housing to adapt them to be secured thereto.



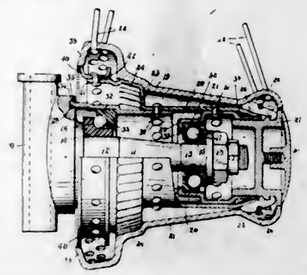
1,377,858. AIRCRAFT. WILLIAM B. STOUT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 27, 1917. Serial No. 204,232. 7 Claims. (Cl. 244—2.)

2. In an aircraft, the combination with a body having a cockpit, of a movable float adapted to be brought up close to the body and having a recess to receive said cockpit.



1,377,859. HAIRPIN. ELIZABETH M. SUTHERLAND, Kansas City, Mo. Filed Jan. 2, 1918. Serial No. 209,984. 1 Claim. (Cl. 132—50.)

A hair pin comprising a wire bent at its mid length to form two equal and parallel legs, each of said legs being bent inwardly at spaced apart points to form two minor sections and three parallel major sections, the minor sections lying in a plane within that of the major sections, said major sections being of substantially the same length, the inner minor sections being centrally crimped to form outer laterally spaced corrugations, and the outer minor

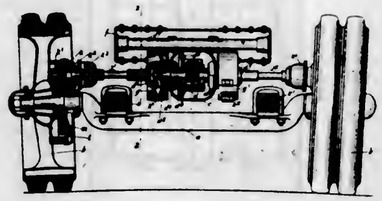


sections centrally crimped inwardly to form contacting bearings, and crimped outwardly on opposite sides of said bearings to form outer corrugations.

1,377,860. CHILD'S PLAY-TABLE. EDWARD G. THOMAS, Springfield, Ill. Filed Mar. 31, 1917. Serial No. 159,004. 10 Claims. (Cl. 155—188.)

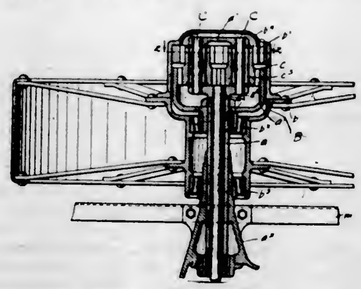
1. In a child's play-table, the combination of means for supporting a child in a sitting position, brackets secured to the seat thereof, a pair of upwardly and divergently extending arms removably supported by said brackets on each side of said seat, and a flexible apron supported by said arms above the level of said seat.

1,377,861. MOTOR-VEHICLE. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 24, 1916. Serial No. 110,877. 4 Claims. (Cl. 301—9.)



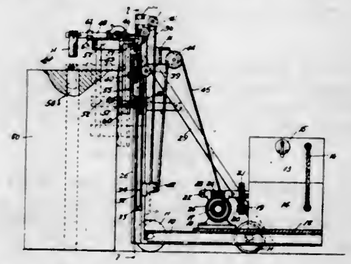
4. A wheel hub comprising an inner member composed of a part adapted to receive an outer hub member in concentric relation therewith and an annular channel part separately formed and secured to the first said part, said channel part opening outwardly and adapted to receive a flanged portion of such outer hub member when the latter is in eccentric relation with the inner member, and an outer member adapted to be removably secured to the inner member and having an inturned flange adapted to coöperate with said channel part.

1,377,862. SPECTACLE-CLIP. ELMO VAUGHAN, Cincinnati, Ohio. Filed July 22, 1920. Serial No. 398,054. 3 Claims. (Cl. 88—42.)



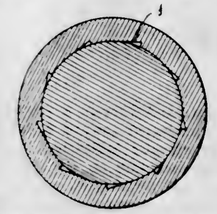
1. A spectacle mounting means comprising a slotted lens rim, a detachable U spring clip adapted to engage opposite sides of the lens rim, pins extending from the interior of the clip and adapted to engage in slots in the lens rim, said clip being adapted to have a bow mounted on its exterior.

1,377,863. BRAKE FOR MOTOR-VEHICLES. MAURICE WALTER, New York, N. Y., assignor to Walter Motor Truck Company, New York, N. Y., a Corporation of New York. Filed June 19, 1919. Serial No. 305,211. 3 Claims. (Cl. 74—99.)



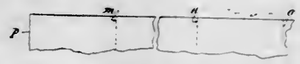
1. In a motor vehicle, in combination with the frame, axle and wheels thereof, a differential gear mounted on the frame to move therewith and independent of the axle, driving gears carried on the wheels, driving pinions therefor mounted to move therewith, Cardan drive shafts flexibly connected to the differential gear and to the driving pinions for the wheels, brake drums carried with the Cardan shafts, and brake bands for said drums mounted to move with the frame.

1,377,864. DRIVE FOR SELF-PROPELLED VEHICLES. MAURICE WALTER, New York, N. Y., assignor to Walter Motor Truck Company, New York, N. Y., a Corporation of New York. Filed July 1, 1919. Serial No. 307,929. 5 Claims. (Cl. 74—34.)



1. In a wheel tractor, in combination with a tubular dead axle, bearings for the wheel on the dead axle and a drive shaft extending through the dead axle, a gear fixed on the wheel beyond the dead axle, a non-rotatable gear of different pitch diameter from the first named gear fast with relation to but beyond the dead axle, a carrier on the drive shaft beyond the dead axle and compound spur gears journaled in the carrier and having sets of teeth of different pitch diameter meshed with the two first named gears respectively.

1,377,865. TRUCK. OTTO L. E. WEBER, St. Cloud, Minn. Original application filed May 8, 1919, Serial No. 295,770. Divided and this application filed Aug. 30, 1919. Serial No. 320,829. 8 Claims. (Cl. 254—2.)

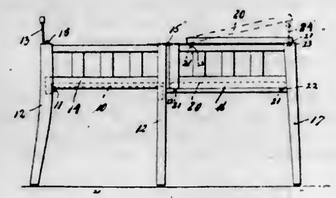


1. A truck comprising a carriage mounted for vertical movement therein, means having a downwardly turned end for entering a vertical opening in the article to be lifted, mechanism for moving said means to clamp the article, and means for raising said carriage and the article.

1,377,866. LUBRICATION OF MACHINERY. JOSEPH WALWYN WHITE, Widnes, England. Filed May 29, 1920. Serial No. 385,305. 2 Claims. (Cl. 64—24.)

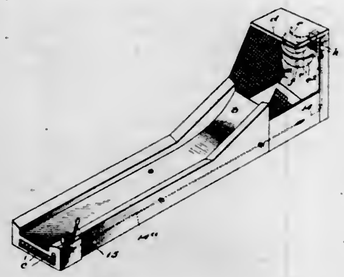
1. A lubricating device for machinery comprising curved parts moving relatively to one another and having small grooves cut in one of the contacting surfaces, one side of which is tangential to the curved surface with large intermediate uninterrupted surfaces supporting the load intermediate the grooves.

1,377,867. TOY AEROPLANE. WILLIAM EDWARD APPLEBY, Newcastle-on-Tyne, England. Filed Oct. 6, 1920. Serial No. 415,131. 1 Claim. (Cl. 244—14.)



A model or toy aeroplane constructed of paper, the leading edges of the wings being formed by folding back a portion of the paper, returning it over the leading edge, folding in the end and connecting the surfaces in contact with the main body of the plane above and below.

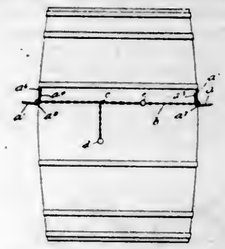
1,377,868. CONVERTIBLE CHAIR. JOHN BEZOLD, Jersey City, N. J. Filed Sept. 2, 1920. Serial No. 407,676. 2 Claims. (Cl. 155—44.)



1. In a convertible chair consisting of a seat, legs, back and side arms, a superstructure pivotally secured to said arms to fold vertically, said superstructure being adapt-

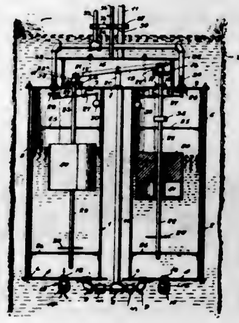
ed in folded position to form part of the chair and in unfolded position to convert the chair into a combination chair and desk or crib, and a removable member on the

seat which is adapted to fit over the bottom of the inverted superstructure to serve as the bottom of the foot end part of the crib or over the top of the inverted superstructure to serve as a top of the desk.



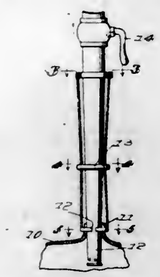
1,377,869. INDICATING MECHANISM FOR GAME APPARATUS. WILMUTH E. BLACKBURN, Summit, N. J. Filed Feb. 25, 1919. Serial No. 279,103. 14 Claims. (Cl. 235—1.)

2. In game apparatus wherein a succession of balls or missiles may be projected toward a target having goal values, means for visually indicating the values of goals made, said means including an element rotatable in opposite directions and forming a carrier for indications arranged in a definite value-progression, said element being positioned in definite relationship to an indication exposure opening and having its movements in one direction by a succession of stages to rotate the element through a totality of angular distances of a magnitude determined by the accumulative values of the succession of goals made and in the opposite direction continuously an angular distance not less than such total distance, and means including control mechanism operative in the element movements in both directions for providing and controlling such element movements, said latter means including power means permanently active to provide element movements in the direction of stage advance, and restraining means normally active to prevent such element movement and rendered temporarily inactive in the presence of goal value production.



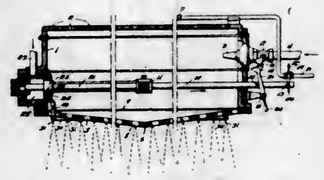
1,377,870. LIFTING-TACKLE. DONAT BROUILLARD, Haverhill, Mass. Filed June 2, 1920. Serial No. 386,055. 2 Claims. (Cl. 294—16.)

1. A lifting device for barrels and like objects, comprising a pair of angularly shaped levers each having a transverse aperture throughout substantially its entire length, intermediate its ends and a continuous chain adapted to be drawn freely through said apertures and about the object, permitting disposition of the levers thereon at opposite points, said chain having means at one end adapted to be engaged with the links thereof at any point between the levers, and said levers being adapted to be fulcrumed at corresponding ends against oppo-



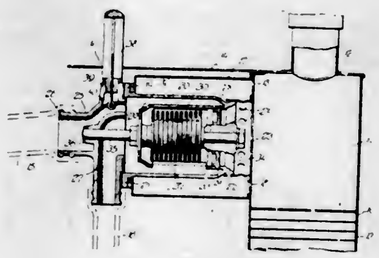
site sides of the object in position to draw outwardly on the chain, at the points engaged, as the opposite ends of the levers are lifted.

1,377,871. HYDRAULIC PUMP. CLARENCE S. BOWEN, Pickens, S. C. Filed Jan. 27, 1920. Serial No. 354,401. 6 Claims. (Cl. 103—8.)



1. In a hydraulic pump, a plurality of cylinders each having a water inlet and outlet valve, automatically operated compressed air inlet and outlet valves for said cylinders, and means for breaking an equilibrium of the valves should the air pressure be cut off, and the pump is inert when pressure is on.

1,377,872. APPARATUS FOR SKINNING CATTLE. WILLIAM S. CALLERY, Wheatland, Calif. Filed June 13, 1919. Serial No. 304,002. 1 Claim. (Cl. 17—13.)



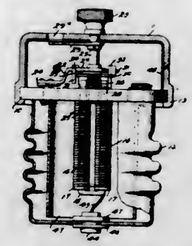
In a means for dehiding cattle, a nozzle provided with a manually controlled valve at the end remote from the nose, and a clamp secured to the nozzle and consisting of a pair of semi-circular jaws, swinging arms by which the jaws are carried, and a clamping ring to move the jaws into clamping engagement with the edges of the hide adjacent a puncture formed therein, the ring being movable in the direction of the length of the nozzle, and traversing the arms by which the jaws are carried.

1,377,873. SAFETY DEVICE FOR HYDROCARBON-BURNERS. WILLIAM H. CHADICK, Suffern, N. Y. Filed Mar. 28, 1919. Serial No. 285,829. 9 Claims. (Cl. 158—36.)

1. Means for extinguishing accidental fires in liquid fuel burners, comprising a steam chest adapted to admit live steam to the interior of and about the burner, a valve in the chest for controlling such admission, and means exposed to the heat of the accidental fire for thermostatically operating said valve to direct live steam against the fire.

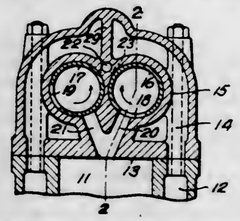
1,377,874. HYDROCARBON-MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 11, 1916. Serial No. 96,879. 16 Claims. (Cl. 123—178.)

1. In a motor vehicle, in combination, a radiator having a tank extension in the rear thereof, a thermostatically controlled valve in said tank extension, a temperature indicator at the intake end of said tank extension, and a motor bonnet covering said tank extension and having an opening through which said indicator passes.



1,377,875. CONTROLLABLE TORCH. CASTLEMAN COEN, San Francisco, Calif. Filed June 14, 1920. Serial No. 388,807. 8 Claims. (Cl. 158—10.)

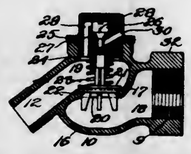
1. A controllable torch for the described purpose, the same comprising a handle provided at one end with a body of absorbent material, a holding reservoir at the other end and adapted to contain a body of hydrocarbon mixture through the handle, means for controlling the flow of liquid from the holding reservoir to the body of absorbent material, and means permanently mounted on the



handle capable of outward longitudinal movement thereon for snuffing out the flame of the torch.

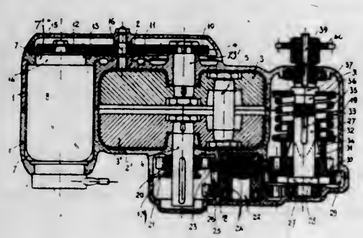
1,377,876. CIRCUIT-BREAKER. GWYN OSCAR OWEN DAVIES, Cle Elum, Wash. Filed Dec. 3, 1919. Serial No. 342,050. 7 Claims. (Cl. 200—106.)

1. A circuit breaker including a hollow plug adapted to plug receptacles, separate contact elements adapted to be placed in circuit with conductor wires, an electromagnetic device in circuit with said contacts and comprising coils housed within said hollow plug, a swingable circuit-breaking device adapted to engage and separate said contacts or to assume a position away from said contacts, and means tending automatically to swing said circuit-breaking device into engagement with the contacts, said circuit-breaking device being subject to a predetermined power to be developed by the electric current in said electro-magnetic device.



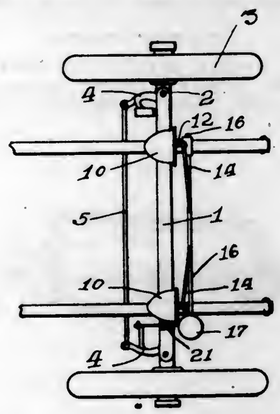
1,377,877. INTERNAL-COMBUSTION ENGINE. WILLIAM J. DUNN, Montreal, Quebec, Canada. Filed Mar. 5, 1920. Serial No. 363,625. 2 Claims. (Cl. 123—59.)

1. In an internal combustion engine, a cylinder, a head therefor, a pair of tubular valves revolubly mounted in



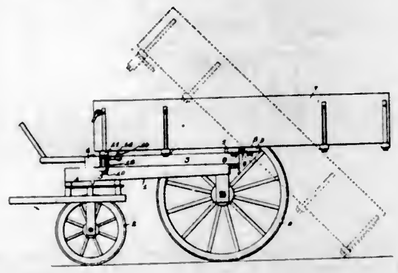
said head, ports in the valves and head, means at one end of the head for revolving said valves, and a single manifold member attached to the opposite end of the head having inlet and outlet passages therein communicating with the respective valves, said manifold holding the valves in operative position in the head.

1,377,878. PIPE-FITTING. CHARLES L. FRENCH, Cambridge, Mass.; Jennie Benner French, administratrix of said Charles L. French, deceased, assignor to Standard Oil Company of New York, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1916. Serial No. 124,829. 2 Claims. (Cl. 277—47.)



1. A fitting of the character described comprising a body interiorly divided by a partition to provide an outlet chamber and an inlet chamber; an inlet port for the inlet chamber adapted to be connected with a supply of liquid; an outlet port for the outlet chamber; screw threads on the body adjacent said outlet port for use in connecting the latter with a delivery hose; a port through said partition; a check valve controlling said port, said valve closing toward said inlet chamber; a spring for holding said valve closed against the valve lifting effects of the weight of the liquid falling through the hose; an opening in the wall of the body opposite said check valve through which said valve is placed within said body; a cap plug closing said opening and serving as an abutment for one end of said spring, said cap plug being formed with a valve chamber and two vent conduits, one connecting said valve chamber with the outlet chamber and the other connecting said valve chamber with the atmosphere, and a check valve within said valve chamber controlling the vent conduit leading from said valve chamber to the atmosphere, said check valve closing toward the inner end of said last mentioned conduit.

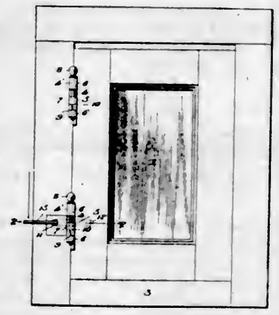
1,377,879. ENGINE FOR MOTORCYCLES AND THE LIKE. ADALBERTO GARELLI, Milan, Italy. Filed Nov. 8, 1919. Serial No. 336,650. 6 Claims. (Cl. 290—1.)



1. An explosion engine for motorcycles and the like, comprising a casing having a plurality of chambers therein; a crank shaft, a magneto, a change-speed gear and a transmission device each in one of said chambers; a partition removably secured to said casing and having an opening wherein the magneto seats; a removable cover on said partition coöperating therewith to provide a chamber; and a set of driving pinions for the magneto arranged in the last-named chamber and including a pinion on the magneto shaft disposed coaxially with the opening in said partition and having a smaller diameter than said opening so as to enable it to pass therethrough.

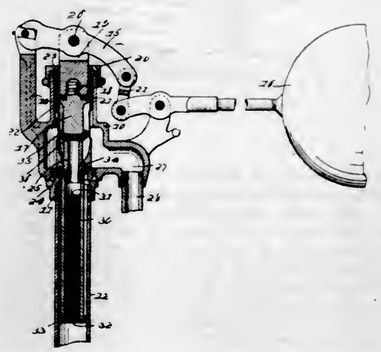
1,377,880. DIRIGIBLE HEADLIGHT. JAMES GLENNON, Rochester, Minn. Filed Nov. 13, 1919. Serial No. 337,695. 3 Claims. (Cl. 240—62.)

1. The combination with a vehicle including a front axle, wheels connected thereto and mounted to swing relative to the axle, and means for shifting said wheels, of a vehicle body supported by and movable relative to the axle, headlights carried by the body and adapted to rotate about vertical axes, a member carried by the body and shiftable transversely thereof, link connections between said member and the headlights for rotating the headlights in unison when the member is shifted, a longitudinally slotted tubular casing fixedly connected to and depending from said member, a shaft journaled on the axle, an arm movable with the shaft, a roller carried by said arm and movably mounted within the depending casing, and means for transmitting motion to said shaft when the wheels are shifted to steer the vehicle.



1,377,881. DUMPING-TRUCK. FRANZ M. GOOSSEN, Hillsboro, Kans. Filed Oct. 20, 1920. Serial No. 418,214. 4 Claims. (Cl. 298—38.)

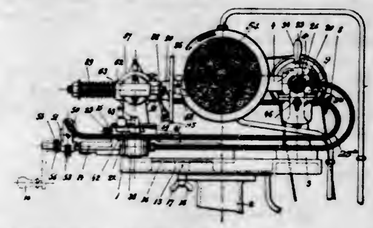
1. A locking mechanism for dumping trucks comprising a pair of rods depending from the forward portion of the body of the truck, collars turnable freely on the rods, lugs on the collars adapted to engage under the supporting framework of the body and prevent rearward tilting of the body, a spring held actuating means for simultaneously operating said lugs.



1,377,882. HINGE FOR WINDOWS. FRANS GRÖNMAN, Inwood, N. Y. Filed Aug. 12, 1920. Serial No. 403,036. 6 Claims. (Cl. 16—106.)

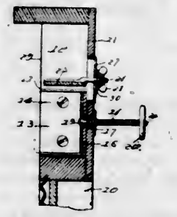
3. In combination with a window-frame and sash hinged together, said hinge consisting of alined knuckles provided with openings adapted to receive a pintle, the edges of the abutting knuckles of said hinged members cut away on opposite sides to cause the hinged member carried by the window to nest with the members carried by the sash in such a manner as to lock the window in a closed position, and a lifting lever pivoted for horizontal move-

ment transversely of the window-frame, an arm extending horizontally therefrom and adapted to be received in an opening in the window-sash when the window is closed, the opposite end extending externally of the window-sash, whereby the window may be lifted and the hinged members disengaged to permit the window to swing open.



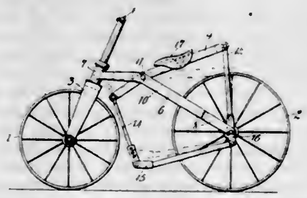
1,377,883. BALL-VALVE FOR CLOSET-TANKS. FRED E. GROSVOLD, Eau Claire, Wis. Filed June 3, 1919. Serial No. 301,444. 4 Claims. (Cl. 137—104.)

3. A ball cock for flush tanks having a casing provided at its upper end with a removable cap nut, a valve cage removable through the upper end of the casing and provided with a flange for engagement by said cap nut, a valve seat tube arranged within the cage and detachably engaged adjacent to its lower end with the lower end of the cage, a silencer having a tube detachably engaged with the lower extremity of the valve seat tube and of a diameter not exceeding that of said cage, and a valve arranged within the cage and having a stem operating in the opening of the said cap nut of the casing.



1,377,884. MACHINE FOR GRINDING TOOLS AND FOR SIMILAR PURPOSES. SERGE HERYNGFEL and FÉNELON DUBREUCQ, Charenton, France; said Dubreucq assignor to said Heryngfel. Filed Mar. 28, 1919. Serial No. 285,880. 12 Claims. (Cl. 51—57.)

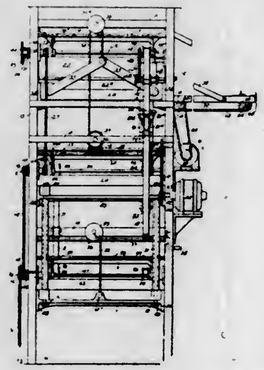
1. A machine for grinding tools comprising the combination with a fixed frame, of a grinding wheel mounted thereon, a support pivotally mounted on said frame, a carriage transversely movable on said support, a second carriage longitudinally slidable on said transverse carriage, said support having graduations thereon movable relatively to an index mark on the frame whereby the angular movement of said support and carriages may be



readily determined, a tool holder mounted on said longitudinal carriage, means for reciprocating the longitudinal carriage and consequently the tool holder carried thereby relative to the grinding wheel, and mechanism for advancing the transverse carriage and consequently the tool holder toward the grinding wheel.

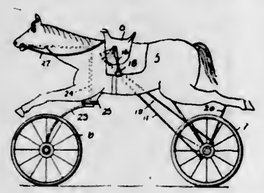
1,377,885. WASHBOARD. CHARLES L. HINES, Council Bluffs, Iowa. Filed Nov. 25, 1919. Serial No. 340,595. 1 Claim. Cl. 68—29.)

The combination with a washboard having a soap receiving seat of terminal flanged guides secured to the washboard frame at the extremities of said seat, a follower terminally mounted in said guides for movement toward and from the plane of the rubbing surface of the board, a screw for advancing said follower and having engagement with a feed nut carried by the washboard frame, and a presser foot for contact with the upper edge of a cake of soap arranged in said seat, the said presser foot consisting of a plate provided with a stem centrally disposed with reference to the length of the plate and lying in substantially the same plane with the latter, the stem projecting through a vertically disposed slot in the washboard frame and receiving on its free extremity a wing nut by means of which it may be adjusted toward or away from said follower.



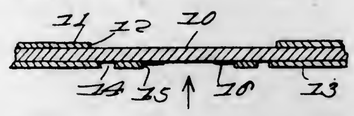
1,377,886. VELOCIPEDE. CHARLES E. HORNIG, Jersey City, N. J. Filed Oct. 26, 1920. Serial No. 419,724. 2 Claims. (Cl. 208—33.)

1. A velocipede, comprising front and rear wheels, a crank axle connecting the rear wheels, a front fork on the



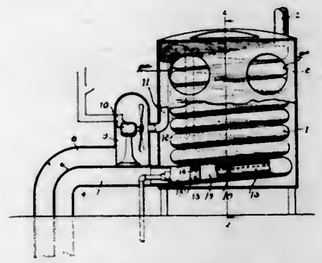
front wheel, a frame bar connecting the front fork and rear axle, a lever positioned across the frame bar, pivotally connected between its ends to said frame bar, and projecting at its respective ends below and above the frame bar, a seat on the rear portion of the lever, a link connecting the rear end of the lever with the crank axle, a forwardly projecting treadle pivotally connected at its rear end to said frame bar, and a rod connecting the forward ends of the lever and the treadle.

1,377,887. APPARATUS FOR THE DEVELOPING, &c., OF FILMS. ROSCOE C. HUBBARD, New York, N. Y. Filed June 29, 1920. Serial No. 392,687. 21 Claims. (Cl. 95—94.)



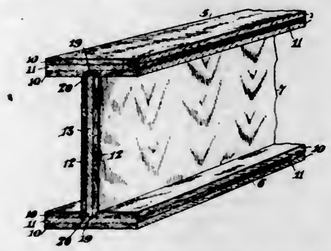
1. In an apparatus for treating films, a film-immersing tank, film-actuating means, and means to move the one relatively to the plane of the other; said first-mentioned means being disposed substantially horizontal, to move the film in approximately a horizontal plane in said tank.

1,377,888. TOY HORSEMOBILE. RAFAEL ASTOR HUNABIAN, San Francisco, Calif. Filed Aug. 19, 1920. Serial No. 404,536. 1 Claim. (Cl. 208—42.)



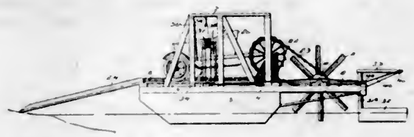
In a toy of the class described, a toy horse, a seat upon the horse, levers extending downwardly on opposite sides of the horse and comprising foot rests for an occupant of the seat, short transverse shafts journaled within the body of the horse and protruding from the sides of the seat, said levers being fixed to the ends of said shafts, links fixed to the shafts within the body of the horse, rods connected to the free ends of said links and extending rearwardly and downwardly through the horse with their opposite ends connected to a crank, said crank comprising an axle with traction wheels for the toy mounted thereon, steering wheels mounted forward of said traction wheels, a downwardly curved fork for supporting the horse on the steering wheels, the ends of said fork terminating in outwardly presented axles for the steering wheels with its opposite meeting ends supporting a plate which in turn provides a rest for the forward part of the horse, a steering post extending vertically within the horse and fixed to said plate, a T-head at the top of said post having an abutment with the top interior of the horse, a transverse cross arm fixed to said post below said T-head, pull cords attached to the ends of said arm, said cords extending forward within the neck of the horse and out of the mouth thereof, pulleys in the corners of the horse's mouth and around which the cords pass rearwardly on the outside of the horse's neck where they may be manipulated by an occupant of the seat for effecting a steering movement of the steering wheels.

1,377,889. DISPLAY-SIGN. DWIGHT W. HUSTON, Springfield, Ohio. Filed May 13, 1920. Serial No. 381,136. 2 Claims. (Cl. 40—135.)



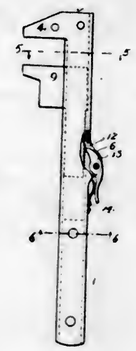
1. An illuminable sign having a light penetrable base provided upon its obverse and reverse surfaces with coatings of which the former is disposed to outline the display matter by exposure of the surface of the base and of which the latter is disposed to outline openings also exposing the base and following the lines of and defining the outlines of the display matter exposed at the obverse surface.

1,377,890. GAS-HEATER. WILLIAM HENRY KELSO, San Francisco, Calif. Filed May 24, 1918. Serial No. 236,345. 1 Claim. (Cl. 126—116.)



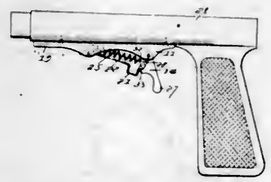
In a heater of the class described, an air heating coil, a casing surrounding said coil and having openings therein, an air intake pipe communicating with the interior of the coil at one end thereof, a burner arranged in the coil at the point of communication with the said air intake pipe, a blower fan having a casing connected directly with the air intake pipe to be supplied with air therefrom and an air delivery pipe leading from the fan casing and extending into the coil casing and arranged to discharge in the space surrounded by the convolutions of the coil adjacent the bottom thereof.

1,377,891. WOODEN BEAM. EUGENE V. KNIGHT, New Albany, Ind. Filed Mar. 22, 1918. Serial No. 223,991. 5 Claims. (Cl. 20—0.5.)



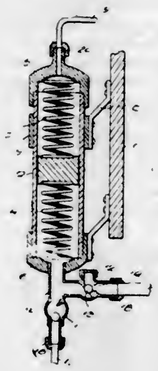
1. In a wooden beam, a flange and a web each built up from a plurality of laminations cemented together, the flange having a longitudinal groove in one face, and the web having a tongue made of a plurality of laminations, said tongue fitting into said groove and holding the flange and web together by interlocking action, the web and flange being cemented together at the point.

1,377,892. AUTOMOBILE-PROPELLED BOAT. JACOB LANE, Anchorage, Alaska. Filed June 30, 1920. Serial No. 393,037. 4 Claims. (Cl. 115—0.5.)



1. In combination, a vessel including means for supporting a motor vehicle, means for utilizing the movement of the drive wheels of the motor vehicle in the propulsion of the vessel, a rudder, a rudder control, and means adjustably supporting the rudder control.

1,377,893. WRENCH. GERHARD M. LEE, Aurora, Ill. Filed May 8, 1920. Serial No. 379,890. 3 Claims. (Cl. 81—136.)

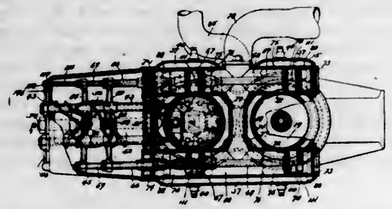


1. A wrench comprising a single sheet of metal cut and bent to provide a handle portion, a body portion having spaced flanges, and spaced jaw extensions, a jaw block riveted between the extensions, and a movable jaw block having slots receiving the flanges of the body portion.

1,377,894. CAP-EXPLODER. ALVAH F. LENT, Newark, N. J. Filed June 2, 1920. Serial No. 385,921. 4 Claims. (Cl. 42—54.)

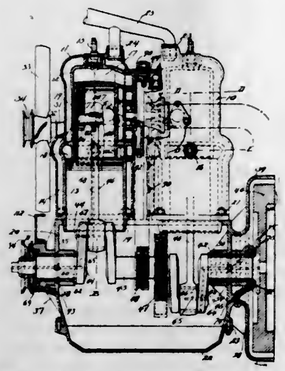
3. A cap exploder having a base element consisting of a blank provided with lateral flanges and transverse flanges located in operative position with the lateral flanges to form a cap seat, a hammer element provided at an intermediate point in its length with lateral extensions forming trunnions mounted in bearings in said lateral flanges of said base element and bent upon itself at the end remote from said trunnions to form a trigger engaging tongue, an up-struck trigger element having side flanges provided with a seat for engagement with the terminal tongue of the hammer element and also having lateral extensions forming trunnions mounted in bearings in the said flanges of said base element, the end of the trigger blank adjacent the trunnions being extended and bent to form a bearing tongue for contact with the base element, and an actuating spring for said hammer and trigger elements terminally connected to one end of the former and an intermediate point in the length of the latter.

1,377,895. OIL-PUMP. CHARLES LONG, Jeffersonville, Ind., assignor of one-half to Frank Garner, Jeffersonville, Ind. Filed Oct. 9, 1918. Serial No. 257,464. 1 Claim. (Cl. 103—67.)



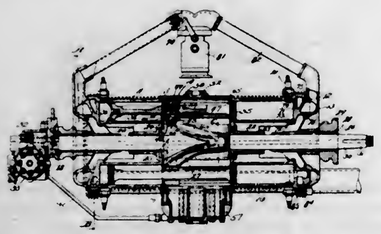
A pump of the class described comprising a cylinder having removable heads provided with apertures of different sizes, a motive fluid conduit connected with the smaller aperture and a pump fluid conduit with the larger, said last mentioned conduit having valve equipped inlet and outlet branch pipes, a stemless piston operable in said cylinder and normally in neutral position midway the ends of the cylinder, a coiled spring on either side of said piston bearing against the piston and the opposed cylinder head, said springs operating as shock absorbers for the piston and one of them as means for returning the piston to neutral position after actuation.

1,377,896. DRYING APPARATUS. HUGH B. LOWDEN, Denver, Colo. Original application filed Oct. 22, 1917, Serial No. 197,905. Divided and this application filed Jan. 7, 1920. Serial No. 349,988. 17 Claims. (Cl. 259—144.)



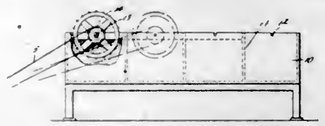
1. In combination a drying surface, means for feeding material thereto in a layer or stratum and means for cleaving it at a plurality of isolated points in a substantially vertical direction, pushing the cleaved portions lengthwise of the drying surface and again cleaving the material at points intermediate the previous cleavings.

1,377,897. INTERNAL-COMBUSTION ENGINE. CHARLES DE LUKACSEVICS, New York, N. Y. Filed May 22, 1919. Serial No. 298,837. 21 Claims. (Cl. 123—59.)



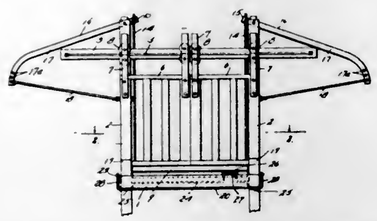
1. In an internal combustion engine, the combination with a plurality of double cylinders, each comprising inner and outer cylinder portions of different diameters disposed with their axes in a common plane, each of said cylinder portions having a plurality of combined inlet and exhaust ports, of a plurality of alined valves for controlling said ports respectively, the common axes of said valves being parallel to the plane of the axes of said cylinders, and a common means for reciprocating all of said valves transversely to the axes of the cylinders.

1,377,898. INTERNAL-COMBUSTION ENGINE. CHARLES DE LUKACSEVICS, New York, N. Y. Filed Apr. 30, 1920. Serial No. 377,915. 7 Claims. (Cl. 123—57.)



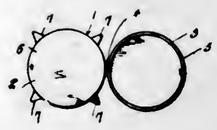
1. In an internal combustion engine, adjacent cylinder blocks each having concentric cylinders of different diameters, a stepped piston in said concentric cylinders and a single valve means interposed between said cylinder blocks and controlling all of said cylinders.

1,377,899. INTERNAL-COMBUSTION ENGINE. CHARLES DE LUKACSEVICS and EDMUND LOFFLER, New York, N. Y. Filed Apr. 30, 1920. Serial No. 377,986. 10 Claims. (Cl. 123—58.)



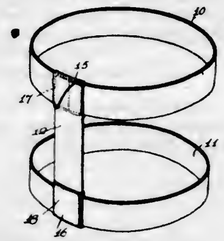
4. In an internal combustion engine having oppositely disposed cylinder blocks with opposing cylinders formed therein, an engine shaft having a cam groove, a crank case of relatively soft material, pistons adapted to reciprocate in said opposing cylinders, a connecting rod rigidly connecting said pistons, means mounted on said connecting rod and engaging said cam groove for imparting rotary motion to said engine shaft, and guide bars integral with said crank case having reinforcing rods embedded therein, said guide bars coacting with said means for relieving said pistons and connecting rod of side thrust.

1,377,900. TEXTILE-FINISHING DRUM. JOSEPH LUNEPP, South River, N. J. Filed Apr. 7, 1920. Serial No. 371,012. 3 Claims. (Cl. 8—19.)



1. In a textile finishing drum, a shaft, a pair of alined annular supports, arms securing said supports to a shaft and spacing them therefrom, a plurality of radially disposed parallel slats connecting the supports, said slats having cutaway portions at each end forming projections on the slats located against the periphery of the annular supports, and said cutaway portions forming shoulders on the slats located against the inner faces of the supports, and all of said slats including tapering portions adjacent their outer edges.

1,377,901. GATE. DREWEY M. MCCAULEY, Algood, Tenn. Filed May 11, 1920. Serial No. 380,554. 2 Claims. (Cl. 39—18.)



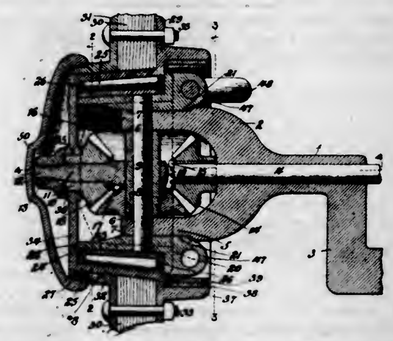
1. A gate of the character described, comprising a frame, a pair of platforms mounted in said frame, a pair of gates supported above said platforms, a crank shaft normally held for retaining and locking the platforms in elevated position, wheel operated triggers for operating the said crank shaft to release the platforms, and means whereby a depression of the platforms opens said gates.

1,377,902. LOCKET. JESSIE R. MCLAREN, Massena, Iowa. Filed Dec. 18, 1918. Serial No. 267,325. 1 Claim. (Cl. 63—19.)

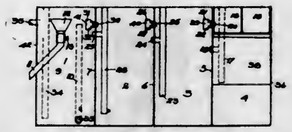
A locket comprising front and rear circular sections, a hinge connecting said sections, a catch for detachably connecting the sections, means for securing a photograph in the rear section, triangular shaped tongues formed on the periphery of the front section and adapted to be bent to overlie the front face thereof for retaining an ornamental element thereon, and a loop formed on the outer face of the rear section to receive the belt worn by a person.

1,377,903. GARTER. RAYMOND A. MANNY and JOSEPH A. RIELLY, Brooklyn, N. Y. Filed Oct. 30, 1920. Serial No. 420,635. 2 Claims. (Cl. 241—5.)

1. As an article of manufacture, a garter comprising circular elastic bands of unbroken continuity disposed one above the other and of which the upper one is the attaching band to hold the garter in position on the wearer's leg and the other is the clamping band and is adapted to encircle the upper end of a sock and thereby clamp the same to the wearer's leg, each of the said circular bands being made of a piece of flat elastic webbing with the ends abutting, and an elastic connecting band having its ends overlying and attached to the circular bands at their joints to connect the said circular bands with each other and to hold the same spaced apart.



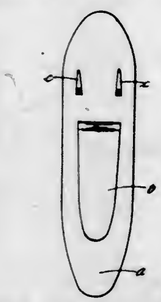
1,377,904. SIGN. HARRY H. MARRIOTT, Kansas City, Mo. Filed Feb. 16, 1920. Serial No. 359,066. 2 Claims. (Cl. 40—133.)



1. In a device of the class described, a panel comprising a front plate, a netting behind the front plate, and pieces of metal foil secured to the netting, the front plate having a sign-forming opening through which the foil is visible, the pieces of foil being disposed closely enough together so that the space within the opening will present the characteristic color of the foil in daylight, the pieces of foil being separated sufficiently to permit the passage of artificial light therebetween from the rear; and means for illuminating the panel from the rear.

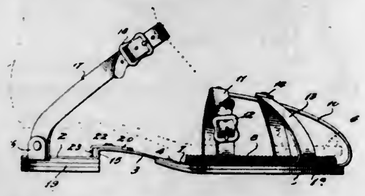
1,377,905. COMBINED STEERING AND DRIVE WHEEL FOR AUTOMOBILES. RANDOLPH N. MARTZ, Frederick, Md. Filed June 23, 1916. Serial No. 105,465. 3 Claims. (Cl. 280—96.3.)

1. A combined driving and steering wheel comprising an axle with a forked end, a drive shaft traversing the axle, intermeshing gearing carried by the axle in the fork with one of the gears fast to the shaft, a ring carried by the fork exterior thereto and provided with a lateral outwardly directed extension, a king bolt traversing the ring and the legs of the fork, an axle stud having one end concentric with the king bolt and carrying one of the gears, antifriction bearings surrounding the ring and carried thereby, a hub sleeve mounted on the antifriction bearings and fast to the last named gear, and manipulating means connected to the ring for turning it about the longitudinal axis of the king bolt.



1,377,906. GREASE AND OIL SEPARATOR. FREDERICK WILLIAM MASON, Toronto, Ontario, Canada. Filed Aug. 30, 1918. Serial No. 252,125. 9 Claims. (Cl. 210—43.)

1. A grease and oil separator comprising a vessel divided by partitions into a plurality of chambers, water conducting means connecting each chamber with the one next to it, said water conducting means consisting of vertical pipes open at both ends, the upper ends of said pipes terminating substantially flush with top of said chambers and their lower ends extending some depth into their respective chambers, said pipes each having a substantially horizontal branch extending through the adjacent partitions into the adjoining chambers and oil pipes connecting each chamber with the one next to it, in combination with separate water and oil discharge pipes.

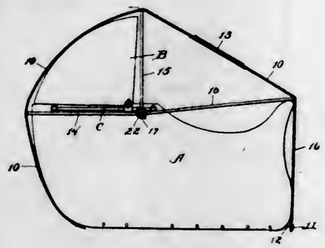


1,377,907. BOOK AND LIKE SUPPORT. WHITNEY MOCKRIDGE, London, England. Filed Jan. 20, 1921. Serial No. 438,714. 4 Claims. (Cl. 40—11.)

1. A book support comprising a single plate-like member having a spur struck therefrom to afford a clip capable of

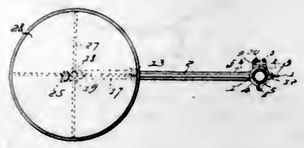
engaging and forming a stiffening support for one book and a plurality of smaller upwardly extending spurs struck therefrom above said first mentioned spur and located side by side slightly spaced apart to afford holding means for another book.

1,377,908. DETACHABLE SOLE. JAMES W. MOORE, Norfolk, Va. Filed Apr. 15, 1920. Serial No. 374,120. 6 Claims. (Cl. 36—63.)



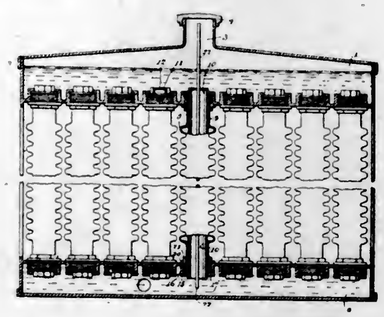
1. A shoe sole protector comprising a sole portion, a metallic heel portion, connected with the sole portion, a plurality of helical springs arranged upon the upper face of the sole portion to provide an air ventilating space between the sole portion of the protector and the sole of the shoe and means for attaching the protector to a shoe.

1,377,909. PORTABLE DIFFUSION APPARATUS. RENÉ MOULIN, Paris, France. Filed Jan. 7, 1921. Serial No. 435,676. 1 Claim. (Cl. 299—20.)



A portable diffusion apparatus, comprising an elongated casing provided with a cover having perforations in its top, a receptacle containing the liquid to be diffused fitting snugly in the casing and provided with an apertured stopper, a wick in the receptacle and extending through the aperture of the stopper thereof, and absorbent cotton in the casing and filling the space in the body of the casing above the end of the wick and with which the wick engages.

1,377,910. DETACHABLE RAINPROOF TOP FOR BABY-CARRIAGES. WILLIAM R. MUNSON, Sharon, Pa. Filed Jan. 12, 1920. Serial No. 350,733. 2 Claims. (Cl. 296—110.)

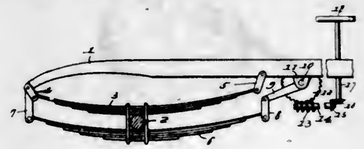


1. An attachment for baby carriage comprising a cover extending along the front, over the hood and along the back of the carriage, a plurality of U-shaped supporting rods connected with said cover at the back of the hood, above the front of the hood, and at the top of the front portion of the carriage, means carried by each side of the carriage for holding said rods stationary, and side curtains detachably engaged with the edges of said cover and extending along the sides of the carriage, the means for holding said rods comprising bolts clamped upon the hood guide rods of the carriage, a series of disks disposed upon each bolt, and one disk of each series being provided with a plurality of spaced radial ribs between which the meeting ends of said rods are disposed, and clamping nuts engaged upon said bolts and engaging the others of said disks.

1,377,911. ADJUSTABLE BED-TABLE. SAMUEL P. MURPHY, Canastota, N. Y. Filed Sept. 29, 1919. Serial No. 327,046. 1 Claim. (Cl. 45—82.)

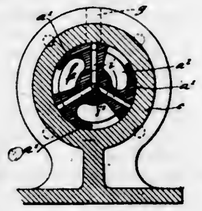
A device for the purpose indicated comprising a normally stationary arm having a base portion at one end, a clamping element carried by said base portion and consisting of two complemental members one of which is formed integral with the base portion and the other of which is hingedly attached to the first, both members being formed with bosses opposite the hinge, a hook carried by one boss, a pin carried by the other boss and engaged by the hook, a thumb screw threadingly engaged with the hingedly mounted clamping member, and a table carried at the extremity of the arm.

1,377,912. RADIATOR. ALBERT NEBEL, Brooklyn, N. Y. Filed Oct. 6, 1919. Serial No. 328,745. 2 Claims. (Cl. 257—129.)



1. In a radiator comprising a plurality of reservoirs, and a tube connecting the same, a means for connecting one end of the tube to the reservoir, which consists in providing a threaded recess in the reservoir, a shoulder on one end of the tube, and a member adapted to be inserted in the recess, and to abut against the shoulder of the tube to hold the said tube and reservoir in fixed relation.

1,377,913. AUXILIARY SPRING. PAUL R. NAVE, Bucyrus, Ohio. Filed July 25, 1919. Serial No. 313,234. 2 Claims. (Cl. 267—45.)



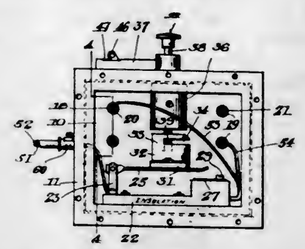
2. In a vehicle spring suspension, the combination with a chassis frame and main spring to bear the minimum load

thereof, of an auxiliary spring shackled at one end to the chassis frame, a transverse rock shaft mounted on the chassis frame, an arm carried by the rock shaft and shackled to the remaining end of the auxiliary spring, a worm gear mounted on the rock shaft, a horizontally disposed shaft arranged longitudinally of the frame, a

worm carried by said horizontal shaft and meshing with the worm gear, a vertically disposed shaft carried by the frame and provided at the upper end with a hand wheel, and a bevel gear couple operatively connecting the vertically disposed and horizontally disposed shafts for imparting angular movement to the rock shaft to vary the position of the said arm for the purpose specified.

1,377,914. PUMPING OF VISCOUS SUBSTANCES. HENRY THORNTON NEWBIGIN, Newcastle-upon-Tyne, England. Filed Aug. 11, 1919. Serial No. 316,849. 7 Claims. (Cl. 103—44.)

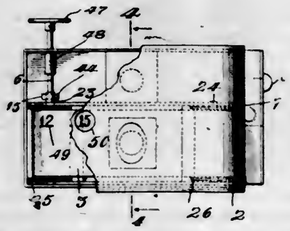
1. A method of pumping viscous fluids which consists in employing the mutual reaction of parts of relatively moving, closely adjacent surfaces, slightly inclined to each other against the direction of motion, between which wedge-shaped pressure films are formed by the adhesion to and constriction of the fluid between these surfaces, thereby increasing the pressure in the fluid from a minimum around the edges of the moving surface to a maximum at a point in the direction of motion behind the center of the area of the said moving surface and drawing off the fluid from such point of maximum pressure, substantially as described.



2. A method of pumping viscous fluids which consists in employing the mutual reaction of pairs of relatively moving, closely adjacent surfaces, slightly inclined to each other against the direction of motion between which wedge-shaped pressure films are formed by the adhesion to and constriction of the fluid between the said pairs of surfaces, thereby increasing the pressure in the fluid from a minimum around the edges of the moving surfaces to a maximum at points in the direction of motion behind the center of the area of the said moving surfaces, drawing off the fluid from such points of maximum pressure, and making the pressure at the point of maximum pressure in one of said pairs of relatively moving surfaces constitute the minimum pressure in an adjacent pair of such surfaces, thereby building up a high pressure in stages in the unit.

3. In the method of pumping viscous fluids at high pressure stated in claim 2, arranging different units to work in opposition to one another, as and for the purpose described.

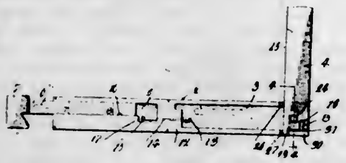
4. Apparatus for pumping viscous fluid consisting of a ported body member formed with an internal cylindrical chamber communicating through a port in the body member with a source of viscous fluid supply, a bored outlet piece attached to said member and a rotor revolubly mounted in the chamber, said rotor comprising a shaft and a fluid impelling member carried by the shaft, said impelling member having a peripherally disposed surface arranged closely adjacent to and at a slight angle to the inner surface of the cylindrical chamber against the direction of motion, and a delivery duct, extending from a point on the peripheral surface toward and communicating with the bore of the said outlet piece.



5. Apparatus for pumping viscous fluid consisting of a ported body member formed with an internal cylindrical chamber of tapering bore and communicating through a port in the body member with a source of viscous fluid supply, a bored outlet piece attached to said member and a rotor revolubly mounted in the chamber, said rotor comprising a shaft and a fluid impelling member carried by the shaft, said impelling member having a peripherally disposed surface arranged closely adjacent to and at a slight angle to the inner surface of the cylindrical chamber against the direction of motion, and a delivery duct, extending from a point on the peripheral surface toward and communicating with the bore of the said outlet piece, and means for regulating the position of the rotor longitudinally within the said chamber, as and for the purpose described.

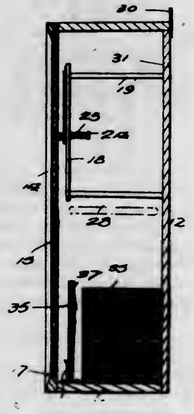
1,377,915. SAFETY SHOT-FIRER. CHARLES FUKUZO OAKA, Lovettville, Alberta, Canada. Filed Apr. 29, 1920. Serial No. 377,632. 2 Claims. (Cl. 175—91.)

1. A shot firer comprising a casing, a pair of posts in the casing, a pair of contacts spaced from the posts, arms pivotally mounted to the posts and designed to bridge the gap between the posts and the contacts, an insulating member connecting the arms, a bracket on the insulating member, a plunger coacting with the bracket, the plunger being manually actuated in one direction, and resilient means for automatically actuating the plunger in the opposite direction.



1,377,916. CAMERA. MARIA OCHOA, New York, N. Y. Filed Aug. 6, 1919. Serial No. 315,694. 4 Claims. (Cl. 95—31.)

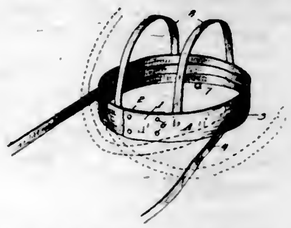
1. In a camera of the character described, a frame, means for holding a film in the frame, a glass for receiving an image, a single lens coacting with said glass and with the film, a rectangular guide for the lens, said guide being formed with a slot, a lever mechanism having a part



extending through said slot and engaging the lens for shifting the same from in front of said glass to in front of the film, and back again to its original position, and a shutter operated after said lens has reached the exposure position in front of said film.

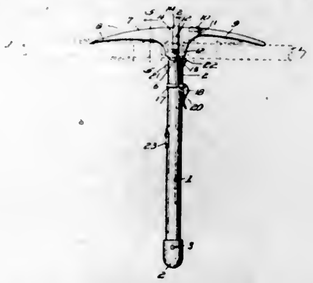
1,377,917. COLLAPSIBLE SQUARE. AUGUST E. ODMARK, Muskegon, Mich. Filed July 16, 1918. Serial No. 245,210. 6 Claims. (Cl. 33—114.)

1. In a geometrical instrument, the combination with a shank containing a recess, and a spring fixed in one end wall of the recess and projecting into it, the tip of the spring being deflected; of an element movably mounted within said recess and having a notch adapted for engagement with said spring and the notch provided with an enlargement adapted to receive the deflected end of the spring when the element is housed within the recess.



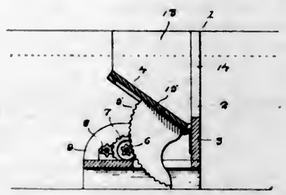
1,377,918. NOTICE-INDICATOR AND MESSAGE-RECEIVER. MICHAEL W. OTTO, Supply, Okla. Filed Aug. 21, 1918. Serial No. 250,898. 1 Claim. (Cl. 40—63.)

A device of the class described comprising a housing, a closure therefor having a transparent panel therein, a stacked card compartment in said housing opposite said closure, upright card supports in the housing adjacent said closure and between it and said stacked card compartment, said supports being positioned to perform the double function of a card support to hold the card for reading through said panel and to retain the stacked cards against displacement.



1,377,919. BABY-HARNESS. ELEANOR DANA PARSON, Pinehurst, N. C. Filed Feb. 19, 1920. Serial No. 359,797. 2 Claims. (Cl. 155—189.)

1. A harness for children comprising a body encircling belt having an elongated strap threaded therethrough to slide longitudinally intermediate its extremities in said belt for supporting or attaching a child to a chair or the like, the intermediate portion of the strap lying on the inner face of the intermediate portion of the belt with its ends outside the belt, said strap being of a length materially greater than the length of the belt to adapt the

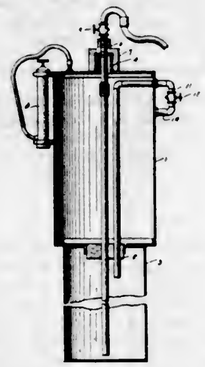


ends thereof to be crossed over the closed ends of the belt and secured to a suitable support, and shoulder straps attached to said belt.

1,377,920. COMBINATION-TOOL. JAMES WOOD PEARSON, near Elk Grove, Calif. Filed Oct. 27, 1920. Serial No. 419,872. 4 Claims. (Cl. 306—40.)

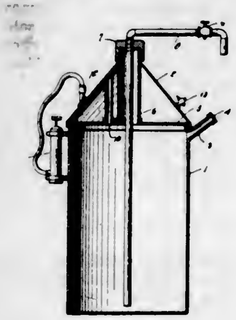
1. In a combination tool of the class described, a double ended implement blade, attaching ears formed with said blade, a handle pivoted to said attaching ears, a strap embracing said attaching ears and means connecting the said strap and locking the same to the handle.

1,377,921. ANTIFREEZE HEAD-GATE. NIELS PETERSON, St. Anthony, Idaho. Filed Aug. 5, 1919. Serial No. 315,475. 1 Claim. (Cl. 61—26.)



A head gate of the class described comprising a gate hinged at its lower end to a part of the dam, means for raising and lowering the gate and side wings hinged to a part of the dam and having their lower edges beveled to engage the gate when partly raised.

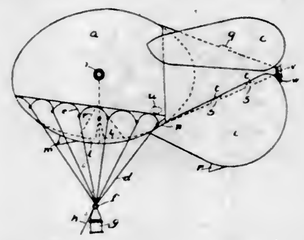
1,377,922. AIR-STORAGE-TANK LIQUID-DISPENSING DEVICE. EMIT M. POSA, Burleson, Tex. Filed Aug. 18, 1920. Serial No. 404,316. 2 Claims. (Cl. 221—74.)



1. A liquid dispenser comprising a body provided at one end with a boss and at its opposite end with a nipple, a pipe passing through the nipple and boss and traversing

the length of the body and provided at a point above the nipple with a valve, a collar surrounding the pipe and having screw threaded engagement with the nipple and adapted to hold the pipe at an adjusted position in the body, means for supplying air under pressure to the body, and an air pipe connected at one end with the body at a

point betwen the ends thereof and having a portion bowed outwardly beyond the side of the body and forming a handle, a valve provided upon the handle portion of the last mentioned pipe, the said pipe being extended back into the body and carried down through the boss and out below the lower end of the body.

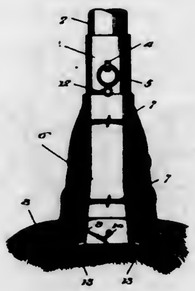


1,377,923. COMPRESSED-AIR-FEED LIQUID-CONTAINER. EMIT M. POSA, Burleson, Tex. Filed Aug. 18, 1920. Serial No. 404,317. 2 Claims. (Cl. 221—74.)

1. A compressed air feed liquid container comprising a body, a dome mounted thereon, a partition separating the dome from the body, means for forcing air under the dome and above the partition, a tube passing through the partition and the dome, a pipe passing through the tube and entering the body, a valve mounted upon the pipe, a cap carried by the pipe and adapted to close the tube and an air pipe passing through the partition and entering the space under the dome and having its end spaced from the top of the dome.

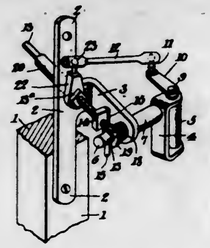
1,377,924. OBSERVATION KITE-BALLOON. EUGENIO PRASSONE and LUIGI AVORIO, Rome, Italy. Filed Aug. 12, 1918. Serial No. 249,454. 7 Claims. (Cl. 244—4.)

1. An observation kite-balloon consisting of a gas container or bag of moderately elongated shape connected with a conical or pointed appendage with stabilizing or



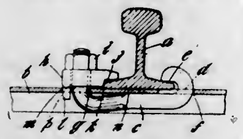
rudder bags, the conical or pointed appendage and the stabilizing or rudder bags being filled with air.

1,377,925. METHOD OF ATTACHING LIPS TO DREDGE-BUCKETS. JOHN J. RATTIGAN, Homestead, Pa. Filed May 24, 1919. Serial No. 299,442. 4 Claims. (Cl. 29—148.2.)



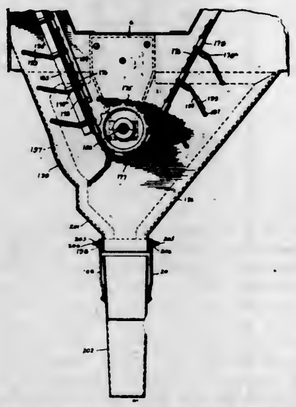
1. A method of attaching lips to dredge-buckets which consists in first removing the worn lip portion of said buckets and piercing holes in the edge of the bucket adjacent to the line of severance, reaming said holes while the material is in a heated condition, and then riveting a new lip portion on said bucket.

1,377,926. BROOM. AMBROSE S. RAY, Bellefonte, Pa., assignor of one-half to George T. Ray, Mill Hall, Pa. Filed Nov. 6, 1919. Serial No. 336,038. 1 Claim. (Cl. 15—19.)



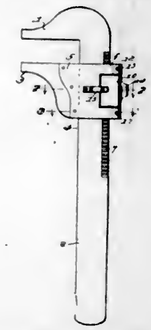
A broom stock of tubular form to receive a handle having its lower end portion gradually increased in diameter and merging into elliptical form at the lower extremity of the stock and having pointed lugs bent outwardly at an angle therefrom at the ends of the major diameter of said extremity and located in the plane of said extremity to project under the shoulders of a flat broom head so as to spread the broom corn, and a binding wire anchored at one end to the lower end portion of said stock to bind the broom corn on the stock above said lugs so as to bend the broom corn into the angles between said stock and lugs.

1,377,927. SPOTLIGHT-HANGER. HERBERT H. REED, Covington, Ohio. Filed Dec. 15, 1920. Serial No. 430,814. 3 Claims. (Cl. 240—7.)



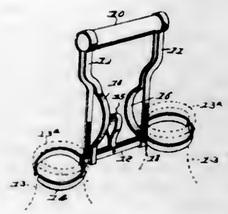
1. In a device of the type described, a light-fixture member, a yoke for mounting said light-fixture member, a stem projecting from said yoke, said stem and light-fixture member being turnable in planes perpendicular to each other, a sleeved hand-operated shaft, a block-head member having a screw-threaded connection with said shaft, a lever-connection between said block-head and said stem for actuating the light-fixture member, and means for actuating said light fixture member from the sleeve of the hand-operated shaft.

1,377,928. MEANS FOR SECURING RAILWAY-RAILS TO SLEEPERS. MORGAN EDWARD REES, Morriston, near Swansea, Wales. Filed Dec. 1, 1920. Serial No. 427,555. 7 Claims. (Cl. 238—348.)



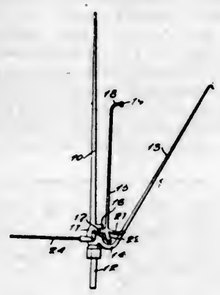
1. A bolt for securing railway rails to sleepers, comprising a shank adapted to be arranged beneath the sleeper transversely to the rail and bent so as to provide an upwardly directed elbow to bear against the underside of the sleeper, and having end portions adapted to project through the sleeper on opposite sides of the rail and provided with means for clamping the rail flange to the sleeper.

1,377,929. CANE-PLANTING MACHINE. HENRY M. REMY, Constancia, Cuba. Filed Feb. 28, 1919. Serial No. 279,709. 11 Claims. (Cl. 193—2.)



1. In a cane planting machine, a supporting frame, a cane conveyer casing extended transversely of the frame and of triangular form which apex is directed downwardly, an endless conveyer within said casing, said casing having an open upper side and an open lower side, said endless conveyer comprising a pair of chains, sprocket wheels for said chains, transverse members connecting said chains at spaced intervals, angularly extended bars carried by said transverse members, a pocket member carried by each of said transverse members to form a pocket wall for a pocket carrying a section of cane to be dropped from the lower end of the casing, and a guiding discharge member extended from the lower end of said casing.

1,377,930. WRENCH. WILLIAM H. ROACH, Lindsay, Calif., assignor of one-half to L. G. Stallings and J. M. Hadley, Lindsay, Calif. Filed Feb. 4, 1919. Serial No. 274,962. 1 Claim. (Cl. 81—137.)



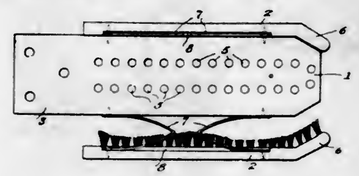
A wrench comprising a stationary jaw formed with a handle, a portion of whose edge above the grip is beveled having a flat longitudinal portion adjacent one side and a similar portion adjacent the other side, the beveled edge being formed with transversely disposed teeth thereon, a movable jaw slidably mounted on the handle, plates straddling the handle and connected with the movable jaw and formed with web portions facing the said beveled edge, the said web portions being shaped to effect sliding engagement with both said flat portions, a block formed with a beveled edge and provided with teeth for engagement with the teeth of the handle, a pin set in the webs and loosely supporting the block which is disposed between the said webs, and a flat spring mounted on one of the said plates and having a free end bearing upon the block to yieldingly keep the teeth of the latter in engagement with the teeth of the handle for the purpose specified.

1,377,931. MILK-BOTTLE CARRIER. CHARLES B. SAMUELS, Tulsa, Okla. Filed Sept. 9, 1920. Serial No. 409,089. 5 Claims. (Cl. 224—48.)

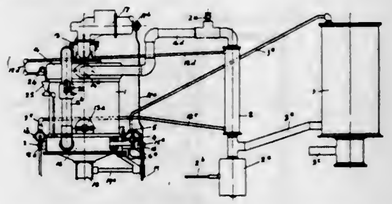
1. A milk bottle carrier having a handle or grip provided with looped hangers, and separable jaw members slidingly mounted in said hangers and provided with bottle engaging elements, said hangers being provided at their lower ends with means for holding said jaw members in their bottle engaging relation.

1,377,932. MAIL-BAG CATCHER. ANTON W. SCHMUTZER, Crandon, Wis. Filed Mar. 13, 1920. Serial No. 365,016. 2 Claims. (Cl. 258—22.)

1. In a device of the character described, the combination with a mail bag catcher of an arm having an extension formed at one end, means pivotally connecting said extension with said mail bag catcher, an actuating finger projecting from said arm in proximity to and in the opposite direction from said extension, said finger adapted to be engaged by the mail bag to rock said arm to retain said mail bag against displacement, a handle pivoted upon said mail bag catcher, a lug on said arm, and means connecting said handle and said lug whereby said handle may be operated to return said arm to its normal position, substantially as described.



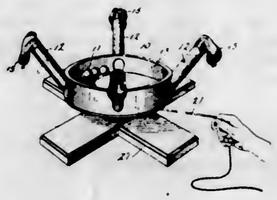
1,377,933. PLUMBER'S FERRET. CHARLES WILLIAM SHEATSLEY, Pensacola, Fla. Filed Apr. 13, 1920. Serial No. 373,592. 3 Claims. (Cl. 137—70.)



3. A device of the character stated comprising a flexible handle, a pair of crossed movable jaws pivoted on one end of said handle, lateral angularly disposed projections on said jaws having longitudinal slots therein, a flexible tongue slidable on said handle, and a pin on said tongue projecting through both of said slots and controlling the position of the jaws.

1,377,934. SHOE-CLEANER. ELMER WRIGHT SILAS, Maitland, Fla. Filed June 12, 1920. Serial No. 388,582. 1 Claim. (Cl. 15—2.)

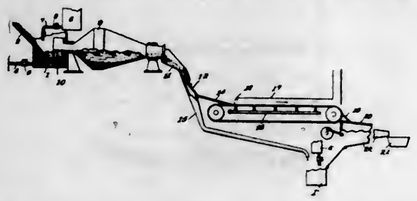
A shoe cleaner of the class described comprising a bottom brush having openings between the rows of bristles and an extension at its rear having openings therein adapted to receive screws for securing the extension to a support, the front end of the bottom brush having tapered corners, a pair of side brushes having their front ends converging to engage the tapered corners, the lower parts of said side brushes being recessed and V-shaped springs each having one end secured to the bottom brush and its other end secured in the recess, said springs holding the side brushes against the bottom brush with the springs occupying the recesses.



1,377,935. GAS-PRODUCER. DAVID J. SMITH, London, England. Filed Nov. 29, 1918. Serial No. 264,714. 6 Claims. (Cl. 48—76.)

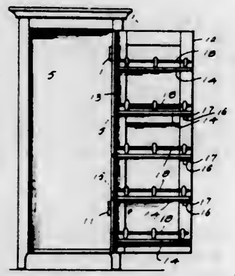
1. The herein described method which consists in forming a fire bed relatively shallow in proportion to area, constantly agitating the same throughout, feeding fuel thereto in small regular quantities during operation, whereby the fuel rapidly becomes incandescent on reaching the fire bed, and in maintaining an even high temperature throughout the fuel bed so that the gas given off is clean and of even quantity and slow distillation is avoided.

1,377,936. GAME APPARATUS. MAURICE M. SMITH, New York, N. Y. Filed Mar. 15, 1920. Serial No. 365,742. 3 Claims. (Cl. 46—57.)



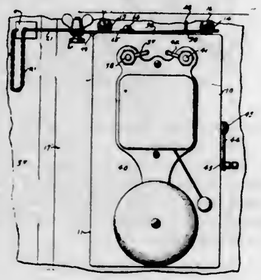
1. A game apparatus, comprising a rotatable member having a rim and adapted to contain balls, passages extending from the said rim and having their lower ends in communication with the said member, and receiving pockets at the upper ends of the said passages for receiving the balls passing up the passages by centrifugal force on rotating the said member.

1,377,937. FLOTATION PROCESS. CHARLES SPEARMAN, Westmount, Quebec, Canada. Filed July 22, 1918. Serial No. 246,126. 6 Claims. (Cl. 83—85.)



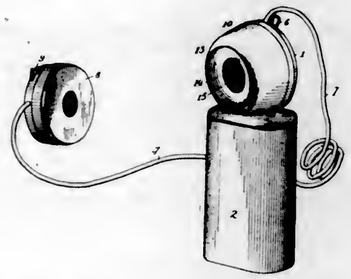
1. A process of concentrating ore which consists in grinding the ore with an aqueous solution containing a small percentage of oil, and agitating the material to sepa-

rate the desired values from the gangue and permit particles of the values to coalesce and float on the surface



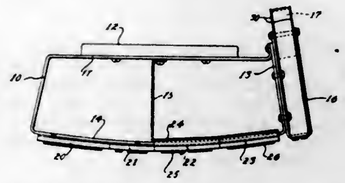
of the solution, and then destroying the adhesion of the coalesced particles and screening the values to separate the larger flakes from the powdered particles.

1,377,938. CABINET. CHARLES A. STROMBERG, Port Townsend, Wash. Filed June 23, 1920. Serial No. 391,088. 2 Claims. (Cl. 211—9.)



1. The combination with a pair of supports extending at right angles to each other, of a plurality of shelves supported one above the other between the supports, outstanding pins extending from one edge of each of the shelves and removably engaged with one support, a downwardly extending lug carried by each of the shelves at its forward edge, and a plurality of U-shaped yokes carried by the other support, one for each of the lugs.

1,377,939. PORTABLE BURGLAR-ALARM. SAMUEL SUNDEL, New Haven, Conn., assignor of one-half to Louis M. Rudman, New Haven, Conn., and one-half to Maurice Strachansky, East Haven, Conn. Filed Oct. 2, 1919. Serial No. 327,857. 4 Claims. (Cl. 177—314.)



1. A portable burglar alarm, comprising a casing adapted to be secured to a door or window, a battery in the casing, a bell on the casing, an electric circuit for the bell, a manually controlled switch for the electric circuit, a contact in the circuit and mounted in the said casing, a spring pressed contact lever fulcrumed within the casing and adapted to engage the said contact to close the circuit, the said contact lever having one end extending to the outside of the casing, a reversible restraining bar adapted to engage the outer end of the lever to hold the latter out of engagement with the said contact, the said bar having an arm at one end adapted to abut against the door or window frame either to the right or left of the casing, and means mounted on the said casing and engaging the said restraining bar to hold the latter in working position and to allow of reversing the restraining bar and its arm, and a block of insulating material adapted to be interposed between the door or window frame and the said arm.

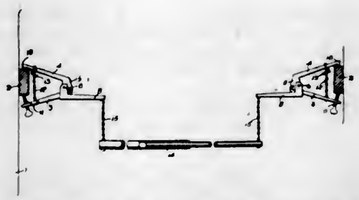
1,377,940. SOUND-CONCENTRATOR FOR TELEPHONE-TRANSMITTERS. ELMER EVERT TAYLOR, Loogootee, Ind. Filed Sept. 23, 1919. Serial No. 325,709. 3 Claims. (Cl. 179—107.)

2. A sound concentrator for telephone instruments, comprising a cap for the mouth-piece end of the transmitter having a central sound transmitting opening over and approximately of the same size as that of the transmitter to snugly embrace the transmitter casing with the depth of the cap such as to space the sound receiving face of the cap away from the transmitter by about approximately half the full depth of the cap and said cap having an interior cylindrical wall surrounding the transmitter mouth-piece with the outer end of the cap provided with frusto conical inner walls meeting intermediately between the cylindrical wall and there merging, whereby the inner walls of the cap constitute reflecting surfaces for sound waves directing said waves toward and concentrating them onto the central portion of the receiver diaphragm.

1,377,941. BOX-MARKER. SAMUEL J. THOMAS, East Wenatchee, Wash. Filed Nov. 29, 1920. Serial No. 427,031. 2 Claims. (Cl. 101—109.)

1. A stamping device comprising a frame provided with a handle, a plurality of printing members rigidly secured upon the opposite side of the frame from the handle, and a plurality of printing members detachably connected with the frame and each including a channel-shaped body of resilient material having side flanges adapted to snap over and engage upon the edges of said side of the frame, printing members carried by each of said channel-shaped members, and a handle on each channel-shaped member whereby the flanges thereof may be sprung.

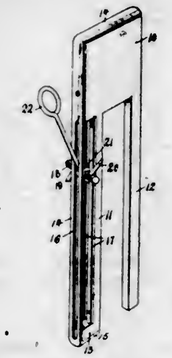
1,377,942. COMBINATION RAILWAY-TIE AND RAIL-FASTENER. ANDREW N. TAUMPOWER, Sr., Hagerstown, Md. Filed Apr. 26, 1920. Serial No. 376,651. 1 Claim. (Cl. 238—66.)



A railway tie of the character described comprising a body formed with a vertical web and horizontal top and bottom tapering portions extending therefrom, vertical reinforcing ribs permanently secured on opposite sides of the web and extending between the top and bottom tapering portions, the said top portion being formed with a rectangular groove therein directly above the central web and at the points of engagement of the rails with the tie, slidable rail fastening means coöperating with the said groove and secured to the top portion of the tie, the said rectangular groove having downward angular drainage passages communicating therewith extending on opposite sides of the vertical reinforcing ribs.

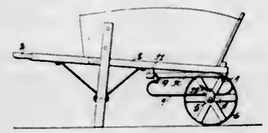
1,377,943. HAIR-WAVING DEVICE. SOTER B. TUSIS, Chicago, Ill. Filed Feb. 16, 1920. Serial No. 359,147. 1 Claim. (Cl. 132—33.)

As a new article of manufacture, a hair waving device formed of a flat piece of metal cut inwardly from one edge toward its longitudinal center to form tongues, said tongues bent at right angles to the strip and the alternate tongues extending in the same direction from the strip and in the direction opposite to the tongues next thereto.



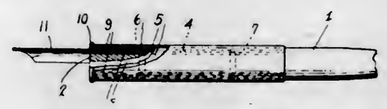
1,377,944. CLOTHES-HANGER. ROY G. TYLER, West Everett, Mass. Filed Feb. 8, 1921. Serial No. 443,400. 5 Claims. (Cl. 45—13.)

1. The combination with a suitable support, of an attaching means for a garment hanger, said means comprising a pair of jaws pivoted together at one end, a spur carried by the free end of one jaw and engageable with one side of the support, a screw movable through the free end of the other jaw and engageable with the other side of the support, an adjustable flexible device connecting the jaws and limiting the separation of the jaws caused by turning the screw when said screw is located against the support.



1,377,945. WEATHER-BOARD GAGE. EDWIN ULVEN, Soldier, Iowa. Filed Jan. 24, 1920. Serial No. 353,737. 4 Claims. (Cl. 33—33.)

1. An implement of the class described comprising an elongated body having guideways directed longitudinally thereof, a holding member extending through one of said guideways and having a guide collar extending into the

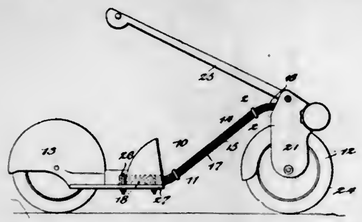


other guideway, and a scoring pin carried by the member and extending externally of one of the guideways.

1,377,946. WHEELBARROW. WILLIAM V. VAN ETTEN, Langley Prairie, British Columbia, Canada. Filed Oct. 20, 1920. Serial No. 418,251. 4 Claims. (Cl. 280—52.)

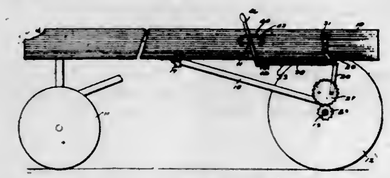
3. A means for supporting the frame of a wheelbarrow on the axle of its wheel, said means comprising a bearing for each end of the axle, a spring on which each bearing is endwise movable, one end of each spring secured to the under frame of the barrow adjacent the front end and the other end link-connected to the frame toward the other end that the springs are parallel to one another, and means for securing the bearings of the wheel at any desired position of endwise adjustment on the springs.

1,377,947. PENHOLDER. WYNAND VAN KORLAAR, Grand Rapids, Mich. Filed June 5, 1920. Serial No. 386,699. 1 Claim. (Cl. 120—101.)



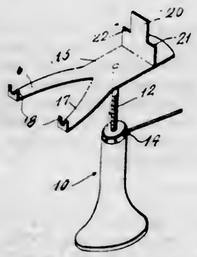
A pen holder comprising a stock, a cap carried thereby, a projection on the cap, a sleeve slidably mounted on the cap and provided with inwardly extending beads, the bead at the inner end of the sleeve being interrupted to form a space through which the projection may pass, the bead with said projection forming a stop for limiting the outward sliding movement of the sleece and the second bead forming a stop for the pen point.

1,377,948. RUNNING-GEAR. GEORGE W. WACKER, Rutherford, N. J. Filed Aug. 20, 1920. Serial No. 404,768. 2 Claims. (Cl. 180—31.)



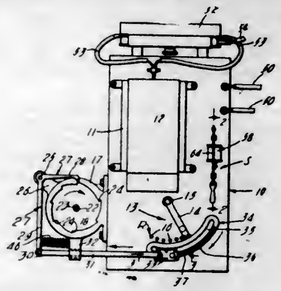
2. In an auto-ped, a front road-wheel mounting including bearings, a composite reach having different rela-

tively disposed portions, a rear road-wheel mounting, the said reach being disposed between the said mountings, stub shafts embodied by the reach which are journaled in



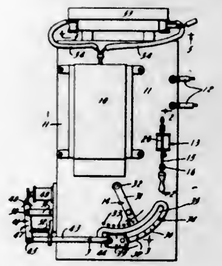
the brasses of said bearings to provide a steering connection between the front end of the reach and the front mounting.

1,377,949. WAGON. FRED H. WARD, Washington, D. C. Filed Oct. 20, 1920. Serial No. 418,202. 4 Claims. (Cl. 280—31.)



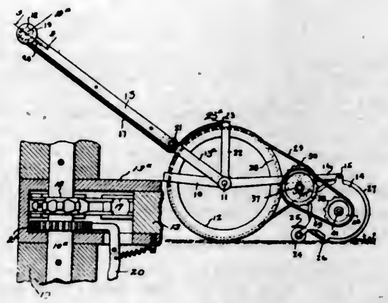
1. A wagon comprising a wagon body, running gear including a truck, a rotatable axle journaled on said truck, wheels on said axle, reach rods secured to the truck and pivotally secured to said wagon body, and a shouldered standard limiting the movement of said wagon body toward said truck, means for imparting a rolling motion to said wagon body including drive pinions fixed to the axle, a shaft rotatably journaled on the truck and having a crank at its ends, gears eccentrically fixed to the cranks and meshed with the drive pinions, drive rods eccentrically pivoted to the gears at the rear and, links pivotally connected to said drive rods at the rear end and to the wagon body at their opposite end, a swinging lever pivoted to the wagon body and connecting rods between the swinging lever and the links, and controlling means adapted to render the means for imparting the rolling motion to the wagon body active and inactive and consisting of a lever pivoted intermediate its ends to the wagon body and pivotally connected to one of the connecting rods, and a rack having ratchet teeth engageable with the operating lever for retaining the operating lever in adjusted position.

1,377,950. LIFTING-JACK. CHESTER A. WATSON, Ballinger, Tex. Filed Sept. 25, 1920. Serial No. 412,662. 5 Claims. (Cl. 254—100.)



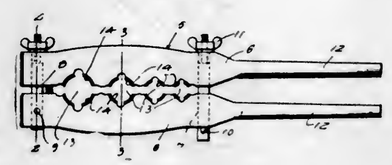
1. In a lifting jack, a stationary element, a movable element coöperating therewith, a transverse member, an upwardly extending lug thereon, and a device for engaging said lug and an axle of a vehicle, for preventing relative angular movement therebetween.

1,377,951. ELECTRIC-FURNACE CONTROL. ALFRED L. WILKES, Los Angeles, Calif. Filed June 17, 1919. Serial No. 304,854. 10 Claims. (Cl. 204—64.)



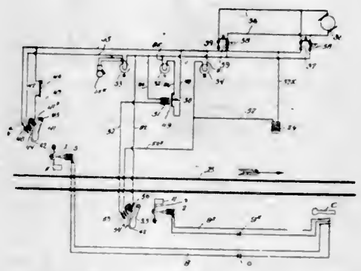
1. In combination with an electric oven, means for varying the temperature of said oven, time regulated means for actuating said varying means, and means for automatically disconnecting said oven upon reaching a predetermined temperature.

1,377,952. HEAT CONTROL FOR ELECTRIC FURNACES. ALFRED L. WILKES, Los Angeles, Calif. Filed Aug. 2, 1919. Serial No. 314,858. 11 Claims. (Cl. 219—35.)



1. In combination with an oven or the like, means for heating the oven to varying temperatures, and means for automatically finally discontinuing the heating of said oven upon its reaching a predetermined final temperature.

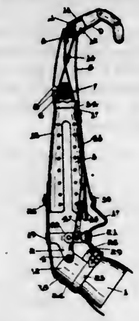
1,377,953. LAWN-MOWER. GALEN WOOD, Seattle, Wash. Filed Apr. 23, 1919. Serial No. 292,019. 11 Claims. (Cl. 56—252.)



1. A lawn mower including a wheeled main frame, a cutter-carrying frame suspended on the main frame to have movement relatively thereto for following the contour of the ground, said main frame being tiltable and said cutter frame being adapted to be raised or lowered by the tilting of the main frame.

1,377,954. ADJUSTABLE FLAT DIE. JOHN G. WRIGHT, Tyler, Tex. Filed Sept. 18, 1918. Serial No. 254,627. 1 Claim. (Cl. 10—116.)

A die, a pair of coacting jaws, thread cutting elements carried by the opposed faces of the jaws, a handle extending from one end of each jaw, said handles extending in the same direction, bolts passing through the jaws adjacent the ends thereof, a pin extending transversely of the bolt and one of the jaws, a pin carried by one end of the remaining bolts, bearing against the outer edge of the jaw and serving to limit the movement of said jaw away from the opposite jaw and permitting movement toward said opposite jaw.

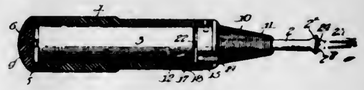


1,377,955. AUTOMATIC TRAIN-STOP. ELLIS EDWARD ADAMS and EDWARD CLAUDIUS BENNETT, Roanoke, Va. Filed July 21, 1919. Serial No. 312,179. 5 Claims. (Cl. 246—185.)

1. An automatic train stop system comprising semaphore controlled track, obstacles, train carried signal circuits to be closed by said obstacles another signal circuit controlled by one of the first mentioned circuits, and manually operated switches for opening all of said first mentioned circuits, and a recorder operated in opening each of said switches.

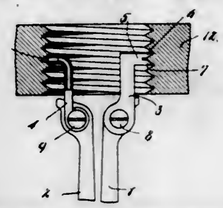
1,377,956. ARTIFICIAL HAND. DUNCAN MACKENZIE ANDERSON, Toronto, Ontario, Canada. Filed July 14, 1920. Serial No. 396,045. 7 Claims. (Cl. 3—12.)

1. The combination of an upper arm sheath; a fore-arm bucket; a hand connected to the end of said bucket and provided with jointed fingers; finger-flexing and finger-extending cables suitably guided in the fingers; a finger-flexing strap connected to the finger-flexing cables, extending along the back of the forearm bucket and connected to the upper arm sheath; and a finger-extending strap connected to the finger-flaxing cables, extending along



the front of the fore-arm bucket and connected to the upper arm sheath.

1,377,957. ANTISLIPPING VITRIFIED TILE. MILTON F. BEECHER, Worcester, Mass., assignor to Norton Company, a Corporation of Massachusetts. Filed Apr. 29, 1918. Serial No. 231,546. 12 Claims. (Cl. 106—7.5.)

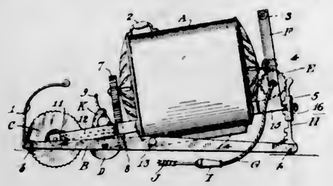


1. A ceramic article for a safety tread, comprising a body having a rough tread surface of durable, wear-resisting, vitrified non-glassy clay material and anti-slipping granular material of a hardness of 9 or more intimately incorporated therein and forming a considerable portion of the surface to prevent a pedestrian slipping thereon.

1,377,958. SCREWDRIVER OR THE LIKE. CARLOS S. ANDREWS, Chicago, Ill. Filed Aug. 28, 1916. Serial No. 117,207. 5 Claims. (Cl. 145—50.)

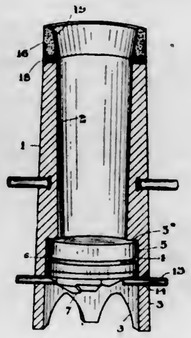
1. A screw driver having a shank provided with a magnetizing coil and a hollow handle containing a battery for energizing said coil.

1,377,959. THREAD-MEASURING APPARATUS. AXEL E. BJORKMAN, Cliftondale, Saugus, Mass. Filed Nov. 10, 1919. Serial No. 336,908. 1 Claim. (Cl. 33—199.)



Thread measuring apparatus of the kind described, having a pair of legs, a thread measuring member secured to each leg and projecting at an angle thereto, said members having right-angled thread contacting portions extending a substantially greater distance than the height or depth of the threads to be measured, a V-shaped end on one thread measuring member and a rounded portion on the end of the other thread measuring member in alinement with the bottom of the V-shaped end of the other member, said members being so proportioned as to contact with the approximate pitch diameter of the thread to be measured.

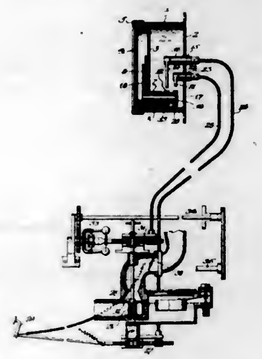
1,377,960. ANTISLIPPING TILE. HERBERT K. DODGE, Palisades, N. J., assignor to Norton Company, a Corporation of Massachusetts. Filed Apr. 29, 1918. Serial No. 231,417. 12 Claims. (Cl. 106—7.5.)



1. An anti-slipping tread block comprising anti-slipping particles of a hardness of 9 or more and a ceramic vitrified bonding material holding said particles together in a unitary wear resisting structure, said particles constituting a major portion of the block and receiving substantially all of the traffic wear.

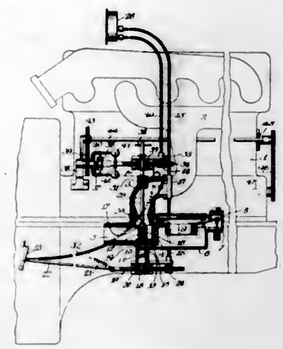
1,377,961. SAWING AND BORING DEVICE. GLENN H. DRABENSTOTT, Wooster, Ohio. Filed Sept. 23, 1920. Serial No. 412,328. 2 Claims. (Cl. 144—35.)

1. In a device of the character described, in combination, a slidable base, a motor mounted to swing endwise on said base, a circular saw attached to said motor, and driven by mechanism intermediate the same, and a guiding disk mounted to travel in the path of said saw, substantially as set forth.



1,377,962. INGOT-MOLD. ORVILLE ALDEN FOGARTY, Rigaud, Quebec, Canada. Filed Sept. 17, 1920. Serial No. 410,983. 3 Claims. (Cl. 22—139.)

1. In an ingot mold, a casing having an annular recess at the lower end forming a bottom seat, a bottom fitting to said seat and a keeper plate stepped for various thicknesses of the bottom and held by pins.



1,377,963. FUEL-ECONOMIZING DEVICE. GEZA HORVATH, Highland Park, Mich. Filed Dec. 15, 1919. Serial No. 345,012. 3 Claims. (Cl. 116—129.)

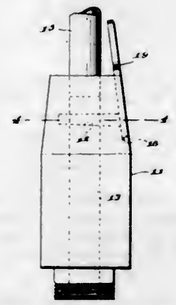
1. Means for determining the speed of an engine having a carbureter and the nature of the fuel mixture supplied to the engine by the carbureter, comprising an indicator having a fixed dial provided with indicia, a combined dial and pointer movable relative to said fixed dial, a pointer movable relative to said combined dial and pointer, and

means for separately moving said pointers, said means including concentric shafts and racks and pinions for imparting movement to said shafts.

1,377,964. SPEED-CONTROLLING DEVICE FOR VEHICLES. GEZA HORVATH, Highland Park, Mich. Filed Dec. 15, 1919. Serial No. 345,013. 4 Claims. (Cl. 123—123.)

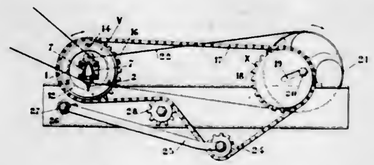
1. The combination of a carbureter body, a rotatable and slidable valvular member in said carbureter body adapted to admit fuel thereto, means adapted to adjust said valvular member, an adjustable valve in said carbureter body movable to and from said valvular member, a governor actuated means for adjusting said valve, and means adapted to indicate adjustment of said valve and valvular member.

1,377,965. RADIATOR CONSTRUCTION. GEZA HORVATH, Detroit, Mich., assignor to National Can Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 12, 1918, Serial No. 249,431. Renewed Mar. 25, 1921. Serial No. 455,434. 7 Claims. (Cl. 257—130.)



1. In radiator construction, a core assembly comprising a plurality of tube units each having a plurality of spacing elements projecting alternately in opposite directions, each unit having a zig-zag formation in the direction of fluid flow with the spacing members positioned at the apices of the angles, and a spacing plate positioned between units and having a configuration to extend substantially parallel to the units, said plate having

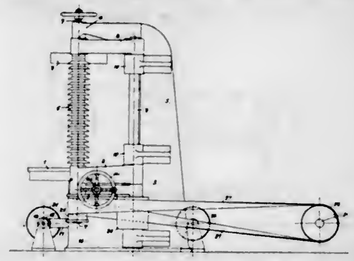
dimensions to permit the spacing members of one unit to project beyond the extremes of the opposing members of the adjacent unit, both sets of members contacting



with the interposed spacing plate, said assembly providing air passages on opposite sides of the plate, said plate having a configuration to permit movement of air from one space to another.

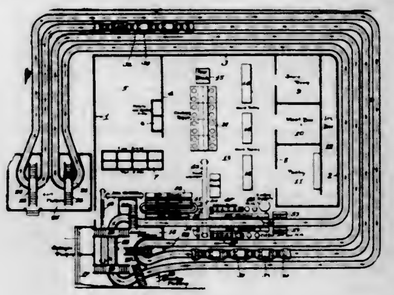
1,377,966. SHUT-OFF FOR GAS-WELLS. FRANK W. HUNTER, Kinzua, Pa. Filed Nov. 8, 1920. Serial No. 422,584. 3 Claims. (Cl. 166—15.)

1. A gas well valve including a body, a removable closure for preventing escape of gas while a pipe is being placed, and a removable closure for preventing escape of gas except through the pipe.



1,377,967. APPARATUS FOR HAMMERING PISTON-RINGS. CHARLES LAUFFET, Paris, France. Filed Sept. 2, 1919. Serial No. 321,231. 2 Claims. (Cl. 78—26.)

1. A machine for hammering piston rings comprising a hammer, means including a ratchet wheel and roller for reciprocating said hammer, means for supporting a piston ring and driving means for imparting a uniform reciprocating motion to the hammer and adapted to be adjusted to impart either a uniform rotary or a uniformly varied rotary motion to the ring.



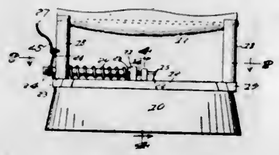
1,377,968. MACHINE FOR MAKING BARREL-HEADS. CHRISTOPHER JOHN MONTGOMERY, Liverpool, England. Filed Nov. 9, 1920. Serial No. 422,912. 2 Claims. (Cl. 147—40.)

1. A machine for shaping and dressing the peripheral edges of barrel heads, comprising a rotary support adapted to receive a series of barrel heads arranged in superimposed relation, upright shafts mounted beyond the support, spaced cutter carrying arms mounted on each of said shafts, a cutter shaft mounted in the free ends of each set of arms, an adjusting arm mounted for free rotary movement on each of the first mentioned shafts, a connection between each of said adjusting arms,

a cam way formed in the support, a screw shaft having threaded connection with each of said cutter carrying arms, means for connecting the ends of such shafts to permit the shafts to move longitudinally with respect to each other, and a connection between each of said shafts and the adjacent adjusting arm, whereby the cam way determines the cutting path of the cutters and the screw shafts the dimensions of such path.

1,377,969. RESTAURANT SYSTEM. LAZARUS MUNTEAN, Highland Park, Mich. Filed Aug. 19, 1920. Serial No. 404,703. 5 Claims. (Cl. 45—26.)

1. An endless track for a restaurant providing a substantially rectangular inclosure and having parallel loop portions at one side of the inclosure and loop portions one within the other, at another side of the inclosure, said loop portions affording a gap as an entrance to the inclosure, and table carrying cars on said track.

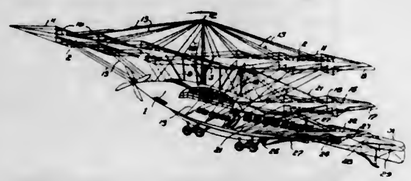


1,377,970. GAS-PRESSURE-REDUCING DEVICE. JAMES A. PARENT, Detroit, Mich., assignor of one-half to Thomas S. Richard, Detroit, Mich. Filed May 14, 1920. Serial No. 381,497. 2 Claims. (Cl. 67—120.)

2. The combination with a conduit composed of joined pipes adapted to have gas pass therethrough, of a cone open at one end only and supported axially of said conduit and providing a baffle, a cone surrounding and supporting the first mentioned cone, adapted to receive gas therefrom and restrict the passage of gas to the axis of said conduit.

a series of disks within the conduit adjacent the last mentioned cone causing the gas to travel in a tortuous path impinging against the walls of the conduit, and means between joined pipe ends of said conduit preventing longitudinal displacement of said disks.

1,377,971. SADIRON. HENRY PETERSON, Dunkirk, Mont. Filed May 1, 1920. Serial No. 378,091. 1 Claim. (Cl. 68—26.)

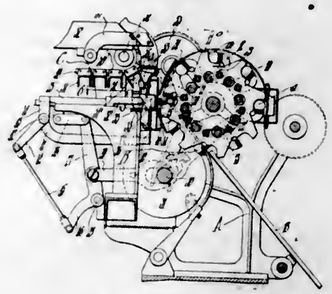


A sad iron having a body provided with a longitudinal seat and an upstanding tongue, a handle having a base bar for engagement with said seat and provided at an intermediate point with an opening for the reception of said tongue, a spring-actuated bolt provided with a collar and mounted upon the base bar for engagement with an opening in the tongue, and a bolt-operating lever mounted upon the handle in engagement with the collar on the bolt and provided with a fingerhold disposed adjacent to one end of the handle grip.

1,377,972. SPLICING-EAR FOR OVERHEAD TROLLEY-WIRES. RALPH ROSE and NICHOLAS F. CIMAGLIA, Mount Vernon, N. Y. Filed July 16, 1919. Serial No. 311,341. 8 Claims. (Cl. 191—44.)

1. In a device of the character described, the combination of a splicing member having bulged sides, adapted to have the ends of the trolley wire attached thereto, and a U-shaped guide piece removably attached to said splicing member, adapted to fit over the ends of the trolley wire and to have its sides bear against the sides of said splicing member.

1,377,973. TRIPLANE. JAMES L. SHANKLAND, Toronto, Ontario, Canada. Filed Aug. 23, 1919. Serial No. 319,376. 1 Claim. (Cl. 244—14.)



A tri-plane comprising a body, an aerofoil above said body, intermediate wings protruding from the sides of said body adjacent the top thereof, rear wings protruding from the sides of said body adjacent the bottom thereof, said wings being in planes stepped downwardly from said aerofoil and decreasing in area with the tips of said aerofoil and wings of less area than the central and inner portions thereof so as to concentrate the lifting power of said aerofoil and wing at said body, posts above and below said aerofoil and wings with the posts of each trussed together and to the lower sides of said body, masts mounted on said body in a central vertical plane with one of said masts extending through said aerofoil, mast wires connecting the top of each mast to said body and to the posts above said aerofoil and each wing, and struts connecting said body and said aerofoil.

1,377,974. PIE MARKER AND TRIMMER. EVELYN L. SIMPSON, Waterville, Me. Filed Oct. 1, 1920. Serial No. 414,016. 2 Claims. (Cl. 107—49.)

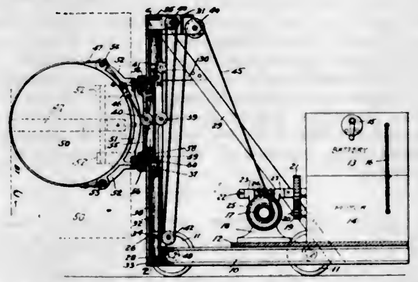
1. A device of the class described consisting of a handle; a disk revolubly mounted on one end thereof; and a plurality of lateral projections extending outwardly from one face of said disk and formed integral therewith.

1,377,975. WRAPPING-MACHINE. ELMER LOVELL SMITH, Springfield, Mass., assignor to Package Machinery Company, Springfield, Mass., a Corporation of Massachusetts. Filed May 20, 1919. Serial No. 298,482. 15 Claims. (Cl. 93—5.)

4. In a wrapping machine, a turret, a plunger to feed articles to the turret and movable to and from the latter, said plunger having a forked end to receive the articles, a gate coöperating with such end to provide a pocket in which an article may be deposited, and means controlled by the plunger to move said gate to allow the plunger to carry the article to the turret.

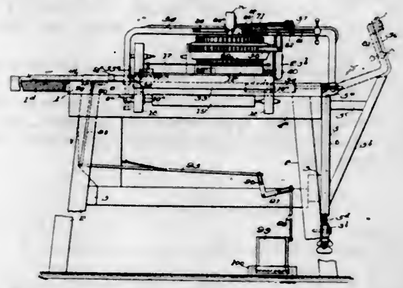
1,377,976. FLOUR-MILLING MACHINERY. GEORGE T. SMITH, Wichita Falls, Tex., assignor of seventeen and two-thirds per cent. to Daisy Dell Sheldon, and one-third to C. P. Sheldon, Wichita Falls, Tex. Filed Feb. 28, 1919. Serial No. 279,717. 6 Claims. (Cl. 83—12.)

1. A flour milling system comprising a single flow consisting of a suitable casing, breaking rolls and sieves arranged in alternate formation in a single downward path, bran reels intermediate the upper and lower parts of the casing, chutes for delivering the bran to said bran reels, chutes for delivering middlings to reduction rolls below



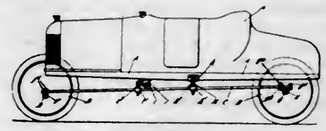
said reels, bolting reels at the lower end of said casing, and chutes for delivering flour from separating sieves above and below said bran reels to said bolting reels.

1,377,977. LADDER. ALBERT A. SORG, Grand Rapids, Mich. Filed Aug. 30, 1919. Serial No. 320,962. 2 Claims. (Cl. 228—22.)



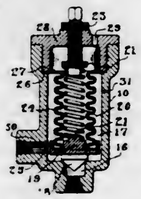
1. In combination with a step ladder having a vertically adjustable center section, lower sections supporting the center section; a slide pivotally mounted upon the upper ends of the lower sections, links pivotally connected with the lower sections, pivotally connected together, and slidably connected with the slides, said slides having slots that incline from the perpendicular, a rod mounted in said slots, and indentures formed in the edges of the stiles of the central section of the ladder to receive the rod and lock the ladder extension in place.

1,377,978. TRUCK. OTTO L. E. WEBER, St. Cloud, Minn. Filed May 8, 1919. Serial No. 295,770. 12 Claims. (Cl. 214—66.)



1. A truck comprising a frame, a carriage mounted for vertical movement therein, a block on the carriage mounted for rotation on a horizontal axis, means for clamping the article to be lifted on said block, means to raise and lower said carriage, and means adapted upon raising of the carriage to actuate said article-clamping means.

1,377,979. STENCIL-CUTTING APPARATUS. ERNEST G. CLARK, De Kalb, Ill. Filed July 30, 1919. Serial No. 314,389. 14 Claims. (Cl. 197—6.2.)

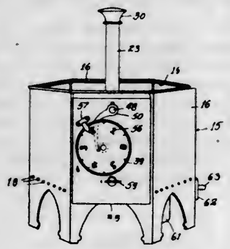


1. In a machine for the purpose indicated, in combination with a fixed support, a punch carrier mounted thereon for rotation about a fixed axis; a platen carrier mounted for movement along said fixed support, and a platen on said carrier; a pair of rolls from and onto which respectively a stencil web may be wound mounted on the platen carrier at opposite sides of the platen; and guide means for the stencil web at opposite sides of the platen, the platen being elevated above the plane of said guides.

1,377,980. SPRING SUSPENSION OF MOTOR ROAD-VEHICLES. LEONARD EUGENE COWEY, Kew Gardens, England. Filed Feb. 16, 1920. Serial No. 358,888. 8 Claims. (Cl. 267—41.)

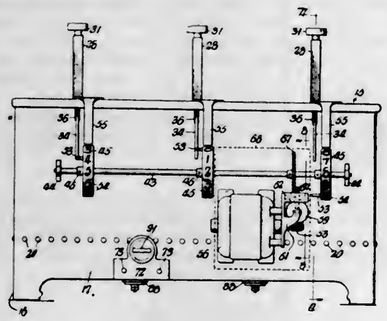
7. In a motor road vehicle the combination with a chassis, of long springs disposed on opposite sides of the chassis, means attaching one end of each of said springs to the front axle, means attaching the other end of each of said springs to the rear axle, means connecting each of said springs to the chassis at two points in a non-rigid or flexible manner, one of said connections to the chassis being of such a character as to permit endwise movement of the springs relatively to the chassis, and means for adjusting the position of the rear connection to the chassis so as to alter the strength of the springs to suit different classes of vehicles or different loads on the same vehicle.

1,377,981. COMPRESSOR-CONTROLLING MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 29, 1917. Serial No. 177,771. 22 Claims. (Cl. 251—145.)



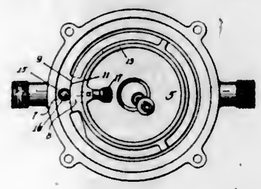
1. In a compressor controlling mechanism, a casing, a longitudinally extensible and compressible member therein, a valve for admitting fluid pressure to said casing carried by said member, and means normally seating said valve.

1,377,982. MANUFACTURE OF MOLYBDENUM TUNGSTEN ALLOY. FREDERICK G. KEYES, Cambridge, Mass., assignor to Cooper Hewitt Electric Company, a Corporation of New Jersey. Original application filed Oct. 16, 1915, Serial No. 56,214. Divided and this application filed July 11, 1917. Serial No. 179,933. 3 Claims. (Cl. 75—1.)



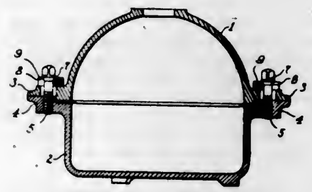
1. The step in the method of producing a bar of metallic alloy composed of molybdenum and tungsten which consists in subjecting a molded moistened bar of said metals to a drying process, applying to the dry bar a heat of about 1200° and passing through it a very slow stream of dry hydrogen.

1,377,983. EGG-BOILER. CHARLES CALVERT LAMB, Chicago, Ill. Filed Oct. 13, 1917. Serial No. 196,359. 9 Claims. (Cl. 161—16.)



1. An egg boiler, comprising a tank, a receptacle vertically movable therein, means for raising said receptacle, an arm extending downward into said tank from adjacent the upper edge thereof and moved by said receptacle into locking engagement therewith upon the depression of the receptacle in said tank, and time controlled means for effecting the movement of said arm out of locking engagement with said receptacle.

1,377,984. EGG-BOILER. CHARLES C. LAMB, Chicago, Ill. Filed Mar. 29, 1918. Serial No. 225,479. 12 Claims. (Cl. 161—16.)

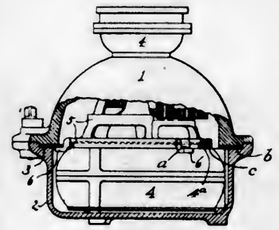


1. An egg boiler, comprising a tank, a receptacle vertically movable therein, means for raising said receptacle, a pivotally mounted trigger having two connected arms straddling one of the upright walls of said tank and having movement transverse of said tank wall, said trigger having one arm extending downward into the tank and moved by said receptacle into locking engagement therewith upon the depression of said receptacle in said tank, and the other arm extending downward on the outside of said tank, and time controlled means adapted to operate on the outer arm for moving the inner arm out of locking engagement with said receptacle.

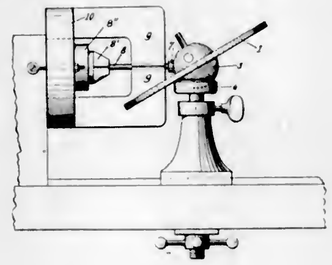
1,377,985. METER. FRANK LAMBERT, Brooklyn, N. Y., assignor to Thomson Meter Company, Brooklyn, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1919. Serial No. 327,652. 3 Claims. (Cl. 73—98.)

1. In a meter, a casing containing a measuring chamber, said casing and chamber having coacting projections on their side walls, the adjacent surfaces of said projections being shaped to form a tight joint, said projections being provided with ports arranged to register when the chamber is in position within the casing, the projection on the measuring chamber having a hole and the projection on the casing having a recess, a fastening member slidable in said hole when loosened and having a head adapted to enter said recess, and means engaging said member for drawing said head against the walls of said recess and thereby tightening the joint between said coacting surfaces, the head of said member passing freely into and out of said recess when said member is loosened to permit ready insertion of the measuring chamber into the casing and its ready removal therefrom.

1,377,986. YIELDING FASTENING FOR JOINTS. FRANK LAMBERT, Brooklyn, N. Y., assignor to Thomson Meter Company, Brooklyn, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1919. Serial No. 327,653. 3 Claims. (Cl. 285—134.)



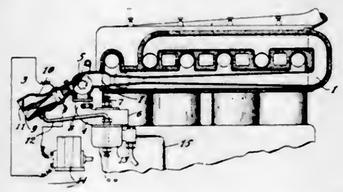
1. The combination with two joint members, of means for connecting said members comprising headed screws passing each through a screw-hole of one of said members into engagement with the other of said members, the said screw-hole being of a size to permit free passage of the head of the screw, and an expansion member normally interposed between the screw-head and the joint member provided with the screw-hole, but adapted to expand under pressure to permit the passage of the screw-head.



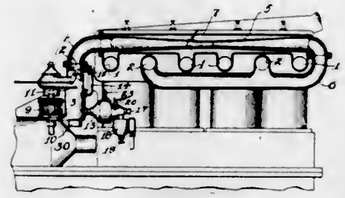
1,377,987. WATER-METER. FRANK LAMBERT, Brooklyn, N. Y., assignor to Thomson Meter Company, Brooklyn, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1919. Serial No. 327,654. 7 Claims. (Cl. 73—98.)

1. In a water meter, the combination of a two-part casing, a measuring chamber within said casing, a gear frame freely mounted on said measuring chamber, projecting lugs on said gear frame, said lugs being out of supporting engagement with the lower part of the meter casing, the top face of the lower casing part being substantially on a level

with the top faces of said lugs, said top faces of the lower casing part and lugs coacting to form a level gasket support, a gasket on said support, and means on the upper casing part to bear down on said gasket and thereby hold said gear frame in place.

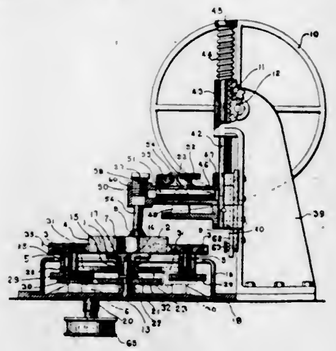


1,377,988. METHOD OF AND APPARATUS FOR FINISHING WATER-METER DISKS. FRANK LAMBERT, Brooklyn, N. Y., assignor to Thomson Meter Company, Brooklyn, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1919. Serial No. 327,655. 8 Claims. (Cl. 90—20.)



1. The herein-described method of finishing the slots of slotted meter disks having spherical central portions, which consists in oscillating the spherical portion of the disk in working contact with a rotating concave-faced cutter.

1,377,989. METHOD OF OPERATING INTERNAL-COMBUSTION ENGINES. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed Nov. 6, 1919. Serial No. 336,027. 17 Claims. (Cl. 123—122.)



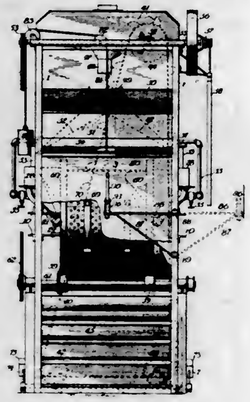
1. The method of operating internal combustion engines which consists in causing the suction effect of the rotating engine to cause the flow of mixture of liquid fuel and air coincidently from two separate localities, while controlling the proportions of the mixture from each locality, igniting the mixture from one of said localities, commingling the ignited with the unignited mixture in transit to the engine and running the engine on the commingled medium.

1,377,990. COMBUSTION-ENGINE. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 21, 1917, Serial No. 149,998. Renewed Mar. 23, 1920. Serial No. 368,158. 59 Claims. (Cl. 123—122.)

1. In combination, an internal combustion engine having a throttle-controlled suction intake including a carbureter delivering charge-mixture-proportions, and an automatically-igniting burner connected with said intake and having fuel and air admission means functioning by the suction of said intake to maintain relative proportions serving to support a continuous flame within itself, and an outlet from said burner adapted to deliver the burner products into said intake by the effect of the suction therein for supplying heat to vaporize the engine fuel.

1,377,991. WHEEL-TRIMMING MACHINE. THURE LARSSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1920. Serial No. 374,575. 14 Claims. (Cl. 82—1.)

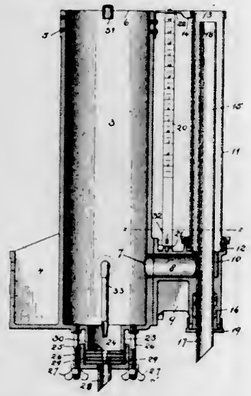
1. A wheel trimming machine comprising a cutting tool, a support for the same, and means frictionally driving against and movable relative to the surface of the wheel to rotate said wheel while in engagement with the cutting tool.



1,377,992. FUEL. CHARLES LE PETIT, Mombasa, British East Africa, assignor to Power Alcohol Limited, London, England. Filed Sept. 18, 1919. Serial No. 324,296. 7 Claims. (Cl. 44—9.)

1. The herein described fuel composition which comprises a combustible liquid containing an aliphatic amin and a formyl ester.

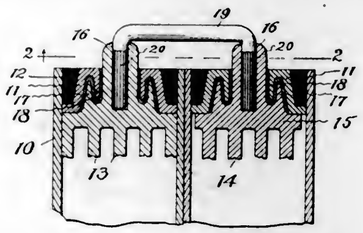
1,377,993. SAND-BLAST MACHINE. ELMER A. RICH, Jr., Chicago, Ill., assignor to The American Foundry Equipment Company, New York, N. Y., a Corporation of Ohio. Filed Apr. 7, 1916. Serial No. 89,532. 10 Claims. (Cl. 51—13.)



2. The combiantion of a rotary drum provided with apertures for the escape of sand, a frame supporting said drum, and an inclined platform located below said drum

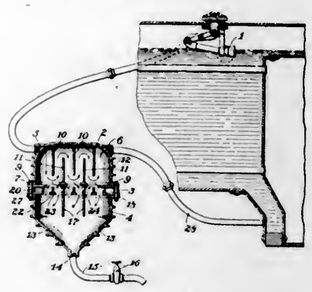
and arranged to convey sand downwardly from said drum, said platform being hinged near the floor so that

when swung down into a horizontal position it will form a support for a truck, and a counterweight and arms for counterbalancing said platform.



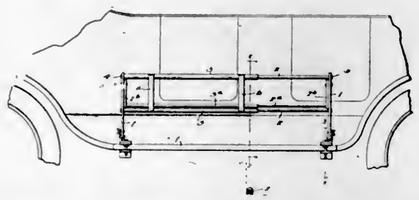
1,377,994. LIQUID-FEEDING APPARATUS. FREDERICK H. WAGNER, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed Oct. 2, 1916. Serial No. 123,247. 3 Claims. (Cl. 137—21.)

1. In a liquid-feed apparatus, the combination with a receptacle having two outlets one of a greater capacity than the other, of means for varying the size of the outlet of the lesser capacity to one of a plurality of predetermined sizes at a time; a tube having continuous communication with the outlet of the greater capacity; an adjustable overflow tube in said tube, and a scale for each size of outlet of the plurality of sizes whereby a predeterimned quantity of liquor may be discharged in a given time by adjusting the overflow tube in accordance with the scale for the size of outlet employed.



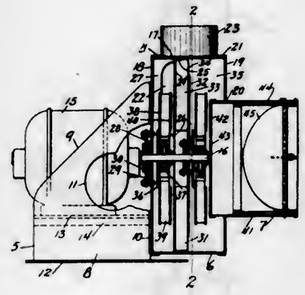
1,377,995. STORAGE BATTERY. THEODORE A. WILLARD, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Aug. 7, 1916. Serial No. 113,423. 3 Claims. (Cl. 204—29.)

1. In a storage battery, a pair of cells each comprising a chamber containing a group of battery plates connected together by an integral and substantially horizontal strap with an integral post extending upwardly from an intermediate point of the strap, and a one-piece substantially



U-shaped cross connector extending across from one cell to the other and having its end portions extending centrally and axially into and embedded in the posts of the two cells.

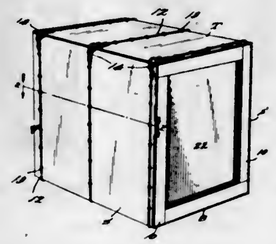
1,377,996. PRECIPITATOR. WILLIAM E. WINE, Toledo, Ohio. Filed Mar. 6, 1920. Serial No. 363,738. 7 Claims. (Cl. 210—60.)



1. A precipitator comprising an upper dome-shaped portion provided with a plurality of spaced baffle walls, a plane central portion also provided with a plurality of baffles and a lower portion also provided with baffle walls, the bottom walls of the lower portion converging and said precipitator provided with inlet, outlet and drain passages.

1,377,997. LUGGAGE-CARRIER. ALBERT A. KLUG, ARTHUR M. REYNOLDS, and ETHAN L. REYNOLDS, Delton, Wis. Filed June 10, 1919, Serial No. 303,135. Renewed Apr. 13, 1921. Serial No. 460,911. 3 Claims. (Cl. 224—29.)

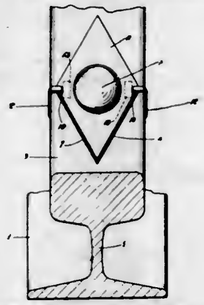
1. A device of the type described, including end members, means for the attachment thereof to carrying means, telescoping extensible and retractable means of connection between said end members and an additional rod and tubular like connection between said end members, the rod and tubular members of the latter connection having direct pivotal link connections with said end members.



1,377,998. SUCTION OR BLOWING APPARATUS. IRA H. SPENCER, West Hartford, Conn., assignor to The Spencer Turbine Company, West Hartford, Conn., a Corporation of Connecticut. Filed Nov. 17, 1920. Serial No. 424,596. 7 Claims. (Cl. 230—11.)

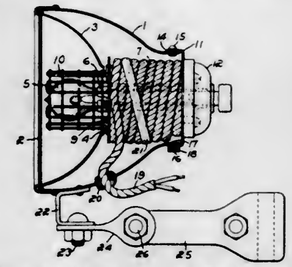
1. A suction or blowing apparatus casing comprising a motor section with sides arranged in spaced relation, a motor supporting plate extending between the side parts and secured thereto, and a fan section having an end with its flat face secured against the back edges of said sides.

REISSUES.



15,100. BOX OR CRATE. HUGH BROWN, Battle Creek, Mich., assignor, by mesne assignments, to Wirebounds Patents Company, a Corporation of Maine. Filed Sept. 22, 1915. Serial No. 52,133. Original No. 1,133,001, dated Mar. 23, 1915, Serial No. 753,311, filed Mar. 10, 1913. 24 Claims. (Cl. 217—12.)

1. A wirebound package, comprising a plurality of individual sections, each comprising a pair of cleats and connecting sheet material, binding wires attached to such sections so as to connect them in foldable relation, each of said binding wires carrying an eye at each end stopping short of registry with each other when the sections are folded, and a single fastening means passing through the several oppositely disposed eyes along an edge of the package to firmly hold the top section closed.



15,101. SIGNALING-TORPEDO. WILLIAM T. MCCULLOUGH, Pittsburgh, Pa., assignor of one-half to Henry J. Orth, Pittsburgh, Pa. Filed Mar. 3, 1921. Serial No. 449,533. Original No. 1,337,240, dated Apr. 20, 1920, Serial No. 219,222, filed Feb. 26, 1918. 9 Claims. (Cl. 246—487.)

1. A torpedo comprising an integral body formed of two superimposed parts in the form of diamond-shaped parallelograms whereby pointed end portions beyond the explosive charge are provided, one of said parts having a pocket formed therein, and an explosive charge in the

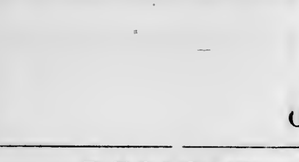
pocket and between the two parts, the other part forming the bottom portion of the body.

15,102. ELECTRIC SPOTLIGHT. JOHN P. NIKONOW, New York, N. Y., assignor, by mesne assignments, to The Hawthorne Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 16, 1919. Serial No. 318,059. Original No. 1,300,454, dated Apr. 15, 1919, Serial No. 246,290, filed July 23, 1918. 12 Claims. (Cl. 240—7.)

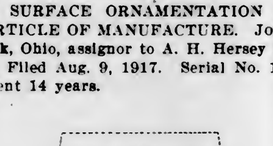
9. Lighting apparatus comprising a support or bracket, a lamp structure sustained thereby and including a reflector, a light normally positioned in front of the reflector, an element presented at the rear of the lamp structure and providing a handle whereby said light may be withdrawn rearwardly from said reflector, a conductor leading to said light and laterally connected thereto to leave said handle unobstructed thereby and a reel for storing slack of said conductor intervening between its point of connection and said support.

15,103. PHOTOGRAPHIC PRINTS ON METAL. PHILO V. SNOW, Chicago, Ill., assignor to The Radiotone Photo Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1921. Serial No. 449,532. Original No. 1,346,140, dated July 13, 1920, Serial No. 323,121, filed Sept. 11, 1919. 24 Claims. (Cl. 41—27.)

8. A process for producing photographic prints on metal which includes printing from a negative on a sensitized sheet of metal, developing the print, dyeing the print, polishing the print, and coating the print with a preservative.

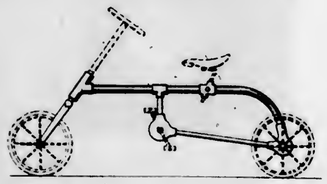


DESIGNS.

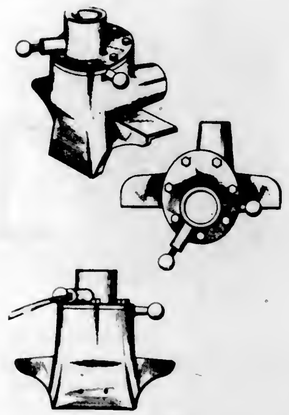


57,806. SURFACE ORNAMENTATION APPLIED TO AN ARTICLE OF MANUFACTURE. JOSEPH O. BALDA, Newark, Ohio, assignor to A. H. Hersey & Co., Newark, Ohio. Filed Aug. 9, 1917. Serial No. 185,366. Term of patent 14 years.

The ornamental design for a surface ornamentation applied to an article of manufacture, substantially as shown and described.

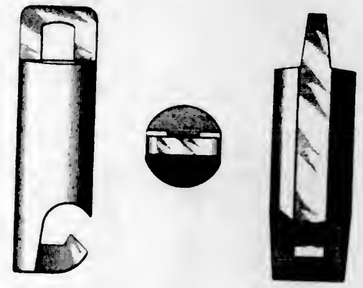


57,807. VELOCIPEDE-FRAME. LUCIEN J. BARIBAULT, West Haven, Conn., assignor of one-half to Lewis M. Ryman, New Haven, Conn. Filed Apr. 29, 1920. Serial No. 377,721. Term of patent 7 years.



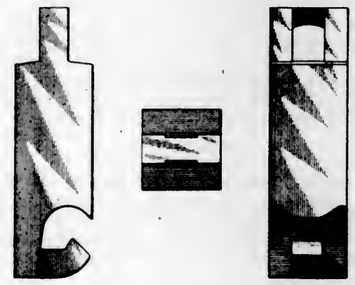
The ornamental design for a velocipede frame as shown.

57,808. VELOCIPEDE-FRAME. LUCIEN J. BARIBAULT, West Haven, Conn., assignor of one-half to Lewis M. Ryman, New Haven, Conn. Filed July 6, 1920. Serial No. 394,370. Term of patent 14 years.



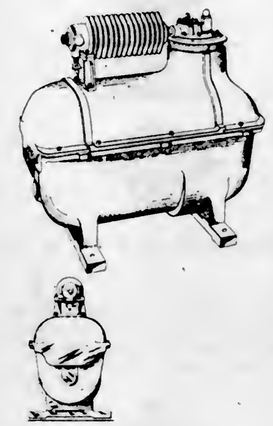
The ornamental design for a velocipede frame as shown.

57,809. GEAR-CASING FOR WASHING-MACHINES. HARRY O. BARTLETT, Washington, D. C., assignor to Bowers & Bartlett, Inc., Washington, D. C., a Corporation of Maryland. Filed Aug. 16, 1920. Serial No. 403,960. Term of patent 14 years.



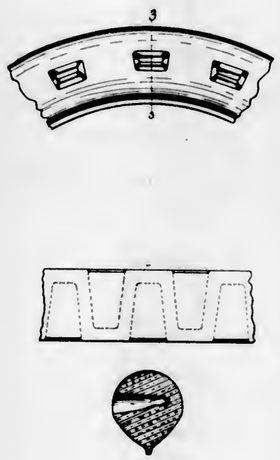
The ornamental design for a gear casing for washing machines, as shown.

57,810. SECTIONAL SASH-WEIGHT. WILLIAM A. BARTLEY, Washington, N. J. Filed Oct. 27, 1920. Serial No. 420,029. Term of patent 14 years.



The ornamental design for a sectional sash weight, as shown.

57,811. SECTIONAL SASH-WEIGHT. WILLIAM A. BARTLEY, Washington, N. J. Filed Oct. 27, 1920. Serial No. 420,030. Term of patent 14 years.

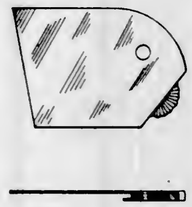


The ornamental design for a sectional sash weight, as shown.

57,812. HOUSING FOR ELECTRIC AIR COMPRESSORS AND MOTORS. SAMUEL DUNCAN BLACK and ALONZO G. DECKER, Baltimore, Md., assignors, by mesne assignments, to Second National Bank of Baltimore, trustee, Baltimore, Md. Filed June 6, 1919. Serial No. 302,345. Term of patent 14 years.

The design for a housing for electric air compressors and motors substantially as shown.

57,813. TIRE-CORE. WALTER A. BLACK, Perry, Iowa. Filed Oct. 23, 1920. Serial No. 419,097. Term of patent 14 years.

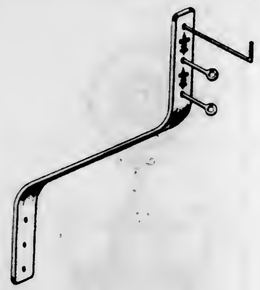


The ornamental design for a tire core, as shown.

57,814. PERCOLATOR, URN, OR SIMILAR ARTICLE. RUDOLPH J. BOURGEOIS, Chicago, Ill., and GEORGE P. ITTIG, Bridgeport, Conn., assignors to W. D. Smith Silver Company, a Corporation of Delaware. Filed Nov. 29, 1918. Serial No. 264,743. Term of patent 14 years.

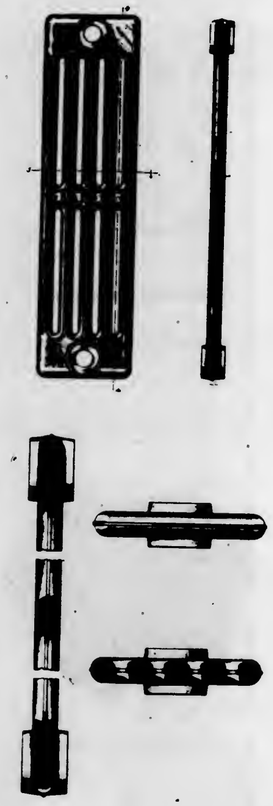
The ornamental design for a percolator, urn, or similar article, as shown.

57,815. PASTRY-TOOL. JOHN CLARK BROWN, Minneapolis, Minn. Filed Sept. 26, 1919. Serial No. 326,685. Term of patent 14 years.



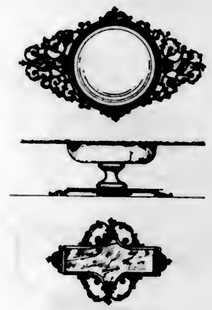
The new and ornamental design for a pastry tool, as shown.

57,816. FAN. WILLIAM BROWN, St. Louis, Mo. Filed Oct. 18, 1920. Serial No. 417,854. Term of patent 7 years.



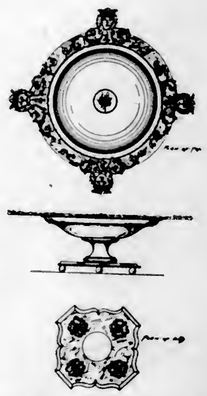
The ornamental design for a fan, as shown.

57,817. CURTAIN-POLE BRACKET. NICOLA CIMINO, Providence, R. I. Filed Aug. 6, 1920. Serial No. 401,796. Term of patent 7 years.



The ornamental design for a curtain pole bracket, as shown.

57,818. RADIATOR-SECTION. LOUIS COUATOT, Paris, France, assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 30, 1919. Serial No. 320,954. Term of patent 14 years.

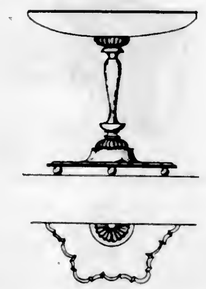


The ornamental design for a radiator section, as shown.

57,819. DISH. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Dec. 22, 1919. Serial No. 346,792. Term of patent 7 years.

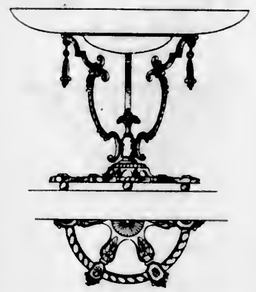
The ornamental design for a dish, as shown.

57,820. DISH. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Dec. 22, 1919. Serial No. 346,793. Term of patent 7 years.



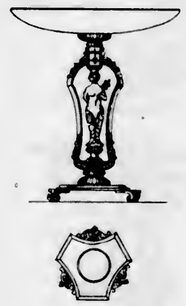
The ornamental design for a dish, as shown.

57,821. DISH. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Dec. 22, 1919. Serial No. 346,795. Term of patent 7 years.



The ornamental design for a dish, as shown.

57,822. FRUIT-DISH OR ARTICLE OF SIMILAR NATURE. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 29, 1920. Serial No. 354,936. Term of patent 7 years.



The ornamental design for a fruit dish or article of similar nature, as shown.

57,823. FRUIT-DISH OR ARTICLE OF SIMILAR NATURE. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 29, 1920. Serial No. 354,937. Term of patent 7 years.

ESCORT

Particular description of goods.—Eggs, Butter, and Live and Dressed Poultry.

Claims use since Aug. 1, 1920.

Ser. No. 137,460. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FANNIE FRAZIER, Chicago, Ill. Filed Sept. 22, 1920.

Mrs Fannie Frazier.

The name appearing in the drawing being a facsimile of the signature of the applicant.

Particular description of goods.—A Medicine to be Used as a Uterine Sedative.

Claims use since May 5, 1919.

Ser. No. 137,563. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BOERICKE & RUNYON CO., San Francisco and Oakland, Calif. Filed Sept. 24, 1920.

NEPHTOL

Particular description of goods.—Home Medicines for Diseases of the Kidneys and Bladder.

Claims use since 1900.

Ser. No. 137,622. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH MAURO, Rochester, N. Y. Filed Sept. 25, 1920.

VITRO-LAY

Particular description of goods.—A Liquid Preparation for Smoothing and Dressing the Hair and Also Beneficial as a Scalp-Tonic.

Claims use since Aug. 15, 1920.

Ser. No. 137,721. (CLASS 43. THREAD AND YARN.) J. E. BARBOUR COMPANY, Paterson, N. J. Filed Sept. 29, 1920.

IRISH

FLAX

No claim being made to the words "Irish Flax" apart from the mark shown.

Particular description of goods.—Yarns.

Claims use since March, 1912.

Ser. No. 137,978. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VAN VLEET-MANSFIELD DRUG CO., Memphis, Tenn. Filed Oct. 5, 1920.

In the drawing the word "Plantation" and the central panel of the design are lined for red, indicating like coloration. The other lining appearing on the drawing is merely to represent shading only.

Particular description of goods.—An Antiseptic.

Claims use since Jan. 1, 1895.

Ser. No. 138,118. (CLASS 12. CONSTRUCTION MATERIALS.) JOSEPH A. BIRKHOLZ, Orange, N. J. Filed Oct. 9, 1920.

ARMOBOARD

Particular description of goods—Building Wall and Partition Panels Made of Concrete, Artificial Stone, and Similar Compositions.

Claims use since July 7, 1920.

Ser. No. 138,204. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BELLINGHAM CHEMICAL CO., Bellingham, Wash. Filed Oct. 12, 1920.

J-O-T-O

JO-TO

Particular description of goods.—A Composition of Matter Comprising a Definite Mixture of Dry Medicinal Powders, More Particularly for the Relief of Pains in the Stomach, for Which Purpose it is to be Taken Internally.

Claims use since Oct. 4, 1920.

Ser. No. 138,208. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HERSEY P. BARNES, Philadelphia, Pa. Filed Oct. 12, 1920.

Particular description of goods.—Soap Flakes.

Claims use since June, 1919.

Ser. No. 138,271. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE AMERICAN MULTIGRAPH SALES CO., Cleveland, Ohio. Filed Oct. 14, 1920.

MULTIGRAPH

Particular description of goods.—Printing-Machines and Parts Thereof.

Claims use since about September, 1904.

Ser. No. 138,274. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CARL AHLERS, New York, N. Y. Filed Oct. 14, 1920.

STERIL-SEAL

Particular description of goods.—Eggs.

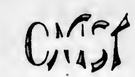
Claims use since Sept. 29, 1920.

Ser. No. 138,290. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE LENITONE LABORATORIES COMPANY, Cleveland, Ohio. Filed Oct. 14, 1920.

LENITONE

Particular description of goods.—Foods for Infants, Invalids, and Convalescents.

Claims use since Sept. 23, 1920.



Ser. No. 138,318. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CATHARINE H. HUSBAND, Philadelphia, Pa. Filed Oct. 15, 1920. Under ten-year proviso.

Particular description of goods.—Bottled Magnesia.

Claims use since 1837.

Ser. No. 138,332. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EUGENE B. NICOLAIT, Brooklyn, N. Y. Filed Oct. 15, 1920.

Particular description of goods.—Bakers' Products—viz., Bread.

Claims use since about Sept. 21, 1920.

Ser. No. 138,423. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) AMERICAN TRANSOCEANIC TRADERS, INC., New York, N. Y. Filed Oct. 18, 1920.

Particular description of goods.—Matches.

Claims use since June 1, 1920.

Ser. No. 138,479. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JAMES H. EDELEN, Oakland, Calif. Filed Oct. 19, 1920.

CALPRO

Particular description of goods.—Liquid Ant-Exterminators.

Claims use since about Sept. 30, 1919.

Ser. No. 138,730. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) B. L. SESSUM, Memphis, Tenn. Filed Oct. 23, 1920.

POK-A-DOT

Particular description of goods.—Stock Feed.

Claims use since Sept. 1, 1920.

Ser. No. 138,795. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE WILLIAMSON HEATER COMPANY, Cincinnati, Ohio. Filed Oct. 25, 1920.

HOMAKER

Particular description of goods.—Coal, Gas, and Wood Furnaces.

Claims use since Sept. 11, 1920.

Ser. No. 138,850. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DRY OIL PRODUCTS, LTD., London, England, and New York and Trout Creek, N. Y. Filed Oct. 27, 1920.

DACKO

Particular description of goods.—Dry Pulverulent Mixtures Containing Oils or Fats, to be Employed as a Shortening Agent in Cooking.

Claims use since Sept. 1, 1920.

Ser. No. 139,108. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HERSEY P. BARNES, Philadelphia, Pa. Filed Nov. 3, 1920.

Insto

Particular description of goods.—Soap Flakes.

Claims use since June, 1919.

Ser. No. 139,259. (CLASS 12. CONSTRUCTION MATERIALS.) FLEX-OR-CRETE CORPORATION, Boston, Mass. Filed Nov. 6, 1920.

FLEX-OR-CRETE

Particular description of goods.—Autosolidifying Structural Compositions Composed of Cement, Fiber, and other Ingredients.

Claims use since the latter part of 1918.

Ser. No. 139,296. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE NULOMOLINE COMPANY, New York, N. Y. Filed Nov. 6, 1920.

HONYO

Particular description of goods.—Cane-Syrup and Molasses for Food Purposes; Glucose, Grain-Syrup, and Refiner's Syrup for Food Purposes; Honey, and Invert-Sugar.

Claims use since Oct. 25, 1920.

Ser. No. 139,302. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PEERLESS FOOD MANUFACTURING CO., Pittsburgh, Pa. Filed Nov. 6, 1920.

PEER-KO

Comprises the name "Peer-Ko."
Particular description of goods.—Vinegar, Sauer-Kraut, Pickles, Fruit Butters, Jams, Jellies, Fruit Preserves.
Claims use since Aug. 1, 1920.

Ser. No. 139,329. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE TINCTORIAL COMPANY, Denver, Colo. Filed Nov. 6, 1920.

CHAMPION

Particular description of goods.—A Dye for Changing the Color of Leather to a Deep Black.
Claims use since June 11, 1920.

Ser. No. 139,365. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NORTH AMERICAN DYE CORPORATION, Mount Vernon, N. Y. Filed Nov. 8, 1920.

Apart from the mark as shown in the drawing no claim is made to the words "Colorantes, Dyes, Marca de Fabrica Registrada" and the word "Negro," being the equivalent in Spanish of the English word "Black."
Particular description of goods.—Dyes.
Claims use since Dec. 17, 1917.

Ser. No. 139,572. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE HOUBIGANT, Paris, France. Filed Nov. 12, 1920.

PARFUM
INCONNU

No claim being made to the word "Parfum" apart from the mark shown in the drawing.
Particular description of goods.—Perfumes, Toilet Waters, Sachet, and Sachet-Powders.
Claims use since 1910.

Ser. No. 139,573. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE HOUBIGANT, Paris, France. Filed Nov. 12, 1920.

Particular description of goods.—Perfumes, Toilet Waters, Sachet, and Sachet-Powders.
Claims use since 1906.

Ser. No. 139,574. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE HOUBIGANT, Paris, France. Filed Nov. 12, 1920.

Premier mai

Particular description of goods.—Perfumes, Toilet Waters, Face-Powders, Liquid Lotion for the Skin, Sachets, Sachet-Powders, and Brilliantine.
Claims use since 1908.

Ser. No. 139,575. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE HOUBIGANT, Paris, France. Filed Nov. 12, 1920.

MON
BOUDOIR

Particular description of goods.—Perfumes, Toilet Waters, Sachets, and Sachet-Powders.
Claims use since 1919.

Ser. No. 139,639. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ANTHONY J. TRASSO, New York, N. Y. Filed Nov. 13, 1920.

SANOTRIX

Particular description of goods.—Medicinal Preparation for the Treatment of the Hair and Scalp.
Claims use since Oct. 15, 1920.

Ser. No. 140,088. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HAWAIIAN FRUIT PRODUCTS COMPANY, LIMITED, Honolulu, Hawaii. Filed Nov. 23, 1920.

Particular description of goods.—Fruit Jams, Jellies, and Preserves, Dried Bananas and Banana-Flour, Canned Pineapples, and Canned Fruits and Vegetables.
Claims use since June 1, 1919.

Ser. No. 140,070. (CLASS 15. OILS AND GREASES.) STANDARD OIL COMPANY, Bayonne, N. J. Filed Nov. 23, 1920.

Prymol

Particular description of goods.—Liquid Fuel Oil.
Claims use since Oct. 30, 1920.

Ser. No. 140,105. (CLASS 12. CONSTRUCTION MATERIALS.) THE GEORGIA MARBLE COMPANY, Tate, Ga. Filed Nov. 24, 1920.

"Creole"

Particular description of goods.—Marble Cut to Size, Finished Marble, and Cut Stone.
Claims use since 1885.

Ser. No. 140,134. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE LOURNAY, INC., New York, N. Y. Filed Nov. 24, 1920.

L' Ile d' Amour

Consisting of the words "L'Ile d'Amour."
Particular description of goods.—Toilet Preparations—viz., Face-Powder.
Claims use since Oct. 20, 1920.

Ser. No. 140,135. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE LOURNAY, INC., New York, N. Y. Filed Nov. 24, 1920.

Lournay

Consisting of the word "Lournay."
Particular description of goods.—Toilet Preparations—viz., Face-Powder.
Claims use since Oct. 20, 1920.

Ser. No. 140,141. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE LOURNAY, INC., New York, N. Y. Filed Nov. 24, 1920.

Qui Sait?

Consisting of the words "Qui Sait?"
Particular description of goods.—Toilet Preparations—viz., Face-Powder.
Claims use since Oct. 20, 1920.

Ser. No. 140,142. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE LOURNAY, INC., New York, N. Y. Filed Nov. 24, 1920.

Fleur Vivant

Consisting of the words "Fleur Vivant."
Particular description of goods.—Toilet Preparations—viz., Face-Powder.
Claims use since Oct. 20, 1920.

Ser. No. 140,143. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE LOURNAY, INC., New York, N. Y. Filed Nov. 24, 1920.

Fleur de Mignon

Consisting of the words "Fleur de Mignon."
Particular description of goods.—Toilet Preparations—viz., Face-Powder.
Claims use since Oct. 20, 1920.

Ser. No. 140,174. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GLANDEX COMPANY, INC., New York, N. Y. Filed Nov. 26, 1920.

DEX

Particular description of goods.—A Laxative Tablet.
Claims use since Aug. 17, 1920.

Ser. No. 140,223. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) V. VIVAUDOU, INC., New York, N. Y. Filed Nov. 26, 1920.

MYRTIS

Particular description of goods.—Face-Powders, Face-Creams, Perfumes, Toilet Waters, Rouges, Hair-Tonics, Hair-Oils, Dentifrices, Tooth-Powders, Nail-Polishes, Deodorizing Preparations, and Sachet-Powders.
Claims use since Nov. 8, 1920.

Ser. No. 140,345. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) T. NOONAN & SONS COMPANY, Boston, Mass. Filed Nov. 27, 1920.

SLIKUM

Particular description of goods.—Hair-Dressing Preparations.
Claims use since on or about Apr. 1, 1920.

Ser. No. 140,377. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FREDERICK STEARNS & CO., Detroit, Mich. Filed Nov. 29, 1920.

ESTEROL

Particular description of goods.—Medicines for Use in Intestinal Diarrhea, Dysentery, Colic, Dysmenorrhea, and in Conditions Requiring a Non-Narcotic, Anti-Spasmodic, and Sedative.
Claims use since Nov. 15, 1920.

Ser. No. 140,378. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FREDERICK STEARNS & CO., Detroit, Mich. Filed Nov. 29, 1920.

Sadira

Particular description of goods.—Perfumes, Toilet Waters, and Face-Powders.
Claims use since Nov. 19, 1920.

Ser. No. 140,391. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN FRANCIS LOGAN, San Francisco, Calif. Filed Nov. 29, 1920.

FADE-A-WAY

Particular description of goods—Pile Remedy.
Claims use since Nov. 6, 1920.

Ser. No. 140,488. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CLAPP PRODUCTS COMPANY, Boston, Mass. Filed Dec. 1, 1920.

TORON

Particular description of goods.—Sulfur-Terpene Compounds and Solutions.
Claims use since on or about Feb. 21, 1920.

Ser. No. 140,502. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Dec. 1, 1920.

Particular description of goods.—Dyestuffs, Intermediates, and Certified Food-Colors.
Claims use since June 25, 1920.

Ser. No. 140,503. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM B. PRICE, Poughkeepsie, N. Y. Filed Dec. 1, 1920.

AQUANON

Consists of the word "Aquanon."
Particular description of goods.—A Waterproofing Composition for Fabrics of All Kinds.
Claims use since 1913.

Ser. No. 140,505. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RICHTER BROS., Hartford, Conn. Filed Dec. 1, 1920.

TANGO DUST

Particular description of goods.—Insecticides.
Claims use since Jan. 1, 1920.

Ser. No. 140,540. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HODGE W. NORMAN, Phoenix, Ariz. Filed Dec. 2, 1920.

"AEROTONE"

Particular description of goods.—A Liquid Medicinal Preparation for the Treatment of Tuberculosis.
Claims use since Sept. 18, 1920.

Ser. No. 140,560. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ESTELLE B. FINLAYSON, Ossining, N. Y. Filed Dec. 3, 1920.

Creo-Belle

Particular description of goods.—Liquid Face-Powder.
Claims use since Oct. 22, 1920.

Ser. No. 140,571. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MERCK & CO., New York, N. Y. Filed Dec. 3, 1920.

PHYLLOSAN

Particular description of goods.—A Preparation of Chlorophyl in Tablet Form.
Claims use since Oct. 22, 1920.

Ser. No. 140,587. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MOSELLA FILE, Winston-Salem, N. C. Filed Dec. 4, 1920.

ELECTRO MAGIC

Particular description of goods.—Hair-Grower.
Claims use since Oct. 18, 1914.

Ser. No. 140,600. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH P. KAYATTA, Providence, R. I. Filed Dec. 4, 1920.

Particular description of goods.—Fire-Brick and Tile Manufactured From Fire-Clay for Metallurgical Furnaces.
Claims use since January, 1903.

142,364. (CLASS 12. CONSTRUCTION MATERIALS.) CRESCENT REFRACTORIES COMPANY, Curwensville, Pa. Filed Oct. 3, 1918. Serial No. 113,554.

STOVE JUNIATA

Particular description of goods.—Fire-Bricks and Tile Manufactured From Fire-Clay for Metallurgical Furnaces.
Claims use since January, 1903.

142,365. (CLASS 12. CONSTRUCTION MATERIALS.) CRESCENT REFRACTORIES COMPANY, Curwensville, Pa. Filed Oct. 3, 1918. Serial No. 113,555.

FORD

Particular description of goods.—Fire-Bricks and Tile Manufactured From Fire-Clay for Metallurgical Furnaces.
Claims use since May, 1914.

142,366. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. I. DU PONT DE NEMOURS & COMPANY, Wilmington, Del. Filed Sept. 2, 1920. Serial No. 136,742.

DU PONT DYESTUFFS

Particular description of goods.—Dyestuffs.
Claims use since April, 1918.

142,367. [WITHDRAWN.]

142,368. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. I. DU PONT DE NEMOURS & COMPANY, Wilmington, Del. Filed Sept. 2, 1920. Serial No. 136,748.

DU PONT

Particular description of goods.—Dyestuffs.
Claims use since April, 1918.

142,369. (CLASS 39. CLOTHING.) D. B. FISK & CO., Chicago, Ill. Filed Dec. 31, 1920. Serial No. 141,828.

Fiskhats

Particular description of goods.—Trimmed and Untrimmed Hats for Women and Children.
Claims use since on or about Jan. 22, 1905.

142,370. (CLASS 39. CLOTHING.) H. GOLDWATER & CO. INC., New York, N. Y. Filed Dec. 30, 1920. Serial No. 141,676.

AMERICAN GIRL

Particular description of goods.—Girls' Coats.
Claims use since Feb. 28, 1914.

142,371. (CLASS 39. CLOTHING.) THE H & W COMPANY, INC., Newark, N. J. Filed Jan. 8, 1921. Serial No. 141,982.

They Fit

Particular description of goods.—Brassières, Bandeaux, Children's Underwaists and Skeleton Waists; Corset-Waists for Ladies, Misses, and Children; Corsets, Including Maternity-Corsets; Elastic-Tape Girdles, Tape-Girdles, and Hose-Supporter Belts.
Claims use since about July 1, 1916.

142,372. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) JACKSON PIANO CO., Milwaukee, Wis. Filed Jan. 17, 1921. Serial No. 142,344.

MIESSNER

Particular description of goods.—Pianos and Player-Pianos.
Claims use since Oct. 26, 1918.

142,373. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) WILLIE S. JOHNSON, St. Louis, Mo., assignor to Leslie M. Wilkinson, St. Louis, Mo. Filed Sept. 4, 1919. Serial No. 122,303.

JOHNSON'S TIRE PATCH

Particular description of goods.—Repair Outfits for Automobile Tires and Tubes.
Claims use since Mar. 26, 1919.

142,374. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) JOHN Y. KING, Lansdowne, Pa. Filed Feb. 3, 1921. Serial No. 143,239.

KARBURETOR

Particular description of goods.—Air-Feeding Devices for Stoves, Furnaces, and other Burning Appliances.
Claims use since on or about Oct. 1, 1919.

142,375. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) LA FAYETTE MOTORS COMPANY, Indianapolis, Ind. Filed Sept. 23, 1920. Serial No. 137,533.

LAFAYETTE

Particular description of goods.—Automobiles.
Claims use since Jan. 1, 1920.

142,376. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) LANDERS, FRARY & CLARK, New Britain, Conn., and Connersville, Ind. Filed Feb. 10, 1921. Serial No. 143,395.

CONNERSVILLE

Particular description of goods.—Electrically-Driven Apparatus Comprising Scrubbing-Machines, Floor-Polishing Machines, Floor-Sanding Machines, and Vacuum-Cleaners.
Claims use since 1909.

142,377. (CLASS 11. INKS AND INKING MATERIALS.) ROLAND G. LANDIS, Dayton, Ohio. Filed Feb. 5, 1921. Serial No. 143,216.

FLAX CLOTH

Particular description of goods.—Typewriter-Ribbons.
Claims use since on or about Jan. 1, 1915.

142,378. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH B. MCMANES, Columbus, Ohio. Filed Nov. 20, 1920. Serial No. 139,896.

BROMO-ASPIRIN

Particular description of goods.—A Medicine in Tablet and Powder Form for Nervous and Sick Headache.
Claims use since about Feb. 1, 1919.

142,379. (CLASS 39. CLOTHING.) ROBERT E. MILLER, INC., New York, N. Y. Filed Sept. 3, 1920. Serial No. 136,806.

U-PUT-ON

Particular description of goods.—Rubber Heels.
Claims use since June, 1917.

142,380. (CLASS 39. CLOTHING.) THE MILLER RUBBER COMPANY, Akron, Ohio. Filed Dec. 18, 1920. Serial No. 141,274.

Miller

Particular description of goods.—Rubber Baby-Bibs, Bathing-Caps; Rubber Belts, (Trouser;) Rubber Household Gloves, Rubber Acid-Gloves, Rubber Linemen's Gloves.
Claims use since Oct. 6, 1907.

142,381. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) NATIONAL CARBON COMPANY, INC., New York, N. Y. Filed Mar. 18, 1921. Serial No. 144,935.

White A.C. Special

Particular description of goods.—Arc-Light Carbons.
Claims use since about Oct. 1, 1917.

142,382. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) NATIONAL WEATHER-PROOF PAINT CO., Milwaukee, Wis. Filed Sept. 8, 1919. Serial No. 122,442.

NU Top-Dressing

Particular description of goods.—A Waterproof Dressing for Use on Auto-Tops, Auto-Curtains, Wagon-Tops, Wagon-Curtains, Wagon-Covers, Tents, Awnings, Piano-Covers, Car-Covers, Hatch-Covers, Boat-Covers, Sails, Nets, Ropes, Hunting-Coats, Hunting-Suits, Shoes, Leggings, Hose, Hats, Pants, Shirts, Mittens, Gloves, Sheets, Tarpaulins, Aprons, Cement-Sacks, Cement-Covers, Butcher-Aprons, Blacksmith-Aprons, Auto-Washing Aprons, Window-Shades, Harnesses, Belting, Rubber Goods, Typewriter-Covers, Canvas, Paper, &c.
Claims use since Oct. 1, 1918.

142,383. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,655.

BOATING SERGE

Particular description of goods.—Cotton Piece Goods.
Claims use since 1911.

142,384. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PACIFIC MILLS, Lawrence and Boston, Mass. Filed Jan. 22, 1921. Serial No. 142,665.

DURABLE

Particular description of goods.—Cotton Piece Goods.
Claims use since December, 1915.

142,385. (CLASS 39. CLOTHING.) F. A. PATRICK & Co., Duluth, Minn. Filed Jan. 5, 1921. Serial No. 141,876.

Mankato DULUTH

Particular description of goods.—Aprons, Bath-Robes, Blouses, Booties, Rubber Boots, Leather Boots, Cloth Capes, Fur Capes, Cloth Capes Lined with Fur, Rubber Caps, Leather Caps, Fur Caps, Cloth Caps, Caps of Oiled Fabric, Caps of Waterproof Fabric, Rubber Coats, Leather Coats, Fur Coats, Fabric Coats, Fur-Lined Coats, Coats of Oiled Fabric, Coats of Waterproof Material; Men's, Women's, and Children's Drawers of Either Textile Fabric or Knitted Fabric; Dresses, Gowns; Men's, Women's, and Children's Hats of Either Straw, Felt, Cloth, Beaver, or Rubber; Rubber Hoods, Fabric Hoods, Straw Hoods; Hosiery of Either Silk, Wool, Cotton, or Mercerized Fabric; Insoles, Fabric Jackets, Fur Jackets, Leather Jackets, Jumpers, Mufflers; Leggings of Either Leather, Canvas, or Cloth; Moccasins of Either Leather, Canvas, or Cloth; Hand-Muffs of Either Fabric or Fur, Ear-Muffs, of Either Fabric or Fur, Nightgowns, Overalls; Overshoes of Either Rubber, Cloth, or Both Rubber and Cloth; Pajamas, Pantaloons, Rubber Raincoats, Raincoats of Cravenette Material, Fur Robes, Fabric Robes; Sandals of Either Rubber, Leather, or Canvas; Slippers of Either Cloth, Leather, or Canvas; Dress Outer Shirts, Negligée Outer Shirts, Work Outer Shirts, Outer Skirts, Sweaters, Feather Toques, Fabric Toques, Fabric Ulsters, Fur Ulsters, Fur-Lined Ulsters; Men's, Women's and Children's Undershirts of Either Knitted or Textile Fabric; Outer Vests, Undervests, Shirtwaists, Underwaists, Waistcoats, Trousers of Oiled Fabric, Leather Trousers, Rubber Trousers, Trousers of Waterproof Material, Fabric Cloaks, Fur Cloaks, Fur-Lined Cloaks; Gloves of Either Rubber, Leather, or Fabric; Overcoats of Either Rubber, Leather, or Fabric; Men's Women's, and Children's Knitted Underwear Made Up of Either One Garment or more Than One Garment; Outer Suits for Men, Women, and Children; Men's, Women's, and Children's Undersuits of Either Knitted or Textile Fabrics, and Children's Romper-Suits.
Claims use since Jan. 1, 1912.

142,386. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PEPSINIC SELTZER COMPANY, Worcester, Mass. Filed Oct. 12, 1920. Serial No. 138,233.

PEPSINIC SELTZER "AMELOTTE"

Particular description of goods.—Effervescing Salt for Use in Cases of Headache, Heartburn, Indigestion, Gastritis, Dyspepsia, (Hyperacid Type.)
Claims use since about Oct. 10, 1916.

142,387. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PETER CAILLER KOHLER SWISS CHOCOLATES Co., INC., New York, N. Y. Filed Jan. 10, 1921. Serial No. 142,020.

"RICHEST IN CREAM"

Particular description of goods.—Milk-Chocolate.
Claims use since January, 1900.

142,388. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MILAN FRANCIS PRATT, Rochester, N. Y. Filed Nov. 23, 1920. Serial No. 140,063.

Lithuric SALTS

Particular description of goods.—Salts Used in the Treatment of Kidney and Bladder Troubles, Rheumatism, Gout, Backache, Arthritis, and other Complaints Due to an Uric-Acid Diathesis; Liver and Bowel Disorders, and Removing the Products of Intestinal Fermentation and Decomposition; Prevents and Relieves the Excessive Blood-Pressure Due to Constipation, Auto-Intoxication, Kidney and Uric-Acid Complaints.
Claims use since Apr. 8, 1918.

142,389. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ROENTGEN APPLIANCE COMPANY, San Francisco, Calif. Filed Mar. 1, 1921. Serial No. 144,203.

STABILIZER

Particular description of goods.—Apparatus for Maintaining Constant Current on Coolidge Tubes.
Claims use since Sept. 3, 1919.

142,390. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE SANITARY FEATHER CO., Chicago, Ill. Filed Aug. 5, 1920. Serial No. 135,827.

SANITARY

Particular description of goods.—Pillows, Sofa-Cushions, Mattresses, and Box-Springs.
Claims use since Jan. 1, 1894.

142,391. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) N. SIMON CHEESE CO., INC., Appleton, Wis. Filed Dec. 5, 1919. Serial No. 125,634.

SIMON'S

Particular description of goods.—Cheese.
Claims use since January, 1919.

142,392. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) SIMMONS HARDWARE COMPANY, St. Louis, Mo. Filed Oct. 15, 1920. Serial No. 138,349.

SIMMONS

Particular description of goods.—Harness, Riding-Saddles, Horse-Collars, Swingle and Double Trees, Neck-Yokes.
Claims use since Jan. 26, 1912.

142,393. (CLASS 25. LOCKS AND SAFES.) SIMMONS HARDWARE COMPANY, St. Louis, Mo. Filed Oct. 15, 1920. Serial No. 138,357.

SIMMONS

Particular description of goods.—Padlocks, Night-Latches.
Claims use since Dec. 29, 1911.

142,394. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) G & J TIRE COMPANY, Indianapolis, Ind. Filed Jan. 11, 1921. Serial No. 142,068.

STALWART

Particular description of goods.—Vehicle-Tires Made of Rubber.
Claims use since January, 1918.

142,395. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WESTERN SAUSAGE & PROVISION CO., INC., New York, N. Y. Filed July 19, 1920. Serial No. 135,183.

FINE PRIZE

Particular description of goods.—Dried Sausage.
Claims use since 1907.

142,396. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE J. B. WILLIAMS COMPANY, Glastonbury, Conn. Filed Feb. 17, 1921. Serial No. 143,731.

HOLDER TOP

Particular description of goods.—Shaving-Sticks.
Claims use since on or about May 21, 1909.

142,397. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE J. G. WILSON CORPORATION, Norfolk, Va. Filed Aug. 27, 1919. Serial No. 122,067.

DIFFUSELITE

Particular description of goods.—Ready-Mixed Paints.
Claims use since July 1, 1919.

142,398. (CLASS 39. CLOTHING.) "THE YOUNG MEN'S SHOP," Washington, D. C. Filed Dec. 29, 1920. Serial No. 141,659.

"The Young Men's Shop"

Particular description of goods.—Men's, Youths', and Boys' Coats, Vests, Trousers, Overcoats; Straw, Felt, and Textile Hats and Caps; Dress and Negligée Shirts, Collars, Cuffs, Sweaters, Hosiery, Bath-Robes, Bathing-Suits, Night-Shirts, Pajamas, Leather and Textile Gloves, Knitted and Woven Underwear in One and Two Piece Garments, Raincoats, Scarfs, Mufflers; Boots, Shoes, and Slippers of Leather, Fabric, Rubber, and Combination; Suspenders, Cravats, Neckties, and Belts.
Claims use since 1912.

142,399. (CLASS 39. CLOTHING.) SAMUEL ZALIS, Baltimore, Md. Filed Nov. 17, 1920. Serial No. 139,778.

BALTIMORE SHIRT CO.

Particular description of goods.—Work-Shirts, Dress-Shirts, Negligée Shirts, Knitted and Textile Fabric Underwear, Union-Suits, and Two-Piece Garments for Men.
Claims use since Jan. 1, 1919.

LABELS

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

THOMSON *v.* PEARSONS.

Decided December 9, 1919.

PATENTS—PRIORITY—CONSTRUCTION OF ISSUE—BROAD INTERPRETATION.

Under the rule that the counts of an interference issue should be given the broadest interpretation which they will reasonably support *Held* that Pearsons is entitled to make the claims and that he is entitled to an award of priority.

[Affirmed by the Court of Appeals of the District of Columbia, 286 O. G., 415.]

APPEAL from Examiners-in-Chief.

FIRE-EXTINGUISHING DEVICE.

Mr. Seward Davis for Thomson.

Mr. John O. Seifert for Pearsons.

NEWTON, *Commissioner:*

This is an appeal by Thomson from the decision of the Examiners-in-Chief affirming the action of the Examiner of Interferences awarding priority to Pearsons, the senior party, on the following issue:

1. In an automatic fire extinguisher, a container for a fire extinguishing fluid, means adapted automatically to place said fluid under compression when a predetermined temperature is reached and means normally within said container adapted to expel the fluid at a point exterior to said container.

2. In a fire extinguisher, the combination of a container for a fire extinguishing fluid, means adapted to place said fluid under compression, and means adapted to be projected from said container for conveying said fluid to a point exterior to said container and there ejecting it.

3. In a fire extinguisher, the combination of a container for a fire extinguishing fluid, means adapted to place said liquid under compression, and means for ejecting said liquid at a point exterior to said container, said means being positioned within said container when the compression means is inactive.

4. In a fire extinguisher, the combination of a container for a fire extinguishing fluid, means adapted to compress said fluid and to project a nozzle from said container, and means for causing said compression means to become operative.

Thomson is a patentee; but his patent was issued less than a year before Pearsons copied two claims for interference purposes. Counts 3 and 4 were afterward added under Rule 109 by the Law Examiner.

The invention covered by the counts is an automatic fire-extinguisher, and the only point involved is whether Pearsons can make the claims corresponding to the counts.

At an extended hearing before me Thomson emphasized the same points that are so fully discussed by the Board of Examiners-in-Chief in its decision, and since I agree with that tribunal in its statements of facts as well as its conclusions nothing need be added thereto.

Unquestionably the two involved devices are specifically different. Thomson's liquid is expelled by a spring 11, which, by the way, is old, (see Putnam, No. 1,098,837,) while Pearsons's is expelled by the expansion of generated gas. Thomson's device (Figures 1 and 2) is adapted for use as a hand-extinguisher to be pointed in different directions and even upwardly, while Pearsons's is not; but the counts, when fairly construed, are broad enough to read on either device and are, furthermore, patentable over the prior art by reason of such limitations as—

> means adapted to be projected from said container for conveying said fluid to a point exterior to said container and there ejecting it—

of count 2 and corresponding limitations of the other counts, and there is no need in reading limitations into the counts. Indeed, it is now well established that—

> we must give claims the broadest interpretation which they will reasonably support, and we are not at liberty to import limitations therein to meet the exigencies of a particular situation. (*Miel* v. *Young*, 128 O. G., 2532; 29 App. D. C., 481; *Kirby* v. *Clements*, 216 O. G., 1319; 44 App. D. C., 12.)

The decision of the Examiners-in-Chief holding that Pearsons's disclosure supported the counts, and therefore their award of priority to him, was undoubtedly in accordance with the practice, and it is affirmed.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

IN RE COFFIELD.

Decided February 7, 1921.

1. PATENTS — NOVELTY AND INVENTION — CLOTHES-WRINGER.

Claims in an application for a patent on improvement in clothes-wringers the only novel element of which was a rigidly attached drain-board and clothes-guide *Held* patentable, since none of the patents of the prior art discloses this idea.

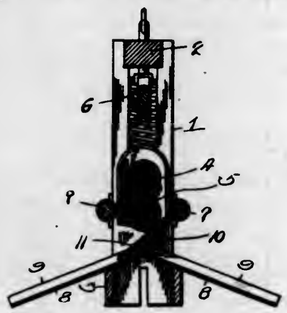
2. SAME—DOUBTS AS TO INVENTION WILL BE RESOLVED IN FAVOR OF INVENTOR.

A doubt as to whether the improvement is invention or mere mechanical improvement will, as a general rule, be resolved in favor of the inventor.

Mr. R. J. McCarty and *Mr. Edward L. Reed* for the appellant.

Mr. T. A. Hostetler for the Commissioner of Patents.

VAN ORSDEL, *J.:*



Applicant Coffield appeals from the decision of the Commissioner of Patents rejecting the following claims for improvements in clothes-wringers:

1. In the clothes wringer, the combination with the wringer rolls, of a drain-board and clothes guide rigidly mounted in the wringer frame below said rolls and extended a substantial distance on each side of the wringer frame to form a clothes guide, and a reversible water shutter pivotally mounted between said drain-board and clothes guide and said rolls to direct the water to one side of the said drain-board and clothes guide while the clothes are guided from the wringer on the other side to a receiving receptacle.

2. In a clothes wringer, the combination with the wringer rolls, of a double inclined shed rigidly mounted in the wringer frame and extended a substantial distance on each side thereof to form a combined drain-board and clothes guide upon one part of which the clothes passing through the wringer rolls are delivered to a receptacle and upon the other part of which the water wrung from the clothes is directed elsewhere.

The device is described by the Commissioner as follows:

The device shown is a clothes wringer having a combined drain-board and clothes guide rigidly connected to the frame of the wringer and extending therefrom at a considerable distance on each side, and a pivoted water shutter, the latter being so arranged with reference to the drain-board and the wringer rolls that the water wrung from the clothes by the latter can be drained in either direction.

The rigidly-mounted drain-board and clothes-guide 9 is the only improvement over the prior art. The revers.ble water-shutter 11, mentioned in the claims, is old. A number of references to patents are cited by the Patent Office, but all relate to means for draining the water from the rolls into the receptacle from which the clothes are being placed in the wringer. These are so arranged that they may be adjusted to either side of the wringer as desired. But in none of them is the idea of a rigidly-mounted drain-board and clothes-guide disclosed. The function of the clothes-guide to direct the clothes without manual assistance into the receiving-receptacle is as important as the draining feature.

While the idea here developed is in the twilight zone between invention and mere mechanical improvement, we will apply the rule of the courts generally and resolve the doubt in favor of the inventor. We are dealing with an old and well-developed art, and it is significant that no one has before conceived the means for automatically delivering the wrung clothes into the receiving-receptacle.

Now that it has succeeded, it may seem very plain to any one that he could have done it as well. This is often the case with inventions of the greatest merit. (*Loom Co. v. Higgins*, 105 U. S., 580.)

The improvement here produces a new and useful result, and efficiency where before there had been inefficiency. Where this is accomplished there is invention. As was said in *re Harbeck*, (39 App. D. C., 555, 563:)

While the use of new materials to produce a known result, or of known materials to produce a new but obvious result, may not always constitute invention, if the new idea, when applied, brings success out of failure, produces a new and useful result and saving in operation or production, or efficiency instead of inefficiency gives to the device new functions and useful properties, it is invention, and may be patented.

The decision of the Commissioner of Patents is reversed.

Reversed.

The decision of the First Assistant Commissioner is as follows:

WHITEHEAD, *First Assistant Commissioner:*

Applicant appeals from the decision of the Examiners-in-Chief affirming the action of the Primary Examiner finally rejecting the following claims:

* * * * * * *

The references cited by the Examiner are: Broich, 614,219, November 15, 1898; Judd *et al.*, 1,033,593, July 23, 1912; and in addition the Examiners-in-Chief cited Bailey, 318,850, May 26, 1885; Parker, 413,543, October 22, 1889.

The device shown is a clothes-wringer having a combined drain-board and clothes-guide rigidly connected to the frame of the wringer and extending therefrom at a considerable distance on each side, and a pivoted water-shutter, the latter being so arranged with reference to the drain-board and the wringer-rolls that the water wrung from the clothes by the latter can be drained in either direction.

The device shown by the applicant differs from the wringer shown in the patent to Bailey only in the extension of the drain-board. Each of the claims specifies a drain-board and clothes-guide extending a substantial distance on each side of the wringer-frame, and claim 1 includes the reversible shutter.

The Examiners-in-Chief held that no invention would be involved in extending the drain-board shown in the patent to Bailey in view of the patents to Parker and Broich.

The patent to Parker, which shows a wringer having a somewhat different water-shutter—that is, one slidable in guides instead of pivoted—has the drain-boards extending slightly on each side of the wringer-frame, and the patent to Broich shows the drain-boards extended some distance on either side. They are not rigid with the frame, being pivoted in the center thereof and being held in extended position by means of latches.

It is argued on behalf of applicant that the Broich patent does not suggest the idea of the rigid drain-boards and that in use the clothes as they were drawn from the tub would pull up the drain-board on that side and release the latches.

It was stated by the applicant at the hearing that when he attempted to purchase wringers for use in connection with the washing-machines which he was manufacturing he was offered a wringer differing from that shown in the Bailey patent in that the water-shutter was made much longer and served as a drain-board, an additional member being provided as a clothes-guide, and a wringer somewhat as shown in the Judd and Pletsch patent, with the water-shutter slidable in the frame and capable of being latched in the desired position. It was stated that the wringers of the latter type were also provided with an additional member to serve as a clothes-guide, which had to be moved from one side of the wringer to the other when the direction of rotation was reversed.

It is argued from these facts that the provision of a combined clothes-guide and drain-board such as applicant shows was not so obvious as is now alleged.

There is nothing to show that the parties who built the wringers referred to had before them the Bailey patent or were attempting to improve upon the device shown therein. If in using the wringer of the Bailey patent it was found that the water did not drain far enough away from the wringer or that the clothes dropped down too close to the edge of the wringer, it is believed that the remedy would have at once suggested itself—viz., to extend the drain-board C C'—or that at least such a remedy would have been suggested by the patents to Parker and Broich, both of which show extended drain-boards. Although in the Parker patent the drain-boards are not very much extended and in the Bailey patent they are not rigid, they both disclose the idea of shedding the water farther from the wringer.

The decision of the Examiners-in-Chief is affirmed.

Court of Appeals of the District of Columbia.

SPEED *v.* KIRBY. KIRBY *v.* SPEED.

Decided February 7, 1921.

PATENTS—PRIORITY—RIGHT TO MAKE CLAIM—CARBURETER—"NOZZLE."

Where the issue of an interference relating to a carbureter includes a mixing-chamber and "a nozzle for discharging liquid fuel" into said chamber, and one party shows a pipe and the other merely a port through which gas flows, *Held* that a port or hole is not a nozzle, and such party has no right to make the claims of the issue.

Mr. J. F. Robb, *Mr. W. C. Robb*, and *Mr. H. S. Hill* for Speed.

Mr. J. H. Milans, *Mr. C. T. Milans*, and *Mr. Frank Parker Davis* for Kirby.

SMYTH, *C. J.:*

This interference relates to carbureters for internal-combustion engines. There are three counts, as follows:

1. In a carbureter, the combination with the casing containing the mixing chamber, of an automatic air valve controlling the admission of air to said mixing chamber, coöperating means variably restricting the flow of the liquid fuel, and a dash-pot for retarding the opening movement of said valve, permitting the unresisted closing thereof.

2. In a carbureter, the combination with a casing containing the mixing chamber, of an automatic valve controlling the admission of air to said chamber, a nozzle for discharging liquid fuel into said chamber, a metering pin coöperating with said automatic valve for variably restricting the flow of liquid to increase the same upon the opening of said valve, a dash-pot for resisting the sudden opening of said valve, and a valve-controlled by-pass for said dash-pot permitting the unresisted closing of said valve.

3. In a carbureter, the combination with a casing containing the mixing chamber, of an automatic valve controlling the admission of air to said chamber, a nozzle for discharging liquid fuel into said chamber, a piston connected with said valve, a cylinder coöperating with said piston to form a dash-pot for resisting the sudden opening of said valve, and a valve-controlled by-pass for said dash-pot permitting the unresisted closing of said valve.

Speed was allowed by the Commissioner count 1, and Kirby counts 2 and 3. Both parties appeal.

The Examiner of Interferences gave the three counts to Speed; so did the Examiners-in-Chief, but, as just stated, the Commissioner modified their findings. With respect to count 1, if Speed has an "air valve controlling the admission of air to" the "mixing chamber," then the patent granted to him on an application filed in December, 1911, reads on it, and as that date is prior to any date established by Kirby, Speed must prevail. It seems to us beyond a doubt that the valve 24 answeres to the call of the patent. It controls the admission of the air to the mixing-chamber. Speed is entitled under the law to a construction of the claim in issue as broad as the language will permit. (*Kirby v. Clements*, 44 App. D. C., 12; *Miel v. Young*, 29 App. D. C., 481.) Giving him this, we think it must be said that the Patent Office was right in awarding him count 1.

Concerning counts 2 and 3, the solution of the question presented turns on whether or not Speed in his patent disclosed a "nozzle for discharging liquid fuel into" the "mixing chamber." The Examiner of Interferences and the Board of Examiners held that he had, but the Commissioner refused to approve this finding. A nozzle is defined by *Webster's International Dictionary* as

a short tube, usually tapering, forming the vent of a hose or a pipe.

Speed has two ports which he says are nozzles. Through them the fluid runs by gravity.

To call a hole through which the gas flows by gravity from a chamber a "nozzle" is straining language too much, says the Commissioner, and we agree with him. Kirby's pipe F, on the other hand, is described by him as a nozzle, and meets the definition from *Webster's Dictionary* just quoted.

Believing that the Commissioner is right, his decision is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

THOMSON AND THE JARDINE MANUFACTURING CORPORATION OF NEW YORK *v.* PEARSONS.

Decided February 7, 1921.

PATENTS—PRIORITY—CONCURRING DECISIONS OF PATENT OFFICE TRIBUNALS AFFIRMED.

Concurring decisions of the tribunals of the Patent Office holding that Pearsons is entitled to make the counts of the issue and awarding priority to him not being palpably wrong, Commissioner's decision affirmed.

[Affirming Commissioner's decision, 286 O. G., 413.]

Mr. Seward Davis for Thomson *et al.*

Mr. Jos. D. Sullivan for Pearsons.

MEMORANDUM OPINION BY CHIEF JUSTICE SMYTH.

This interference involves an automatic fire-extinguisher, and, in the language of the Commissioner, the only point involved is whether Pearsons can make the claims corresponding to the counts. The three tribunals of the Patent Office held that he could. We see no reason for disturbing their conclusion. It is not palpably wrong, and therefore, under repeated decisions of this court (*Greenawalt v. Dwight*, 49 App. D. C., 82; 258 Fed., 982; *Hopkins v. Riegger*, 49 App. D. C., 188; 262 Fed., 642; *Kennicott v. Caps*, 49 App. D. C., 187; 262 Fed., 641; *Maremont v. Olson*, 49 App. D. C., 369; 265 Fed., 1009) we affirm the Commissioner's decision.

Affirmed.

Court of Appeals of the District of Columbia.

STORY *v.* COTTRELL.

Decided February 7, 1921.

PATENTS—PRIORITY—RIGHT TO MAKE CLAIMS.

Decision of the Commissioner of Patents finding that Cottrell had a right to make the claims of the issue and awarding priority to him affirmed.

Mr. Frank L. Dyer for Story.

Mr. Walter F. Rogers for Cottrell.

SMYTH, *C. J.:*

The invention involved in this interference relates to a feeding mchanism for printing-presses. Cottrell was successful below, and Story appeals. In view of the question upon which our decision turns it is not necessary for us to set forth the counts of the issue.

The Law Examiner overruled a motion by Story to dissolve the interference on the ground that Cottrell could not make the claims. He was sustained by the Examiner of Interferences. On appeal the Board of Examiners ruled in favor of Cottrell, and their decision was affirmed by the Commissioner.

When the interference came before the Commissioner, Story abandoned his contention with respect to priority and rested his case entirely upon the argument that Cottrell could not make the claims. The Commissioner held against him and awarded priority to Cottrell. The line of reasoning pursued by the Commissioner in reaching his conclusion has

been carefully examined by us in the light of the arguments adduced on behalf of Story, and we think the conclusion is sound. It would serve no good purpose to repeat that reasoning here, or to attempt to substitute for it reasoning of our own. The Commissioner's decision is available to anyone who may desire to examine it.

We affirm the Commissioner's decision.

Affirmed.

Changes in Classification.

(ORDER No. 2,651.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 30, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 64, Journal-Boxes, Pulleys, and Shafting, (Division XLV,) abolish subclass—

Wheel-mounts—
Movable—
71. Laterally-movable wheel.

The patents formerly contained in this subclass have been placed for the most part in various subclasses in class 191, Electricity—Transmission to Vehicles.

In class 191, Electricity—Transmission to Vehicles, (Division XXXIV,) establish the following subclasses and definitions:

Collectors—
Trolley—
Heads—
Swivel—
60.1. Center bias,
60.2. Lateral swing,
60.3. Vertical swing,
60.4. Axial slide,
60.5. Pole-couplings,
Wheels—
63.1. Quick release,
63.2. Lateral slide,
63.3. Universal mount,
63.4. Slidable pins,
63.5. Pin-fasteners.

60.1. COLLECTORS, TROLLEY, HEADS, SWIVEL, CENTER BIAS. Gravity, spring, or electric devices constantly tending to maintain the swiveled heads in normal or central position and to restore them to such position if swung to either side.

Search this class, subclass 60.2.

60.2. COLLECTORS, TROLLEY, HEADS, LATERAL SWING. The head or harp is pivotally or flexibly connected to the trolley-pole to permit the head to swing transversely relatively to the car and trolley-wire.

60.3. COLLECTORS, TROLLEY, HEADS, VERTICAL SWING. The head or harp is pivotally or flexibly connected to the trolley to permit the head to swing vertically toward or from the trolley-wire.

60.4. COLLECTORS, TROLLEY, HEADS, AXIAL SLIDE. The shank of the head or harp has an axially-slidable connection with the trolley-pole, usually against spring-pressure.

60.5. COLLECTORS, TROLLEY, HEADS, POLE-COUPLINGS. Releasable and permanent fixtures for securing the head or harp to the trolley-pole, not including yielding or pivotal connections, which are found in this class, subclasses 60, 60.1, 60.2, 60.3, and 60.4.

63.1. COLLECTORS, TROLLEY, HEADS, WHEELS, QUICK RELEASE. Articulated sectional trolley-harps to permit the quick release of a trolley-wheel.

63.2. COLLECTORS, TROLLEY, HEADS, WHEELS, LATERAL SLIDE. The trolley-wheel is mounted on an elongated pin or shaft to permit the wheel to slide laterally while running on the trolley-wire.

63.3. COLLECTORS, TROLLEY, HEADS, WHEELS, UNIVERSAL MOUNT. The trolley-wheel is mounted in the harp or on a pin, so as to permit free universal movement of the wheel.

63.4. COLLECTORS, TROLLEY, HEADS, WHEELS, SLIDABLE PINS. The supporting-pins for the trolley-harps are mounted so as to permit up and down or rear and forward movement of the pins in the harps.

63.5. COLLECTORS, TROLLEY, HEADS, WHEELS, PIN-FASTENERS. Devices for fastening trolley-wheel pins or axles in the trolley-harps.

The patents contained in subclass 63.1 above have been taken for the most part from class 64, Journal-Boxes, Pulleys, and Shafting, subclass 67, Wheel-mounts, Quick wheel release, and those contained in the remaining subclasses have been taken for the most part from class 64, Journal-Boxes, Pulleys, and Shafting, subclasses 71, Wheel-mounts, Movable, Laterally-movable wheel, hereinbefore abolished, and 66, Wheel-mounts; 68, Wheel-mounts, Movable; 69, Wheel-mounts, Movable, Universal, and 70, Wheel-mounts, Movable, Pivoted.

THOMAS E. ROBERTSON,
Commissioner.

Changes in Classification.

(ORDER No. 2,653.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 4, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 1, Nailing and Stapling, (Division XI,) establish the following subclasses and definitions:

Machines—
Shoe—
Nail-driving—
Magazine—
18.1. Multiple drivers,
18.2. Shank-stiffener assembling.

18.1. MACHINES, SHOE, NAIL-DRIVING, MAGAZINE, MULTIPLE DRIVERS. Nailing-machines of the magazine type having a plurality of drivers.

Search this class, subclasses 32, 33, 35, 36, 37, and 38.

Search class—
12—BOOT AND SHOE MAKING, subclass 4, Lasting and nailing machines, Multiple drivers.

18.2. MACHINES, SHOE, NAIL-DRIVING, MAGAZINE, SHANK-STIFFENER ASSEMBLING. Nailing-machines of the magazine type for assembling shoe shanks and stiffeners.

Note.—For machines which attach assembled shanks or stiffeners to a shoe search this class, subclass 19.

The patents contained in these subclasses have been taken from class 1, Nailing and Stapling, subclass 18, Machines, Shoe, Nail-driving, Magazine.

THOMAS E. ROBERTSON,
Commissioner.

Changes in Classification.

(ORDER No. 2,654.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 4, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 61, Hydraulic and Earth Engineering, (Division XXXIII,) abolish the following subclass, with its definition:

Stable structures in shifting media—
Piles—
Protected—
55. Wood and concrete.

The patents formerly contained in this subclass have been placed for the most part in class 61, Hydraulic and Earth Engineering, subclass 54, Stable structures in shifting media, Piles, Protected, and class 20, Wooden Buildings, subclass 100, Poles and posts, Protected.

In class 61, Hydraulic and Earth Engineering, subclass 54, Stable structures in shifting media, Piles, Protected, abolish the existing definition and establish in lieu thereof the following:

Piles having protective means associated therewith other than wooden piles having mere coatings or jackets.

Note.—For wooden piles of the kind mentioned search class 20, WOODEN BUILDINGS, subclass 100, Poles and posts, Protected.

THOMAS E. ROBERTSON,
Commissioner.

Patents Nos. 1,377,999 to 1,378,830.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 286—No. 3. TUESDAY, MAY 17, 1921. Price—$5 per year.
[PUBLISHED MAY 31, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Nolan Act—Order.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE.
Washington, D. C., May 25, 1921.

The following order, issued on May 25, 1921, is here published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

(ORDER No. 2,660.)

NOLAN ACT—AMENDMENTS TO PREAMBLE—OATHS.

Recitation of foreign applications and patents in preamble.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 25, 1921.

In all applications filed in the United States more than a year after the filing of a corresponding application, or applications, in a foreign country, or countries, which are allowed or are otherwise ready for allowance, the Examiner will enter an amendment to the preamble, substantially in the following form, varying the words as circumstances demand:

(for which I have filed applications in England, Jan. 10, 1916, Patent No. ————, and in Belgium, March 2, 1916, Patent No. ————,).

The data for this amendment should be taken from the oath and will be entered after the words "have invented certain new and useful improvements in ———" and before "of which the following is a specification." This amendment should be made irrespective of whether a foreign patent has been granted, and the wording will be varied accordingly.

In applications where correspondence is necessary for other reasons the Examiner will require such insertion to be made by amendment.

Application oaths.

Where a foreign applicant is entitled to take the benefits of priority provided by section 1 of the Nolan Act, patents, printed publications, and public use do not constitute bars unless they are prior to the foreign application on which priority is based. An oath executed in the form prescribed by the present Rules of Practice should not be objected to unless the Examiner has knowledge contrary to the averments thereof, in which case a new oath should be required. The following form of oath is approved as meeting the requirements of the Nolan Act:

———— } ss:
———— }

————, the above-named petitioner, being sworn (or affirmed), deposes and says that —— citizen of ———— and resident of ————; that —— verily believes ——— to be the original, first and ——— inventor of the improvement in ———— described and claimed in the annexed specification; that —— does not know and does not believe that the same was ever known or used before —— invention or discovery thereof, or patented or described in any printed publication in any country before his invention or discovery thereof, or patented or described in any printed publication or in public use or on sale in the United States prior to the filing of any foreign application by him, his legal representatives or assigns, and that no application for patent on said improvement has been filed by, nor patent granted to, him or his legal representatives or assigns in any country foreign to the United States, except as follows:

THOMAS E. ROBERTSON,
Commissioner.

Notice of Cancelation.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 7, 1921.

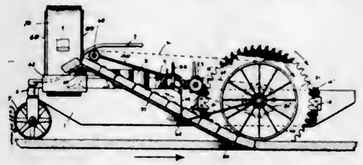
Monarch Motor Car Company, its assigns or legal representatives, take notice:

A cancelation proceeding has been instituted by this Office upon the application of Lorena W. Robinson, trading under the name of Texas Wheel & Body Company and doing business at 2500 Commerce street, Dallas, Tex., to effect the cancelation of the trade-mark registration of the Monarch Motor Car Company, 1528 Jefferson avenue, Detroit, Mich., No. 100,380, dated October 20, 1914, and the notice of such proceeding sent by registered mail to the said Monarch Motor Car Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Monarch Motor Car Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancelation will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

APPLICATIONS UNDER EXAMINATION.



Condition at Close of Business May 7, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.

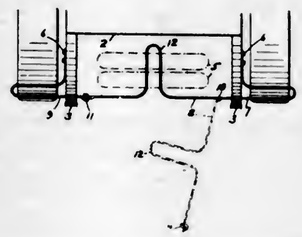
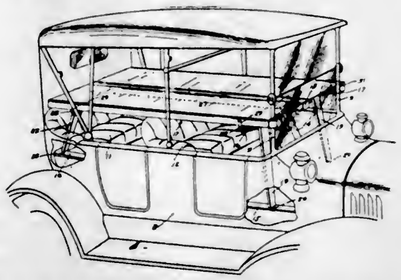
PATENTS



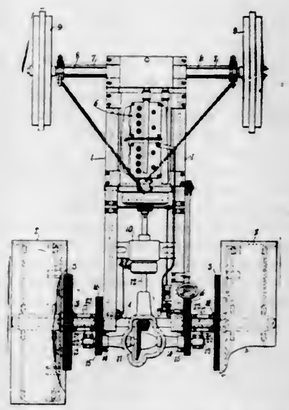
GRANTED MAY 17, 1921.

1,377,999. SALT-HARVESTING MACHINE. GUSTAV A. AICHER, San Francisco, Calif., assignor to Arden Salt Company, San Francisco, Calif. Filed Aug. 9, 1918. Serial No. 249,213. 6 Claims. (Cl. 262—9.)



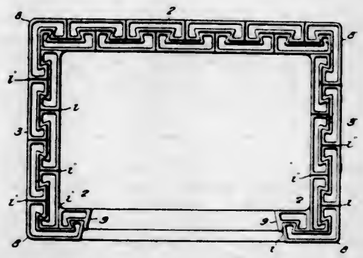
6. A salt harvesting machine comprising a driving mechanism, a wheeled support therefor, a rotary cutter positioned at the outer side of one of said wheels for cutting the salt bed, means for operating said cutter, and a chute adjacent the cutter for picking up the blocks of salt.

1,378,000. BUMPER FOR AUTOMOBILES. SYDNEY K. ALLMAN, Jenkintown, Pa. Filed June 22, 1920. Serial No. 390,946. 5 Claims. (Cl. 293—55.)



4. The combination with an automobile having a spare tire support thereon, of a rear bumper having a projection connected thereto and wholly supported therefrom, said projection extending forwardly into the open space of the tire support to prevent the removal of a tire, until after the projection has been withdrawn from the open space of the support by the removal of the bumper.

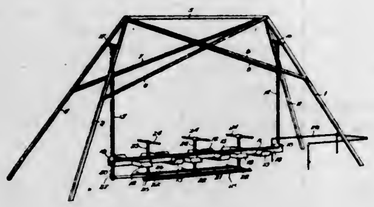
1,378,001. COT FOR AUTOMOBILES. HANS C. ANDERSON, Minneapolis, Minn. Filed Aug. 16, 1920. Serial No. 403,826. 2 Claims. (Cl. 5—72.)



1. A knock-down cot for use in connection with automobiles, comprising front and rear cross rails, side and center rails having detachable interlocking engagement, a canvas applied to said side and center rails, rearwardly extending relatively short legs pivoted to the said rear cross rail and adapted to rest upon the rear seat board of an automobile, forwardly extending relatively long front legs pivoted to said front cross rails and adapted to rest upon the front portion of the floor structure of an automobile, said side rails, at their front ends, having notches for engagement with the wind shield posts of the automobile.

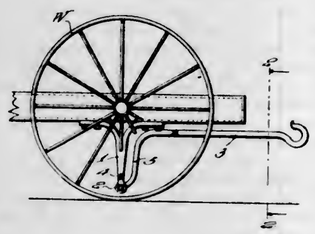
1,378,002. TRACTOR. WALTER L. BARTHELEMY, Dayton, Ohio. Filed Jan. 20, 1919. Serial No. 271,945. 11 Claims. (Cl. 180—54.)

1. In a tractor, the combination, with a frame, of an engine and transmission and differential gearing transferred thereto, said gearing being rigidly mounted on said frame, a shortened drive shaft connecting said gearing, a bracket secured to said frame, a fixed axle and tractor wheels mounted thereon, a cut-off floating axle having fixed bearings in said bracket and reducing gearing, whereby power is transmitted from the engine through said gearing to the tractor wheels.



1,378,003. REFRIGERATOR AND METHOD OF MANUFACTURING THE SAME. EDWARD BOEHM, Tampa, Fla. Filed Mar. 20, 1920. Serial No. 367,464. 17 Claims. (Cl. 25—157.)

1. The method of producing a stoneware body, comprising forming said body by fitting together previously-fin-



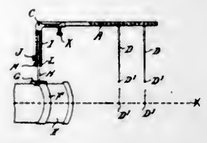
ished stoneware blocks and sealing the joints between the same by fusible cement in a plastic state, and then firing the body as thus built to fuse the cement and thereby unite the blocks.

1,378,004. LAWN-SWING. GEORGE H. BUGENHAGEN, Minot, N. D. Filed Dec. 10, 1919. Serial No. 343,741. 3 Claims. (Cl. 155—63.)

1. A lawn swing comprising a plurality of supporting posts arranged in pairs, the posts of each pair converging together and being secured to a connecting bar at their tops, a cross piece pivoted between the supporting posts of each pair, suspension bars rigidly secured at one end to said cross pieces, a carrier comprising a central supporting member provided with an upwardly extending portion at each end, said upwardly extending portions being pivotally connected adjacent their upper edges to said suspension bars to provide a space between the lower end of each of said suspension bars and the adjacent portion of the carrier, laterally extending seats carried by said supporting member on each side thereof, one of said suspension bars being extended below the carrier, and means mounted on the carrier and pivotally and adjustably connected with said extended suspension bar for propelling the swing.

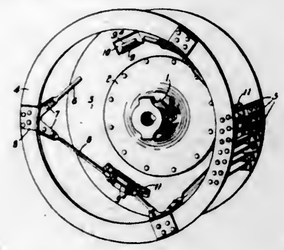
1,378,005. DRAWBAR FOR TRACTORS. JOHN J. BUKOLT, Stevens Point, Wis. Filed Aug. 16, 1920. Serial No. 403,668. 5 Claims. (Cl. 213—67.)

1. The combination with a tractor frame including depending portions and wheels; of a draw-bar connected to said portions on opposite sides of the longitudinal center of the same, the points of connection being close to the ground and within the space circumscribed by the rim of the wheels.



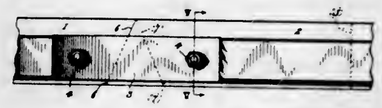
1,378,006. TOOL FOR RESTORING SWAGE-BITS. EDWARD ASA BURPEE, Renton, Wash. Filed Jan. 24, 1920. Serial No. 353,736. 1 Claim. (Cl. 78—6.)

A tool for use in restoring to good working condition a swage-bit whose lips or lip have been bent and otherwise impaired, said tool being a hard metal bar curved and concave at one end thereof, behind which end and through which bar is an elliptical hole that fits loosely over the screw and point of said bit making said curved and concave end adjustable to said lips both when the latter are bent



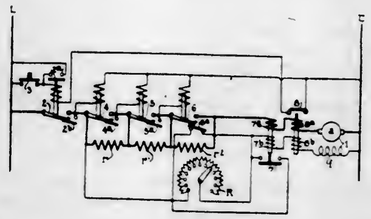
and in normal position, and which bar thence tapers to its other end and is of suitable dimensions for convenient use, substantially as described and shown.

1,378,007. RÖNTGEN-RAY AND LIKE APPARATUS. GEORGE GORING CAMPION, Manchester, England. Filed May 27, 1919. Serial No. 300,151. 1 Claim. (Cl. 250—34.)



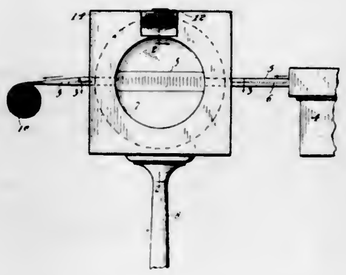
In Röntgen-ray or like apparatus, means for directing the central beam or X-ray of normal incidence comprising a carrier, an adjustable standard adjustably mounted upon said carrier, an arm mounted upon said standard, adjustable pointers slidably mounted upon said arm, and beads carried by said pointers for indicating the path of said central beam.

1,378,008. CENTRIFUGAL FAN. ANDREW H. CANDEE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 21, 1916. Serial No. 126,892. 8 Claims. (Cl. 230—11.)



8. A centrifugal fan comprising two spaced annular plates, a plurality of fan blades arranged between said plates, a plurality of bracing members mounted in pairs and extending obliquely from plate to plate, the members of each of said pairs extending in opposite directions, and means mounted on each of said plates for securing said bracing members thereto.

1,378,009. RAIL-JOINT. FRANK O. CANELLA, Mason City, Iowa. Filed Feb. 23, 1921. Serial No. 447,127. 3 Claims. (Cl. 238—231.)

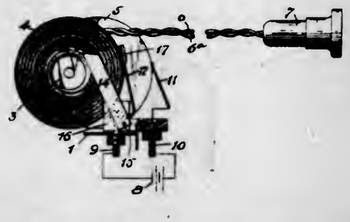


1. In a rail joint of the type described, meeting rail ends having a scarf connection, the abutting ends of the rails having the opposite sides thereof reversely inclined to prevent relative perpendicular movements, and side retaining fish plates for the rail sections, the reversely inclined abutting ends having their apices meeting in a single transverse line at the head of the rail.

1,378,010. MOTOR-CONTROLLER. CHARLES E. CARPENTER, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 5, 1916. Serial No. 123,801. 17 Claims. (Cl. 172—288.)

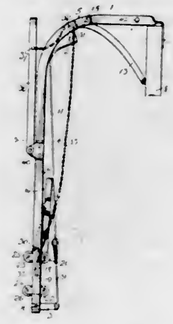
1. The combination with a motor variable in speed by field regulation, of control means therefor having control windings connected in different branches of the circuit of said motor one being in series with the armature of said motor, said windings providing for variation of the sensitiveness of said control means to variations in armature current according to the field regulation of said motor.

1,378,011. TELEGRAPH REGISTER RECEIVING APPARATUS. NATHANIEL B. CREGIER, Chicago, Ill. Filed Feb. 11, 1918. Serial No. 216,588. 7 Claims. (Cl. 178—1.)



1. A telegraph register receiving and displaying apparatus comprising in combination, an automatically operated printing mechanism, a substantially opaque printing tape therefor, a magnifying lens, and means for directing the printed tape around a portion of the spherical surface of said lens.

1,378,012. ELECTRICALLY-HEATED HAIR-WAVING DEVICE. MARIE JOSEPHINE CULLY, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 366,782. 6 Claims. (Cl. 219—24.)



1. A hair-waving device comprising an iron, means for maintaining the iron at a substantially uniform temperature, and means for bending the hair relatively to the iron in two different planes and holding the hair in contact therewith until a permanent set has been imparted to the hair, such bending and holding means allowing the hair to slide freely relatively thereto.

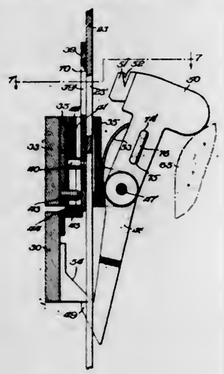
1,378,013. CIGAR-LIGHTER. CHARLES F. CUNO, Meriden, Conn. Filed Nov. 6, 1920. Serial No. 422,176. 2 Claims. (Cl. 200—153.)

1. In an automatic switch, a rotatable device, a spiral cam rotatable thereby, a circuit closer adapted to open and close an electric circuit, means coacting with said spiral cam and adapted to be moved by said cam and also coacting with said circuit closer to control the latter for the purpose of opening and closing the circuit depending upon the position of said means relatively to said cam.

1,378,014. LOADING DEVICE. LOUIS EGER, Brooklyn, N. Y., assignor of one-half to John L. Martin, Brooklyn, N. Y. Filed Aug. 27, 1919. Serial No. 320,200. 5 Claims. (Cl. 214—75.)

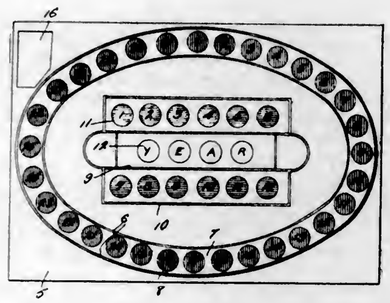
1. A device of the class described, comprising a frame having guiding means, a carriage movable on said guiding means, and adapted to carry a barrel or other object, and a lever for raising said carriage arranged to move over and partially around said carriage and the object carried thereby, to permit said carriage to rise and fall.

1,378,015. CONDUIT-PIPE COUPLING. FREDERIC WM. ERICKSON, East Greenwich, R. I. Filed Apr. 30, 1920. Serial No. 377,797. 3 Claims. (Cl. 285—146.)



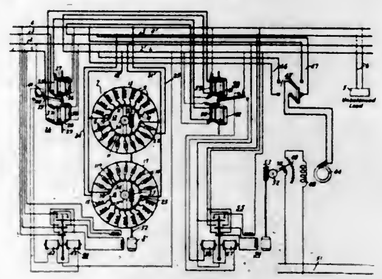
1. A coupling for conduit pipes composed of two bushings and an inclosing and uniting sleeve for the same, each bushing internally and externally screw-threaded and having one or more slits in their outer edges; the inner edges having semi-circumferential lips whose abutting ends are adapted to lock to each other, the said sleeve being internally screw-threaded and adapted to inclose the said bushings and couple them.

1,378,016. BOTTLE-CAP FLUID DISPENSER AND SPREADER. JEREMIAH ERWIN, Chicago, Ill. Filed Dec. 22, 1919. Serial No. 346,519. 2 Claims. (Cl. 91—67.4.)



1. In combination, a bottle, a dome-shaped cap closing said bottle, a portion of said cap being flattened to provide a plane surface oblique to the axis of said bottle and at one side thereof, an aperture in the curved surface of said cap, a valve for closing said aperture, a spring for holding said valve in closing position, said spring having a portion attached to the inner wall of the cap, a portion attached to the valve and at an angle to the first named portion and a portion connecting the said two portions and forming a compound curve, all the portions of said spring being in one plane, the flattened portion of said cap being on the side of said aperture opposite the bottle.

1,378,017. DEVICE FOR OPERATING FREIGHT-ELEVATOR HATCH-DOORS. JOHN E. W. FOGAL and CLAUD L. FULGHUM, Quincy, Ill. Filed Feb. 20, 1920. Serial No. 360,206. 15 Claims. (Cl. 187—52.)



1. A device for operating elevator hatch doors comprising a motor, a cable operated by said motor, a lift bar, a locking device carried by the door for normally locking the door in its closed position, and means for engaging the locking device to throw it out of locking position and into operative engagement with the lift bar, whereby the door is lifted with the latter.

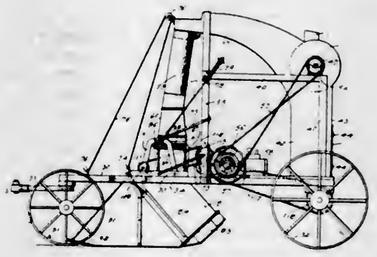
1,378,018. GAME. PATRICK J. FORD, Augusta, Ga. Filed Oct. 29, 1920. Serial No. 420,508. 2 Claims. (Cl. 46—21.)

1. A game apparatus of the character described, comprising a board being provided upon its upper surface with day spaces consecutively numbered, month spaces consecutively numbered, and year spaces, in combination with consecutively numbered day pieces, consecutively numbered month pieces and year pieces.

1,378,019. PHASE-BALANCING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1917. Serial No. 167,086. 12 Claims. (Cl. 172—238.)

1. In a system of transmission comprising polyphase circuits, a phase balancer comprising a group of adjustable elements, two possessing condensive characteristics and two possessing inductive characteristics, said condensive elements alternating in position with the inductive elements to form a closed circuit, means for adjusting said elements to balance the power component polyphase currents, and means for effecting the flow of balanced wattless currents in the polyphase circuits in order to control the power factors of the balanced polyphase currents.

1,378,020. METAL WHEEL. EDWARD FULDA, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Mar. 17, 1919. Serial No. 283,066. 4 Claims. (Cl. 301—64.)

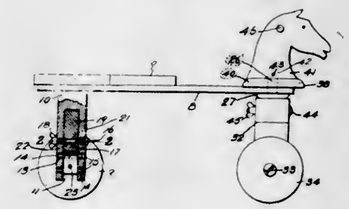


1. In a wheel of the character described, a sheet metal disk having its edge bent over at intervals to engage the

inner surface of the rim and having at intermediate points tongues cut out of the body of the disk and bent

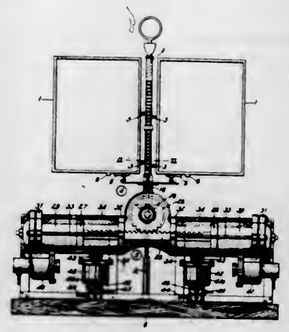
to one side of the plane thereof and engaging the rim to act as struts to resist torsional strains.

1,378,021. COTTON-PICKING MACHINE. ANDREW J. GIPSON, Perkins, Okla. Filed May 17, 1920. Serial No. 381,871. 18 Claims. (Cl. 56—12.)



1. In a cotton picker, a pair of laterally spaced rotating cylinders having hollow perforate picking wings disposed spirally thereon, and internally communicating with the cylinder during part of each rotation of the latter, a wheeled frame in which said cylinders are mounted in parallel inclined relation, suction supply means for the cylinders and the hollow wings, and means for rotating the cylinders so that their spiral wings proceed upwardly and rearwardly with respect to the direction of movement of the frame.

1,378,022. TOY. ANTOINE L. GIRARD, West Boylston, Mass. Filed Feb. 19, 1920. Serial No. 359,909. 7 Claims. (Cl. 46—46.)

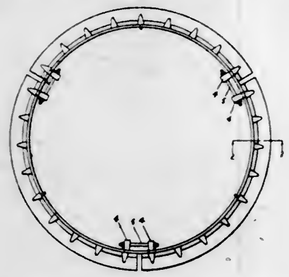


1. A noisemaker formed on a single piece of tubular metal, one part of which extends at right angles with respect to the other, and a horn carried by said tubular member and a whistle carried by said right angularly projecting member.

1,378,023. TOY VEHICLE. FREDERICK HACHMANN, St. Louis, Mo., assignor of one-half to Bernard G. Vieth and one-fourth to David M. Hutchinson, St. Louis, Mo. Filed Apr. 20, 1920. Serial No. 375,311. 3 Claims. (Cl. 208—165.)

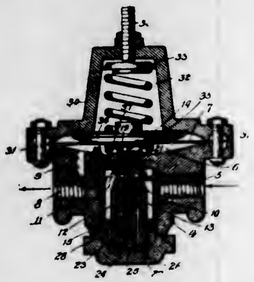
2. A toy vehicle, comprising a connecting member, a seat secured to said connecting member, a slotted standard rigidly secured to the connecting member, a rear axle support adjustably secured in the slot of the standard, a pin projecting through the connecting member, a flange formed integral with said pin, said flange contacting with the under side of the connecting member, a cylindrical projection formed integrally with said flange, a front axle support adjustably secured to the pin beneath the flange, a steering handle secured to the pin above the connecting member, and means for holding the axle supports in adjusted position.

1,378,024. DEMONSTRATING DEVICE. ARTHUR J. HALL and CHARLES C. WHITTAKER, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 3, 1916. Serial No. 129,286. 9 Claims. (Cl. 40—35.)



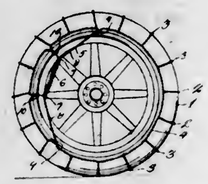
1. A device comprising a plurality of leaves, and means for turning said leaves one at a time comprising a fluid motor having a transparent cylinder, a piston mounted within said cylinder, and an electrically controlled valve for admitting fluid to said cylinder.

1,378,025. WHEEL. EDMUND E. HANS, Kalamazoo, Mich. Filed Mar. 6, 1918. Serial No. 220,827. 1 Claim. (Cl. 152—9.)



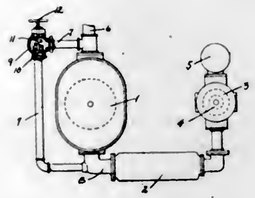
In a wheel, the combination of an apertured rim, a centrally disposed tire cushion made up of segments of rubber cushion supported on metal plates, radially dis-

posed lugs at the end of each plate, disposed through the apertures in the rim, and connecting bolts through the



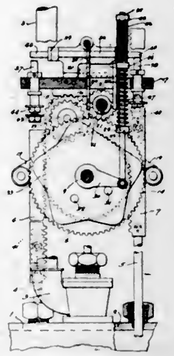
said lugs for retaining the same removably and adjustably in position.

1,378,026. PRESSURE-REDUCING VALVE. CHARLES C. HANSEN, Forest Park, Ill., assignor to Refrigerating Specialties Co., Chicago, Ill., a Corporation of Illinois. Filed June 12, 1918. Serial No. 239,689. 6 Claims. (Cl. 50—23.)



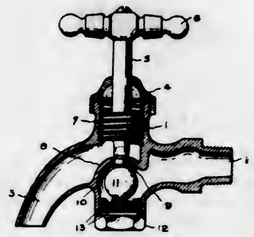
1. A pressure reducing valve comprising a casing, means to connect the casing to a high pressure line, means to connect the casing to a low pressure line, a valve for controlling the passage of fluid to the low pressure connection, a container in which said valve is slidably mounted, and having a valve seat therein, a screw-threaded and metal-to-metal connection between the container and the casing, a piston on the valve slidable in the container, a spring for closing the valve, a diaphragm operated by fluid in the low pressure side of the line for opening the valve, and a cap screw-threaded to the casing and seated therein independently of said cage.

1,378,027. NON-SKID-CHAIN TIGHTENER AND ADJUSTER. WILLIAM ISAAC HARP, Galax, Va., assignor of one-third to John Linn and one-third to R. B. Todd, Galax, Va. Filed Oct. 31, 1919. Serial No. 334,634. 1 Claim. (Cl. 152—14.)



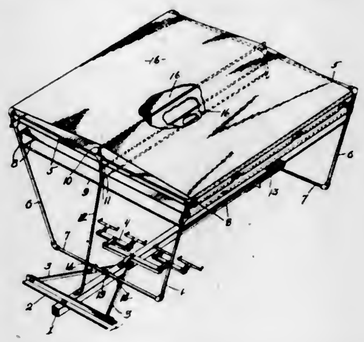
A tire chain tightener comprising chain sections, said chain sections having their adjacent ends secured to the ends of a coil spring, hooks at the free ends of the chains adapted to be hooked into the tire chain at points spaced from each other, and hooks carried by the chains adjacent the ends of the spring and angularly disposed and adapted to be hooked into the tire chain at points intermediate the first named hooks thereby stretching said coil spring and allowing said spring to take up the slack in the tire chain.

1,378,028. COMPRESSOR-OVERLOAD REGULATOR. THOMAS J. HART, Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 7, 1918. Serial No. 248,811. 1 Claim. (Cl. 230—24.)



A regulating system for producing a constant quantity of discharge from the high pressure cylinder of a compound compressor without varying the speed or unloading the machine, in which both the intake and the discharge pressures are variable, comprising a low pressure cylinder, an intercooler, and at least one high pressure cylinder, a by-pass from the intercooler to the intake of the low pressure cylinder, and a pressure relief valve in said by-pass, adapted to open communication from the intercooler to the intake of the low pressure cylinder at a predetermined pressure in the intercooler, thereby maintaining constant pressure in the intercooler and constant quantity of intake into the high pressure cylinder.

1,378,029. MEASURING-PUMP. WILLIAM T. HATMAKER, Dayton, Ohio, assignor to The Protecto Pump Company, Dayton, Ohio, a Corporation of Ohio. Filed July 19, 1920. Serial No. 397,491. 14 Claims. (Cl. 74—27.)

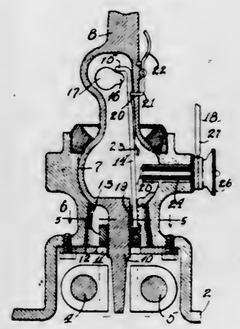


4. In a mechanism of the character described, a pumping device, an operating member therefor, a reversible connection between said operating member and said pumping device comprising a movable member, means for actuating said movable member comprising a part adapted to be connected with said operating mechanism for movement thereby in opposite directions, springs connected with said member of said actuating device, a movable stop to be engaged by one of said springs to cause the latter to be compressed when the movable member of said actuating means is moved in one direction, and means to hold said movable stop against movement until said pumping device has completed its movement in one direction and to then release the same to permit said actuating means to shift said movable member.

1,378,030. VALVE, TAP, AND THE LIKE. JOHN HAROLD HAY, Calgary, Alberta, Canada. Filed Nov. 9, 1920. Serial No. 422,892. 1 Claim. (Cl. 251—140.)

In a valve, the combination of a casing having inlet and outlet connections extending from its sides and an opening in its lower end; a partition dividing the casing into upper and lower chambers and extending from the upper side of the inlet connection to the lower side of the outlet connection, said partition having a passage formed therein having a valve seat on the under side said lower chamber being substantially spherical; a resilient ball valve member loose in the lower chamber adapted to be seated against said seat; and a spindle operating in the upper portion of the casing having its lower end adapted to pass through the passage in said partition to force the valve member from its seat, said lower end having a valve displacer secured thereto and adapted to rock thereon, said displacer having a flat lower surface; and a dished plug closing the opening in the lower end of the lower chamber, said dished plug having a plurality of notches formed in its edge.

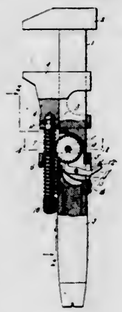
1,378,031. HORSE-SHADING ATTACHMENT FOR VEHICLES. VACHEL O. HINTON, Kansas City, Kans. Filed June 28, 1920. Serial No. 392,281. 5 Claims. (Cl. 135—5.)



5. The combination with a vehicle having a tongue, of a frame fastened upon said tongue and comprising a rear end frame, a front end frame, longitudinal rods connecting the respective sides of said frames together, means to brace the frame against collapse, longitudinally extending rollers at the sides of said frame in different horizontal planes, rods extending longitudinally of the frame, and flexible superposed shades secured to said rollers and adapted for detachable engagement with the rods at the opposite side of the frame from their respective rollers, the said shades having retractive springs attached to their free ends and equipped with hooks for engaging the said rods.

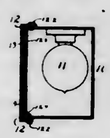
1,378,032. MAGNETIC SCREWDRIVER. WILLIAM J. HOOD and EUGENE J. HOOD, Toledo, Ohio. Filed Apr. 26, 1920. Serial No. 376,490. 2 Claims. (Cl. 145—50.)

2. In a screw driver a magnetized shank, the end of the shank having a surface extending at right angles to the axis of the shank, and having an insert of non-magnetic metal protruding from the end of the shank a distance not over the depth of the channel of the head of the screw, and means for clamping the insert in position in the end of the shank.



1,378,033. GEAR-SHIFT AND IGNITION LOCK. JOHN H. IMHOFF, Chicago, Ill., assignor, by mesne assignments, to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1916, Serial No. 79,642. Renewed Sept. 18, 1917. Serial No. 192,034. 18 Claims. (Cl. 70—127.)

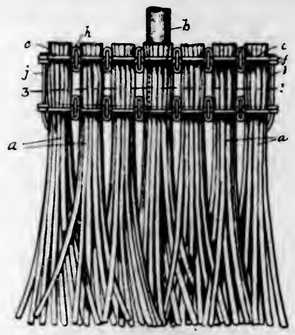
5. In a lock for a gear shift lever of the class described, the combination with means associated with the pivoted end of said lever acting automatically when released to lock said lever, of electrical contact members adapted to be grounded by movement of said means.



1,378,034. [WITHDRAWN.]

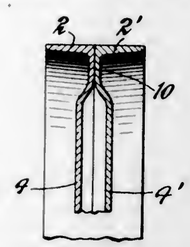
1,378,035. WRENCH. GEORGE C. KOTABA, Chicago, Ill., assignor of one-half to Thomas E. Weaver, Chicago, Ill. Filed July 12, 1920. Serial No. 395,594. 3 Claims. (Cl. 81—133.)

1. A wrench comprising a shank, a fixed jaw on the shank, a movable jaw on the shank, a screw secured to the movable jaw, a pinion mounted in the shank meshing with said screw and a spring-held dog normally locking the pinion against movement.



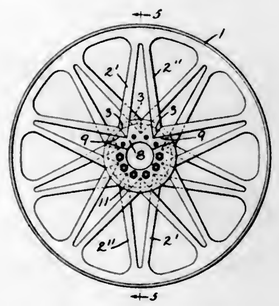
1,378,036. AUTOMOBILE SIGNAL DEVICE. GEORGE F. KREBS, Wichita, Kans. Filed June 12, 1920. Serial No. 388,538. 2 Claims. (Cl. 177—326.)

2. An automobile signal device comprising a case composed of a plurality of compartments, an electric bulb in each compartment, each bulb being on an individual lighting circuit and a circuit closer in said circuit; the exposed face of each compartment having glass retaining rim portions and two glass panes lying contiguous one another in the same plane, immediately behind said rim portions; and backing supports secured to said case and arranged within such compartment against said glass panes to secure said paired panes against such rim portions so as to effectually seal the compartment, one of said backing supports being perforated to provide a stenciled signal, said support being coextensive with one pane in the paired combination, the other pane being uncovered by the backing supports; and giving a signal corresponding to the stenciled signal, the stenciled backing supports of the several compartments differing each from the other as to the signal stenciled thereon, the glass panes immediately in front of said stenciled supports being each of clear glass, while the other glass panes in the device differing each from the other in color, substantially as set forth.



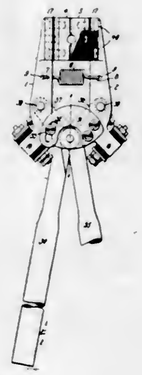
1,378,037. BROOM OR BRUSH. PETER KRUMSCHEID, Boston, Mass. Filed Sept. 6, 1919. Serial No. 322,097. 8 Claims. (Cl. 15—19.)

7. The method of making a brush which consists in providing a holder member having open sockets for the receipt of brush tufts and oppositely-projecting open loops, placing brush tufts in said open sockets, placing a similar and complemental holder member upon the opposite sides of the tufts, and causing the open loop portions of the respective members to overlie one another, and then passing a tool through the openings defined by said over-



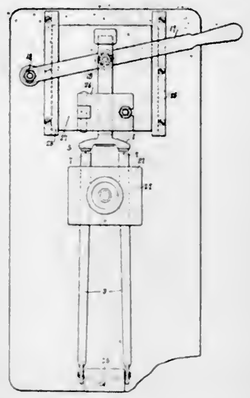
lapping loops and turning the tool so as to bend said loops about one another and to draw the complemental parts of the sockets toward one another against the tufts.

1,378,038. TUBULAR-SPOKE WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed May 31, 1919. Serial No. 301,023. 4 Claims. (Cl. 301—64.)



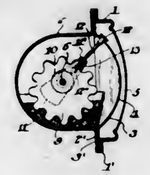
1. A metal wheel consisting of two sections of channel bar assembled back to back and each consisting of a length of bar having its floor part or base slit to form the spokes and its edge bent to the circumference of the rim.

1,378,039. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed May 15, 1920. Serial No. 381,781. 8 Claims. (Cl. 301—62.)



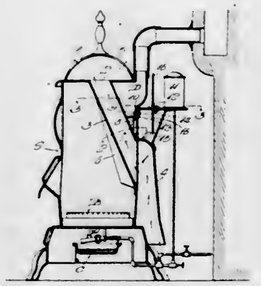
1. A metal wheel comprising integral spokes and rim, each of the spokes being divided longitudinally and spread apart, the ends of alternate spokes being assembled at the hub at opposite ends thereof and practically tangent thereto.

1,378,040. VULCANIZED JOINT. JOSEPH O. LANGGUTH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 28, 1917. Serial No. 183,336. 11 Claims. (Cl. 18—18.)



6. A vulcanizing implement comprising two pivotally connected members, working jaws carried by the said members and provided with coöperating pins and openings for preventing relative lateral movement of the said jaws and also provided with coöperating depressions conforming in shape to an object to be vulcanized and with raised flanges surrounding the said depressions, and means for electrically heating the said working jaws.

1,378,041. PROCESS OF MANUFACTURING BICYCLE-FORKS. ELMER M. LEWIS, Dayton, Ohio, assignor to The Davis Sewing Machine Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 2, 1919. Serial No. 321,176. 3 Claims. (Cl. 219—10.)

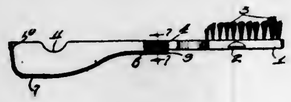


1. In the manufacture of bicycles the herein described process consisting in supporting and alining a bicycle fork head having a weld contact surface, in supporting and alining relative to said head a fork stem having a corresponding weld contact surface, and in causing said surfaces to be brought into contact and in the application of a welding heat to the contacting parts to effect a butt-weld therebetween.

1,378,042. GRADOMETER. HENRY G. LEWIS and WALTER S. MAYER, Philadelphia, Pa., assignors, by direct and mesne assignments, to said Mayer. Filed Oct. 22, 1919. Serial No. 332,457. 8 Claims. (Cl. 33—215.)

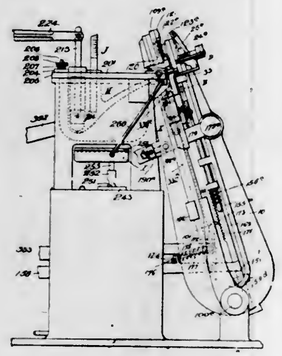
1. A gradometer comprising a rim provided with a flange, a shell provided with a flange, a dial clamped between said flanges, an arbor supported in said shell, an oscillatory weight mounted eccentrically on said arbor in said shell, a pointer movable over said dial and means whereby the movement of said weight about its axis moves said pointer proportionately over said dial.

1,378,043. HOT-AIR STOVE. CURTIS C. LILLIBRIDGE, Hutchinson, Kans. Filed Nov. 3, 1919. Serial No. 335,367. 1 Claim. (Cl. 126—70.)



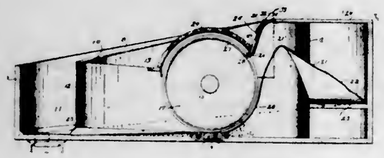
A stove comprising a vertical cylindrical casing having an air inlet opening in its side wall, a hot air outlet opening in its top and a smoke outlet opening in said side wall above said air inlet opening, a hot air circulating pipe in the casing extending upwardly at an incline from said air inlet opening to said hot air outlet opening and provided on its exterior with longitudinally extending fins, an additional downwardly tapered fin carried by said hot air pipe in the angle between the same and the casing wall and forming a support having a horizontal upper end, and a horizontal deflecting plate carried by said fin and extending between the wall and pipe and resting upon the upper end of the supporting fin and curved to conform to the contour of the wall and the adjacent part of the hot air pipe, said plate being provided with a slot extending beyond the sides of the supporting fin to provide an auxiliary air passage.

1,378,044. COLLAPSIBLE TOOTHBRUSH. CONVERSE W. LLOYD, New York, N. Y., assignor to L. Lynn Lloyd, Lincoln, Nebr. Filed June 14, 1918. Serial No. 239,935. 2 Claims. (Cl. 15—39.)



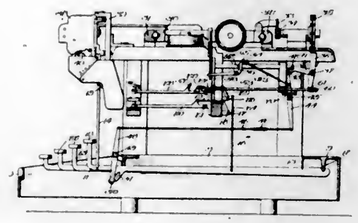
1. In a folding tooth brush, the combination of a handle comprising an elongated hollow casing, tapered to form a contracted channeled extension at one end, a brush having a reduced shank pivoted in the channeled extension

so as to fold down into the cup shaped casing, said shank having the lateral walls angularly related and yieldingly



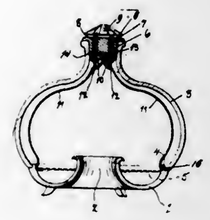
engaged by the side walls of the channeled extension to lock the brush in the unfolded position.

1,378,045. TYPOGRAPHIC COMPOSING-MACHINE. EVERETT M. LOW, Brooklyn, N. Y. Filed Dec. 14, 1916. Serial No. 137,064. 55 Claims. (Cl. 199—47.)



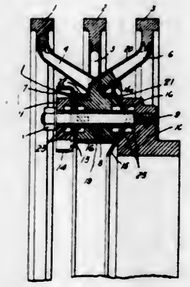
10. In a machine of the class described the combination of a mold, means for confining a line of matrices within certain predetermined limits, including front and back plates, a vise jaw 11 and a vise jaw 3, the latter moving toward and from the mold and having the channel 3^x, said latter vise jaw being adapted to be moved to cause the channel 3^x, to aline with said confining means or be moved out of alinement therewith.

1,378,046. BEATING-ENGINE. ERNST MAHLER, Neenah, Wis. Filed June 14, 1920. Serial No. 388,952. 10 Claims. (Cl. 92—24.)



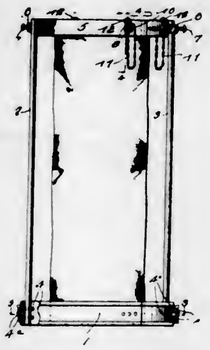
1. A beating engine, comprising a vat member having an inclined bottom portion, a midfeather positioned medially within the vat to form a circular passageway, a beating drum vertically yieldingly extending into the passageway between one side portion of the vat wall and the midfeather, a back fall positioned in the passageway adjacent the drum, the upper portion of said back fall extending in a plane higher than the axis of the drum to move the stock around the passageway at a high speed with relation to the speed of travel of stock in an ordinary beating engine, and a scraper vertically yieldingly positioned between the drum and the back fall for deflecting stock from the drum toward the upper portion of the back fall, said scraper moving vertically with the drum and retaining approximately its relative position with relation thereto.

1,378,047. TYPEWRITING AND CALCULATING MACHINE. OLAF O. MARTIN, Chicago, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 7, 1916. Serial No. 70,731. 10 Claims. (Cl. 197—82.)



1. In a typewriter calculating machine, the combination of a moving carriage, an escapement therefor, typewriter keys, printing bars operatively connected therewith and a positive linkage adapted to connect said typewriter keys and said escapement on the actuation of any of said keys, whereby a complete cycle of said escapement compels a complete cycle of said key.

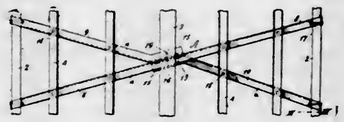
1,378,048. INSECT-TRAP. JOSEPH E. MAZIARZ, Buffalo, N. Y. Filed Jan. 15, 1921. Serial No. 437,400. 2 Claims. (Cl. 43—122.)



2. A device of the class described comprising a base having an annular chamber therein, a groove on the interior of said chamber, a body adapted to be mounted upon said base, means for retaining said body on said base comprising a pair of members adapted to engage said groove, a stopper adapted to be mounted in the upper extremity of said body, vertical pins slidably mounted in said stopper, a cap rigid with the upper extremities of said pins, a shoulder on each of said members adapted to be engaged by said pins, said members forming the two legs of a single member secured to the lower extremity of said stopper.

1,378,049. CURRENT-COLLECTING DEVICE. CHESTER B. MILLS, East McKeesport, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1917. Serial No. 198,330. 9 Claims. (Cl. 171—322.)

1. A current-collecting device for dynamo-electric machines comprising collector rings mounted on arms of a spider, said arms being incased in insulating coverings.

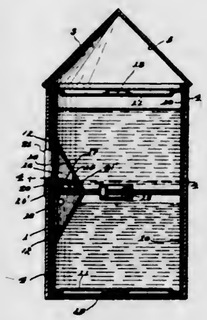


1,378,050. BAG-HOLDER. FIELDS J. MORRIS, Durango, Colo. Filed Sept. 15, 1919. Serial No. 323,731. 1 Claim. (Cl. 83—26.)

A bag holder comprising a supporting frame including a sheet metal ring provided at circumferentially spaced points with openings, above and below which are horizontal apertured ears extending laterally outward from the ring, chains secured to the latter below the lower ears, and passing freely inwardly through the aforesaid openings, bag engaging clamps on the inner ends of the chains, and pins to extend through the apertures in the ears and one of the links of the adjacent chain, permitting the clamps to be adjusted to different positions to accommodate bags of various diameters.

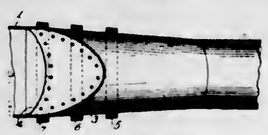
1,378,051. CARLINE. ROY C. MUNRO, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1919. Serial No. 335,923. 7 Claims. (Cl. 108—5.6.)

1. In a carline for car roofs and the like, the combination of a main L-bar arranged with horizontal top flanges and depending side flanges, and having a central apex, declining thence to the side plates and having its ends formed for engagement with the side plate; and supplementary L-bars having laterally bent inner ends arranged at the sides of said apex with the vertical flanges of all of said bars in contact and secured together to form a frame-supporting apex of triple width, and declining thence, and



inclining away from said main bar, to the side plates, and having their outer ends formed for engagement with the side plates.

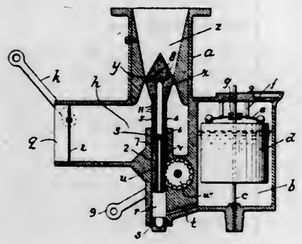
1,378,052. PROCESS OF COATING STEEL SHEETS WITH ALUMINUM. SAMUEL PEACOCK, Wheeling, W. Va., assignor, by mesne assignments, to Wheeling Steel & Iron Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Nov. 9, 1920. Serial No. 422,812. 5 Claims. (Cl. 91—70.2.)



1. The process of coating steel sheets with aluminum which consists in first passing said sheets through a molten bath of a double aluminum alkali metal chlorid, and then through a molten bath of aluminum, substantially as described.

1,378,053. WATERING-FOUNTAIN. CHARLES GUSTAVE PELTIER, Ontonagon, Mich. Filed Sept. 22, 1920. Serial No. 412,015. 6 Claims. (Cl. 119—73.)

1. In a watering fountain, the combination with an upright casing having an opening in its front; of two duplicate tanks for removable insertion into and close fit within said casing, each having an opening in its front and a trough in rear of said opening, and holes through the walls of the trough into the interior of the tank, the height of one tank being such that it supports the other with the mouth of its trough registering with the opening in the casing.

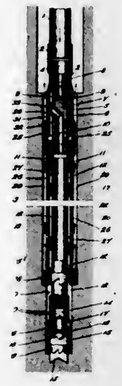


1,378,054. HYDRAULIC-PIPE JOINT. WILLIAM A. PRATT, Bayonne, N. J., assignor to The M. W. Kellogg Co., a Corporation of Delaware. Filed Mar. 27, 1920. Serial No. 369,245. 8 Claims. (Cl. 137—75.)

6. A joint for lateral branch pipes, comprising a main portion and reduced branch portions, the latter having

circular outer ends and flattened surfaces at the inner ends, means for uniting said flattened surfaces, thereby forming a longitudinal retaining member, the combined transverse areas of said inner ends being substantially equal to the area of said larger portion to which they are connected and a plurality of bands surrounding said branch portions for preventing distortion under internal pressure.

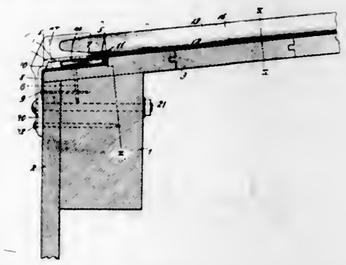
1,378,055. CARBURETER. HOWARD CARROLL PUSEY, Swarthmore, Pa. Filed July 16, 1919. Serial No. 311,275. 3 Claims. (Cl. 261—41.)



1. A carbureter having a mixing chamber, an air inlet communicating with the mixing chamber, a constant level chamber, a well in communication with the constant level chamber, a hollow plunger extending from the well into the mixing chamber and having an emulsion chamber therein communicating with the mixing chamber, there being a calibrated opening for constantly feeding fuel to said emulsion chamber, a constant air supply for the emulsion chamber, means for lowering the hollow plunger, means for increasing the air supply to the mixing chamber when the plunger is lowered, and other means for feeding fuel and air to the emulsion chamber, said means being arranged to decrease the air supply and increase the fuel supply as the main air supply is increased.

2. A carbureter having a mixing chamber, an air inlet communicating with the mixing chamber, a constant level chamber, a well in communication with the constant level chamber, a hollow plunger extending from the well into the mixing chamber and having an emulsion chamber therein communicating with the mixing chamber, there being a plurality of openings through the wall of the plunger arranged to be successively moved into the well as the plunger is lowered, said openings being arranged to feed either fuel or air to the emulsion chamber, said feed being determined on the position of the plunger, and means for lowering the plunger, the upper end of said plunger being arranged to increase the air supply to the mixing chamber when it is lowered.

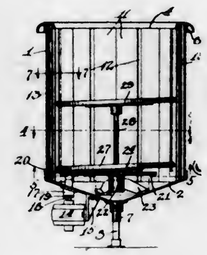
3. A carbureter having a float chamber, a fuel well in communication with said float chamber, an air inlet, a mixing chamber in communication with the air inlet, a plunger movable within the well, a Venturi tube in the mixing chamber, there being an emulsion chamber within the plunger, openings through the wall of the plunger arranged to communicate either with the air chamber in the carbureter or the well, a valve head on the upper end of the plunger, there being openings through said head in communication with the emulsion chamber and also opening to the mixing chamber, and means for raising and lowering the plunger for increasing the fuel fed to the emulsion chamber, and, at the same time, increasing the amount of air fed to the mixing chamber.



1,378,056. DRILLING APPARATUS. WARREN B. REED and WALTER HEPLER, Morgan City, La. Filed June 21, 1920. Serial No. 390,494. 8 Claims. (Cl. 255—61.)

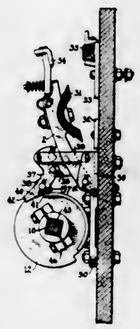
1. In an apparatus of the class described the combination of a cutter member; a second cutter member adapted to operate in advance of said first cutter member; means whereby fluid may be supplied to said first cutter member to remove the cuttings therefrom; and means adapted

to receive the cuttings produced by said second member, and to maintain them out of contact with said fluid; substantially as described.



1,378,057. CAR-ROOF. THOMAS NATHAN RUSSELL, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1919. Serial No. 332,475. 7 Claims. (Cl. 108—5.4.)

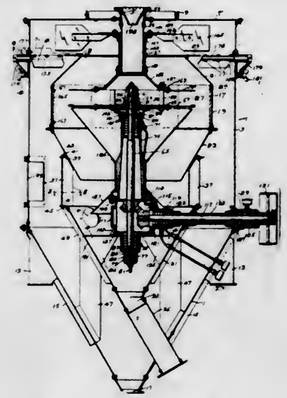
1. In a car roof, the combination of a roof frame, a top sheathing carried thereby, roof sheets united in a loose seam which permits individual movement of each sheet, the eaves ends of the roof sheets being formed with downwardly and inwardly bent hooked flanges, an eaves hook strip attached to the body of the car near the eaves and formed with outwardly extending hooked flanges which are loosely engaged with those of the roof sheets, an eaves flashing having a vertical flange which is directly engaged with and confines the side sheathing of the car and having a top flange which enters the eaves seam above a portion of the eaves hook strip and below the hooked flange of the roof sheets, and a seam clip attached directly to the side sheathing and inclosing and supporting the outer end of the seam cap and loosely confining the eaves ends of the roof sheets.



1,378,058. PEELING-MACHINE. FRANK M. SCHAEFER, Chicago, Ill. Filed Feb. 13, 1919. Serial No. 276,759. 3 Claims. (Cl. 146—14.)

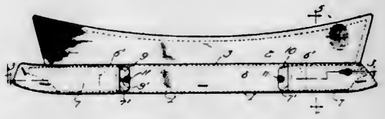
1. In a vegetable peeling machine, a container, an abrasive disk having a hub rotatably mounted in the lower part of said container, said hub having an aperture, a second abrasive disk above the first disk and having a

shaft removably secured in said aperture, and means for rotating said first disk.



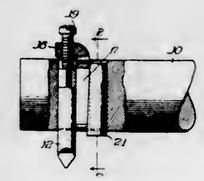
1,378,059. CIRCUIT-CONTROLLER. ARTHUR SIMON, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 15, 1915. Serial No. 28,406. 10 Claims. (Cl 200—6.)

1. In combination, a pivoted switch member biased to open position, an arm pivoted thereto and extending outwardly therefrom, a link element having one end pivotally connected to the outer end of said arm and its opposite end pivoted at a fixed point, said arm being normally disposed at an acute angle to said link element and being movable through a position wherein its pivot points are in alinement with the pivot points of the latter to move said switch member into closed position with a toggle action and to lock the same therein, and a cam operable to move said arm in opposite directions to effect opening and closing movements of said switch member.



1,378,060. AIR-SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed June 14, 1920. Serial No. 388,728. 14 Claims. (Cl. 83—40.)

1. An air separator comprising outer and inner casings providing communicating separating and collecting chambers having upper and lower openings between them, means to introduce materials to be graded into the separating chamber, means to cause a current of air to circulate up through the separating chamber and down through the collecting chamber and carry the finer materials separated into the collecting chamber, whirl pro-



moting vanes adjacent the upper opening of the collecting chamber, and whirl promoting vanes adjacent the lower opening of the collecting chamber.

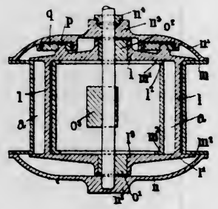
1,378,061. SOFT COLLAR. CHARLES F. J. SWAIN, Chicago, Ill. Filed Apr. 9, 1919. Serial No. 288,827. 2 Claims. (Cl. 2—67.)

1. In a soft removable shirt collar, having a neck band and an outer flap secured to the band; a longitudinal pocket at each end of the band having an opening transversely thereof between the ends and the central portion of the collar, a separate flexible stiffening strip longitudinally slidable in said pockets, and means on the band to engage the ends of each of said strips and hold the same in said pockets.

1,378,062. MEANS FOR SECURING TOOLS IN BORING-BARS. AXEL R. SWANSON, Chicago, Ill. Filed Sept. 12, 1918. Serial No. 253,783. 7 Claims. (Cl. 29—96.)

7. In combination a boring bar having a pair of apertures therethrough and having a slot therein connecting said apertures, a cutting tool mounted within one of said apertures, and a pair of co-acting wedge members, one of said wedge members being mounted in the slot and the other in one of the apertures, adapted to secure said cutting tool in position, one of said wedge members being secured against longitudinal movement.

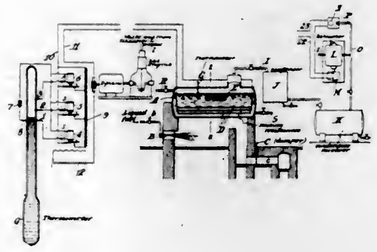
1,378,063. INTERFOLDED-PAPER PACK. CLYDE E. SWICK, San Francisco, Calif., assignor to Hawley Pulp and Paper Company, a Corporation of Oregon. Filed Dec. 21, 1917. Serial No. 208,286. 6 Claims. (Cl. 206—57.)



1. A paper pack comprising interfolded webs of paper, said webs being partially severed at alternate points along their lengths, the portions of each web intermediate its partially severed points inclosing the partially severed points of the other web.

1,378,064. PROCESS OF FORMING MOLDS FOR DENTISTS' USE. GIUSEPPE E. TERRANOVA, New Haven, Conn. Filed Oct. 28, 1920. Serial No. 420,078. 1 Claim. (Cl. 32—6.)

The process of forming molds for dentists' use consisting in forming a mold of plastic material in a flexible cup and then expanding the sides of the cup to permit the removal of the mold.



1,378,065. ROTARY ENGINE OR PUMP. CROMWELL HANFORD VARLEY, Chilworth Hill, near Guildford, England. Filed Aug. 31, 1920. Serial No. 407,259. 10 Claims. (Cl. 103—44.)

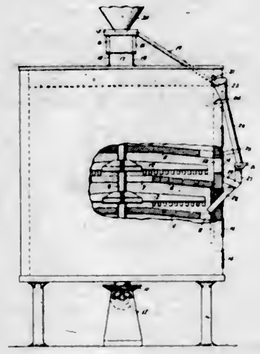
1. In a combination in a rotary engine or pump a conduit of substantially uniform transverse section throughout its length disposed around an axis in a figure approximating to a single turn of any configuration, a band-like displacer element of similar figure to said conduit positioned and movable therein normally to said axis, and means arranged at various positions relative to the axis of the displacer for similarly constraining the relative movement of said displacer and conduit elements so that every point of the former moves within the latter in a circle, the diameter of which is less than the breadth of the conduit.

1,378,066. APPARATUS FOR HEATING LIQUID HYDROCARBONS IN DISTILLING AND OTHER PROCESSES. ALBRECHT FRIEDRICH GEORG CARL PAUL JOSEF VON GROELING, New York, N. Y., assignor to National Refining Corporation, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 21, 1918. Serial No. 267,766. 8 Claims. (Cl. 219—19.)

1. In an apparatus for the purpose described, a still for liquid hydrocarbon, an electrical heating-resistance in the still, means for supplying current to the heating-resistance, an automatic means, responsive to the temperature

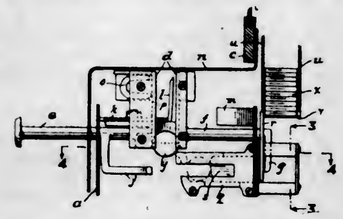
in the still, for controlling the flow of current in the heating-resistance to maintain a desired temperature in the still.

1,378,067. NECKTIE. MERVIN F. WALT, Huron, S. D. Filed Mar. 15, 1920. Serial No. 365,774. 5 Claims. (Cl. 2—11.)



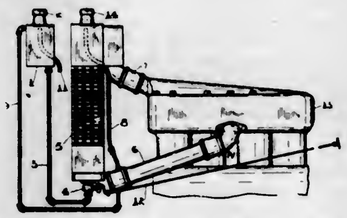
3. A neck tie comprising an outer cover of fabric, and an inner lining disposed within said outer cover, said inner lining consisting of end strips of fabric, and an intermediate strip of elastic material secured at its ends to said end strips, said intermediate strips having an elongated opening formed therethrough intermediate its length and intermediate the side edges thereof.

1,378,068. FEEDING DEVICE FOR ROASTING-FURNACES. WILLIAM FRANCIS WEEKES, Linwood, Pa., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed July 29, 1919. Serial No. 314,155. 3 Claims. (Cl. 263—26.)



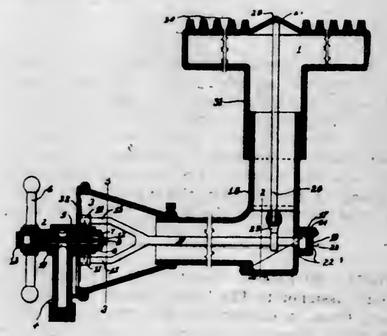
1. The combination of a furnace having a plurality of superposed hearths and wall openings in registry therewith, means located upon the top of the furnace for receiving material and a plurality of coöperating chutes

arranged in series and communicating with said receiving means whereby material is conducted from said receiving



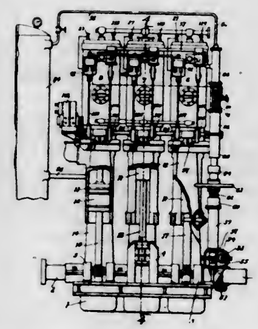
means and delivered through a wall opening to a hearth other than the top one.

1,378,069. COIN-ACTUATED DISPENSING APPARATUS. MORRIS WEINER, Philadelphia, Pa. Filed Dec. 24, 1919. Serial No. 347,099. 6 Claims. (Cl. 194—80.)



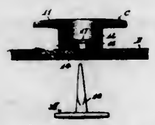
1. A coin actuated dispensing apparatus comprising a movable coin receiver having a coin slot extending therethrough, spring means for retaining the movable coin receiver in its retracted position, a fixed coin receiver extending over one edge of the coin slot in the movable receiver and forming a stop for the proper coin, a coin slot in the fixed coin receiver arranged to receive the coin from the movable coin receiver after the movable coin receiver has been advanced a short distance, a dispenser slidably mounted in the slot of the fixed coin receiver and arranged to be engaged by the coin, and means movable with the movable coin receiver to actuate the dispenser through the medium of the coin.

1,378,070. WATER-COOLING SYSTEM FOR INTERNAL-COMBUSTION MOTORS. DIDRIK WELGE, Mason, Nev. Filed July 21, 1919. Serial No. 312,352. 4 Claims. (Cl. 123—174.)



1. The combination with the radiator of the cooling system of an internal combustion motor of a tank located above the level of the bottom of the radiator; a water connection between the bottom of the tank and the bottom of the radiator; and an overflow pipe leading from the top of the radiator to the tank.

1,378,071. GAS-BURNING STOVE. CHARLES H. WERLIN, Columbus, Ohio. Filed May 5, 1919. Serial No. 294,934. 3 Claims. (Cl. 158—99.)



3. In a gas stove, a valve structure, a conduit leading from said valve structure and terminating in an upstanding portion, a burner member telescoping upon said portion, a shaft positioned within said conduit and extending co-axially with said valve structure, means whereby said shaft will be caused to rotate in unison with said valve structure, a stem located in parallelism within said burner member and operating to support the latter, and means connecting said shaft to said stem to raise and lower the burner member in proportion to the extent of gas flow through the valve structure.

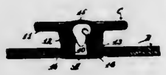
1,378,072. INTERNAL-COMBUSTION ENGINE. WILLIAM B. SMITH WHALEY, Malden, Mass., assignor to American Whaley Engine Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 27, 1917. Serial No. 144,970. 9 Claims. (Cl. 123—41.)

1. An operating gear of the character described for internal combustion engines operating on the retarded combustion cycle, comprising means for actuating the auxiliary valves thereof; means for operating said actuating means for said auxiliary valves; means for varying the working operations of said auxiliary valve actuating means; and means for holding said valve actuating varying means in set position with the engine; and means cooperating with the shifting means for opening the supply of the medium to be transferred through said auxiliary valves.

1,378,073. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 16, 1920. Serial No. 358,882. 3 Claims. (Cl. 24—94.)

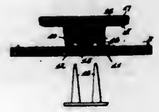
1. A button of the character described, comprising a body formed of non-metallic material and including a head, a hub, and a base, the latter being provided with an opening therethrough adapted to receive the prong of a metallic fastener therein and a metallic reinforcement provided with an opening in alinement with the opening of the base and adapted to receive the headed portion of the prong of the fastener thereagainst and protect the base from abrasion by the headed portion of the prong.

1,378,074. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 16, 1920. Serial No. 358,883. 2 Claims. (Cl. 24—95.)



2. A button of the class described, comprising a body portion formed of a hard non-metallic material, of uniform color throughout, a metallic anchor located therein, a non-metallic and slightly resilient anvil, contacting with said anchor, and a metallic cap, engaging said body portion, and holding said anvil in place.

1,378,075. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 16, 1920. Serial No. 358,884. 3 Claims. (Cl. 24—95.)



3. A button of the class described comprising a body portion formed of non-metallic material, having an opening extending therethrough and enlarging at its upper extremity, a metallic anvil located upon the top of said body, and a top engaging said body and holding said anvil in place.

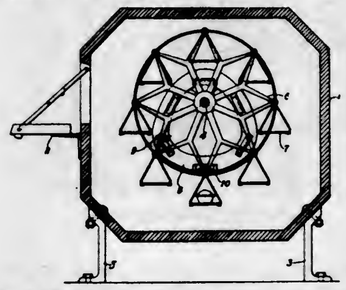
1,378,076. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 16, 1920. Serial No. 358,885. 1 Claim. (Cl. 24—95.)

A button of the class described for use with automatic button attaching machines, comprising a body portion including a top, a hub, and perforated base, formed of non-metallic material, of uniform color throughout, and a metallic cup-shaped anchor secured within said hub, having an open ended cavity in alinement with the opening in said base.

1,378,077. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 16, 1920. Serial No. 358,886. 3 Claims. (Cl. 24—95.)

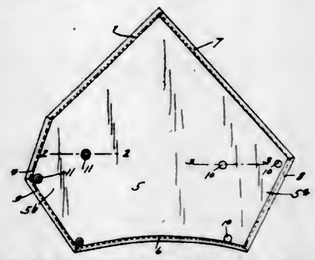
1. A button comprising a body, including a hub having an imperforate base and provided with a groove therein, an imperforate non-metallic anchor fitting within and substantially filling said hub.

1,378,078. VEGETABLE GLUE AND PROCESS OF MAKING THE SAME. FREDERIC S. WILLIAMS, Chicago, Ill., and JAMES G. B. PERKINS and JULIUS B. B. STRYKER, Lansdale, Pa., assignors to Perkins Glue Company, a Corporation of Pennsylvania. Filed Oct. 9, 1917. Serial No. 195,544. 12 Claims. (Cl. 87—17.)



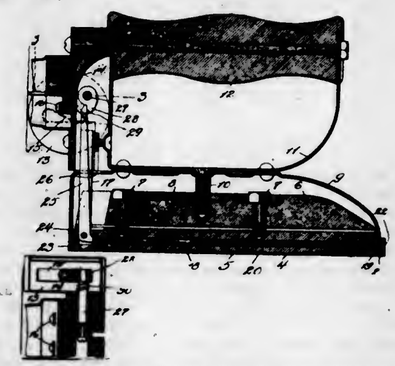
1. The improved vegetable glue comprising a starchy carbohydrate in solution in about 3 parts or less by weight of water and containing a salt of an alkali metal and a siliceous filler and being substantially neutral and having substantially the properties of animal glue for gluing up veneers.

1,378,079. FINGER-GRASPING RAZOR-BLADE HOLDER. JOHN A. WILLIAMSON, Denver, Colo. Filed June 22, 1920. Serial No. 390,937. 2 Claims. (Cl. 30—12.)



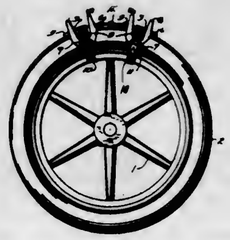
1. In a finger grasping razor blade holder, a razor blade and a suitable finger grasping plate form of holder for securing said razor blade in shaving positions, said holder being provided with means including a bottom and back conforming housing for securing the razor blade against displacement therefrom, said means including a stationary back plate member against which the razor blade rests, said back member being provided with ribs on its outside surface arranged to define the shaving angle of the razor blade, and a flat base portion against which the bottom or heel edge of said razor blade bears, said finger grasping portion comprising a thin bottom plate portion extending laterally from the said heel portion of said holder a short distance, and then being bent in a small curve upon itself, and extended forwardly in a resilient top plate portion to close to the razor blade, slots through the bottom flat portion of said holder, a loose housing plate bearing against the inside surface of said razor blade and provided with lugs extending through the slots in said bottom plate, and pivotally bent up against said bottom plate and arranged to allow said plate to be moved against said razor blade, the adjacent end of said top plate member of said holder being arranged to bear against said loose housing plate with a resilient tension and arranged to clampingly hold said razor blade against said stationary back, a screw threaded through the bottom plate of said holder and bearing against the underside of said resilient top plate for forcing said top plate against said pivotally swinging plate.

1,378,080. ELECTRICALLY-HEATED BAKE-OVEN. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Sept. 24, 1920. Serial No. 412,485. 5 Claims. (Cl. 219—35.)



1. In a baking oven of the reel type, the combination with an outer casing, a shaft therein, a rotatable reel secured to said shaft, and a plurality of spaced trays secured to said reel, of electric heating means located inside of the path of travel of said trays.

1,378,081. SLEEVE-PROTECTOR. BEATRICE YAEGER, Columbia Heights, Minn. Filed May 31, 1918. Serial No. 237,396. 1 Claim. (Cl. 2—95.)

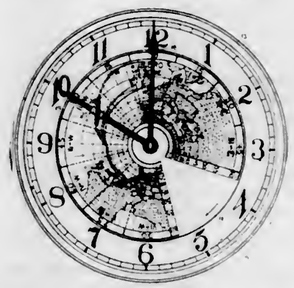


A sleeve protector comprising a body portion and a pair of substantially triangular flaps adapted to fold, one over the other and over the body portion, a fastener for securing the flaps together at the wrist portion of the protector, a fastener for securing an extension of one of the flaps to the overlapped portion of the other flap, and an additional fastener for securing the other flap to the overlapped portion of the first mentioned flap.

1,378,082. AUTOMATIC CONTROL FOR ELECTRIC IRONS. CHARLES B. YOREK, Webster Groves, Mo. Filed Apr. 19, 1920. Serial No. 374,988. 2 Claims. (Cl. 219—25.)

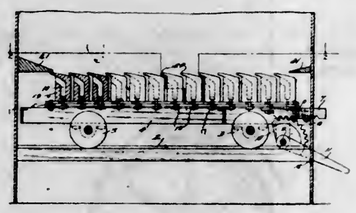
1. In combination with an electric iron having a circuit controlling switch, a switch operating means comprising a cam for engagement with the circuit making and breaking device, a bell crank for engagement with the cam and a rod, susceptible of linear expansion by heat, acting upon said bell-crank.

1,378,083. TRACTION DEVICE. HARRY G. ANDERSON, Chicago, Ill. Filed Feb. 11, 1920. Serial No. 357,800. 2 Claims. (Cl. 152—14.)



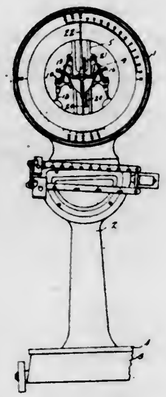
1. In a traction device for vehicle wheels, a pair of shoes, each shoe comprising a curved plate terminating at one end in a hook and at its opposite end in an ear, each plate being formed also with an enlarged lateral ear, the lateral ear of one plate being disposed upon its side remote from the other plate, spaced upstanding lugs formed upon each plate, a tooth struck from each plate between its lugs, and a sprocket chain adapted for engagement with the teeth of each pair of shoes to adjustably secure the same together and to the vehicle wheel.

1,378,084. REFINING SULFUR. RAYMOND F. BACON and CALVIN N. WENRICH, Pittsburgh, Pa., assignors to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Oct. 6, 1919. Serial No. 328,902. 3 Claims. (Cl. 23—10.)



1. The method of obtaining from mined sulfur, a sulfur product particularly adapted for shipment or transfer, which comprises maintaining a body of the sulfur at a temperature ranging from about 115° to 130° C. and supplying it in the form of drops into a body of cooling liquid at such a rate compared with the volume and boiling temperature of the liquid that the drops will coagulate into pellet form; substantially as described.

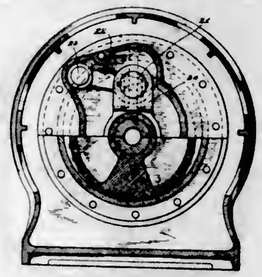
1,378,085. GEOGRAPHICAL CLOCK. SAMUEL W. BALCH, Montclair, N. J. Filed June 29, 1918. Serial No. 242,564. 3 Claims. (Cl. 58—43.)



1. A disk bearing a map of a portion of the earth's surface so projected that the angular spacing with respect to the center of the disk of any two portions will be double their difference in longitude, in combination with a concentric dial bearing twelve hour designations in a complete circle in consecutive order in the west to east direction of the map, the dial and disk being capable of being angularly set with respect to each other, substantially as described.

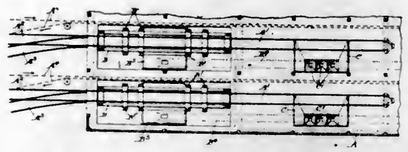
1,378,086. GRATE. ERIK J. BERGE, Bayati, Cuba. Filed Mar. 13, 1918. Serial No. 222,228. 4 Claims. (Cl. 126—153.)

1. In a furnace construction, a fire box, a carriage removably disposed within said fire box, grate bars, a frame secured to said grate bars and composed of parts pivotally secured together and relatively adjustable to vary the length of the frame, thereby varying the distance between the grate bars, and manually operable means mounted on said carriage and engaging said frame for adjusting the latter.



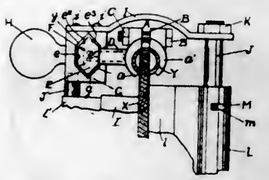
1,378,087. WEIGHING-SCALE. HARRY S. BERGEN, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 23, 1916. Serial No. 127,250. 10 Claims. (Cl. 265—62.)

1. In a weighing scale and in combination with the indicating mechanism thereof, a vertically-movable frame, a rack arranged thereon to actuate the indicating mechanism, means for adjusting the position of the rack vertically relative to the frame, a load-offsetting pendulum and knife edge pivots on which said pendulum is mounted, said pendulum being connected to and adapted to roll upon the vertically-movable frame.



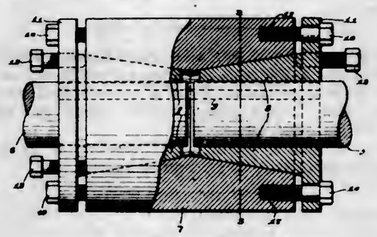
1,378,088. DRIVING MECHANISM FOR ROTARY MACHINES. ALEXANDER B. BOYER, Riverside, Ill., assignor, by direct and mesne assignments, to American Rotary Engine Co., Grand Rapids, Wis., a Corporation of Wisconsin. Filed Mar. 29, 1920. Serial No. 369,652. 9 Claims. (Cl. 230—30.)

1. In a driving mechanism, the combination of a rotary machine comprising two members one within the other in eccentric relation forming an inclosed compartment between them and a diaphragm carried by one of said members crossing said compartment and engaging slides carried by the other member, said slides having rocking motion about an axis of oscillation, an arm rig-



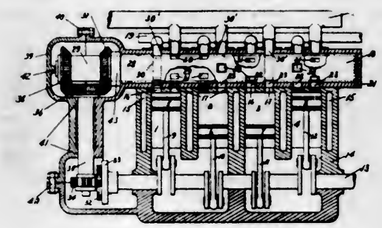
idly secured to said other member outside of said compartment, and a link pivotally connecting said arm and said one member.

1,378,089. GRAIN-CAR-HANDLING APPARATUS. THOMAS D. BUDD, Chicago, Ill., assignor of one-half to Link-Belt Company, Chicago, Ill., a Corporation of Illinois, and one-half to James Stewart & Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 3, 1918. Serial No. 226,534. 13 Claims. (Cl. 214—44.)



1. A grain handling apparatus comprising a track for the storage of loaded cars, a track for the storage of unloaded cars, said tracks being joined at one end, a single unloading track connected to the pair where they join, the tracks for the loaded and for the unloaded cars extending in the same general direction, a car dumping cradle and a hand unloading pit arranged along the unloading track.

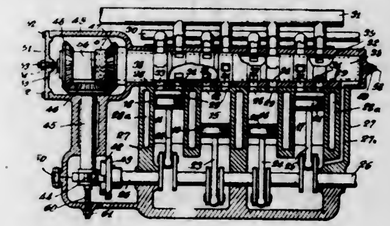
1,378,090. WINDSHIELD-WIPER FOR VEHICLES. JOHN W. CAIN, Chicago, Ill. Filed July 29, 1918. Serial No. 247,129. 2 Claims. (Cl. 15—59.)



1. In a wiper for wind shields, in combination, clamps adapted to grip a wind shield frame, each comprising a plurality of members, a projecting lug on one of said members of each clamp, a track, means to secure said track to said lugs, a block slidably mounted on said track, said block provided with an undercut groove therein corresponding in cross section with the cross section of said track, the open side of said groove being adapted to pass said lugs, said clamps and lugs arranged to position said track to one side of said frame, a member on said slidable block extending over said frame to the other side thereof, a rod secured to the end of said member, and a wiper mounted on said rod.

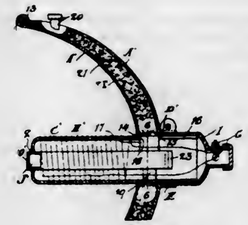
1,378,091. SHAFT-COUPLING. EINAR F. CARLSEN, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,313. 2 Claims. (Cl. 287—114.)

1. A shaft coupling comprising a sleeve having oppositely inclined surfaces on the inside, shaft-gripping jaws seating in the sleeve and having their exterior surfaces inclined to correspond to the inclined surfaces of the sleeve, the outer ends of the jaws having lateral flanges facing the ends of the sleeves, bolts passing through the flanges and screwed into the sleeve ends, and set screws threaded through the flanges to engage the sleeve ends.



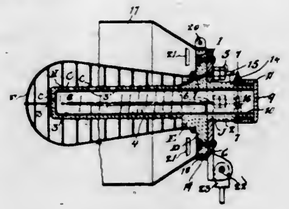
1,378,092. INTERNAL-COMBUSTION ENGINE. HAROLD J. CARMODY, Brooklyn Manor, N. Y., assignor of one-half to Joseph A. Faurot, New York, N. Y. Filed Apr. 26, 1918. Serial No. 230,875. 6 Claims. (Cl. 123—59.)

1. In a device of the character described the combination of a pair of valve members disposed concentrically to each other and revoluble upon a common axis, said valve members each being provided with transversely disposed ports located in different planes crossing said axis, some ports of each valve being staggered so as to cross other ports of the same valve, and a plurality of engine cylinders each provided with an inlet port located in one of said planes and with an exhaust port located in another of said planes, the arrangement being such that by the rotation of said valve members first a pair of transverse ports in one plane are brought into registry with an inlet port of the engine, and then a different pair of transverse ports in another plane of the same valve, crossing the ports thus brought into registry with the inlet port of the engine are brought into registry with an exhaust port of the engine.



1,378,093. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. HAROLD J. CARMODY, Brooklyn Manor, N. Y., assignor of one-half to Joseph A. Faurot, New York, N. Y. Filed June 29, 1918. Serial No. 242,517. 4 Claims. (Cl. 123—59.)

2. In an internal combustion engine the combination of a revoluble valve sleeve provided with ports, a second revoluble valve sleeve provided with ports adapted to be brought into and out of registry with said first mentioned ports, a collar carried by said second mentioned

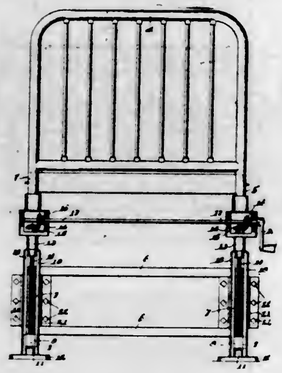


valve sleeve and adjustable relatively thereto, said collar being normally abutted by the adjacent end of said first mentioned sleeve.

1,378,094. METHOD OF AND MEANS FOR TREATING AIR. EGERTON RYERSON CASE, Toronto, Ontario, Canada. Filed Mar. 22, 1920. Serial No. 367,905. 20 Claims. (Cl. 219—38.)

1. The method of treating air for various purposes, which consists in supplying a treating agent to air into which is passed reflected heat waves or rays, generated by electric current.

1,378,095. ELECTRIC DEVICE FOR TREATING AIR. EGERTON RYERSON CASE, Toronto, Ontario, Canada. Filed Mar. 22, 1920. Serial No. 367,906. 14 Claims. (Cl. 219—38.)

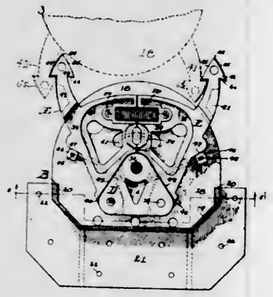


1. A device of the class described and for the purpose set forth including means for carrying a treating agent for air at large, and portable means whereby the same is electrically heated so that one end of said means will have a higher temperature than the other end.

1,378,096. BED-ELEVATING DEVICE. FRANK J. CHAT, Chicago, Ill., assignor to Harry R. Gibbons, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,666. 5 Claims. (Cl. 5—44.)

1. In a device of the class described, a frame adapted to be attached to a bed; threaded upright members rota-

tively mounted in bearings secured to said frame, and adapted upon rotation, to adjust the elevation of said

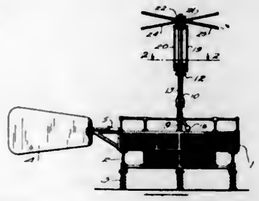


bed; a base for pivotally supporting each upright member and means of rotating said upright members, substantially as described.

1,378,097. STYLUS-BAR MOUNTING. HARRY J. DURBOROW, Philadelphia, Pa., assignor of one-half to Bayard L. Winders, Philadelphia, Pa. Filed July 16, 1920. Serial No. 396,673. 3 Claims. (Cl. 274—35.)

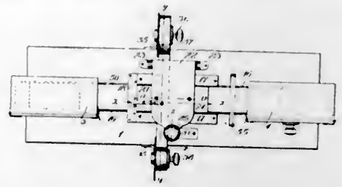
1. The combination with a sound box having a diaphragm casing and a diaphragm therein, of a stylus bar mounting including a plate having a stylus bar extending therefrom for attachment with the diaphragm; means providing a fulcruming contact between the plate and the casing; springs having looped end portions connected to said plate and central portions between said looped portions; and means for connecting said central portions to said casing independently of said plate; substantially as described.

1,378,098. CAR-COUPLING. MARVIN L. ECKHART, Attica, Ind., assignor to National Car Coupler Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1920. Serial No. 355,062. 16 Claims. (Cl. 213—17.)



1. A car coupler comprising a housing, means for securing the housing to the car, a fulcrum plate pivotally mounted within the housing, a pair of fulcrum arms each pivotally secured at its rear end to said plate and provided at its outer end with a coupling jaw projecting beyond the margin of the housing and means independent of the plate for operatively holding the fulcrum arms together.

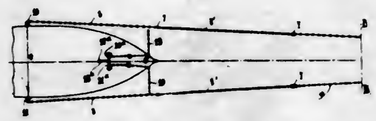
1,378,099. FLAVORING AND PERFUMERY EXTRACT. GUSTAVUS J. ESSELEN, Jr., Swampscott, Mass., assignor, by mesne assignments, to D. & L. Slade Company, Boston, Mass. Filed June 5, 1920. Serial No. 386,779. 5 Claims. (Cl. 99—11.)



1. A solution consisting of an essential oil or the like dissolved in an ester of glycerin and acetic acid.

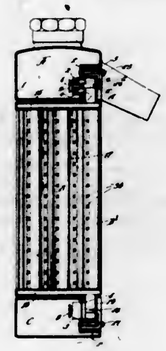
1,378,100. FLYING-MACHINE. DANIEL FENSKE, Milwaukee, Wis., assignor of one-half to John C. Kleist, Milwaukee, Wis. Filed Dec. 15, 1919. Serial No. 344,848. 1 Claim. (Cl. 244—19.)

In a flying machine, a basket, a motor driven sectional shaft carried by said basket, a sleeve support, one shaft section rotating in said sleeve, teeth formed along one face of said sleeve support, a hand lever fulcrumed to said sleeve support and formed with a pawl in engagement with the teeth of said sleeve support, a block slidably keyed to the last named shaft section and rotating therewith, pitmen connecting said block and hand lever, and shafted wings carried by said block and adjustable relatively thereto through movement of said block relative to its shaft section.



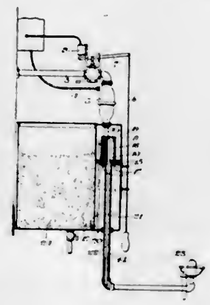
1,378,101. PHOTOGRAPHIC-PRINTING APPARATUS. WILLIAM F. FOLMER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 20, 1918. Serial No. 254,926. 7 Claims. (Cl. 95—75.)

1. In a photographic printing apparatus, the combination with a guide for a sensitized strip and a printing negative arranged therein, of a movable presser for holding the strip and negative in printing contact, a marker adapted to act upon the strip and controlled by the movement of the presser, and an indicator with which the mark made on the strip is adapted to coöperate to indicate the feed of the strip.



1,378,102. CABLE ARRANGEMENT FOR TOWING. LOUIS VICTOR WILLIAM FROGER, Lorient, France. Filed Dec. 8, 1919. Serial No. 343,361. 8 Claims. (Cl. 114—235.)

1. In a cable arrangement for towing, the combination, with a pair of releasing hooks adapted to be positioned on the tow at the ends of a transverse line normal to the longitudinal axis of the tow; of a tow line having its ends detachably coupled to said hooks; and balancing connec-



tions forward of said hooks between the tow and each bight of the tow line, the bend in the latter adapted to run in a grooved part on the tug or anchor.

1,378,103. RADIATOR. MATHIAS GAL, Cleveland, Ohio. Filed Apr. 24, 1919. Serial No. 292,311. 7 Claims. (Cl. 257—129.)

1. A radiator comprising headers provided with normally-closed valves, an intermediate tubular section attachable at its ends to said headers, and means carried by said intermediate section and adapted to automatically open said valves upon the insertion of said section.

1,378,104. OZONE-FUME-REMOVING APPARATUS. WILLIAM E. GEST, Milwaukee, Wis., assignor to Ozone Company of America, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 28, 1920. Serial No. 377,295. 4 Claims. (Cl. 183—3.)

1. In a device of the character described, an outlet structure for an ozonized water tank comprising a delivery pipe communicating with the tank, an inclosure forming an air chamber at the upper end of said pipe and provided with water sealed inlets to prevent the passage of free fumes from the tank to the delivery pipe, and means for equalizing the pressure in the air chamber.

1,378,105. VEGETABLE GLUE AND PROCESS OF MAKING SAME. WILLIAM M. GROSVENOR, New York, N. Y., assignor to Perkins Glue Company, a Corporation of Pennsylvania. Filed Dec. 8, 1917. Serial No. 206,144. 10 Claims. (Cl. 87——17.)

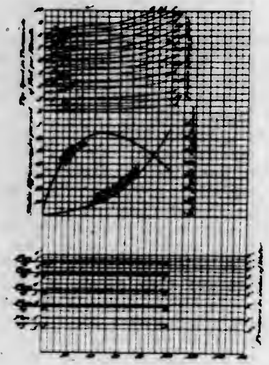
1. The process of making vegetable glue, which consists in dissolving a starchy carbohydrate in about 3 parts or less by weight of water and a substantially neutral solvent of starch cellulose, to produce a substantially neutral glue solution, the starchy carbohydrate being such that the resulting glue solution has substantially the properties of animal glue for gluing up high grade wood veneers.

2. The process of making vegetable glue, which consists in dissolving a starchy carbohydrate in the absence of caustic alkali and in about 3 parts or less by weight of water and a substantially neutral solvent of starch cellulose, the starchy carbohydrate being such that the resulting glue solution has substantially the properties of animal glue for gluing up wood veneers.

3. The process of making vegetable glue, which consists in dissolving a starchy carbohydrate in water by means of a substantially neutral solvent of cellulose to form a substantially neutral viscous glue solution, the starchy carbohydrate being such that the resulting glue solution has substantially the properties of animal glue for gluing up wood veneers.

4. The process of making vegetable glue, which consists in dissolving a starchy carbohydrate in about 3 parts or less by weight of water and a substantially neutral salt solvent of starch cellulose, to produce a substantially neutral glue solution, the starchy carbohydrate being such that the resulting glue solution has substantially the properties of animal glue for gluing up wood veneers.

5. The process of making vegetable glue, which consists in dissolving a starchy carbohydrate in water by means of a substantially neutral salt solvent of cellulose, to form a substantially neutral viscous glue solution, the starchy carbohydrate being such that the resulting glue solution has substantially the properties of animal glue for gluing up wood veneers.

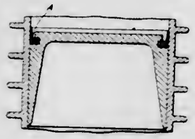


1,378,106. VEGETABLE GLUE AND PROCESS OF MAKING SAME. WILLIAM M. GROSVENOR, New York, N. Y., assignor to Perkins Glue Company, a Corporation of Pennsylvania. Filed Jan. 16, 1918. Serial No. 212,044. 9 Claims. (Cl. 87—17.)

7. The improved process of making vegetable glue, which consists in dissolving with an alkaline solvent of starch, a mixture of a starchy carbohydrate uncombined with sulfur and a water absorptive material in about 4 parts or more of water per part by weight of carbohydrate, the carbohydrate and proportions being such that the resulting glue has substantially the spreading and cohesive qualities of animal glue for gluing up wood veneers and is capable of adhering to wood with substantially the adhesiveness of animal glue for gluing up wood veneers.

1,378,107. FAN-CHART. HAROLD F. HAGEN, Boston, Mass., assignor to B. F. Sturtevant Company, Boston, Mass., a Corporation of Massachusetts. Filed June 16, 1916. Serial No. 104,064. 12 Claims. (Cl. 283—1.)

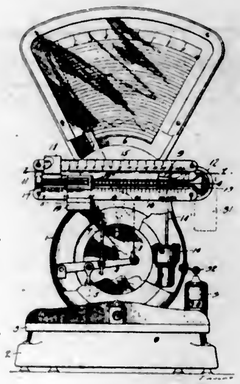
1. A chart for determining the performance of fans, blowers, and the like, comprising cross lines, the lines in one direction being marked to designate volumes and being spaced uniformly, and the lines in the other direction being marked to designate pressures and being spaced from the line of zero pressure at distances proportional to the square roots of the pressures designated, whereby a straight line may be drawn from any point corresponding to the volume delivered and pressure developed by a



particular fan to the point of zero volume and pressure to indicate the different volumes delivered and corresponding pressures developed by the fan running at different speeds but with a constant efficiency.

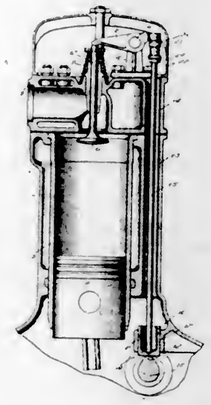
1,378,108. BUTTON. LEWIS J. HART and FRANKLIN R. WHITE, Waterbury, Conn., assignors to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 16, 1920. Serial No. 358,881. 2 Claims. (Cl. 24—94.)

1. A button comprising a body portion including a head, a hub and an imperforate base formed of a hard, non-metallic material, said base provided with an indentation adapted to receive and guide the prong of a metallic fastener through the base for securement of the button to a supporting surface.



1,378,109. OBTURATOR-RING. JOHN S. HECHT and ALBERT T. DOWDELL, St. Albans, England. Filed May 17, 1916. Serial No. 98,073. 7 Claims. (Cl. 74—109.)

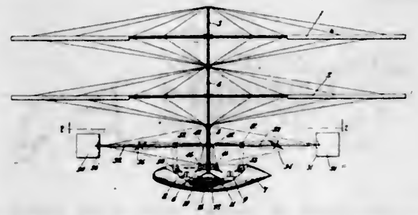
1. An obturator ring comprising a strip of metal having its grain extending diagonally of its length.



1,378,110. WEIGHING-SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 21, 1916. Serial No. 138,199. 19 Claims. (Cl. 265—31.)

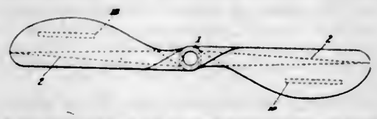
1. In a weighing scale and in combination with the main lever thereof, a graduated beam mounted upon the lever, a poise slidable thereon, a computing member mounted upon said lever, and rotatable means mounted within

the poise, said beam being formed with means adapted to engage said rotatable means for rotating said computing member when the poise is moved on the beam.



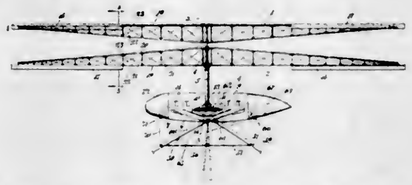
1,378,111. VALVE-ACTUATING MECHANISM. ROBERT O. HENDRICKSON, Racine, Wis., assignor to Wallis Tractor Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 15, 1917. Serial No. 154,938. 3 Claims. (Cl. 123—87.)

1. In a device of the class described, a spring-pressed valve, a rocker arm for operating the valve there being a partially spherical socket formed in said arm, a push rod for operating said rocker arm, a sleeve threaded upon said push rod and having a partially spherical socket in its upper end and a ball seated in the sockets in said sleeve and rocker arm respectively.



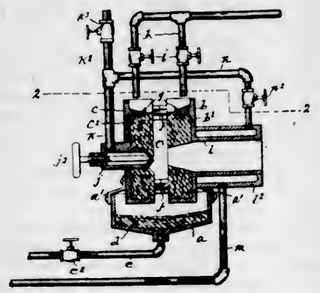
1,378,112. FLYING-MACHINE. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed June 14, 1919. Serial No. 304,190. 5 Claims. (Cl. 244—19.)

1. A helicopter comprising a propeller, means supporting the propeller, means for driving the propeller about an upright axis, means arranged to be acted upon by the draft from the propeller for tilting said propeller supporting means to cause lateral movement of the helicopter,



and means for maintaining said propeller supporting means tilted when the helicopter moves laterally.

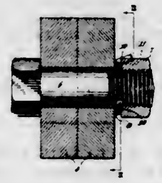
1,378,113. PROPELLER. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed June 14, 1919. Serial No. 304,191. 16 Claims. (Cl. 170—159.)



1. A propeller having a hollow self-sustaining blade, the center of support of which is forwardly of the center of pressure of the blade.

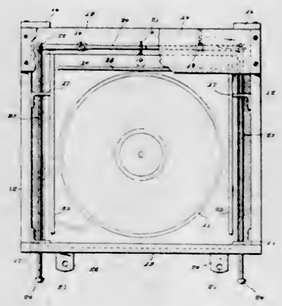
1,378,114. FLYING-MACHINE. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed June 14, 1919. Serial No. 304,192. 13 Claims. (Cl. 244—19.)

1. The combination of two propeller and means for supporting the same for rotation about a common axis, said propellers being spaced apart along said axis and comprising blades and members supporting said blades and arranged entirely within the space between the blades of the respective propellers.



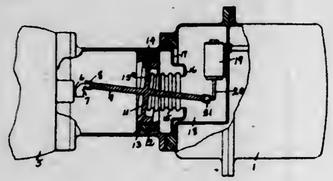
1,378,115. FUEL-OIL BURNER. WILLIAM M. HOFFMAN, Buffalo, N. Y., assignor to General Fuel Apparatus Corporation, Buffalo, N. Y., a Corporation of Delaware. Filed Mar. 5, 1920. Serial No. 363,547. 7 Claims. (Cl. 158—73.)

1. In a fuel oil burner, a drip-pan containing a porous refractory filler and provided with a discharge conduit



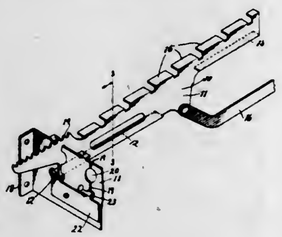
leading therefrom, a pair of parallel opposed vertical burner plates, spaced from each other so as to provide an air passageway therebetween supported over said drip-pan in such a manner as to provide a circumferential air inlet-opening to said drip-pan, said burner plates composed of refractory porous material, means for supplying fuel oil to said burner plates, said plates so adapted that said oil may gravitate therethrough and seep out along the face thereof, a nozzle adapted to project a vapor jet through one of said plates into the air passageway therebetween, a combustion chamber passing through the other of said burner plates disposed opposite the nozzle.

1,378,116. NUT-LOCK. GWYLLYM R. HOLMES and WALTER J. WISCH, Baltimore, Md., assignors to The Bull Dog Lock Washer Co., Baltimore, Md., a Corporation of Maryland. Filed May 8, 1920. Serial No. 379,795. 1 Claim. (Cl. 151—25.)



In combination with a member having a bolt extending therethrough with a nut threaded thereon, a washer loosely arranged upon the bolt between the member and the nut and provided with an inwardly projecting rigid spur, and a rigid tongue on the washer engageable by the nut to prevent turning of the latter relative to the washer, said tongue and said spur being formed and arranged to permit free turning of the nut onto the bolt, and said tongue being arranged to be engaged by the nut when the latter tends to turn off of the bolt for sliding the washer transversely of the bolt and causing digging of the spur into the threads of the bolt, whereby such turning of the nut off of the bolt is prevented.

1,378,117. PHONOGRAPH-CABINET. JOSEPH C. HOULEY and CHARLES E. SHAW, Chicago, Ill. Filed Sept. 21, 1920. Serial No. 411,794. 2 Claims. (Cl. 211—16.)

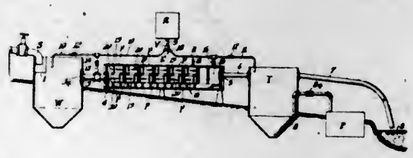


1. A filing device for talking machine record disks, comprising a frame having side walls and an open front, a series of vertically spaced and horizontally slidable disk-supporting shelves between the side walls and adapted to be projected from the open front of the frame, shelf-supporting flanges on the side walls, said flanges having edge notches in which the shelves seat at their side edge portions, levers connected to the shelves for projecting the same, and slidable actuators for the levers supported by the aforesaid flanges and projecting from the front of the frame.

1,378,118. POWER-TRANSMITTING JOINT. CHARLES H. JACOBSEN and CARL BREER, Detroit, Mich. Filed July 21, 1920. Serial No. 397,838. 5 Claims. (Cl. 74—14.)

4. In a power transmitting joint for gas compressors, the combination of a rotary pump; a motor; a driving connection between the motor and the pump comprising a wall between the motor and pump, a wabbling fulcrum mounted in the wall; a crank on the motor; a crank on the pump; a wabbling bar mounted on the fulcrum and extending from one crank to the other; and a bellows diaphragm having one end secured to the fulcrum and the other to the wall to seal the joint at the fulcrum.

1,378,119. RACK-BAR AND BEARING FOR CALCULATING-MACHINES AND THE LIKE. OLIVER D. JOHANTGEN, Chicago, Ill., assignor to Victor Adding Machine Co., Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 4, 1918, Serial No. 210,301. Divided and this application filed July 1, 1919. Serial No. 307,941. 11 Claims. (Cl. 235—60.)



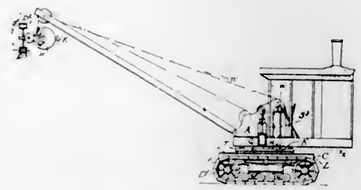
1. In an adding machine, in combination, a sliding rack bar having a web and a flange, a guide plate having a slot for receiving the said flange of the rack bar, and a bearing plate carried by the guide plate and having a portion projecting into said slot under the flange to serve as a bearing therefor.

6. A rack bar bearing for calculating machines and the like comprising, in combination, a member having a slot therein said slot being enlarged at each end, a reciprocating part acting in said slot with longitudinal edges in the enlargements of the slot, and means to guide said part in its reciprocation with its edges out of contact with said member.

8. A rack bar for calculating machines and the like comprising an elongated sheet metal plate having a right angled flange at the bottom thereof formed of the material of the plate and a set of stops at successively increasing heights above said flange formed by bending portions of the material of the plate at an angle thereto.

1,378,120. METHOD OF AND APPARATUS FOR TREATING LIQUID. CLARENCE P. LANDRETH, Philadelphia, Pa. Filed Dec. 20, 1916. Serial No. 138,087. 21 Claims. (Cl. 204—25.)

1. The method of treating liquid, which consists in passing current through the same in the presence of a normally attackable positive electrode, rendering said electrode passive, continuing passage of current through the liquid in the presence of said passive electrode, and introducing reagent into the liquid after the passage of current therethrough.



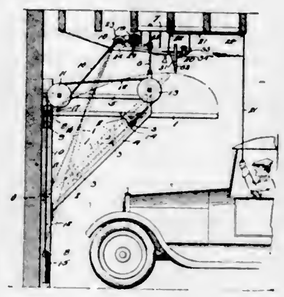
2. The method of treating liquid, which consists in passing current therethrough in the presence of a normally attackable positive electrode and in the presence of a reagent added thereto until passivity of said electrode is produced, and introducing a reagent into the liquid after passage of current therethrough.

3. The method of treating liquid, which consists in introducing a reagent thereinto, and electrolyzing the same in the presence of a positive metal electrode until said electrode becomes pasaive, then reducing or discontinuing the introduction of said reagent, and introducing said reagent into the liquid after passage of current therethrough.

4. The method of treating liquid, which consists in passing current therethrough in the presence of a positive metal electrode, and simultaneously introducing reagent into said liquid both during and after its electrical treatment to render said electrode passive and cause reaction between said reagent and contents of the liquid after passage of current through the liquid.

5. The method of treating liquid, which consists in passing electric current therethrough, and alternately introducing reagent into said liquid prior and subsequent to the electrical treatment.

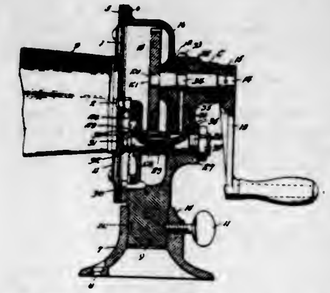
1,378,121. MECHANISM FOR STEERING TRACTORS. FREDERICK W. LARKWORTHY, Cleveland, Ohio, assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio, a Corporation. Filed Mar. 24, 1920. Serial No. 368,331. 5 Claims. (Cl. 180—17.)



1. In a locomotive crane of the endless belt type, having truck wheels, oppositely related horizontal shafts for driving the same, and a differential gear operatively connected to said shafts and to the power mechanism of the crane, the combination, with the superstructure of the crane, of a rotary steering-shaft extending through the superstructure below the bedplate, a pinion fixedly attached to the lower end of said steering shaft, in mesh with the upper circumferential face of a transmission-gear, revolubly mounted on the bedplate around the axis of revolution of the superstructure; a gear-section axially mounted on said bed-plate in mesh with the lower circumferential face of the transmission gear; an arm on the axle of said gear-section; devices for braking said horizontal shafts, and a system of arms and levers, between said arm and said devices, whereby, according to and by the movement of said arm in one direction or the other, one, or the other, of said devices will be correspondingly actuated, substantially as shown and described.

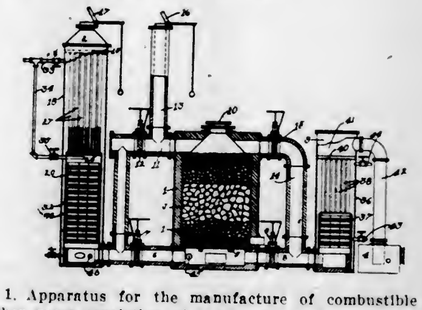
1,378,122. SPARKING PLUG. EDMUND LEYMARIE, Paris, France. Filed Feb. 12, 1919. Serial No. 276,543. 1 Claim. (Cl. 123—169.)

A spark plug, including a metallic body portion having an axial opening therethrough and an undercut angular groove adjacent to the upper end of the opening, an insulating barrel located within said body portion having a face inclined toward and substantially parallel with said undercut groove and a metallic ring forced against said inclined face and into said groove to bind the insulating barrel in position within the body portion.



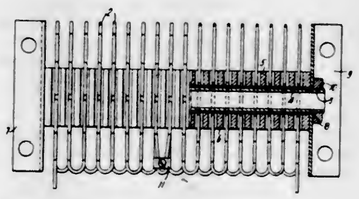
1,378,123. TRACKAGE FOR CEILING TYPE OF DOORS WITH DOOR-OPENERS. ELMER LOVEJOY, Laramie, Wyo. Filed Mar. 27, 1920. Serial No. 369,346. 8 Claims. (Cl. 268—1.)

1. In an automatic power operated door opener of the type described, the combination of spaced inclined tracks arranged adjacent the doorway, rollers adapted to ride on said track, said rollers being mounted at a point substantially equally distant from the top and bottom of the door, guide rollers carried by the lower edges of the door and adapted to travel in vertical guide channels, channeled members on either side of the door for guiding the said rollers, counterweights operatively attached to the door at a point equally distant from the top and bottom thereof to render its operation easy, and a cable for raising the door, said cable being attached to the lower portion of the door.



1,378,124. MECHANICAL HORN. DUNCAN A. MCCONNELL, Montclair, N. J., assignor to Klaxon Company, a Corporation of Delaware. Filed Jan. 30, 1919. Serial No. 273,953. 13 Claims. (Cl. 116—145.)

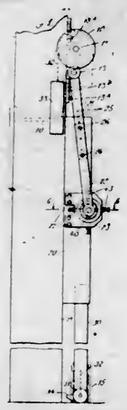
1. In a horn of the class described, rear and front castings and a diaphragm clamped between them, in combination with means for vibrating the diaphragm, said means including a sleeve with a rotor, and driving pinion thereon, a stationary stud shaft projecting endwise toward the diaphragm from the rear wall of the casing on the inwardly projecting portion of which said rotor and pinion are rotatably mounted, the rear portion of said stud shaft extending through the rear wall of the casing and having screw connection therewith, accessible from the exterior of the casing for endwise adjustment of the rotor to and from the diaphragm, a rotatable driving shaft extending through the rear wall of the casing with its axis parallel



to said stud shaft, a large gear mounted on the inner end of said driving shaft and engaging said pinion, and a hand crank located outside the casing on said drive shaft.

1,378,125. GAS-GENERATING APPARATUS. FRANK D. MOSES, Trenton, N. J. Filed Aug. 8, 1919. Serial No. 316,240. 6 Claims. (Cl. 48—64.)

1. Apparatus for the manufacture of combustible or other gases consisting of a generator and a boiler-superheater, means for producing combustion in the generator, a conduit at the top of the generator to the bottom of the boiler-superheater, a valve in the said conduit, a second conduit from the bottom of the generator to the bottom of the boiler-superheater, a valve in said conduit, a discharge conduit for the generator at the top thereof and at the bottom thereof, a valve in each of the said last named discharge conduits, and a steam conduit leading from the boiler of the boiler-superheater and discharging through the bottom thereof, and thence selectively to the top or bottom of the generator through the first and second named conduits of the generator.

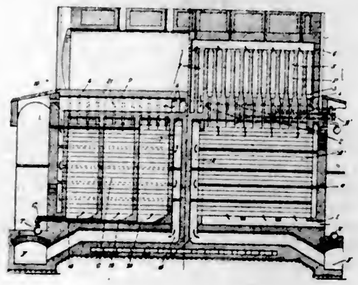


1,378,126. RESISTANCE DEVICE. HARRY C. NAGEL, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 14, 1915. Serial No. 28,042. 3 Claims. (Cl. 219—63.)

1. A two-part electrical resistance device, each part comprising a continuous length of resistance wire composed

of a plurality of integrally connected parallel, flat sections, the connecting portions of said wire being disposed substantially perpendicularly to the planes of said sections, said sections severally comprising a plurality of radial loops symmetrically disposed to form a central opening, said parts being electrically connected by a terminal device.

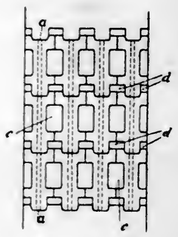
1,378,127. ADJUSTABLE-LINK DOOR. JOHN EDWARD OGDEN, Mountainville, N. Y. Filed May 6, 1920. Serial No. 379,221. 10 Claims. (Cl. 20—19.)



1. The combination with a door section, a counterbalance therefor, a hoisting element operatively connected between the lower edge of the door and the counterbalance, and means for guiding the lower edge of the door section in a dirtcion other than horizontal, of adjustable links pivoted to points above the door section and to the sides of the door section intermediate the uper and lower edges thereof, and means for adjusting the length of said links.

1,378,128. PROCESS OF MAKING VEGETABLE GLUE. JAMES G. B. PERKINS and JULIUS B. B. STRYKER, Lansdale, Pa., assignors to Perkins Glue Company, a Corporation of Pennsylvania. Filed Sept. 26, 1917. Serial No. 193,240. 12 Claims. (Cl. 87—17.)

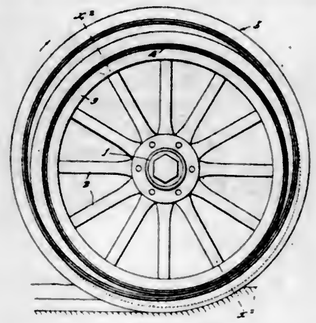
7. The process of making vegetable glue which consists in dissolving a starchy carbohydrate with water and an alkaline compound, the carbohydrate being such that the resulting solution is a thick viscous alkaline mass capable of flowing through pipes two inches in diameter, and of being spread by glue applying machinery and of adhesively securing layers of wood together, and adding an ammonia salt thereto to substantially neutralize the glue without materially decreasing its strength or spreadability.



1,378,129. HORIZONTAL COKING-OVEN. OLIVIER PIETTE, Paris, France, assignor to Société Anonyme Des Fours A Coke Semet-Solvay & Piette, a Corporation of Belgium. Filed Jan. 28, 1918. Serial No. 214,160. 5 Claims. (Cl. 202—9.)

5. A horizontal coke oven comprising heating means, a plurality of apertured baffles located beneath said heating means and forming a series of superimposed chambers communicating with each other, groups of horizontal channeled member in said chambers constituting recuperating channels, said groups of channeled members being spaced apart and having an exterior contour whereby vertical undulating channels are formed in registry with the apertures in said baffles and communicating with said heating means, means whereby air on the one hand and producer gas on the other are conducted to and caused to pass through said undulating channels to said heating means and means whereby the products of combustion are conducted from said heating means to the first group of

recuperating channels, said products of combustion passing successively through successive groups of recuperating channels from one chamber to another to preheat the air and producer gas prior to their arrival at said heating means.

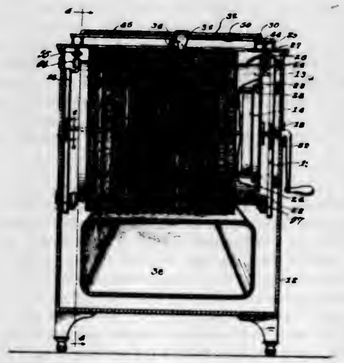


1,378,130. HEAT-RECUPERATOR FOR AIR OR GAS. OLIVIER PIETTE, Brussels, Belgium, assignor to The Société Franco-Belge De Fours A Coke, Paris, France. Filed Nov. 6, 1918. Serial No. 261,422. 3 Claims. (Cl. 72—15.5.)

1. A brick for furnace construction, having two of its opposite faces formed with laterally-projecting flanges extending longitudinally of the brick to form channels in said faces, one of the other two faces of the brick being a substantially plane surface with a depression therein the margins of which lie within the boundaries of said face, and the face opposite said last-named face having a projection extending a greater distance therefrom than the depth of said depression but its other dimensions substantially corresponding with those of said depression, and a duct extending completely through the brick between said depression and said projection.

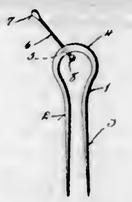
1,378,131. LOOSE-TREAD TRACTION-WHEEL. JAMES V. PRIEST, Los Angeles, Calif. Filed Oct. 24, 1916. Serial No. 127,346. 4 Claims. (Cl. 305—7.)

2. A wheel having a flat rim; wedge shaped gear teeth on the periphery of said rim; a loose tread track rim in which the wheel runs, said track rim having recesses to receive the gear teeth and prevent slipping; and means between the flat rim and the track rim for maximizing friction between the wheel and the track rim and thereby



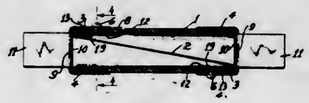
relieving the strain upon the gear teeth and also for minimizing wear and noise.

1,378,132. CAR-REPLACING APPARATUS. ARTHUR RACINE, Montreal, Quebec, Canada. Filed June 17, 1919. Serial No. 304,858. 1 Claim. (Cl. 104—265.)



A car wheel replacing device, comprising a plate, the ends of which are disposed in a horizontal plane the said plate slanted upwardly from the horizontal ends formed in central portion, vertical flanges extending upwardly from the inner edge of the plate and connecting the slanting portions with the horizontal ends, a rib formed on the outer edge of the plate and connecting the slanting and horizontal portions, a single pedestal extending transversely of the central portion of the plate, with its lower edge flush with the lower side of the horizontal portions of the plate and a depending flange formed upon the outer edge of the plate with its lower edge faced above the lower side of the horizontal ends of the plate and the said pedestal.

1,378,133. TALKING-MACHINE. THOR RAJE, Los Angeles, Calif. Filed Aug. 17, 1916. Serial No. 115,402. 3 Claims. (Cl. 274—18.)



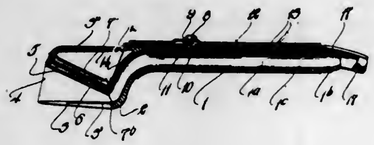
1. In a machine of the character referred to, in combination, a cabinet, means for supporting and revolving a phonographic element therein, a reproducer mounted to travel on said element, a sound amplifier of tapering form and curved from the upper side of said phonographic element around and under the same to the front of said cabinet, the upper portion of said sound amplifier being connected to the other portion thereof, with a swivel joint within said cabinet, said swivel portion partially encircling said phonographic element, a tubular connecting member from said reproducer and having telescopic connection with the small end of said amplifier, means for positively moving said reproducer longitudinally of said phonographic element and for turning the swivel portion of said amplifier therewith, and means for indicating different locations along said phonographic element, substantially as shown and described.

1,378,134. SLIDABLE RETAINING MEANS FOR HAIRPINS, COMBS, AND THE LIKE. LOUIS J. RHEIN and RANDOLPH A. REHRAUER, Two Rivers, Wis. Filed Mar. 30, 1918. Serial No. 225,831. 1 Claim. (Cl. 132—22.)

An article of the class described, comprising a head having two or more depending legs, a resilient bar slidable transversely through the head, said bar having at one end a ball adapted to override the coacting leg of the article and engage the outer edge thereof, and at the other end a tapered head adapted to wedge into the bearing of the bar, and both means functioning as holding means for the bar when same is in an operative position.

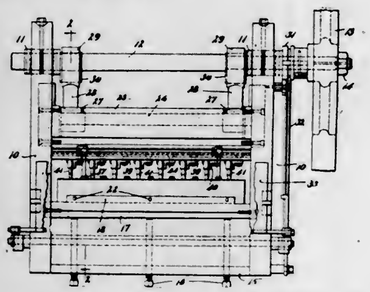
1,378,135. RENEWABLE FUSE. LEON W. ROSENTHAL, New York, N. Y., and GUSTAVE J. LANG, Weehawken, N. J., assignors to Arthur T. Murray, Allentown, Pa. Filed Dec. 24, 1918. Serial No. 268,134. 4 Claims. (Cl. 200—131.)

1. A renewable fuse consisting of an open-ended tube having recesses extending along the outer surface of the tube near the ends thereof, spring bearing plates located in the recesses and strained into substantial conformity with the outer surface of the tube, a fuse passing through the tube and folded over the plates to form fuse terminals, caps positioned over the open ends of the tube and the fuse terminals, and means securing the caps against endwise displacement on the tube.



1,378,136. RENEWABLE FUSE. LEON W. ROSENTHAL, New York, N. Y., and GUSTAVE J. LANG, Weehawken, N. J., assignors to Arthur T. Murray, Allentown, Pa. Filed Dec. 24, 1918. Serial No. 268,136. 3 Claims. (Cl. 200—132.)

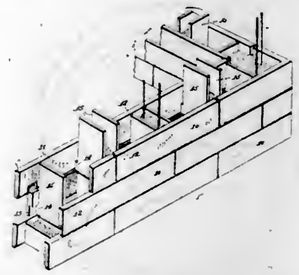
1. A renewable fuse consisting of a tube having bayonet slots at its ends, detachable end plates having depending



legs engaging the bayonet slots and adapted to be fastened therein and detached therefrom by longitudinal and circumferential movements relatively to the tube, a fuse extending through the tube and having end portions folded over the end plates to form fuse terminals, caps positioned over the outer ends of the tube, and end screws passing through the caps into threaded engagement with the end plates to prevent longitudinal movement of the caps on the tube while clamping the fuse terminals between the end plates and caps.

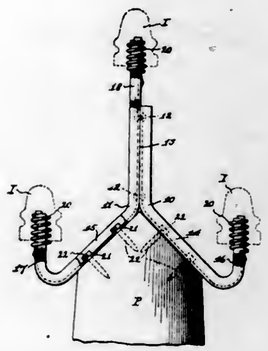
1,378,137. HAIR-SINGEING MACHINE. WARREN A. ROSS, Haverhill, Mass. Filed May 25, 1920. Serial No. 384,233. 10 Claims. (Cl. 219—29.)

1. The combination with a tubular handle and hollow open front head having tines in its bottom forming a comb, of a singeing device in said head for the purpose described, and means for conveying charred hairs through said head and handle.



1,378,138. SOLE-BLANK-CUTTING MACHINE WITH ADJUSTABLE KNIVES. CHARLES ADRIAN SAWYER, Jr., Newton, Mass. Filed Apr. 28, 1920. Serial No. 377,321. 3 Claims. (Cl. 164—31.)

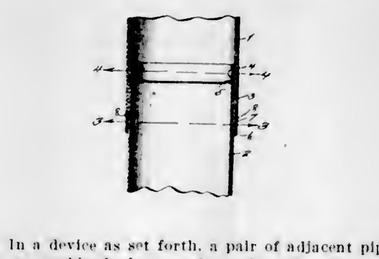
1. In a dinker press for shoe sole blanks, the combination of a frame, a reciprocating cutter head therein, there being longitudinally arranged parallel slots in said cutter head at each side thereof, a plurality of cutters defining the contour of the sides of a plurality of shoe sole blanks, and means, including said parallel slots for adjustably mounting said plurality of cutters in operative position on the head to define the contour of the sides of shoe sole blanks of different widths.



1,378,139. WALL CONSTRUCTION. FRANK MCMURRAY SAWYER, Los Angeles, Calif. Filed Mar. 24, 1919. Serial No. 284,604. Renewed Oct. 12, 1920. Serial No. 416,512. 5 Claims. (Cl. 72—29.)

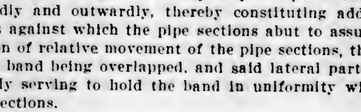
5. In a wall construction, inner and outer walls formed of slabs, transverse key-slabs for connecting said walls together, the wall-slabs being formed with key receiving recesses on their inner sides only and provided with an undercut wall on one side of said recesses, and said transverse key-slabs being formed with key projections of a thickness less than the length of said recesses and which are adapted to engage therein, and a concrete filling between each pair of the transverse key-slabs, said filling also entering the portions of the recesses not filled by

the key projections, whereby the recesses serve as a keying means to receive at the same time both the key-projections and the filling between the key-slabs.



1,378,140. INSULATOR-BRACKET. WARREN B. SIMPSON, Huntingdon, Pa. Filed Nov. 25, 1919. Serial No. 340,452. 3 Claims. (Cl. 173—321.)

1. An insulator bracket to be secured to the top of a pole comprising two sections of channel iron of unequal length bent at an angle and connected together at a portion of the back of their web lengths to form a central upright standard provided with means on the outer end of the longer section for engaging an insulator, the disconnected portions of the two sections diverging from each other and so constructed, arranged and adapted to have the back of their web lengths to be seated and secured to the top of a pole and provided at each of their oppositely disposed ends with means for engaging an insulator.

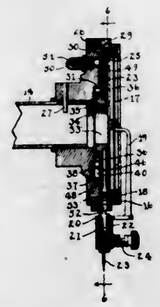


1,378,141. VALVE. HARVEY SLATER, Chicago, Ill., assignor to Charles F. Elmes Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed Mar. 15, 1920. Serial No. 365,703. 8 Claims. (Cl. 138—16.)

1. In a device of the character described, the combination of two valve mechanisms each including an inlet, an exhaust and a machine-supply port, means in each of said mechanisms whereby its machine-supply port is put in alternate communication first with its inlet and then with its exhaust, means for operating both valve mechanisms in synchronism whereby when communication between the machine-supply port and inlet of one is opened communication between the machine-supply port and exhaust of the other is opened, and vice versa, and means to establish communication between the inlet of one valve mechanism and the machine-supply port of the other whereby

when the pressure in the latter port reaches a predetermined amount communication will automatically open therebetween.

1,378,142. COLLAR. ANGELO L. SORESI, New York, N. Y. Filed Aug. 15, 1919. Serial No. 317,744. 2 Claims. (Cl. 2—67.)

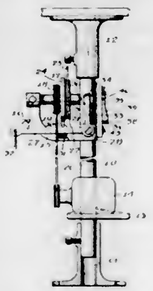


1. A collar having its middle and free end portions provided with openings for the reception of means for fastening the collar to the neck band of a shirt, the lower edge of said collar extending uninterruptedly from the said middle and free end portions to oppositely disposed and relatively narrow roached portions, the highest points in which aline with the said openings of the collar, said roached portions being arranged so as to avoid transmission of pressure from said edge to the blood vessels of the wearer extending laterally from the neck and posterior to the uppermost ribs.

1,378,143. STOVEPIPE-CLAMP. BASCUM LENTON STRANGE, Hernando, Fla. Filed Apr. 26, 1920. Serial No. 376,716. 4 Claims. (Cl. 285—185.)

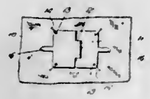
1. In a device as set forth, a pair of adjacent pipe sections, a combined clamp and coupling therefor comprising a band telescoping respectively within one section and over the other section, the circular marginal edges of the band having inwardly and downwardly, and outwardly and upwardly turned flanges, the marginal edges of which being flared and adapted to be engaged by the respective marginal edges of the pipe sections, thereby preventing relative movement of the pipe sections, the ends of said flanges terminating in laterally disposed parts extending inwardly and outwardly, thereby constituting additional means against which the pipe sections abut to assure prevention of relative movement of the pipe sections, the ends of the band being overlapped, and said lateral parts additionally serving to hold the band in uniformity with the pipe sections.

1,378,144. PHONOGRAPHIC REPRODUCER. HENRY H. STROMBERG, Chicago, Ill. Filed Mar. 29, 1920. Serial No. 369,476. 14 Claims. (Cl. 274—45.)



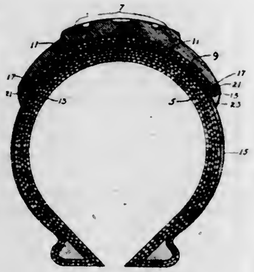
3. In a phonographic reproducer comprising a casing, the combination with a needle holder of a disk in said casing, said disk having needle-receiving bores extending inwardly from the periphery thereof, and means for rotating said disk.

1,378,145. ELECTROLYTIC DEPOSITION OF COPPER FROM ACID SOLUTIONS. FRANZ EDWARD STUDT, London, England. Filed Aug. 14, 1917. Serial No. 186,192. 4 Claims. (Cl. 204—15.)



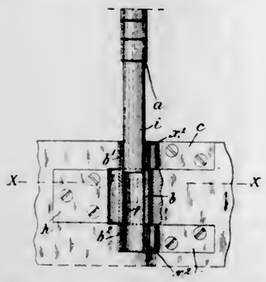
1. In the electrolysis of acid copper-sulfate solutions, the cyclic operation of preventing anodic polarization in a copper-depositing cell by introducing an amount of sulfur dioxid into the solution at the anode, capable of forming sulfuric acid in the solution in excess of that required for leaching the ores; utilizing a portion of the so-formed sulfuric acid for leaching copper ore material conveying the solution to said cell, and decomposing another portion of said sulfuric acid by heating the same with a metalloid reducing agent to produce sulfur dioxid and conveying the same to the said cell for use in the first mentioned step of the process, substantially as hereinabove described.

1,378,146. ELECTRICALLY-CONTROLLED TRANSMISSION. MAX TAIGMAN, New York, N. Y. Filed May 17, 1918. Serial No. 235,221. 3 Claims. (Cl. 172—179.)



2. An attachment for a motor driven clutch comprising a bell crank lever pivoted at its angle with one arm extending horizontally and constituting an actuating arm and the other arm extending vertically and constituting a clutch controlling member, a clutch on one side of said member, a switch on the other side, a spring for moving the switch into circuit closing position, and a plunger controlled by the clutch controlling member for holding said switch in circuit breaking position and against the action of said spring.

1,378,147. TOUPEE AND WIG RETAINER. JOHN CHRISTOPHER TAPSCOTT, El Paso, Tex. Filed Aug. 25, 1920. Serial No. 405,896. 4 Claims. (Cl. 132—53.)

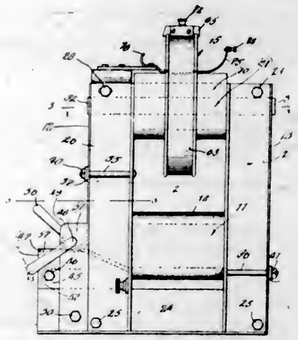


1. The combination with a toupee or wig, of attaching means including a pair of attaching plates hingedly connected along their inner edges and flexibly attached to the toupee or wig at the opposite ends of their outer edges, spurs projecting from the outer edges of the plates intermediate their ends and each projecting in the plane of its respective plate, and an attaching strip slitted at spaced points to receive the spurs therethrough, having a smooth face turned toward the adjacent surface of the toupee or wig and an adhesive surface presented outwardly away from the toupee or wig as described.

1,378,148. TREAD FOR TIRES. GEORGE W. TAYLOR, Everett, Mass. Filed July 13, 1920. Serial No. 395,917. 3 Claims. (Cl. 152—17.)

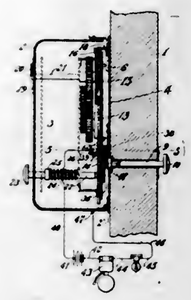
3. A tread for tires comprising an annular body of rubber construction having open passageways in the margins thereof, constrictable binders loosely received in the passageways and means for supporting the walls of the passageways and providing resistant bearings for the binders.

1,378,149. HINGE FOR VEHICLE-BODIES. HENRI TEISSEIRE, Paris, France. Filed Oct. 23, 1917. Serial No. 198,167. 5 Claims. (Cl. 16—106.)



1. A hinge for the door of a vehicle body having a removable top, comprising hinge eyes and lateral attaching plates, the hinge eyes formed as tubular sleeves, the inner one forming a coaxial socket adapted to receive the pintle of a hinge for a window of such detachable top.

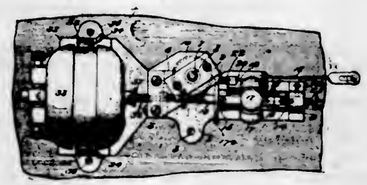
1,378,150. BUTTON. ERNEST B. THIELKE, Pittsburgh, Pa. Filed Sept. 28, 1920. Serial No. 413,263. 5 Claims. (Cl. 24—112.)



4. A button comprising a body having an orifice therethrough, and a wire of resilient metal having a loop lying in said orifice, a portion extending toward the center of said orifice and downwardly of the button, and an attaching loop disposed beneath the under surface of the body of the button.

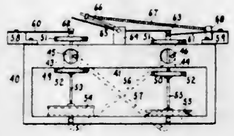
1,378,151. ELECTRICAL TRANSFORMER. CHESTER H. THORDARSON, Chicago, Ill. Filed Nov. 6, 1916. Serial No. 129,779. 18 Claims. (Cl. 171—242.)

1. In a transformer, a magnetic circuit provided with an air gap formed by a supporting surface and a tapered surface, a magnetic element movable along said supporting surface to vary the width of the gap, and having a face that is parallel to the tapered surface of the gap, and locking means to lock said element in fixed position in the gap.



1,378,152. WATCHMAN'S DOUBLE-RECORDING AND SIGNAL DEVICE. WALTER J. TIDD, Springfield, Mass., assignor to Tidd Recording Clock Company, Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 18, 1918, Serial No. 212,460. Renewed Oct. 12, 1920. Serial No. 416,516. 12 Claims. (Cl. 234—40.)

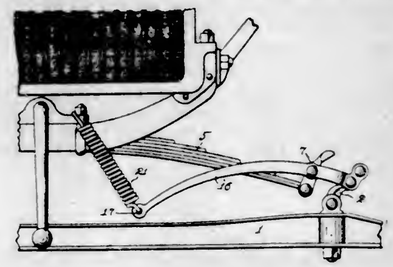
3. A dial for a watchman's time recording mechanism comprising two graduated circles, said concentric circles being designed to be perforated only by independent devices that are located on opposite sides of a fixed support, one of the perforating devices passing through the



movement to the outer side of the casing and the other perforating device extending through the fixed support, the hour spaces of the graduated portions being divided by lines that are located on the outer and inner points of the circles and extending toward each other, as shown, and the perforating devices being so located as to engage the circles at the inner ends of the division lines, as described.

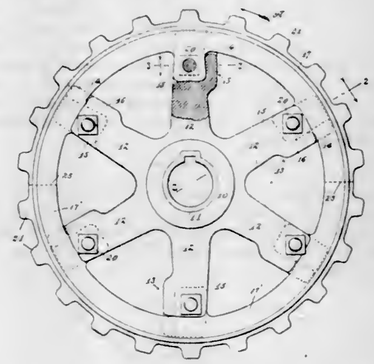
1,378,153. MOTOR. GEORGE C. TROTTER, Chicago, Ill., assignor to Plymouth Phonograph Parts Co., Plymouth, Wis., a Corporation of Wisconsin. Filed Oct. 20, 1919. Serial No. 332,030. Renewed Mar. 2, 1921. Serial No. 449,240. 8 Claims. (Cl. 64—96.)

3. In a motor, the combination with a base-plate, opposite posts projecting therefrom and provided with alining bearing-openings, of a bored plug seated in the outer post, a conical bearing formed in the companion post, a shaft reduced at its outer end to enter the bore of the plug and near its opposite end having a conical bearing-collar fitting the conical bearing of the companion post, a motor, the shaft of which approximately alines with the first mentioned shaft, and a tubular spring-wire coupling engaging the ends of the two shafts, whereby, when said motor-shaft is rotated, the first mentioned shaft is drawn toward the motor by the twisting of said coupling and caused to snugly fit and center itself in its said conical bearing.



1,378,154. VALVE-TIMING DEVICE. BURT R. VAN VALKENBURG, Oakland, Calif., assignor to American Photo Player Company, Berkeley, Calif., a Corporation of California. Filed Sept. 19, 1918. Serial No. 254,829. 4 Claims. (Cl. 230—2.)

1. A valve timing device including a chamber provided with a pair of ports, leading from the chamber to the atmosphere, valves controlling both ends of said ports, said chamber being also provided with ports leading from the aforesaid ports, means for normally holding said valves in position closing the inner end of the aforesaid ports, a lever for engaging said valves and causing them to open the inner end and close the outer end of the aforesaid ports, and means for operating said lever.



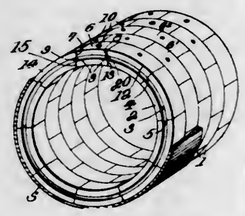
1,378,155. SPRING-SUSPENSION LEVER. GEORGE F. VOIGHT, San Francisco, Calif., assignor to Walter S. Burgess, Oak Park, Ill. Filed Nov. 4, 1918. Serial No. 261,099. 5 Claims. (Cl. 267—19.)

1. The combination with a vehicle having a leaf spring supporting the body thereof, of a pair of spaced apart levers to embrace said spring and pivotally supported at their outer ends, means supporting their inner ends upon the spring, a shackle pivotally attached to the levers intermediate their ends and having upper and lower portions projecting respectively above and below the same, a pivotal connection between the outer end of said spring and said

lower portion, said upper portion having means for engaging the levers to limit the movement of the shackle.

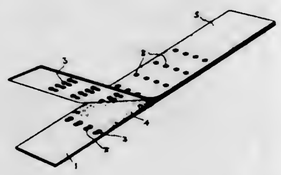
1,378,156. SHEAVE, SPROCKET, OR GEAR CONSTRUCTION. JAMES RALPH WATTS, New Castle, Del., assignor to American Manganese Steel Company, Augusta, Me., a Corporation of Maine. Filed Oct. 29, 1920. Serial No. 420,385. 8 Claims. (Cl. 74—28.)

1. A wheel of the character described comprising a hub and spokes, said spokes each provided at their outer extremities with spaced side walls, and a rear abutment wall, a detachable rim with portions thereof adapted to extend between said side walls and contact with said abutment walls of the spoke extremities, and means for locking said rim to said spokes.



1,378,157. TOOTHBRUSH. WILLIAM LLOYD WEBSTER, New York, N. Y. Filed Oct. 31, 1919. Serial No. 334,794. 2 Claims. (Cl. 15—39.)

2. In a tooth-brush, the combination with a handle, a tapered socket carried by the handle near one end thereof,



of means within the socket for the securement of a doubled-over piece of absorbent cotton roll therein, said means comprising screw-threads adapted to directly engage the cotton roll whereby the free ends of the cotton roll may be presented in operative position.

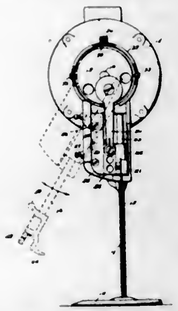
1,378,158. CONCRETE TUNNEL STRUCTURE. FREDERICK J. WEST, MARK JACKSON, and HAROLD T. LEADER, Detroit, Mich., assignors of one-fourth to Aldrich Baxter, Detroit, Mich. Filed Dec. 29, 1920. Serial No. 433,890. 6 Claims. (Cl. 61—45.)

1. A tunnel or like structure comprising annular sections, each annular section consisting of a series of curved blocks, means integral with said blocks for holding said blocks against radial displacement in the annular sections and said annular sections in alinement, two of said blocks having spaced parallel ends adapted to receive therebetween a key block, and means integral with said key block for securing said key block against radial displacement when inserted in place.

1,378,159. MEANS FOR GREASING SPRINGS. ROBERT WHITE, Orillia, Ontario, Canada, assignor of one-half to Melville B. Tudhope, Orillia, Ontario, Canada. Filed Apr. 20, 1920. Serial No. 375,220. 3 Claims. (Cl. 267—50.)

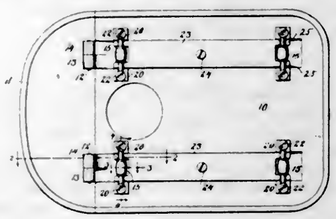
3. A means for greasing springs, comprising, a pair of paper strips, each being perforated with transverse rows of holes, a layer of grease placed between said strips and adapted to be extruded through the holes, said strips being placed between the leaves of the spring.

1,378,160. SPANNER. RICHARD CATON WOODVILLE, London, England, assignor to Arthur Ryner, London, England. Filed Nov. 23, 1920. Serial No. 426,078. 1 Claim. (Cl. 81—121.)



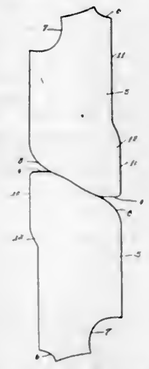
A spanner consisting of a head having an hexagonal opening formed therein, two opposite sides of the hexagon being elongated and one of said elongated sides being cut away at a portion intermediate the ends thereof to form a gate for permitting retrograde movements of the spanner.

1,378,161. RACK. MARTHA A. YATES and ODAVILLE YATES, Portland, Oreg. Filed Aug. 20, 1919. Serial No. 318,764. 1 Claim. (Cl. 211—17.)



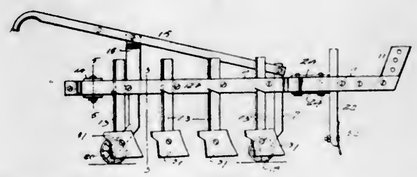
As a new article of manufacture, a rack comprising a transverse bar, a plurality of spaced leaves formed on said bar and extended vertically with their side edges rolled inwardly toward one another and their flared upper ends turned back in a horizontal plane and provided with notches in their opposed edges, the notches being adapted to accommodate handles of toothbrushes, the upstanding portions of the leaves forming tubes to receive towels to be suspended in spaced relation with respect to the stationary support.

1,378,162. CLOTH-CUTTING MACHINE. MARTIN ZAWISTOWSKI, Brookiyn, N. Y. Filed Aug. 7, 1919. Serial No. 315,832. 18 Claims. (Cl. 164—75.)



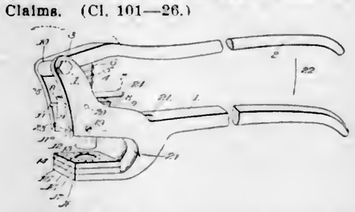
1. A cloth cutting machine, having a reciprocatory knife, a rotary driver, operative connections therebetween, a casing including a circular portion covering said driver and a depending portion rigid therewith covering said driver and said connections, and means for mounting said casing to permit rotation thereof about the center of said circular portion and the lateral swinging of said depending portion away from said knife.

1,378,163. BASE FOR CLOTH-CUTTING MACHINES. MARTIN ZAWISTOWSKI, Brooklyn, N. Y. Filed Apr. 19, 1920. Serial No. 374,805. 9 Claims. (Cl. 164—73.)



1. A base for reciprocating knife cloth cutting machines having a pair of depending lugs rigid therewith and provided with vertical slots, stops at the lower ends of said slots, a roller having an axle vertically movable in said slots and a spring engaging with said base and having portions engaging with said axle between the ends of said roller and said lugs for resiliently pressing said axle downwardly away from the body of said base and toward said stops.

1,378,164. METHOD OF CUTTING SHIRTS. GEORGE ANTHONY AIKEN, Clifton, N. J. Filed Apr. 13, 1920. Serial No. 373,679. 1 Claim. (Cl. 33—12.)

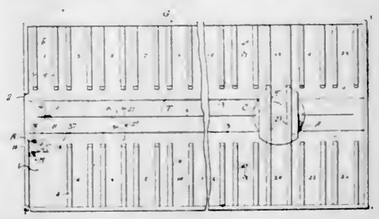


A method of cutting shirts consisting in forming a pattern of a plurality of sections having curved ends, positioning the curved ends of the pattern together and placing them on the material under operation, and finally cutting the cloth by the pattern.

1,378,165. CULTIVATOR. ERVAN V. ALLEN, Bogalusa, La. Filed Aug. 9, 1918. Serial No. 249,083. 1 Claim. (Cl. 97—10.)

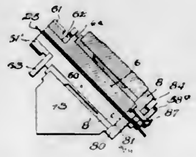
In a cultivator, a beam composed of spaced side bars, said side bars being provided at their edges with incisions and the material of the side bars adjacent the incisions being inwardly disposed to form tongues which lie between the side bars, standards lying between the side bars and between the tongues carried by the side bars and soil engaging elements carried by the standards.

1,378,166. DEVICE FOR MARKING ANIMALS AND THE LIKE. TOMÁS FERRADÁS AMOEDO, Buenos Aires, Argentina. Filed Sept. 3, 1919. Serial No. 321,480. 9 Claims. (Cl. 101—26.)



1. A device of the class described including a bar provided with a fork and having a supporting arm extending beneath the fork, a punch, means mounted in the fork for guiding the punch, a bar pivoted in the fork and arranged to actuate the punch, a cutter carried by the punch and a coöperating cutter mounted on the supporting arm.

1,378,167. BEATER-BAR. TERRENCE J. CLARK, Holyoke, Mass. Filed Jan. 9, 1920. Serial No. 350,461. 2 Claims. (Cl. 92—22.)

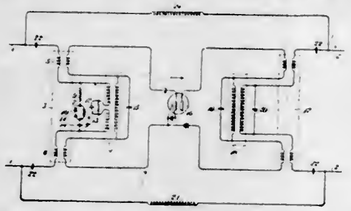


1. A beater bar having a steel center and a coat of iron welded to each side thereof, one edge portion of the steel center being deflected toward the side of the bar to provide a steel cutting edge.

1,378,168. MEANS FOR STORING VEHICLES. PERINO B. COLE, Cambridge, Nebr. Filed May 17, 1920. Serial No. 382,098. 14 Claims. (Cl. 104—44.)

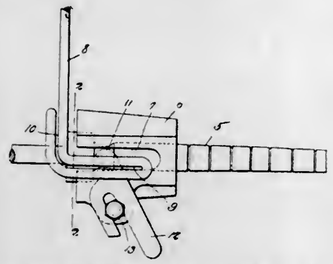
1. In combination, a carrier, means for moving said carrier, a turn-table mounted upon the carrier, and means positioned at a point along the path of travel of the carrier and coacting with the table to impart turning movement to the table.

1,378,169. BINDER TYING AND CUTTING DEVICE. CHARLES E. EVANS, Seattle, Wash. Original application filed Jan. 11, 1918, Serial No. 211,448. Divided and this application filed Aug. 21, 1919. Serial No. 319,008. 4 Claims. (Cl. 140—115.)



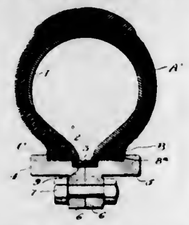
2. A twisting and binder cutter mechanism including in combination, a bearing, a rotary device mounted in said bearing formed with a longitudinal radial slot for the binder, the inner portion of which is slightly eccentric to the axis of said device and a combined binder cutting and gripping wheel mounted at one end of said device for rotation about an axis eccentric to the axis of the device, and coöperating with the device to grip and hold one end of the binder.

1,378,170. REPEATER-CIRCUITS. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 19, 1918. Serial No. 267,527. 8 Claims. (Cl. 179—170.)



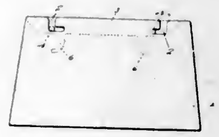
1. In a signaling system the combination of a main line for simultaneously transmitting telephone and telegraph

currents, an amplifier adapted for simultaneously amplifying both currents, and means for equalizing the attenua-



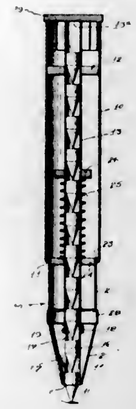
tion of the various frequencies comprised within the telephone range and within the telegraph range.

1,378,171. BUNCH-BUILDER FOR WINDING-MACHINES. EDWARD STANLEY GARY, JR., Baltimore, Md. Filed Oct. 18, 1920. Serial No. 417,689. 3 Claims. (Cl. 242—31.)



1. In a winding machine, the combination with a bobbin, and the thread guide of a traverse mechanism, said guide having a thread-engaging portion and a slot leading thereto, said slot extending parallel to the direction of the strokes of the thread guide; of a restraining device engageable by the thread in its passage from the thread guide to the bobbin, said device being positioned to hold the thread in the aforesaid slot to permit a building up of a bunch on the bobbin, said bunch by its increasing diameter operating to automatically disengage the thread from the restraining device and permit passage of the thread to the thread-engaging portion of the thread guide.

1,378,172. APPARATUS FOR CURING TIRE-CASINGS. FREDERICK J. GOSTLIN, Akron, Ohio, assignor, by direct and mesne assignments, to The Star Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 2, 1919. Serial No. 286,920. 6 Claims. (Cl. 18—45.)

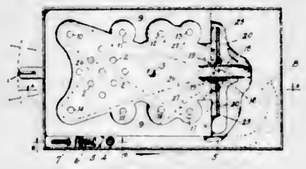


1. Apparatus for curing tire casings comprising a base ring split on a median plane to form a pair of complementary sections, the peripheral portion of said sections adjacent their meeting faces being cut away to form a central annular groove, means for confining the bead portions of a tire casing on said base ring, and a closed air bag lying within the casing, and having an inner toe portion snugly fitting in said groove and held in position thereby, whereby said bead portions of the casing are properly and symmetrically spaced.

1,378,173. CHANGE-RECEPTACLE. WILLIAM A. HEAP, Topeka, Kans., assignor to Charles M. Crews, Topeka, Kans. Filed Feb. 24, 1920. Serial No. 360,752. 1 Claim. (Cl. 133—14.)

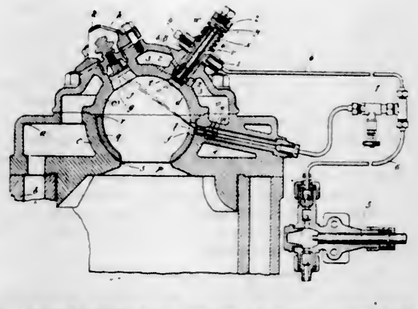
A device of the class described comprising a channel-shaped holder having bayonet-shaped slots in its upper edges, a tray having lugs thereon engaging said slots, said lugs being spaced apart so that while one lug engages the vertical part of the slot the other lug is engaging the horizontal portion.

1,378,174. PENCIL. FERDINAND KAISER, St. Paul, Minn. Filed Jan. 28, 1920. Serial No. 354,727. 5 Claims. (Cl. 120—14.)



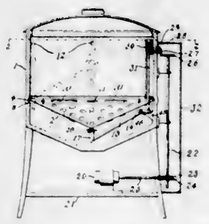
3. A pencil comprising a barrel, a tubular magazine fixed axially therein and adapted to freely receive pointed leads, said magazine having a slot near the discharge end thereof and being split longitudinally and contracted slightly at said end to form a yielding holder for the leads, a hollow cone-shaped tip slidable at its large end within the barrel and at its small end upon said magazine, a spring for yieldingly holding the tip in extended position, an inwardly inclined yielding finger cut from the wall of the tip and normally projecting through the slot in said magazine to hold a lead within the holder, against backward movement, and being further adapted, upon the reciprocation of said tip, to engage the adjacent lead, eject the first lead from the holder and insert the second lead therein, and a guide on the magazine to receive the finger, when the tip is retracted, said slot and guide serving to maintain the tip in fixed angular relation with respect to the barrel.

1,378,175. GAME-BOARD. JOSÉ KECKEIS, Portland, Oreg. Filed Apr. 7, 1920. Serial No. 371,832. 3 Claims. (Cl. 46—61.)



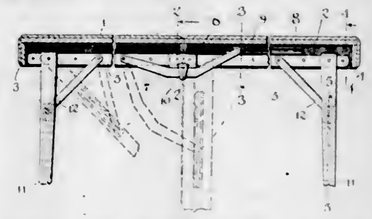
1. In a game board, the combination of a playing field, a wall provided with a plurality of curved recesses surrounding the field, propelling and guiding means for a ball

located at one end of the field, the recesses being so located with respect to each other and to said field that a



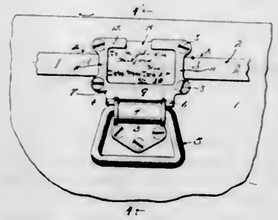
ball directed by the guiding and propelling means toward one recess may be deflected by the wall thereof to a skittle located in a recess on the opposite side of the field.

1,378,176. MEANS FOR SUPPLYING LIQUID FUEL TO THE CYLINDERS OF INTERNAL-COMBUSTION ENGINES. HENRY KENT-NORRIS, Newbury, England. Filed Oct. 11, 1920. Serial No. 416,219. 15 Claims. (Cl. 123—32.)



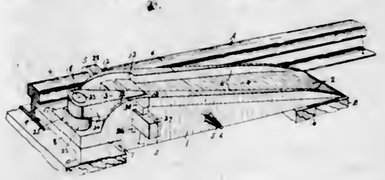
1. Internal combustion engine vaporizer comprising in combination an auxiliary injector, an igniter disposed in said vaporizer in the path of the jet of said auxiliary injector, a main injector disposed so as to direct its jet on to a hot part of the interior of said vaporizer, and controlling means operative upon said injectors whereby only one of them can be in effective operation at one time.

1,378,177. WASHING-MACHINE. ROBERT LELAND KINCAID, Syracuse, N. Y. Filed Dec. 6, 1919. Serial No. 342,899. 6 Claims. (Cl. 68—37.)



1. A washing machine comprising a receptacle, a vibratory flexible and perforate diaphragm mounted in the receptacle for supporting the clothes, means for holding the rim of the diaphragm against movement relatively to the receptacle, the middle portion of the diaphragm being movable above and below the horizontal plane of its rim, and actuating means connected to the middle of the diaphragm, substantially as and for the purpose described.

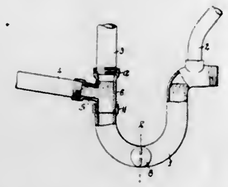
1,378,178. FOLDING TABLE. GEORGE J. KORN, Kirksville, Mo. Filed Aug. 10, 1920. Serial No. 402,549. 3 Claims. (Cl. 45—116.)



1. A table of the character specified, comprising top sections each consisting of a body and an angular marginal flange, a hinged connection between the sections for permitting them to fold with the bodies in alinement or upon each other with the flanges abutting, legs pivoted to the sections at the outer edges thereof, a brace for each leg pivoted to the top section and slidably connected with the leg, and a brace arm for holding the sections with the bodies in alinement, said arm being pivoted to one section and having a sliding connection with the other, and a latch plate engaging beneath the brace to hold it in bracing position and connected to the sections.

1,378,179. IDENTIFICATION-CARD HOLDER. WILLIAM F. LUICK, Milwaukee, Wis. Filed July 13, 1920. Serial No. 395,824. 1 Claim. (Cl. 40—10.)

In combination with a cylindrical container having hoops thereon, a shipping card holder for attachment to said container comprising a skeleton frame, said frame being transversely curved and attached to said receptacle to extend over a hoop on the cylindrical wall thereof, the under side of said frame being offset to provide a shallow card pocket having a throat extending therefrom, said offset portion following the curved contour of the frame whereby the card inserted therein is transversely bowed and held by the hoop to cause the same to be frictionally held against accidental displacement or removal.

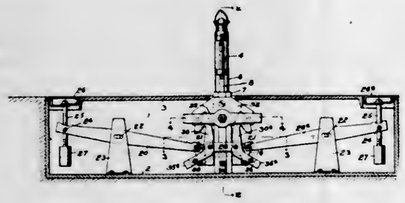


1,378,180. CAR-REPLACER. WILLIAM H. MCGINLEY, Pleasant Beach, N. Y. Filed Dec. 11, 1920. Serial No. 429,988. 12 Claims. (Cl. 104—269.)

1. In a car replacer in combination with a rail, a base section supported along one side of the rail and having a longitudinally inclined upper face, a leader plate resting

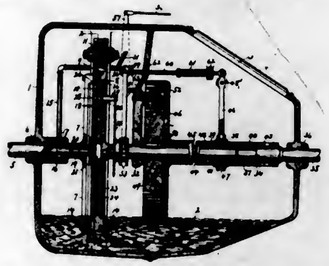
on said inclined face and provided with raised ribs along its opposite edges in spaced relation and converging toward one end, means for clamping the base to the rail and a switch point pivoted to the base and movable into and out of registration with each of said ribs.

1,378,181. SANITARY TUB AND SINK TRAP. HENRY J. MCGUCKIN, New York, N. Y. Filed July 11, 1917. Serial No. 179,788. 2 Claims. (Cl. 182—12.)



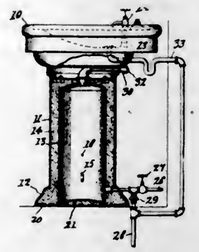
1. In a trap of the character described, a substantially U-shaped body provided with a discharge opening in one leg and a threaded end for receiving a T fitting on the opposite leg, said T fitting having the entrance of the T below the water line of said body whereby two independent drain pipes may be connected to said T and the passage of gas from one pipe to the other prevented.

1,378,182. SPARK-PLUG CLEANER. GEORGE MELLOR, Philadelphia, Pa. Filed Mar. 20, 1918. Serial No. 223,608. 1 Claim (Cl. 83—64.)



A spark plug cleaner comprising a longitudinal extended body with end cleaners thereon and having an intermediate flattened portion and scraping surfaces on said body portion consisting of a quantity of fine wire tightly wound around said flattened portion with the convolutions of the wire in contact with each other and with the ends of the wire secured to the body whereby said scraping surfaces will be rigid and immovable relative to said body and held against any longitudinal or transverse movement on the flattened portion thereof.

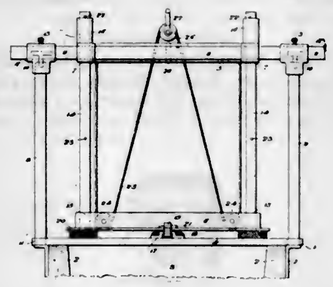
1,378,183. AUTOMATIC MECHANISM FOR OPERATING GATES, DOORS, &c. GOTTLIEB MERZ, McKeesport, Pa. Filed Aug. 8, 1919. Serial No. 316,080. 5 Claims. (Cl. 39—18.)



1. In combination with a swinging gate or the like, of a pair of actuating members located on opposite sides of the gate and arranged to be operated by the vehicle, operating connections therefrom to the gate and so arranged that the actuation of either of said members swings the gate to open position, a pair of locking dogs, and a tilting member associated with said operating connections and said locking dogs and arranged to be tilted in one direction by the actuation of one of said actuating members to bring one of said dogs into locking position and the other into idle position and to be tilted in the opposite direction by the movement of the other actuating member to release the locking dog.

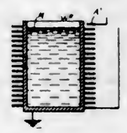
1,378,184. HYDRAULIC TRANSMISSION MECHANISM. BYRON G. NEWTON, Syracuse, N. Y. Filed Sept. 25, 1919. Serial No. 326,314. 9 Claims. (Cl. 192—61.)

1. Hydraulic power transmitting mechanism comprising, in combination, a liquid container, relatively rotatable driving and driven elements, a rotary member journaled on one of said elements and having rolling contact with the other element, said driven element having circulatory passages for the liquid, means on the driving element for feeding the liquid in the container into one of the said passages, means on said member for feeding liquid from said one of the passages to the other passage, and means operable at will for opening and closing the last named passage to regulate the flow of liquid therethrough and to thereby lock said member against rotation about its axis when the last named passage is closed, whereby to cause rotation of the driven element.



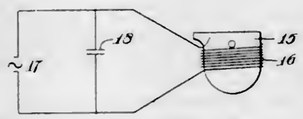
1,378,185. COMBINED LAVATORY AND WATER-HEATER. JOHN S. NICHOLL, Cambridge, Mass., assignor to Electric Boiler Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1921. Serial No. 440,967. 3 Claims. (Cl. 4—1.)

1. In a combined lavatory and water heater, a pedestal, a container arranged within the pedestal, heating means in the pedestal for the container, a single water supply pipe connected to the bottom of the container, an outlet pipe connected to the top of the container and leading to the basin, a branch pipe leading from said supply pipe to the basin for admitting cold water thereto, and draining means connected to the container.



1,378,186. PATTERN-DRAWING MACHINE. WILLIAM C. NORCROSS, Terre Haute, Ind., assignor to American Molding Machine Company, Terre Haute, Ind., a Corporation of Indiana. Filed June 12, 1920. Serial No. 388,531. 5 Claims. (Cl. 22—47.)

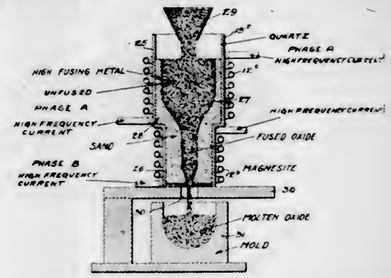
1. In a pattern drawing machine, the combination with a supporting frame and upright posts for sustaining said frame, of a slidably mounted pattern drawing frame movable up and down in relation to said supporting frame, and



cable and sheave raising and lowering means for said slidably mounted pattern drawing frame.

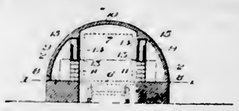
1,378,187. FOCUS INDUCTOR-FURNACE. EDWIN FITCH NORTHRUP, Princeton, N. J., assignor, by mesne assignments, to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Filed Oct. 9, 1918. Serial No. 257,506. 62 Claims. (Cl. 204—64.)

1. In electric heating apparatus, an alternating source of current, a condenser adjusting the phase of the current, a coil supplied with current from said source and a spacing inductor receiving induced current from the coil and distributing the current to the work at a distance from the coil.



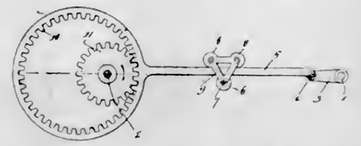
1,378,188. LADLE-HEATING BY HIGH-FREQUENCY CURRENTS. EDWIN F. NORTHRUP, Princeton, N. J., assignor, by mesne assignments, to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Continuation of application Serial No. 133,474, filed Nov. 25, 1916. This application filed Nov. 30, 1918. Serial No. 264,808. 24 Claims. (Cl. 204—64.)

1. In casting mechanism, a pouring ladle carrying an induction coil and free from interlinkage of a transformer magnetic circuit therewith.



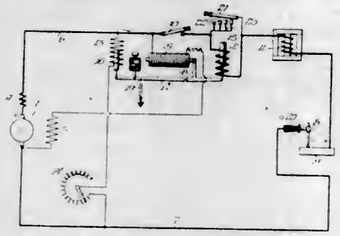
1,378,189. METHOD AND APPAPATUS FOR MELTING OXIDS, &c., WITHOUT CONTAMINATION. EDWIN FITCH NORTHRUP, Princeton, N. J., assignor, by mesne assignments, to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Filed July 30, 1919. Serial No. 314,241. 34 Claims. (Cl. 204—64.)

1. In the melting of metallic oxids and like chemicals the combination of a crucible composed of a metallic oxid having a melting point in excess of the intended tempera-



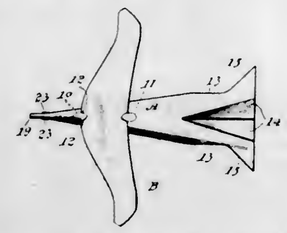
ture of the melt and a molten body of the metal whose oxid is being treated within the bottom of the crucible.

1,378,190. COMBUSTION-CHAMBER FOR TUNNEL-KILNS. JOHN B. OWENS, Zanesville, and ELLSWORTH P. OGDEN, Columbus, Ohio; said Ogden assignor to said Owens. Original application filed May 28, 1918, Serial No. 237,166. Divided and this application filed June 25, 1920. Serial No. 391,637. 3 Claims. (Cl. 25—142.)



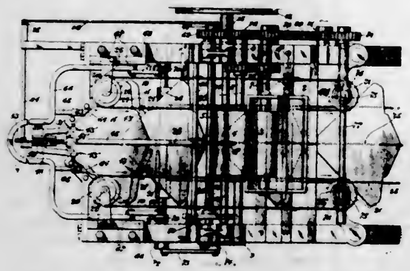
1. A tunnel kiln having a combustion chamber at its side, a baffle for the upper part of the combustion chamber where the latter faces the interior of the tunnel, and piers supporting said baffle, said piers being separated by discharge ports or passages through which the heat and products of combustion pass from the combustion chamber to the interior of the tunnel, said baffle being provided with ports which open into the interior of the tunnel at the lower portion of said baffle and communicate with the combustion chamber in the upper portion thereof.

1,378,191. MECHANICAL MOVEMENT. PAUL PALÉ, Los Angeles, Calif. Filed May 12, 1920. Serial No. 380,756. 7 Claims. (Cl. 74—14.)



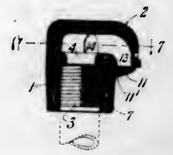
5. A mechanical movement comprising a crank shaft having a crank pin, a second shaft having a gear pinion of a pitch diameter equal to the throw of the crank pin, a stationary fulcrum, and a lever of the first order slidably engaging the fulcrum and connected to the crank pin, the opposite end being formed to provide an internal gear meshing with the gear pinion, the effective lengths of both ends of the lever being equal at all positions, the fulcrum being positioned half way between the two shafts and the gear ratio being two for the internal gear to one for the gear pinion, to transmit rotary motion of one shaft to rotary motion of the second shaft in the same direction and at equal speed and to maintain an even distribution of the transmitted power.

1,378,192. ELECTRIC WELDING APPARATUS AND METHOD OF REGULATING THE SAME. HARRY R. PENNINGTON, Kansas City, Mo. Filed Apr. 22, 1918. Serial No. 229,927. 6 Claims. (Cl. 219—15.)



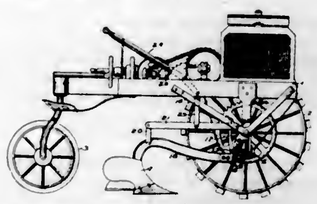
1. Welding apparatus comprising a generator having a shunt field winding, a variable pressure rheostat in series therewith, an arc welding device and conductors connecting the same to said generator, a current responsive coil in the main circuit arranged to vary the resistance of said rheostat to control the energization of said shunt field winding, a reactance coil also connected in the welding circuit, and means for shunting a variable amount of current around said current coil to vary the energization thereof.

1,378,193. FLYING TOY. GEORGE B. PETTY, Evanston, Ill. Filed July 29, 1920. Serial No. 399,829. 6 Claims. (Cl. 244—12.)



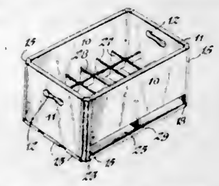
6. A toy aeroplane comprising a body portion formed of a paper blank rolled into substantially conical form, a plane disposed transverse to the axis of the body, and an element for weighting the nose of the body consisting of a wire coil the convolutions whereof engage opposite sides of the nose.

1,378,194. PAPER-FEEDING MECHANISM. CHARLES F. PFLANZE, St. Louis, Mo. Filed Aug. 11, 1919. Serial No. 316,681. 16 Claims. (Cl. 271—1.)



4. In a paper feeding mechanism, a sheet feeder arranged to move forwardly over a pile of the sheets to be fed, said sheet feeder having a forwardly extending sheet holding member adapted to lie between the top sheet and the next adjacent sheet in the pile, and sheet releasing means comprising a lifting device whereby the rear margin of the top sheet is lifted over the plane of said sheet holding member and a reciprocating gripping device whereby the sheet is pulled rearwardly so as to positively release said top sheet from the pile.

1,378,195. PIPE-CAP FOR ELECTRIC CONDUITS. JAMES C. PHELPS, Springfield, Mass.; Charles W. James, Jr., administrator of said James C. Phelps, deceased. Filed Aug. 19, 1915. Serial No. 46,331. 11 Claims. (Cl. 247—6.)



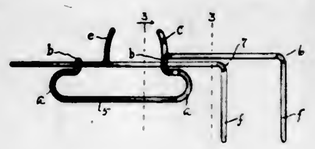
1. An outlet cap for conduits, comprising a base member formed with interior threads thereon for attachment to the conduit, a reinforcing ring embedded in the base member, the upper surface of the base member having a flat surface and formed with an upwardly projecting border, an opening through the projection communicating with the threaded member of the base, a cap for attachment to the base member, the inner upper surface of the cap having a plurality of separated grooves formed therein for the purpose of spreading the wires as they emerge from the base member, and means for attaching the cap to the base member, as described.

1,378,196. TRACTOR-PLOW. OTTO L. PLETTNER and WILLIAM H. LOWE, Continental, Ohio, assignors to The Continental Tractor Company, Continental, Ohio, a Corporation of Ohio. Filed Apr. 10, 1919. Serial No. 289,156. 2 Claims. (Cl. 97—30.)

1. In a tractor plow, a plow having a plow beam, a link connecting the end of the beam of the plow with the frame of the tractor, springs extending laterally from opposite sides of the beam of the plow for yieldingly holding the beam of the plow in its position with reference to the frame of the tractor, a means connected to the plow at a point substantially over the center of gravity of the plow for lifting the plow and allowing lateral play of the plow against the tension of the laterally extending springs.

1,378,197. DELIVERY-CASE FOR BOTTLED BEVERAGES. FRANK X. SCHWAB, Buffalo, N. Y. Filed Jan. 24, 1920. Serial No. 353,694. 5 Claims. (Cl. 217—65.)

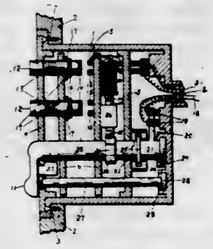
1. A case of the character described, comprising side and end walls having end tenons, removable upright



corner connections having vertical grooves which receive said tenons, and locking members extending crosswise of the case and engaging said corner connections to prevent displacement theerof.

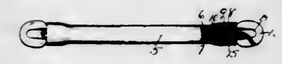
1,378,198. LANDING ATTACHMENT FOR PARACHUTES. FLOYD SMITH, Chicago, Ill., assignor to Floyd Smith Aerial Equipment Company, a Corporation of Illinois. Filed Nov. 26, 1919. Serial No. 340,850. 1 Claim. (Cl. 244—21.)

The combination with a parachute comprising a canopy member, a harness for a person, and suspending means extending between said harness and the periphery of the canopy for the purpose of carrying the load from said periphery, of a rope connected to the center of the canopy in such a manner that a pull on the rope is transmitted positively to said center, said rope extending downward to a point within reach of a person carried by said harness.



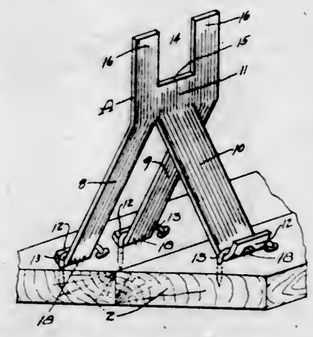
1,378,199. MEDICINE-ADMINISTERING INSTRUMENT FOR HOGS. RICHARD I. SMITH, Omaha, Nebr., assignor of two-fifths to Alvin Martin, Omaha, Nebr. Filed July 3, 1920. Serial No. 393,964. 2 Claims. (Cl. 128—19.)

2. In an instrument for the purpose described, a bearing-strip having transversely disposed end-portions provided with loops, a handle-member approximately of L-shape having one of its ends provided with a curved prong, said handle-member being secured to one of said loops and being disposed in the plane of its prong and said bearing-strip, and a gripping-bar approximately of L-shape having a curved prong, said bar and its prong being adapted to be disposed in the plane of the handle-member and the prong thereof and to have slidable movements in the loops of the bearing-strip for increasing or decreasing the distance between said prongs.



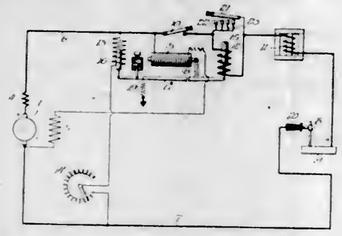
1,378,200. ELECTRIC SAFETY-LOCK. OTTO H. STOLBERG, San Francisco, Calif. Filed May 28, 1918. Seral No. 237,358. 4 Claims. (Cl. 70—63.)

1. An electric permutation lock comprising a source of current, an electromagnet and a lock operated thereby, and a number of buttons in series in the circuit and connections bridging one or more of the buttons, whereby



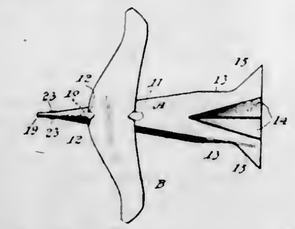
the circuit will be closed only by operating certain of the buttons and leaving the others untouched.

1,378,201. TERMINAL FOR ELECTRICAL PURPOSES. ELMER B. STONE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 16, 1918. Serial No. 217,682. 6 Claims. (Cl. 173—269.)



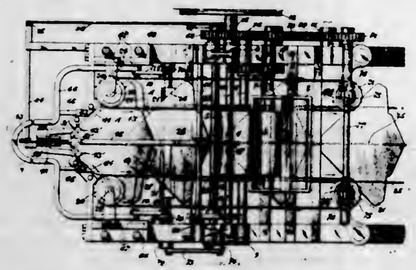
3. An electrical conductor including an insulation of soft flexible material, a core within said material, a terminal comprising a support of tubular shape larger than said core and having means to permit it to penetrate said material, the latter being located both within and without the terminal and exerting a grip thereon sufficient to retain it in place, and means on said terminal to receive an electrical connection.

1,378,202. SUPPORTING-CHAIR FOR SUPPORTING REINFORCING-BARS. OLIVER J. VOELPEL, St. Louis, Mo. Filed Sept. 8, 1919. Serial No. 322,343. 2 Claims. (Cl. 72—122.)



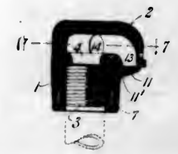
1. A chair for supporting reinforcing bars in reinforced concrete slab construction comprising a body portion having a seat for supporting the reinforcing bars, guide arms to prevent extreme lateral movement of the reinforcing bars upon their seat, supporting legs having feet for said body portion, prongs formed integral with the legs adjacent the feet thereof to prevent spreading of the legs when a load is applied to the chair and said guide arms together with the other members of the chair adapted to serve as a slab thickness gage.

1,378,192. ELECTRIC WELDING APPARATUS AND METHOD OF REGULATING THE SAME. HARRY R. PENNINGTON, Kansas City, Mo. Filed Apr. 22, 1918. Serial No. 229,927. 6 Claims. (Cl. 219—15.)



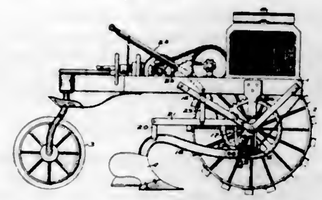
1. Welding apparatus comprising a generator having a shunt field winding, a variable pressure rheostat in series therewith, an arc welding device and conductors connecting the same to said generator, a current responsive coil in the main circuit arranged to vary the resistance of said rheostat to control the energization of said shunt field winding, a reactance coil also connected in the welding circuit, and means for shunting a variable amount of current around said current coil to vary the energization thereof.

1,378,193. FLYING TOY. GEORGE B. PETTY, Evanston, Ill. Filed July 29, 1920. Serial No. 399,829. 6 Claims. (Cl. 244—12.)



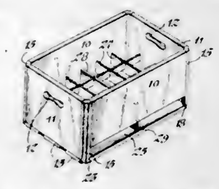
6. A toy aeroplane comprising a body portion formed of a paper blank rolled into substantially conical form, a plane disposed transverse to the axis of the body, and an element for weighting the nose of the body consisting of a wire coil the convolutions whereof engage opposite sides of the nose.

1,378,194. PAPER-FEEDING MECHANISM. CHARLES F. PELANZE, St. Louis, Mo. Filed Aug. 11, 1919. Serial No. 316,681. 16 Claims. (Cl. 271—1.)



4. In a paper feeding mechanism, a sheet feeder arranged to move forwardly over a pile of the sheets to be fed, said sheet feeder having a forwardly extending sheet holding member adapted to lie between the top sheet and the next adjacent sheet in the pile, and sheet releasing means comprising a lifting device whereby the rear margin of the top sheet is lifted over the plane of said sheet holding member and a reciprocating gripping device whereby the sheet is pulled rearwardly so as to positively release said top sheet from the pile.

1,378,195. PIPE-CAP FOR ELECTRIC CONDUITS. JAMES C. PHELPS, Springfield, Mass.; Charles W. James, Jr., administrator of said James C. Phelps, deceased. Filed Aug. 19, 1915. Serial No. 46,331. 11 Claims. (Cl. 247—6.)



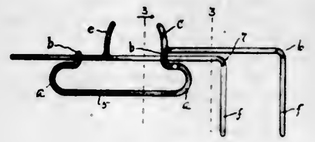
1. An outlet cap for conduits, comprising a base member formed with interior threads thereon for attachment to the conduit, a reinforcing ring embedded in the base member, the upper surface of the base member having a flat surface and formed with an upwardly projecting border, an opening through the projection communicating with the threaded member of the base, a cap for attachment to the base member, the inner upper surface of the cap having a plurality of separated grooves formed therein for the purpose of spreading the wires as they emerge from the base member, and means for attaching the cap to the base member, as described.

1,378,196. TRACTOR-PLOW. OTTO L. PLETTNER and WILLIAM H. LOWE, Continental, Ohio, assignors to The Continental Tractor Company, Continental, Ohio, a Corporation of Ohio. Filed Apr. 10, 1919. Serial No. 289,156. 2 Claims. (Cl. 97—30.)

1. In a tractor plow, a plow having a plow beam, a link connecting the end of the beam of the plow with the frame of the tractor, springs extending laterally from opposite sides of the beam of the plow for yieldingly holding the beam of the plow in its position with reference to the frame of the tractor, a means connected to the plow at a point substantially over the center of gravity of the plow for lifting the plow and allowing lateral play of the plow against the tension of the laterally extending springs.

1,378,197. DELIVERY-CASE FOR BOTTLED BEVERAGES. FRANK X. SCHWAN, Buffalo, N. Y. Filed Jan. 24, 1920. Serial No. 353,694. 5 Claims. (Cl. 217—65.)

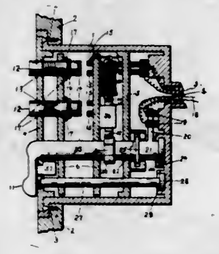
1. A case of the character described, comprising side and end walls having end tenons, removable upright



corner connections having vertical grooves which receive said tenons, and locking members extending crosswise of the case and engaging said corner connections to prevent displacement theerof.

1,378,198. LANDING ATTACHMENT FOR PARACHUTES. FLOYD SMITH, Chicago, Ill., assignor to Floyd Smith Aerial Equipment Company, a Corporation of Illinois. Filed Nov. 26, 1919. Serial No. 340,850. 1 Claim. (Cl. 244—21.)

The combination with a parachute comprising a canopy member, a harness for a person, and suspending means extending between said harness and the periphery of the canopy for the purpose of carrying the load from said periphery, of a rope connected to the center of the canopy in such a manner that a pull on the rope is transmitted positively to said center, said rope extending downward to a point within reach of a person carried by said harness.

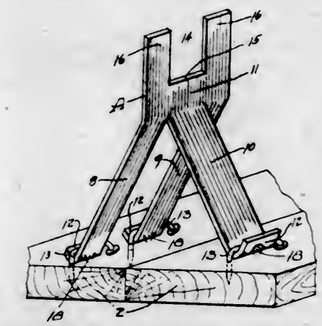


1,378,199. MEDICINE-ADMINISTERING INSTRUMENT FOR HOGS. RICHARD I. SMITH, Omaha, Nebr., assignor of two-fifths to Alvin Martin, Omaha, Nebr. Filed July 3, 1920. Serial No. 393,964. 2 Claims. (Cl. 128—19.)

2. In an instrument for the purpose described, a bearing-strip having transversely disposed end-portions provided with loops, a handle-member approximately of L-shape having one of its ends provided with a curved prong, said handle-member being secured to one of said loops and being disposed in the plane of its prong and said bearing-strip, and a gripping-bar approximately of L-shape having a curved prong, said bar and its prong being adapted to be disposed in the plane of the handle-member and the prong thereof and to have slidable movements in the loops of the bearing-strip for increasing or decreasing the distance between said prongs.

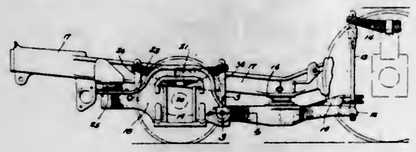
1,378,200. ELECTRIC SAFETY-LOCK. OTTO H. STOLBERG, San Francisco, Calif. Filed May 28, 1918. Serial No. 237,358. 4 Claims. (Cl. 70—63.)

1. An electric permutation lock comprising a source of current, an electromagnet and a lock operated thereby, and a number of buttons in series in the circuit and connections bridging one or more of the buttons, whereby



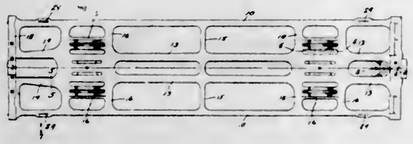
the circuit will be closed only by operating certain of the buttons and leaving the others untouched.

1,378,201. TERMINAL FOR ELECTRICAL PURPOSES. ELMER B. STONE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 16, 1918. Serial No. 217,682. 6 Claims. (Cl. 173—269.)



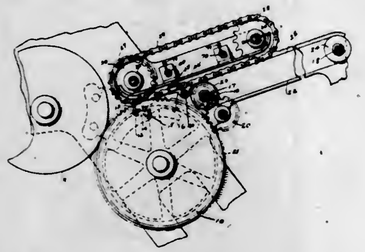
3. An electrical conductor including an insulation of soft flexible material, a core within said material, a terminal comprising a support of tubular shape larger than said core and having means to permit it to penetrate said material, the latter being located both within and without the terminal and exerting a grip thereon sufficient to retain it in place, and means on said terminal to receive an electrical connection.

1,378,202. SUPPORTING-CHAIR FOR SUPPORTING REINFORCING-BARS. OLIVER J. VOELPEL, St. Louis, Mo. Filed Sept. 8, 1919. Serial No. 322,343. 2 Claims. (Cl. 72—122.)



1. A chair for supporting reinforcing bars in reinforced concrete slab construction comprising a body portion having a seat for supporting the reinforcing bars, guide arms to prevent extreme lateral movement of the reinforcing bars upon their seat, supporting legs having feet for said body portion, prongs formed integral with the legs adjacent the feet thereof to prevent spreading of the legs when a load is applied to the chair and said guide arms together with the other members of the chair adapted to serve as a slab thickness gage.

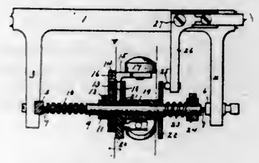
1,378,203. TRAILER-TRUCK FOR LOCOMOTIVES. CHARLES T. WESTLAKE, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Sept. 5, 1919. Serial No. 321,865. 23 Claims. (Cl. 105—82.)



1. A trailer truck frame comprising two main parts which are pivotally connected to each other, the forward portion of the front part being adapted to be pivoted to the main frame of a locomotive, and a wheel carrying axle journaled in the rear part of said trailer truck frame.

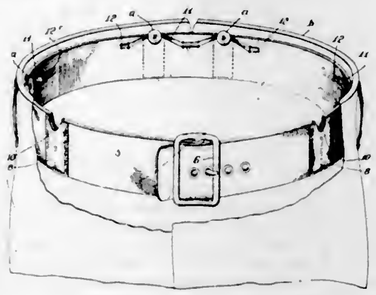
1,378,204. LOCOMOTIVE-TENDER UNDERFRAME. CHARLES T. WESTLAKE, St. Louis, Mo., assignor to Locomotive Tender Frame Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 19, 1919. Serial No. 339,149. 14 Claims. (Cl. 105—415.)

1. A locomotive tender underframe cast in a single piece and provided with integrally formed longitudinal sills, end sills, and double body bolsters.



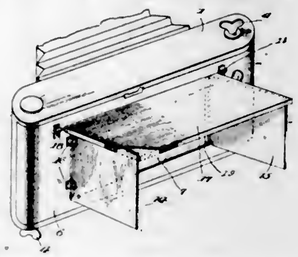
1,378,205. SHEET-POSITIONING MECHANISM. JOSEPH WHITE, Piscataway township, Middlesex county, N. J., assignor, by direct and mesne assignments, of one-half to Hall Printing Press Company, Dunellen, N. J., a Corporation of New Jersey, and one-half to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 14, 1911. Serial No. 665,625. 48 Claims. (Cl. 271—48.)

35. A sheet feeding mechanism for printing presses comprising endless means traveling in a partly circular and partly non-circular path for feeding the sheets to the press and devices carried by the sheet feeding means for bringing the sheets into both end and side register with respect to the printing form while they are in motion.



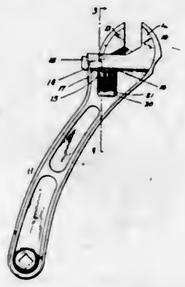
1,378,206. SPRING-MOTOR GOVERNOR. GEORGE M. WILLSON, Williamsport, Pa. Filed Apr. 30, 1919. Serial No. 293,669. 5 Claims. (Cl. 188—187.)

1. In a spring motor governor, the combination of a rotatable governor shaft, a spider rigidly mounted thereon, centrifugal weights pivotally mounted upon said spider, a loosely sliding spool upon said shaft, arms upon said weights coöperating with said spool to move it in one



direction, an adjustable collar upon said shaft and a spring upon said shaft between said collar and spool for opposing the movement of said spool under the influence of said weights.

1,378,207. TROUSERS-BELT. MYRON AWNER, Chicago, Ill. Filed June 28, 1920. Serial No. 392,432. 5 Claims. (Cl. 241—9.)

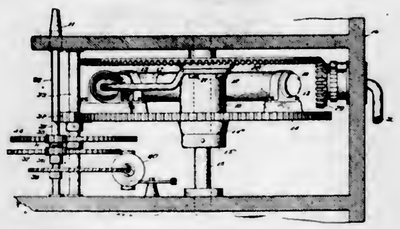


1. An inside trousers-belt having upwardly-open notches to receive button shanks and, for respective notches, resilient retaining members extending horizontally of the belt below the notches adapted to pass over the buttons and engage the upper side of their shanks.

1,378,208. CAMERA. WILLIAM E. BAILEY, Rock Island, Ill. Filed Apr. 22, 1918. Serial No. 230,123. 6 Claims. (Cl. 95—49.)

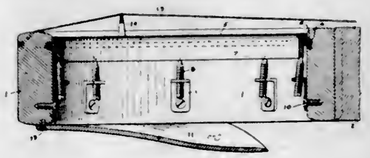
1. The combination with a camera having a back provided with a focusing opening, adapted to register with openings in a film backing, a ground-glass positioned within said camera and over said opening, flat springs carried by said camera back and engaging said ground-glass to normally hold the ground-glass in engagement with the camera back out of the path of said film, and guards carried by said ground-glass plate and extending over said springs to prevent engagement of the film backing with the springs.

1,378,209. WRENCH. JEROME E. BERGMAN, Buffalo, N. Y. Filed May 8, 1919. Serial No. 295,604. 4 Claims. (Cl. 81—165.)



1. A wrench, comprising a head carrying a fixed jaw, a movable jaw, a rotary adjusting-member for the movable jaw, said head having a beveled surface, and a resilient frictional detent engaging said beveled surface and bearing constantly against said adjusting member.

1,378,210. COLLAPSIBLE LUGGAGE-HOLDER. ALFRED L. BERRY, Lincoln, Nebr. Filed Aug. 6, 1920. Serial No. 401,788. 2 Claims. (Cl. 224—29.)



1. In a collapsible luggage-holder for a support, a lazy-tongs, a pair of pivot-posts each being movably connected adjacent to its ends with one of the ends of the lazy-tongs, a pair of end-sections, each including a pair of hook-arms for a removable connection with the support, said hook-arms being movably mounted upon and near the respective ends of said pivot-posts, spacing-strips engaging and tending to prevent swinging movements of the arms of a section from or toward each other, spacing-hooks pivotally mounted upon the lazy-tongs near the top and bottom thereof for a removable connection with the support, and a pair of adjusting-strips, each being provided with a terminal hook and having a pivotal connection with a hook-arm of a section for engaging one of said spacing-hooks.

1,378,211. MOTOR. BURR B. BLOOD, Chicago, Ill., assignor to George Heidman and Norman A. Street, Chicago, Ill. Filed July 23, 1919. Serial No. 312,674. 12 Claims. (Cl. 230—35.)

1. A motor of the class described, comprising a cylinder or tube closed at one end, said cylinder or tube being adapted to travel through the arc of a circle, a plunger or piston mounted in said cylinder or tube and in air-tight relation therewith, means whereby the plunger or piston may be drawn toward the open end of said cylinder or tube, and means operatively connected with the cylinder or tube whereby movement of said cylinder will be transmitted to a rotatably mounted member.

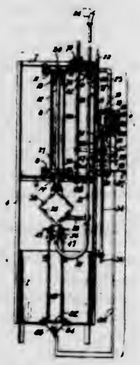
1,378,212. BANJO. JOHN A. BOLANDER, Berkeley, Calif. Filed June 25, 1917. Serial No. 176,775. 7 Claims. (Cl. 84—269.)

1. A musical string instrument, comprising an annular body having an interior continuous groove, a head, a spring ring fitting in said groove and holding the head therein, the edge of the head being extended beyond said spring ring and bent back beneath the head, a hoop within said body engaging the extended edge of the head, and means for forcing said hoop outwardly.

7. A musical string instrument, comprising an annular body of substantial thickness having downwardly opening recesses formed therein, passages leading from said recesses to the top face of the body and strings extending over said body through said passages into said recesses and there secured.

1,378,213. LEATHER-MAKING PROCESS. PAUL BRANT, Bristol, Ind., and HERMAN T. WILSON, Petoskey, Mich.; said Wilson assignor of his entire right to Victor N. Brant, Bristol, Ind. Filed July 31, 1918. Serial No. 247,507. 10 Claims. (Cl. 149—6.)

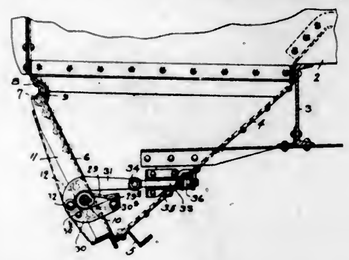
1. That part of the process of making leather which comprises subjecting the partly prepared leather containing tannin to the action of dissolved gluey matter and tannin in the presence of an alkaline material, and thereafter to an acid solution.



1,378,214. TOWEL-RACK. EDWIN T. BRIGHAM, Kansas City, Mo., assignor to Jacques Rousso, Los Angeles, Calif. Filed Sept. 26, 1912. Serial No. 722,473. 8 Claims. (Cl. 45—32.)

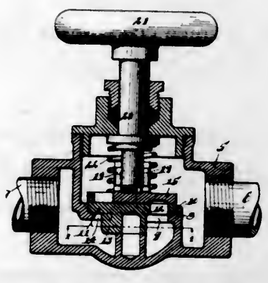
8. A towel rack comprising a pair of brackets, one being hollow and having a keyhole-shaped slot of which

the narrow portion is nearest the other bracket, a U-shaped spring rod arranged with its arms substantially horizontal, one of the arms engaging one of the brackets and the other arm being capable of being fitted into the other bracket through the enlarged end of the keyhole slot thereof, the last-named arm having grooves at opposite sides to receive the edges of the walls of the bracket at opposite sides of the narrow portion of the keyhole slot, and a locking device extending through the slotted bracket to prevent the arm engaging the narrow portion of the keyhole slot from being sprung downward into the enlarged portion of said slot.



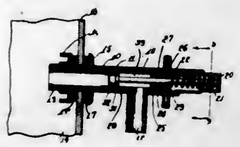
1,378,215. CAN-TESTING MACHINE. WILFORD E. BURNS, San Francisco, Calif., assignor to Max J. Brandenstein, Manfred Brandenstein, and Edward Brandenstein, San Francisco, Calif., a Firm doing business as M. J. Brandenstein & Co. Filed Jan. 31, 1920. Serial No. 355,362. 16 Claims. (Cl. 73—51.)

14. A control mechanism for a fluid pressure operated piston comprising a cylinder in which said piston slides, a valve box formed with an air chamber therein, means for introducing air under pressure into said air chamber, means providing a passage from each end of the cylinder to said air chamber, means providing an exhaust passage from said air chamber, a valve in said air chamber movable to uncover either passage to said cylinder and to place the other passage in communication with said exhaust passage, a manually controlled slide for moving said valve, a lever pivoted on said slide, means for blocking said exhaust passage connected to one end of said lever and normally lying to one side of said passage, and means operating in time with the movement of said piston for moving said lever about its pivot on said slide to move said blocking means across said exhaust passage.



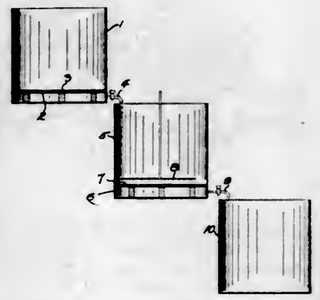
1,378,216. CAR-DOOR-OPERATING MECHANISM. ANDREW CHRISTIANSON, Butler, Pa., assignor to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 16, 1919. Serial No. 311,121. 1 Claim. (Cl. 105—299.)

In door operating mechanism for side dump-cars, the combination of a swinging door, a shaft journaled in said door, winding connections between said shaft and the car body, a ratchet-wheel rigidly mounted on said shaft, and a lever socket loosely mounted on said shaft, a plate loosely mounted on said shaft connected to said lever socket, said ratchet-wheel being located between said plate and said lever socket, a holding pawl for said ratchet-



wheel, and a pawl mounted between said plate and said lever socket.

1,378,217. VALVE. JOHN J. CLIFFORD, Chicago, Ill., assignor to Harry D. Lathrop, Chicago, Ill. Filed May 19, 1919. Serial No. 298,020. 4 Claims. (Cl. 251—84.)

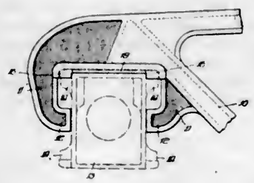


1. A valve, comprising a valve casing; a removable valve seat in said casing, having a valve opening extending therethrough; a rotary valve head coöperating with said seat and having a valve opening extending therethrough, and adapted to be brought into and out of registration with the opening in said valve seat; and a removable valve stem for said valve head, said valve stem and valve head having registering marks thereon indicating proper registration with each other and said valve seat, substantially as described.

1,378,218. FAUCET. GEORGE WINTHROP COOKE, Jamaica, N. Y. Filed Apr. 24, 1918. Serial No. 230,572. 3 Claims. (Cl. 251—137.)

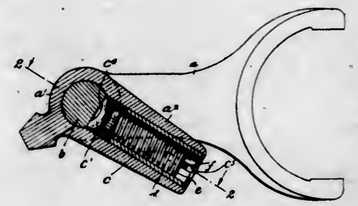
2. A faucet comprising a casing made of a short length of tube, and having an inlet and an outlet, and an inner tubular member made of softer material than that of said casing and closely fitting the inner periphery thereof and having a valve seat formed in one end thereof; and a valve in said casing located opposite said valve-seat and provided with a valve stem which extends through said inner tubular member in water tight relation with its opposite end.

1,378,219. METHOD FOR PRODUCING ZINC CHLORID. PAUL DANCKWARDT, Denver, Colo., assignor to The Danckwardt Process Company, Denver, Colo., a Corporation of Colorado. Filed June 23, 1919. Serial No. 306,182. 5 Claims. (Cl. 23—13.)



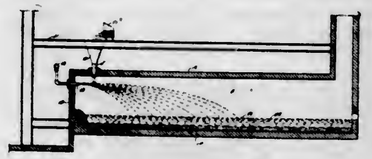
1. A process of producing zinc chlorid, which consists in treating a solution of aluminum chlorid with a zinc oxid, separating the precipitated aluminum oxid by filtering from the zinc chlorid solution, evaporating the filtrate and fusing the residue.

1,378,220. SHOE-HEEL LIFT. NUNZIO DAQUINO, Turtle Creek, Pa. Filed Aug. 30, 1920. Serial No. 407,059. 3 Claims. (Cl. 36—35.)



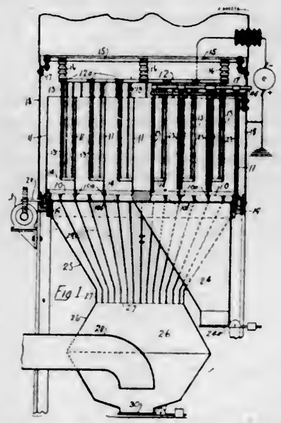
1. A lift for shoes having an upwardly curved central area, an upwardly curved cup-shaped rim forming the sides and rear edge of said lift, a transverse beveled rim on the forward end of the lift the upper edge of which has comparatively short upwardly extending corners, and a central portion formed at a lower elevation than the upper edge of the aforesaid cup-shaped rim, to prevent puckering of the lift material when attached to a flat surface.

1,378,221. SIDE FRAME. HARRY E. DOERR, St. Louis, Mo., assignor to Scullin Steel Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 25, 1920. Serial No. 368,640. 5 Claims. (Cl. 105—220.)



5. A pedestal truck side frame having four lugs for embracing adjacently arranged bolt lugs of the journal box, and having two flanges connecting certain of said four lugs for embracing shoulders on the journal box normally to prevent relative lateral movement between said side frame and journal box.

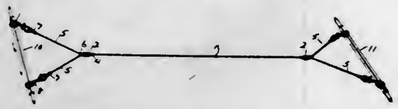
1,378,222. SHIFTER-FORK PLUNGER. MAXIMILIAN C. FAINS, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 26, 1920. Serial No. 406,157. 5 Claims. (Cl. 74—39.)



1. As an article of manufacture, a shifter fork plunger having a nose formed with oppositely tapered side walls terminating in a blunt nose curved transversely.

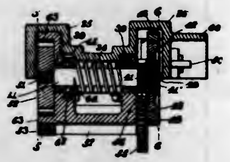
1,378,223. METHOD FOR GRANULATING CONVERTER-SLAG. SAMUEL RICHARD GARR, Chula, Mo., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 18, 1919. Serial No. 331,705. 8 Claims. (Cl. 266—34.)

1. In the art of granulating converter slag as it is fed to an ore smelting reverberatory furnace, the process which consists in pouring a molten charge of the slag in a stream into the furnace and projecting a stream of steam under relatively high pressure against the falling slag stream to cause a disintegration of the slag and to spread the same over a large portion of the surface of the reverberatory charge in the furnace.



1,378,224. ART OF ELECTRICAL PRECIPITATION OF PARTICLES FROM FLUID STREAMS. CHARLES W. GIRVIN, Philadelphia, Pa. Filed Feb. 16, 1918. Serial No. 217,489. 21 Claims. (Cl. 183—7.)

1. In apparatus of the character described and wherein opposing electrode systems are movable relatively to each

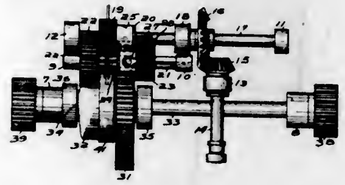


other and adapted to produce an electric field or fields, means operative to isolate a space of predetermined cross-sectional area from field activity, and means whereby deposits collected on a face of one of said systems will be removed from such face while free from such activity.

1,378,225. TOWING DEVICE. MAX MILLIAM GOLDMAN, Somerville, Mass. Filed Dec. 26, 1918. Serial No. 268,407. 2 Claims. (Cl. 213—67.)

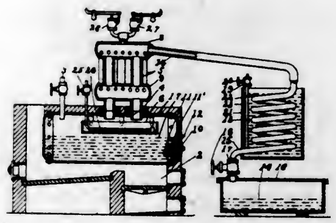
1. In connecting devices for towing purposes, a main cable having an attaching eye at each end, bracing cables secured in said eyes and having eyes at their free ends, attaching cables having eyes at each of their ends and adapted to be looped in spaced position around an element in the device to be towed, and means for detachably securing the eyes of the bracing cables to those of the attaching cables.

1,378,226. LIFTING-JACK. FRANK L. GOAMLEY, Brookline, Mass., assignor to A. O. Norton, Inc., Boston, Mass., a Corporation of Maine. Filed Sept. 3, 1920. Serial No. 408,012. 10 Claims. (Cl. 254—103.)



1. In a lifting jack, a revoluble operating shaft; a revoluble gear in axial alinement therewith; means on said shaft for rotating said gear in one direction only and that during the lowering operation; a worm adapted to be rotated by said gear; a gear secured to one end of said worm; a pinion meshing therewith; a shaft parallel to said worm to one end of which said pinion is secured; a gear secured to the opposite end of said parallel shaft; a pinion freely revoluble about the axis of said worm and meshing with the gear on said parallel shaft; a brake wheel revoluble with the last-mentioned pinion; and means coacting with said brake wheel for normally preventing the rotation thereof.

1,378,227. COIN-HOLDER. MILFRED L. GREENSTREET, Maplewood, Mo., assignor, by mesne assignments, to Blocker Toy Manufacturing Company, Maplewood, Mo., a Corporation of Missouri. Filed June 23, 1919. Serial No. 306,176. 2 Claims. (Cl. 133—6.)

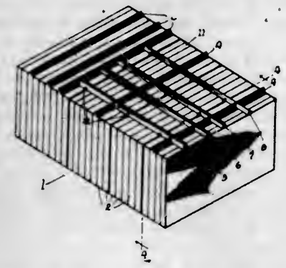


1. A coin holder comprising a substantially flat body member having its outer lateral edges bent upwardly to form flanges, said flanges providing between them coin retaining surfaces and the upper part of said flanges being bent outwardly and then inwardly so as to provide retaining surfaces adjacent to the first-mentioned retaining surfaces.

1,378,228. TRACTOR DRIVING-GEAR. NOBLE W. HARTMAN, Toledo, Ohio, assignor to The Continental Tractor Company, Continental, Ohio, a Corporation of Ohio. Filed Mar. 15, 1920. Serial No. 365,812. 1 Claim. (Cl. 74—58.)

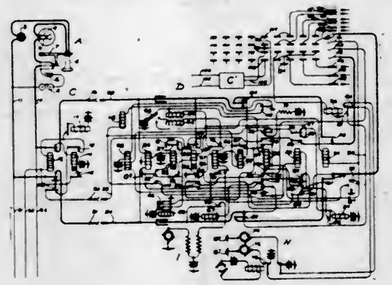
In a driving gear for tractors, a casing formed of two parts, a pair of shafts supported between the two parts, the said shafts having gear wheels, a third shaft having a pair of gear wheels and supported in one of the parts and so as to mesh with gear wheels of the first named shafts when the said parts are secured together, a split double collar for connecting gear wheels of one of the first named shafts and a gear wheel on the last named shaft, a rod extending through the casing for shifting the collar together with the gear wheels connected to the collar along their respective shafts.

1,378,229. PROCESS OF DISTILLING PETROLEUM. ENOCH O. HICKS, St. Joseph, Mo. Filed Apr. 17, 1920. Serial No. 374,743. 2 Claims. (Cl. 196—25.)



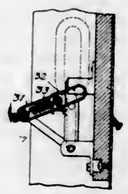
1. The process of treating the liquid portions of the paraffin-series of petroleum distillation having a boiling point upward of 500° F. for obtaining therefrom low boiling point products of the same series, which consists of vaporizing in a still the volatile consituents of said liquid portions of petroleum at a temperature of from about 650 to about 850° F. condensing said vapor, revaporizing said condensed vapor in condensate receptacles in said still for continually maintaining separation of said condensates from said liquid portions of petroleum throughout the entire process, thereby maintaining the viscous nature of the latter, recondensing said revaporized vapor, maintaining a pressure of from about 4 to 5 atmospheres on said liquid of said vapors throughout their course to and while undergoing condensation, and releasing from time to time the accumulation of gas from the products of condensation.

1,378,230. PRINTING-FORM AND MEANS OF RULING SAME. WILLIAM C. HOLLISTER, Chicago, Ill., assignor to Chicago Lino-Tabler Company, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 29, 1918, Serial No. 214,379. Divided and this application filed July 29, 1918. Serial No. 247,124. 7 Claims. (Cl. 199—66.)



6. A series of matrices for use in producing slugs with longitudinal ribs provided with rule receiving notches,

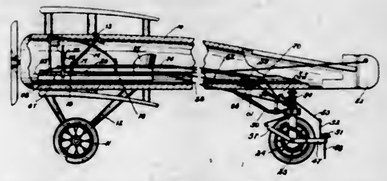
such series varying in width by uniform increments from a relatively narrow width to a relatively wide width,



whereby any desired length of rib increasing by points from one 6 points long to one 36 points long and longer can be produced.

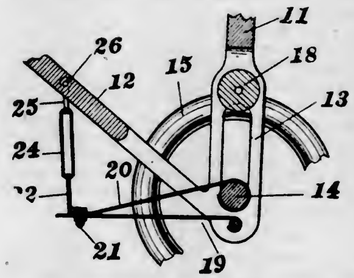
1,378,231. AUTOMATIC TELEPHONE SYSTEM. JOHN H. HOMRIGHOUS, Oak Park, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1919. Serial No. 281,763. 21 Claims. (Cl. 179—18.)

1. In a telephone system, an automatic switch, a line leading to said switch, trunk lines accessible thereto, an auxiliary switch individual to said automatic switch for selecting one of said trunk lines, means for transmitting a plurality of series of impulses over said line, and means responsive to the first series of said impulses for causing said auxiliary switch to select one of said trunk lines without operating said automatic switch.



1,378,232. ELECTRICAL SWITCH. BRYSON D. HORTON, Detroit, Mich. Original application filed Jan. 22, 1915, Serial No. 3,703. Divided and this application filed Oct. 28, 1918. Serial No. 259,888. 25 Claims. (Cl. 200—73.)

8. An electrical switch, comprising an operating crank, movable contacts, an insulating crosshead connected to the contacts for operating the same, and a snap mechanism between the crank and crosshead and comprising a spring connected to both said parts and a metal member connected directly to one of said parts and connected to the other part through an elongated slot, said other part being metallic.

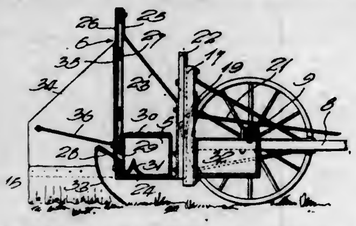


19. In an inclosed-switch structure, in combination a casing thereof having an aperture in each of two opposite walls, and a switch operating member composed of a continuous unitary rod centrally offset to provide a bail-shaped portion with two alined bearing portions adjacent thereto and formed at one end to provide an external handle, said member being tortuously insertible longitudinally into position for locating said alined bearing portions in the respective apertures aforesaid.

1,378,233. STEERING AND BRAKING DEVICE FOR AEROPLANES. JOHN THOMAS HUGHES, Council Bluffs, Iowa. Filed Aug. 10, 1920. Serial No. 402,721. 3 Claims. (Cl. 244—2.)

1. In combination with an aeroplane having the usual steering apparatus, of a resiliently supported landing wheel mounted to turn about a substantially vertical axis, connections between such steering mechanism and the ground wheel for turning the same about such axis, braking means associated with such wheel, further braking means adapted to come in contact with the ground, and a common means on the aeroplane for controlling both of said braking means.

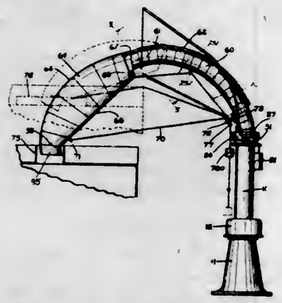
1,378,234. AEROPLANE SHOCK-ABSORBER. JOHN T. HUGHES, Council Bluffs, Iowa. Filed Aug. 12, 1920. Serial No. 403,003. 3 Claims. (Cl. 244—2.)



1. In combination with an aeroplane, supporting legs therefor having slots therein, an axle movable in said slots, wheels on said axle, pairs of leaf springs connected together at one end and having their opposite free ends secured respectively to said axle and to said legs, means to secure the joined ends of said springs to the legs, and a bumper for limiting the movement of said axle.

1,378,235. GRASSHOPPER-CATCHER. AUGUST JAHN, Omak, Wash. Filed July 1, 1919. Serial No. 307,883. 3 Claims. (Cl. 43—133.)

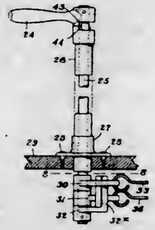
1. In a grasshopper catcher, a screen mounted to travel over ground occupied by grasshoppers, and a receptacle to receive the grasshopers from said screen, said receptacle having a horizontal slot through one of its sides, said screen having a slot in registry with the slot of said receptacle, a downwardly and rearwardly inclined chute



communicating with said slots, and a flexible insect-disturbing member depending from and extending below said

chute to disturb the grasshoppers and cause them to jump into the path of the portion of the screen above said chute.

1,378,236. RAILWAY WATER-COLUMN. EDWARD E. JOHNSON, St. Paul, Minn. Filed Dec. 1, 1916. Serial No. 134,474. 17 Claims. (Cl. 137—21.)

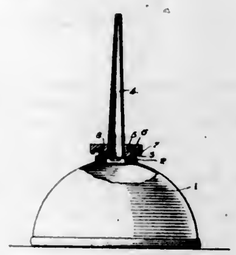


1. A railway water column comprising a standpipe having a curved delivery nozzle, and a correspondingly-curved discharge spout which together form a continuously-curved water course of variable length.

15. A railway water column comprising a revoluble standpipe terminating in a laterally-extended delivery portion, a bail secured to the end of said portion so as to bridge the open mouth thereof, and a discharge spout movable along said delivery portion and over said bail.

17. A railway water column comprising a standpipe having a delivery nozzle with a curved upper surface, a discharge spout enveloping said nozzle, and a roller journaled in the rear of said discharge spout and engageable with said curved upper surface, said roller by engagement with said curved upper surface operating as the sole means of support of the spout while the same is being forwarded along the curved nozzle.

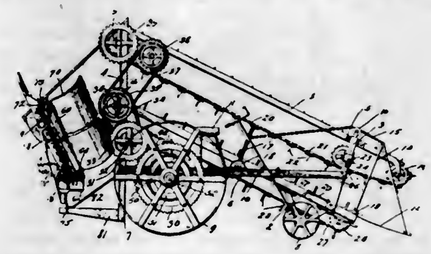
1,378,237. SIGNALING DEVICE. WALTER H. JOHNSON, Boston, Mass., assignor to Chester I. Campbell, Quincy, Mass. Filed Mar. 1, 1918. Serial No. 220,105. 3 Claims. (Cl. 116—4.5.)



1. A signaling device comprising a controlling rockshaft, a bearing structure for said rockshaft, two oscillatory members loosely arranged up on said rockshaft, an actuator common to both said members, said actuator being affixed to said rockshaft, one of said members being arranged to be moved by said actuator when said rockshaft is moved in one direction from a median angular position, the other one of said members being arranged to be moved by said actuator when said rockshaft is moved in the opposite direction from said median position, two independently movable signals, means for transmitting angular motion from one of said members to one of said signals, means for transmitting angular motion from the other one of said members to the other one of said signals, and means arranged to lock said rockshaft against return angular motion toward said median position when said rockshaft is displaced to either side of said position a predetermined angular extent, said locking means including oscillatory shoulders carried by said rockshaft and fixed shoulders, said oscillatory shoulders being movable to and from locking position by endwise movement of said rockshaft.

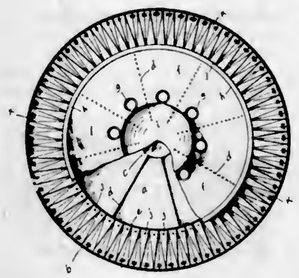
1,378,238. COLLAR-BUTTON. ROGER A. KAHL, Wallingford, Conn. Filed Sept. 16, 1919. Serial No. 324,160. 2 Claims. (Cl. 24—101.)

1. A collar button comprising a base, a flat plate-like shank formed on said base, a pair of notches formed in one edge of said shank, and a third notch formed on the opposite edge of said shank at a point between the first-mentioned notches.



1,378,239. OIL-CAN. ARTHUR E. KAMMAITZ, Hartford, Conn. Filed Apr. 30, 1920. Serial No. 377,831. 3 Claims. (Cl. 221—32.)

1. An oil can comprising a body and a nozzle, the body having a nipple composed of a plurality of elliptical portions having their long axes at right angles, a nozzle having a head circular in cross section and of a diameter corresponding to the length of the short axes of the said portions whereby to permit the head to enter either of the said portions, said head being annularly grooved, and a compression spring held within the groove and of elliptical form and shape to fit and fill either of the elliptical portions of the nozzle, said head having an outwardly extending flange provided with a marginal rib for holding a packing between the said rib and the body of the head for engagement by the end of the nipple.



1,378,240. GRAIN-SHOCK LOADER. FRANK KAPINOS and GEORGE CHIZEK, Canby, Minn. Filed July 25, 1917, Serial No. 182,749. Renewed Oct. 15, 1920. Serial No. 417,279. 3 Claims. (Cl. 193—16.)

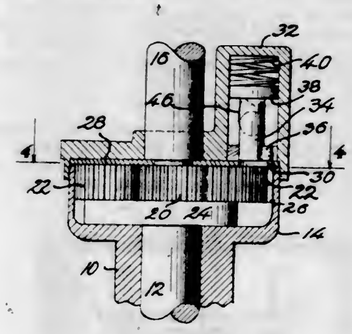
1. In a grain shock loader, a wheeled frame having elevating conveyer means, a trough mounted transversely of the frame at its rear end below the elevating conveyer means and having a central longitudinal opening in its bottom, an endless conveyer movable through the center opening in the bottom of the trough, a vertically and horizontally swinging trough supported at one end of the

first named trough and having a central longitudinal opening in its bottom, an endless conveyer movable in the opening of the last named trough, means for vertically adjusting said last named trough, and connections between the conveyers in the troughs for simultaneously operating the same.

1,378,241. EDUCATIONAL APPLIANCE FOR ARITHMETIC. JOSÉ KECKEIS, Portland, Oreg. Filed Apr. 14, 1920. Serial No. 373,697. 3 Claims. (Cl. 46—57.)

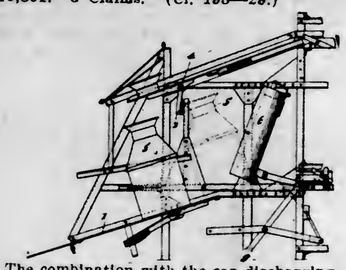
2. An educational appliance, comprising a circular base having a sloping upper surface and an upwardly extending rim at the circumference, sectoral compartments radiating from the center toward the edge, a space between the lower edge of the peripheral wall of said compartments and the base to permit the passage of a marble, a concave dish covering the top of said compartments and openings in the bottom of said concave dish to permit a marble circulating in said dish to enter non-selectively one of the compartments below said dish.

1,378,242. PAPER-FASTENER. FRED J. KLINE, New York, N. Y. Filed Dec. 4, 1919. Serial No. 342,421. 4 Claims. (Cl. 24—153.)



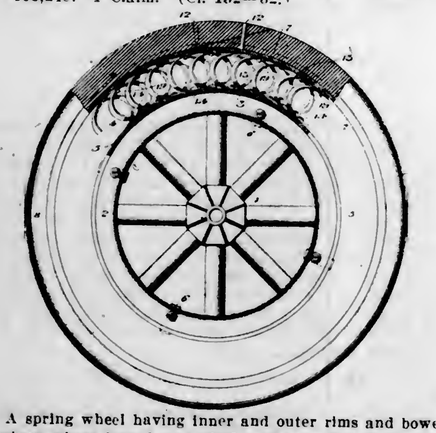
3. The combination with a member embodying two spaced apart tongues adapted to be pushed through papers, of a retaining member having two holes through which the tongues can be passed and bent down flat on the retaining member and two pairs of projections struck up from the interior part of the retaining member, one pair near each end, and a tongue-covering member adapted to be passed under and held by said projections with its side edges in contact with the upper surface of the retaining member.

1,378,243. WINDOW-CLEANER. LOUISE S. KRACKE, Chicago, Ill. Filed Nov. 16, 1920. Serial No. 424,494. 2 Claims. (Cl. 15—59.)



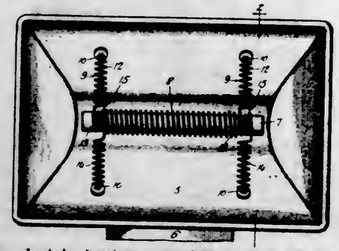
1. In a window cleaner, the combination with a thin flat substantially triangular shaped body having its faces parallel and provided on one of its faces with a depression substantially co-extensive with said face, said body having at one of its ends a pair of spaced apart alined enlargements, each of said enlargements having in its outer end an opening, of a clamping member corresponding in shape to that of said body adapted to fit around the perimeter of the latter, said clamping member having its adjacent ends located in the openings of said enlargements for pivotally connecting the clamping member and body together, and a transversely ribbed pad located in the said depression of the body.

1,378,244. STEERING-WHEEL LOCK. WILLIAM J. LANE, Denver, Colo. Filed Oct. 31, 1919. Serial No. 334,652. 10 Claims. (Cl. 70—129.)



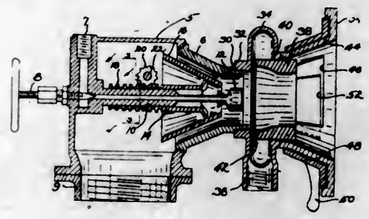
1. In combination, a steering wheel post, a gear casing having an internal gear thereon, a pinion on said post, gears meshing with said pinion and with said internal gear, a reciprocable key mounted in said casing and adapted to engage the internal gear to lock said post, means to move said key into and out of engagement with said internal gear, and a plate secured to said post and rotatable therewith, said plate having a keyhole for passage of said key into engagement with the internal gear.

1,378,245. CAN-WASHING MACHINE. HARRY D. LATHROP, Chicago, Ill. Filed Aug. 25, 1919. Serial No. 319,801. 3 Claims. (Cl. 193—29.)



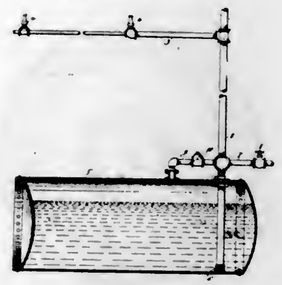
1. The combination with the can discharging mechanism of a can washing machine, of a stop set in the path of a can being discharged, said stop being arranged to yield and be forced from said path by the can itself, substantially as described.

1,378,246. DEMOUNTABLE SPRING-TIRE. LOUIS COMPE, Butte, Mont. Filed Aug. 23, 1920. Serial No. 405,248. 1 Claim. (Cl. 152—32.)



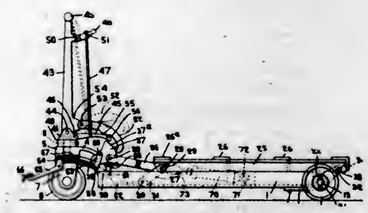
A spring wheel having inner and outer rims and bowed springs whose bowed or arched parts are detachably connected to one of the rims and whose ends are spaced apart transversely of the other rim and connected thereto, said springs having their general extent or length disposed obliquely or angularly crosswise in relation to the said rims and being provided with ends which lie in the plane of the wheel.

1,378,247. ELECTRIC HEATER. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 31, 1920. Serial No. 355,340. 16 Claims. (Cl. 219—34.)



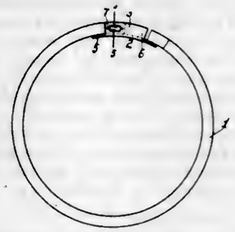
1. An electric heater comprising an insulating tube, a resistor carried thereby, a support, and a helical spring connected with the support and having means to engage the insulating tube.

1,378,248. COMBINATION-BURNER. GEORGE W. LINDSAY, Denver, Colo., assignor to The Denver Fire Clay Company, Denver, Colo., a Corporation of Delaware. Filed Apr. 21, 1919. Serial No. 291,475. 3 Claims. (Cl. 158—74.)



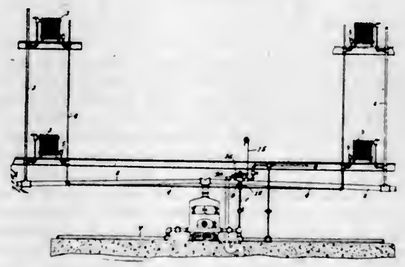
2. In a combination burner, an oil burner having a nozzle piece, a gas burner lying beyond and fitted thereto and comprising a gas head, means to supply gas to said head, and a nozzle piece threaded into the forward wall of said gas head, said nozzle piece being rotatable by means of the threaded connection to control the flow of gas thereto, and an air supply.

1,378,249. AUTOMATIC SPRINKLER SYSTEM. ALBERT J. LOEPSINGER, Edgewood, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed Aug. 26, 1916. Serial No. 116,961. 4 Claims. (Cl. 169—9.)



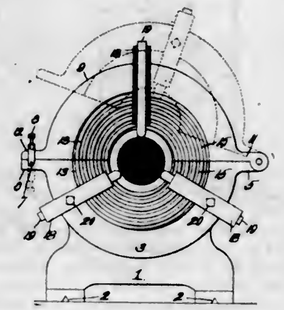
3. An automatic sprinkler system comprising a closed tank partly filled with liquid, a sprinkler pipe system including a supply pipe entering the tank and terminating below the normal level of the liquid therein, the sprinkler pipe system and the space in the tank above the level of the liquid being filled with compressed air at the service pressure, a by-pass pipe connecting the supply pipe and the air space in the tank and containing a check valve arranged to open toward the tank, and pipe connections for admitting the compressed air to the sprinkler pipe system.

1,378,250. ELEVATING HAND-TRUCK. RALPH M. LOVEJOY, Meredith, N. H. Filed Mar. 1, 1916. Serial No. 81,521. 15 Claims. (Cl. 254—10.)



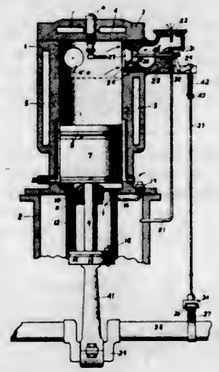
1. An elevating truck comprising a load supporting means, a steering mechanism including a tongue having an unlimited range of steering movement and pivotally mounted to swing vertically, interengaging means for elevating said load supporting means including a power multiplying lever fulcrumed upon a stationary pivotal support on said truck and connected to said load supporting means and located in a position in which it will not interfere with the free steering movement of said tongue and a coöperating member operable by the vertical swinging movement of the tongue to engage said power multiplying lever at different points whereby said load supporting means may be elevated step by step and means for locking said load supporting means at each step of elevation.

1,378,251. PISTON-RING. ROY A. LOVELL, San Francisco, Calif. Filed July 19, 1920. Serial No. 397,445. 1 Claim. (Cl. 74—109.)



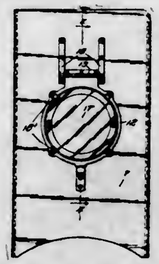
In a split piston ring, a sleeve having side walls and a bottom, adapted to extend across said split, indentations in the edges of the piston ring into which the side walls of the sleeve are adapted to fit, and pins on either side of said indentations passing through said side walls.

1,378,252. STEAM-HEATING APPARATUS. BRYCE W. MCCLYMONT, Detroit, Mich., assignor to Penberthy Injector Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 27, 1918. Serial No. 264,410. 8 Claims. (Cl. 237—68.)



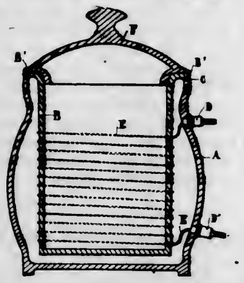
2. In a heating system, including a boiler and steam supply pipes and return passages including an air pipe and a branch pipe communicating with the boiler below its water level, the combination of a vacuum pump having an exhausting chamber and ejector members arranged to induce a vacuum in such chamber, and a valve device above the water level of the boiler having a float chamber provided with upper and lower openings, said chamber communicating through said lower opening with said air pipe, and said valve device having a float and connected valve in said float chamber arranged to prevent the passage of water through said upper opening into said exhausting chamber, and a check valve arranged to prevent passage of air from said exhausting chamber into said float chamber.

1,378,253. MULTIPLE-JAW-SETTING ATTACHMENT FOR STEADY-RESTS FOR LATHES. WILLIAM S. MCCONNELL and WILLIAM E. MCCONNELL, Kansas City, Kans. Filed Nov. 28, 1919. Serial No. 341,223. 1 Claim. (Cl. 82—39.)



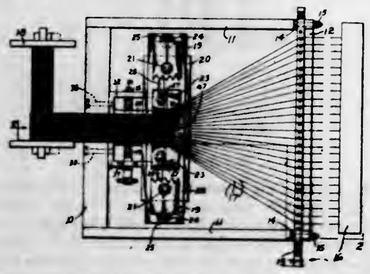
A steady rest for lathes, comprising a portion for support on the lathe frame, provided with a semi-circular member having its inner side facing upward and circumferentially channeled between its side faces, a semi-circular member superimposed upon and inverted with respect to and of the same size as the first-named member and provided with an inner circumferential channel registering at its ends with the channel of the first-named member; said members having radial hollow guides in proximity to one face of said members, a sectional wheel fitting within said semi-circular members and provided with a circumferential rib engaging said circumferential channels, and provided on its face in proximity to said guides, with a scroll, rack-bars fitting slidingly in said radial guides and inter-meshing with said scroll, and means for securing said ring in fixed relation as regards its upper member, to said inverted member; said semi-circular members being hinged together and detachably clamped together respectively, at diametrically opposite points.

1,378,254. INTERNAL-COMBUSTION ENGINE. JACK B. MACDONALD, Oakland, Calif. Filed Jan. 25, 1918, Serial No. 213,735. Renewed Nov. 8, 1920. Serial No. 422,689. 3 Claims. (Cl. 60—30.)



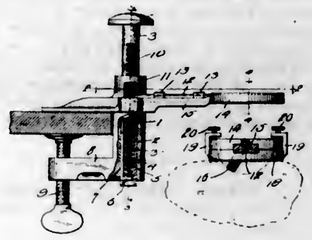
3. In an internal combustion engine, the combination with the exhaust pipe and exhaust valve thereof, of means actuated by the engine for supplying cold air during the operation of the engine, a connection from said means for directing streams of air from said supply into the pipe, a passage from said connection for directing streams of air from said supply upon the valve, said passage being controlled by the position of the valve.

1,378,255. HELMET. ROBERT MALCOM, Chicago, Ill. Filed Feb. 24, 1919. Serial No. 278,629. 6 Claims. (Cl. 2—117.)



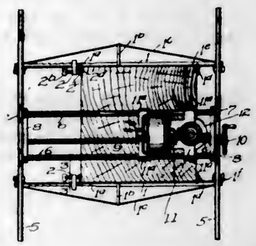
1. A helmet or head protector comprising a shell or casing, shaped to fit around the head and contact with the shoulders of the wearer, said casing having an opening therein in front of the eyes of the wearer, a lens-holding frame secured to said casing around said opening, a transparent member held therein, a frame surrounding said lens-holding frame and movably secured to said casing, and a transparent member removably secured to said last named frame.

1,378,256. ELECTRICAL HEATING APPARATUS. MAURICE RENÉ MALHOMME, Paris, France, assignor to Jacques Poberejsky, Paris, France. Filed June 30, 1920. Serial No. 393,052. 2 Claims. (Cl. 219—44.)



1. An electric heater, comprising nested inner and outer receptacles of ceramic material, and an interposed resistance element wound around the inner receptacle; said receptacles having an hermetic seal between their upper edges, and the inner receptacle having both its side and its bottom walls spaced from those of the outer receptacle to form a dead-air chamber which extends entirely around and beneath the said inner receptacle.

1,378,257. ATTACHMENT FOR WARPING-MACHINES. WILLIAM J. MALONEY, Ansonia, Conn. Filed June 8, 1920. Serial No. 387,284. 14 Claims. (Cl. 28—14.)

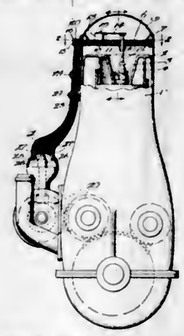


3. In a warping machine, the combination with a reciprocable trevis, thread guiding means carried thereby, and a reed carried by the trevis.

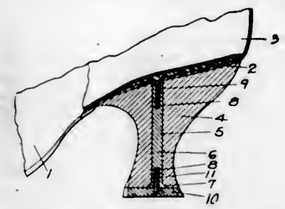
1,378,258. DEVICE FOR CUTTING EYES OUT OF LARGE POTATOES FOR SEED. ROBERT J. MANDERFIELD, Hancock, Mich. Filed Oct. 7, 1920. Serial No. 415,319. 7 Claims. (Cl. 146—6.)

1. In a seed potato cutter, the combination of a frame including means for adjustably clamping same to a table, a plunger slidably mounted in said frame, said plunger having a knob for depressing the plunger conveniently, and having a rack portion, a knife supporting arm extending horizontally from the frame and terminating in a ring, a semi-circular knife pivotally mounted on said ring, a knife arm rotatably mounted on the knife supporting arm and affixed to one end of the knife, a pinion segment mounted on the other end of the knife arm and meshing with the rack portion of the plunger.

1,378,259. SURFACING-MACHINE. ALLEN P. MEAKER and IRA F. BAKER, San Diego, Calif. Filed Aug. 4, 1919. Serial No. 315,066. 2 Claims. (Cl. 144—2.)



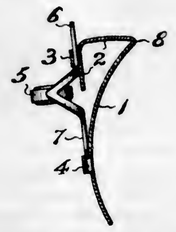
1. A device of the class described, including a pair of truss members, each provided with a block engaging member near one end and with a clamp screw spaced therefrom and adjustable thereon for clamping said truss members to said block, a pair of track members disposed at right angles thereto and adjustably supported thereon provided with beveled upper edges, a carriage provided with flanged wheels conforming to the upper edges of said track members mounted on said tracks and movable thereon, a support shiftable longitudinally on said carriage, a vertical shaft journaled in said support, a cutter secured to the lower end of said shaft and means mounted on said support connecting with said shaft for revolving said shaft.



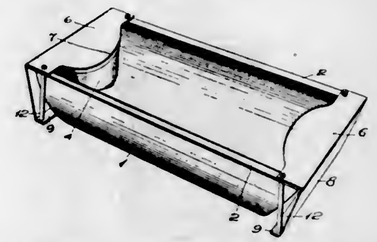
1,378,260. INTERNAL-COMBUSTION ENGINE. LLOYD L. MELTON, Chicago, Ill. Filed Aug. 21, 1919. Serial No. 318,938. Renewed Oct. 6, 1920. Serial No. 415,216. 8 Claims. (Cl. 123—143.)

1. An internal combustion engine having a plurality of cylinders each provided with a spark plug, in combination with a hood; current conducting means within the hood for including the spark plugs in circuit; a mounting for the current conducting means which extends through an opening provided in the hood; switching parts, one for each engine cylinder, carried by said mounting upon the exterior of the hood and connected with the aforesaid current conducting means; conductors upon the exterior

of the engine, one individual to each engine cylinder, for connecting the spark plug thereof with a source of current and terminating, adjacent the aforesaid switching parts, in other switching parts, the first aforesaid switching parts being disposed to be engageable by the closure of the hood with the second aforesaid switching parts; a timer provided with a casing having a cap portion at which the conductors upon the exterior of the engine terminates in timer contacts; and a body of insulating material connected with said cap portion and holding said conductors and the switching parts in which these conductors terminate in substantially fixed relation.

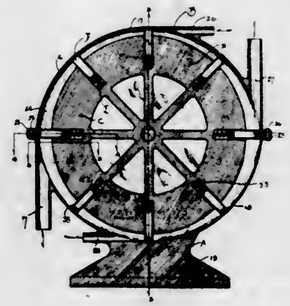


1,378,261. HEEL FOR SHOES. HERMAN R. MENCARELLI, Grand Rapids, Mich., assignor of one-half to Leo J. O'Riley, Grand Rapids, Mich. Filed Oct. 11, 1920. Serial No. 416,304. 2 Claims. (Cl. 36—42.)



2. The combination of a wooden heel, a metal dowel of non-circular cross section extending from top to bottom of the heel and provided with a countersunk head at its lower end, said dowel having a threaded longitudinal bore at its upper end adapted to receive an attaching screw, a wear lift for the bottom of said heel, and an attaching screw for said lift threaded into the lower end of said dowel.

1,378,262. CARD-MOUNT FOR ARTICLES OF MERCHANDISE. WILLIAM H. MEYER, Brooklyn, N. Y. Filed Jan. 14, 1920. Serial No. 351,289. 3 Claims. (Cl. 211—34.)



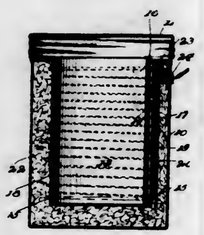
1. A card mount for articles of merchandise comprising a flat main body, said main body having a foldable portion adapted to extend in a parallel plane partially across the face of said main body when in normal folded position, means on said main body to engage one end of an article to be mounted, and means on said foldable portion to engage the opposite end of said article, said latter being engageable with said article by moving said foldable portion into normal folded position.

1,378,263. HOG-TROUGH. HARRY E. MILLER and JOHN H. JAYNE, Monmouth, Ill. Filed May 18, 1917. Serial No. 169,399. 10 Claims. (Cl. 119—61.)

1. A trough, comprising a body portion formed from a single sheet of metal bent to provide a horizontally disposed channel portion and end walls, said end walls being inwardly convex substantially throughout their width and being substantially perpendicular to the bottom of the trough and vertical when the trough is in normal position, and end plates each having a top portion extending over the adjacent curved end wall and downwardly extending support rigidly braced with relation to said body portion.

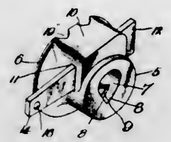
1,378,264. MOTOR. CARL C. MOON, Westboro, Ohio. Filed Dec. 11, 1919. Serial No. 344,057. 6 Claims. (Cl. 253—56.)

1. In a rotary engine, a casing, a rotor mounted in the casing, the rotor having a plurality of equi-distantly spaced inwardly extending slots formed therein, a blade rotatably and slidably mounted in each one of the slots, and inlet and exhaust ports formed in the casing.



1,378,265. LIFTING-JACK. JOHN A. MURNIN, Columbus, Ohio. Filed July 15, 1920. Serial No. 396,548. 7 Claims. (Cl. 254—86.)

1. A permanent jack equipment for vehicles having wheel axles, which consists of a series of jacks clamped



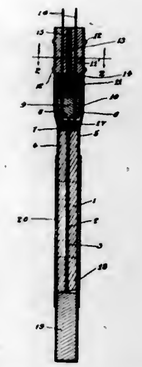
on the axles adjacent to opposite sides of the vehicle and having actuating shafts, a source of power, and actuating connections between the source of power and the jack shafts including manually actuated means controlling the direction of rotation of the jack shafts and arranged to yield when the latter reach their limits of movement.

1,378,266. PORTABLE ELECTRIC VAPORIZER. HENRY NAGEL, Davenport, Iowa. Filed Apr. 30, 1919. Serial No. 293,689. 2 Claims. (Cl. 219—44.)

1. A vaporizer including a shell, a container within the shell, a sheathing surrounding the container, binding members securing the sheathing upon the container, a resistance element wrapped about the sheathing and connected at its ends to said members, and a heat insulating packing surrounding the container within the shell.

1,378,267. ADJUSTABLE ROD-CLAMP. GEORGE F. NEWTON, Kansas City, Mo. Filed Mar. 21, 1918. Serial No. 223,854. 1 Claim. (Cl. 24—136.)

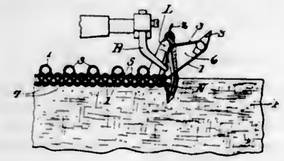
An adjustable rod clamp, comprising a tubular member to be fitted loosely on a rod, the sides of the lower portion of the passage of said member, converging downward to a point and each of said sides having a pair of V-shaped sharpened upwardly projecting transverse ribs, the ribs being ratchet-toothed shape in cross section and disposed with their abrupt faces facing outwardly, said member also having a transverse slot intersecting its passage and occurring in a plane between the planes of said ribs, and a wedge fitting in the said slot and having a downwardly and outwardly beveled lower edge for embedment in and transversely of the upper side of the said rod and for bowing the latter downward between the said ribs and embedding it on said ribs.



1,378,268. INSERTED PUMP FOR OIL-WELLS. THOMAS A. NORTHRUP, Washington, Pa. Filed July 17, 1919. Serial No. 311,430. 1 Claim. (Cl. 103—80.)

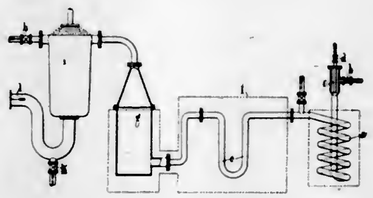
An inserted oil pump comprising a vertical pipe, means for securing the lower end of said pipe in a well tubing and sealing the tubing against escape of oil except through said pipe, an upwardly opening check valve on the upper end of said pipe, downwardly opening cups secured on said pipe, a working barrel slidable over said pipe, said check valve and said cups, an upwardly opening check valve and an openwork cage therefor on the upper end of said barrel to discharge oil from the barrel into the well tubing, and a guide carried by the lower end of said barrel and slidable on said pipe, said barrel having openings at the upper end of said guide permitting entrance of oil into the barrel between said guide and cups upon descent of said barrel, and serving to forcibly discharge such oil when the barrel ascends, whereby to wash all sand from

said barrel and to agitate the oil in the tubing to prevent accumulation of sand, the upward pressure of the oil against said cup serving to force the latter outwardly against the barrel.



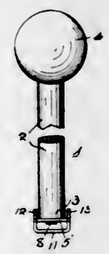
1,378,269. ELECTRIC BLASTING-CAP. ALBERT LESLIE OLIVER, Oakland, Calif., assignor to California Cap Company, Oakland, Calif., a Corporation. Filed Jan. 27, 1920. Serial No. 354,435. 3 Claims. (Cl. 102—10.)

1. The combination with a fuse, a tubular metallic shell member secured at one end thereto, an inflammable substance contained within said shell for igniting said fuse, a plug member for closing one end of said shell, one of said members being provided with a normally closed vent for permitting the escape of generated gases from within said shell and adapted for opening on the igniting of said inflammable substance, a filtering material within the shell intermediate the inflammable substance and said vent opening, and electric means extended into said inflammable substance for igniting the same.



1,378,270. PICOT EDGING FOR FABRICS. LANSING ONDERDONK, New York, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 20, 1916. Serial No. 92,454. 1 Claim. (Cl. 112—269.)

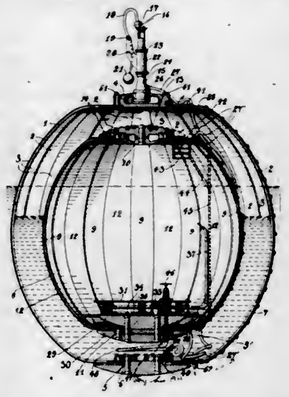
The combination of a fabric and a picot edging therefor, consisting of a needle thread formed into a series of loops extending through the fabric, a looper thread formed into a series of loops extending through the needle thread loops and over the edge of the fabric where said looper thread loops are entered by the needle loops prior to the



passing of the same through the fabric, one of said threads being formed into loops projecting laterally beyond the edge of the fabric, said last named loops being spaced two or more thread concatenations apart.

1,378,271. PROCESS FOR THE OXIDATION OF AMMONIA. JAMES RIDDICK PARTINGTON, London, England. Filed Oct. 10, 1919. Serial No. 329,878. 3 Claims. (Cl. 23—1.)

1. A process for the oxidation of ammonia which consists in forming a mixture of ammonia and steam in the presence of oxygen, preheating the mixture of ammonia steam and oxygen, and subsequently passing such mixture into contact with a heated catalyst.

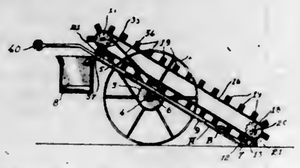


1,378,272. PERCUSSION-CAP DETONATOR. CHARLES F. PAULUS, East Orange, N. J. Filed Jan. 21, 1920. Serial No. 353,008. 2 Claims. (Cl. 46—46.)

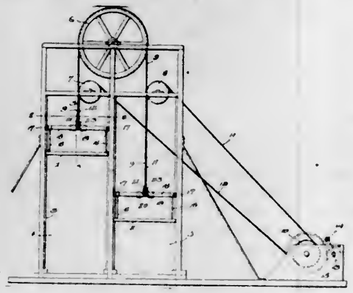
1. A percussion-cap detonator comprising a main body, an anvil-plate fixed upon an end of said body, said plate being provided with oppositely located marginal projections, and a cap-receiving yoke, provided with right-angled wings having openings into and through which said projections extend for movably connecting said yoke with said anvil-plate.

1,378,273. LIFE-SAVING APPARATUS. GIOVANNI PICCO, New York, N. Y. Filed Aug. 23, 1920. Serial No. 405,238. 4 Claims. (Cl. 9—4.)

1. In a life saving apparatus, the combination of an inner and an outer vessel of substantially globular shape, said vessels made of collapsible sections with intervening waterproof connections, and adapted to be closed from without, an air duct secured to the outer vessel, a rotatably mounted valve associated with said duct, a counterweight connected with the valve and adapted to keep it normally open when said outer vessel is in upright position and to close it when the vessel is inclined, a flexible hose connecting said duct with the inner vessel for permitting the latter to roll within the outer vessel, a manhole provided in the outer vessel, a similar manhole provided on top of the inner vessel, a rounded top provided with anti-friction devices mounted at the upper end of the inner vessel, a weighted platform within and at the bottom of said inner vessel, a spring supported seat secured to said platform and having associated therewith a pumping mechanism for supplying air, a water valve operable from within the inner vessel and adapted to supply water into or drain it from the space between the vessels and a cock valve provided at and communicating with the outer vessel.

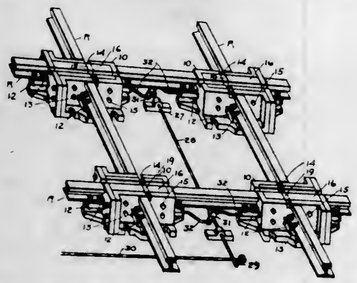


1,378,274. PROCESS OF FILTERING. JOHN P. PROBST, Marion, Ohio. Filed June 12, 1919. Serial No. 303,665. 3 Claims. (Cl. 210—134.)



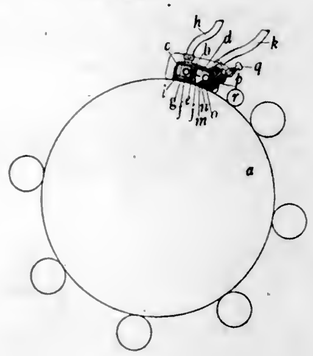
1. In the filtration of liquid, the herein described process consisting in causing the liquid delivered from a service pipe to be disrupted as it enters the filtering chamber by flowing through a perforated surface in the side wall of the casing in causing the liquid under pressure to filter through a plurality of integral layers of compressed sponges superimposed in the lower filter chamber to prevent currents of the liquid being formed therein and to effect primary filtration thereof, in causing the liquid to then filter through the material in an upper chamber arranged to prevent currents of the liquid therethrough and adapted to effect secondary filtration thereof and to cause said liquid to be a second time disrupted as it passes from said secondary filtration chamber by flowing over a perforated surface in the side wall of the casing.

1,378,275. NUT-GATHERER. FRANK RADEMACHER, Ontario, Calif. Filed Oct. 15, 1919. Serial No. 330,698. 2 Claims. (Cl. 56—328.)



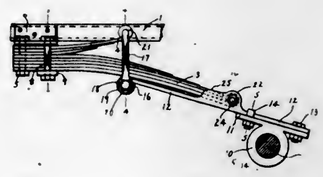
1. A machine for gathering nuts and like objects, including a wheeled support, an inclined apron mounted upon the wheeled support and formed with a foraminous sheet, an endless conveyer belt mounted parallel to the apron for coöperation therewith to engage the nuts and carry them upwardly on the apron, the foraminous sheet enabling foreign matter to be separated from the nuts as they are carried upwardly thereon, and a hopper receiving the nuts from the inclined apron.

1,378,276. COAL-TIPPLE. HORACE RAINEY, Fort Branch, Ind. Filed July 26, 1920. Serial No. 398,982. 4 Claims. (Cl. 187—71.)



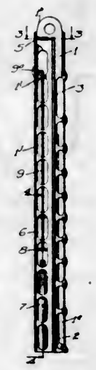
4. Hoisting apparatus of the character specified, including a pair of shafts, a car mounted to travel in each of the shafts, a guide pulley of a diameter corresponding with the distance between the centers of the shafts, a cable running freely over the pulley and connected at opposite ends to the cars which are suspended upon the cable and counter-balance one another, a hoisting pulley for each car, each hoisting pulley being disposed below and in the same plane with the guide pulley, hoisting cables engaging the respective guide pulleys and connected to the respective cars, and a hoisting drum having the hoisting cables reversely wound thereon.

1,378,277. CONTINUOUS-RAIL CROSSING. JAMES M. RIHN and WILLIAM RIHN, Louisville, Ky. Filed Mar. 5, 1921. Serial No. 449,816. 4 Claims. (Cl. 246—375.)



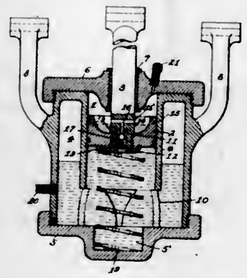
1. The combination with a pair of rails intersecting a second pair of rails; of blocks at the points of intersection each having intersecting grooves in its upper surface arranged to accommodate wheel flanges, each of said blocks having a pair of vertically disposed recesses opening upwardly into said grooves at the outer sides of the intersection, filler members slidable vertically in said recesses, and means to raise said filler members selectively to the level of the top of the rails.

1,378,278. TEXTILE AND LIKE PRINTING MACHINE. CHARLES ROBERTS, Manchester, England, assignor to The Calico Printers' Association Limited, Manchester, England. Filed May 19, 1920. Serial No. 382,593. 2 Claims. (Cl. 101—425.)



1. Means for cleansing the surface of proof covered bowls in printing machines consisting of the combination with a casing having a compartment therein formed by a longitudinal division piece with an extension, of a scraping device upon said extension engaging the bowl, means supplying liquid to said compartment, an outlet passage for the liquid extending across the compartment adjacent the bowl surface and in advance of the scraping device, a plate upon said casing engaging the bowl surface, a further compartment in said casing, means placing said compartment under vacuum, a communicating passage between said vacuum compartment and the surface of the bowl in part formed by said plate and at the rear side of the scraping device, a supplementary vacuum compartment or cavity at the rear side of said plate and a doctor engaging the bowl at the rear side of said compartment, as set forth.

1,378,279. SHOCK-ABSORBER FOR AUTOMOBILES. HENRY CULP ROBINSON, Beamsville, Ontario, Canada. Filed Apr. 17, 1920. Serial No. 374,703. 11 Claims. (Cl. 267—41.)

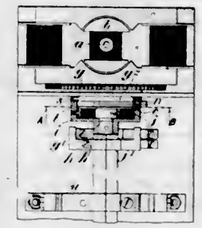


3. In an automobile, the combination with the axle, the frame and the ordinary springs of the automobile connected to the frame, of an opposed spring mounted upon the ordinary spring, a rigid member hingedly connected intermediately of its length to the free end of the ordinary spring, the rigid member being mounted at one end upon the axle, a link connecting the other end of the rigid member to the free end of the opposed spring and means for preventing lateral displacement of the springs.

1,378,280. GASOLENE MEASURING AND TESTING DEVICE. ALBERT ROGERS, San Diego, Calif. Filed Mar. 8, 1920. Serial No. 363,989. 4 Claims. (Cl. 73—120.)

1. A device of the class described, including a casing provided with an index and divided into thermometer and float compartments, the float compartments having a flexible side wall, and a latch member adapted to compress said side wall of the float compartment whereby said side wall engages the float for holding it in any position desired in said compartment.

1,378,281. RESILIENT DEVICE. EDWARD E. ROSS, Wilkinsburg, Pa. Filed Mar. 21, 1916. Serial No. 85,578. 8 Claims. (Cl. 267—64.)

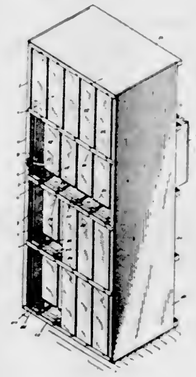


1. A resilient device comprising a cylinder, a piston operating therein, a chamber containing liquid upon which entrapped air acts, a check valve in said piston for controlling communication between the upper and lower faces of said piston, and ports of communication between said cylinder and said chamber so designed and located as to control recoil of the device by causing a variation of port opening with variation of piston travel.

1,378,282. [WITHDRAWN.]

1,378,283. MOTOR-DRIVEN QUICK-ACTION ELECTRIC SWITCH. FRITZ SAUTER, Basel, Switzerland. Filed Dec. 10, 1919. Serial No. 343,897. 1 Claim. (Cl. 74—14.)

In a motor driven electric switch, the combination of an electric motor, a drive gearing connected thereto, a rotary switch shaft, a spring barrel connected with the latter, a radially movable check-arm, a rotary eccentric for the operation thereof, said barrel being provided with a side opening for said check-arm, a stop for the latter, and a coupling pin carried by said driving gearing, said barrel being provided with a long slot and said coupling pin being arranged within this slot so as to be inoperative

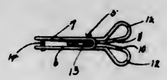


during normal working and to only become operative if the spring barrel should be unable to rotate the switch shaft, substantially as described.

1,378,284. PROCESS OF PREPARING A FERTILIZER. PAUL SCHMIDT, Altrahlstedt, near Hamburg, Germany, assignor to The Firm: Landwirtschaftliche Handelsgesellschaft M. B. H., Sudseehaus, Hamburg, Germany. Filed Apr. 20, 1920. Serial No. 375,280½. 1 Claim. (Cl. 71—9.)

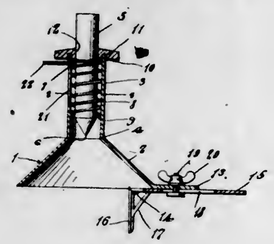
The process of preparing a fertilizer containing magnesium hydroxid and lime which comprises treating lime with a pure solution of a salt of magnesium, and allowing the ingredients to react, substantially as and for the purpose set forth.

1,378,285. CABINET. MAURICE P. SCHWARTZ, Indianapolis, Ind. Filed Oct. 22, 1920. Serial No. 418,795. 8 Claims. (Cl. 45—94.)



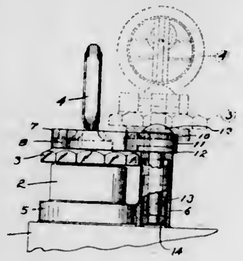
1. In a cabinet, the combination of a casing, a horizontal series of drawers mounted in said casing and having pins projecting vertically therefrom, a slidable bar mounted in said casing to slide transversely of the drawer movement, said bar being arranged to interlock with said pins to prevent or permit the withdrawal of drawers, and means operated by one of said drawers for moving said bar.

1,378,286. HOOK-AND-EYE FASTENER. NELL RILEY SCOTT, Albany, Oreg. Filed June 3, 1920. Serial No. 386,311. 3 Claims. (Cl. 24—228.)



1. A garment fastener formed of one piece of wire and including two inner and two outer parallel bars, loops

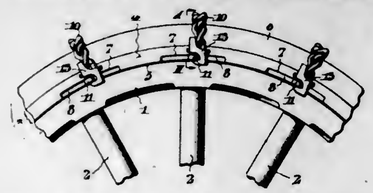
formed at the junction of the inner bars with the outer bars, one of said outer bars having one of its end portions



disposed upon the adjacent inner bar and extending transversely of the remaining bars.

1,378,287. CENTER FINDER AND PUNCH. JOHN SHAYLOR, Lindenwold, N. J. Filed Aug. 29, 1917. Serial No. 188,786. 1 Claim. (Cl. 33—191.)

A centering device of the character specified, comprising a punch having an outer annular flange, a tubular housing slidably receiving the punch and having an inner annular flange engaging the punch, and provided at its lower end with a flared guide member, a cap grooved in its lower side to receive the upper end of the housing and centrally apertured to receive the punch, and an expansion spring encompassing the punch and confined between the annular flanges of the housing and punch.

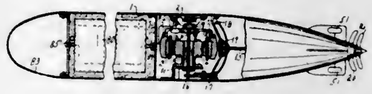


1,378,288. MOTOR-METER LOCK. MAX L. SHIRPSER, San Francisco, Calif. Filed Mar. 25, 1920. Serial No. 368,633. 2 Claims. (Cl. 220—33.)

1. A securing device for radiator caps comprising a hollow post, a ring connected therewith for permanently securing the post to a radiator outside the filling neck, a pair of arms adapted to be loosely connected with a radiator cap, and a pin for connecting the arms together and to said hollow post, the pin being secured permanently and slidable within said hollow post.

1,378,289. ANTISKID ATTACHMENT FOR VEHICLE-WHEELS. SAMUEL G. SILBERMAN, Philadelphia, Pa. Filed Sept. 4, 1920. Serial No. 408,209. 3 Claims. (Cl. 152—2.)

1. The combination of a retaining seat for a resilient vehicle tire having therethrough a transverse opening from side to side subjacent to the tire, and relatively shallow radially with reference thereto; a non-skid chain extending around and across the tire from one end of the

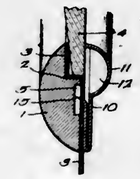


opening to the other; and a slim member extending through said transverse opening attached to said chain at one end and detachably connected thereto at its other end.

1,378,290. ADJUSTABLE TOOL-HOLDER. JOHN H. SMITH, Detroit, Mich., assignor to The Eclipse Interchangeable Counterbore Company, Detroit, Mich., a Corporation of Michigan. Filed May 2, 1919. Serial No. 294,309. 2 Claims. (Cl. 279—100.)

1. The combination with a socket member having its socket formed with cylindrical bearing portions of different diameters and an intermediate threaded portion, of a collet insertible in the socket member and having portions slidably engageable with the bearing portion of the socket, and an intermediate threaded portion engageable with the threads of the socket, and means for locking said collet in various positions of longitudinal adjustment.

1,378,291. DRIVING AND GOVERNING MEANS FOR TORPEDOES. ELMER A. SPERRY, Brooklyn, N. Y. Filed Apr. 2, 1915. Serial No. 18,861. 26 Claims. (Cl. 114—20.)



1. In an automobile torpedo, automatic control means for governing the depth at which the torpedo is driven, a motor for driving the torpedo and a common source of electric supply for said means and motor.

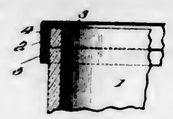
1,378,292. WINDOW. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Henry G. Saal, Chicago, Ill. Filed June 16, 1919. Serial No. 304,444. 1 Claim. (Cl. 296—145.)

The combination with a sheet of flexible material having a window opening therein; of a light transmitting closure having its border overlapped by the border of said opening; a substantially rigid frame having an angular

recess bordering its inner edge in which the light transmitting closure is received and in which the inner edge of the flexible material is also received, this inner edge of the flexible material being interposed between the light transmitting closure and the rigid frame, said rigid frame also having a recess surrounding the aforesaid angular recess and in the face of the rigid frame that is engaged by the flexible material; a second frame, formed of spring material, and having its outer border portion

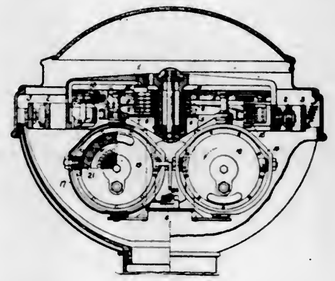
of U-shape in cross section, between which and the first frame the portions of the light transmitting closure and the sheet of flexible material which border the window opening are disposed, the part of the U-shaped border portion of the second frame that is next to the flexible material having prong formations which pass through the flexible material and into the recess in the rigid frame that surrounds the angular recess; and bolts clamping the border portion of the second frame to the first frame.

1,378,293. BED CONSTRUCTION. EDWARD J. STALDER, Chicago, Ill. Filed Dec. 15, 1919. Serial No. 344,795 1 Claim. (Cl. 5—4.)



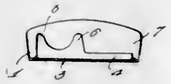
A bed of the character described, comprising a wire end frame and a wire foot frame, bracing wires for said frames and means for securing said wires to the frames, said means comprising castings mounted upon the frames and fashioned to receive the brace wires, said brace wires having V-shaped openings therein adapted to receive projections of the casting for positively uniting the brace wires to the said frames, a mattress frame comprising wire side and end parts, and castings for securing said parts together, a bracket supported by each of said head and foot frames, said bracket having an aperture therein and a portion of the material constituting the same projecting into the aperture and adapted to seat within a circular cutout portion in its support to maintain the bracket in position, the side wires of said mattress frame having their ends bent downwardly and arranged to enter openings in the brackets.

1,378,294. DISPENSING CARD-CASE. DAVID W. STEVENSON, Berkeley, Calif. Filed Oct. 13, 1919. Serial No. 330,478. 4 Claims. (Cl. 206—40.)



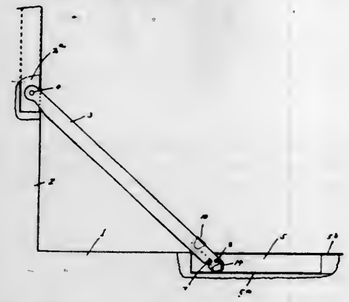
1. A dispensing card case comprising telescoping casings provided with a slot and inclined inner wall at one end thereof; a spring clip suitably secured within said casings for normally engaging and thereby dispensing cards singly therefrom when the casings are moved relatively to each other.

1,378,295. JAR-CLOSURE. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed June 27, 1919. Serial No. 307,056. 1 Claim. (Cl. 215—38.)



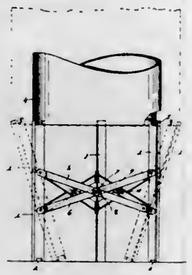
The combination with a glass jar having an outer smooth substantially vertical wall, of a metal closure therefor comprising a top portion, and a substantially vertical depending skirt connected to said top portion, the inner wall of said skirt being spaced from the outer wall of said glass jar, said skirt having an integral in-turned flange at its lower edge extending upwardly at an acute angle to the skirt with the upper edge thereof spaced from the inner wall of said skirt, the extreme inner diameter of said in-turned flange being slightly less than the exterior diameter of the glass jar, whereby said flange will yieldingly grip the vertical side wall of said glass jar and hold said closure on the jar.

1,378,296. ELECTRICAL DISTRIBUTION SYSTEM FOR GYROSCOPIC COMPASSES. HARRY L. TANNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 27, 1919. Serial No. 279,577. 12 Claims. (Cl. 33—204.)



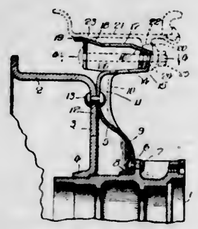
1. In combination, an electrically driven gyroscopic rotor, a system for supplying energy to said rotor, said system comprising a main source of supply, an auxiliary source of supply and means for automatically causing said auxiliary source to supply energy to the rotor on failure of the main supply.

1,378,297. DENTAL IMPRESSION-TRAY. FRANK W. WALLACE, Chattanooga, Tenn., assignor of one-half to Albert E. Doyle, Chattanooga, Tenn. Filed Jan. 20, 1921. Serial No. 438,734. 3 Claims. (Cl. 32—6.)



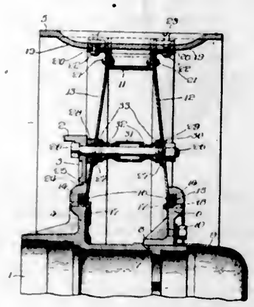
1. A dental impression tray having an upstanding flange provided on its upper edge with a vertical lug in the same plane with said flange and of slightly less height than the side walls of the tray.

1,378,298. SUPPORTING-BRACE FOR COVERS. THOMAS A. WATTS, Springfield, Ohio, assignor to The Springfield Metallic Casket Company, Springfield, Ohio, a Corporation of Ohio. Filed Jan. 10, 1921. Serial No. 436,264. 4 Claims. (Cl. 217—60.)



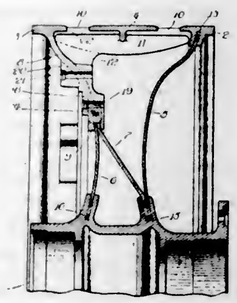
1. In a structure of the character described, the combination, with a body and a cover, of a brace pivotally connected to the cover and having its lower end extended into a pocket in the body, the lower end of the brace having a recess, a projection in said pocket to engage said recess, and a cam lever pivoted to the lower end of said brace to engage said projection to lift the brace therefrom.

1,378,299. RANGE-BOILER STAND. DANIEL D. WESSELS, Detroit, Mich. Filed Aug. 13, 1920. Serial No. 403,247. 7 Claims. (Cl. 248—41.)



2. The combination with a plurality of legs, of pairs of bars crossing each other and pivotally connected at their opposite ends to said legs, said bars having longitudinally-extending elongated apertures therein at their intersecting points, and securing means extending through said apertures.

1,378,300. PRESSED-PLATE WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 336,813. 10 Claims. (Cl. 301—6.)

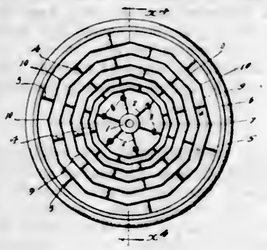


1. In a plate wheel, a brake drum supported on the hub and held in this position by a plate web secured to the hub, extending in a bracing direction and connected to the outer zone of the brake drum whereby the drum and the web mutually strengthen each other and with the hub form the main supporting body of the wheel.

1,378,301. PLATE DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,578. 9 Claims. (Cl. 301—63.)

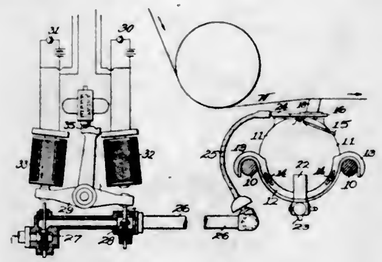
1. In a wheel of the class described, the combination with a flange fixed to the hub and a pressed on flange on the hub, these flanges being provided with annular grooves that face each other when the flanges are assembled on the hub, of two disks secured to these flanges by being engaged in the annular grooves thereof and of locking rings pressed into the grooves.

1,378,302. CAST-RIM DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Dec. 8, 1919. Serial No. 343,353. 4 Claims. (Cl. 301—63.)



1. In a disk wheel, two outwardly divergent rolled metal wheel disks centrally connected by a cast-on hub holding the central margins widely separated and having their outer and more widely separated margins held in the marginal portions, respectively, of a broad-tread cast-on rim.

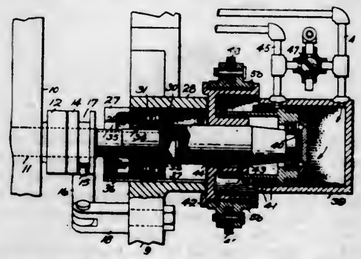
1,378,303. VEHICLE-WHEEL. JEREMY C. WILLMON, Los Angeles, Calif. Filed Apr. 22, 1919. Serial No. 291,912. 1 Claim. (Cl. 152—28.)



A vehicle wheel comprising a hub, a rim, concentric polygonal rings positioned between the hub and rim with their sides and angled corners relatively radially alined,

spokes connecting the hub to the innermost ring, spokes connecting the rim to the outermost ring, and spokes con-

necting the rings to one another, the spokes connecting with the middle portion of the polygon sides of the rings and arranged in staggered relation one to another.

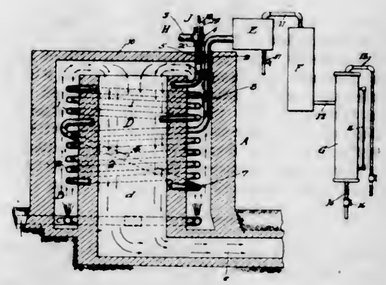


1,378,304. PASTING DEVICE FOR WEB-PRESSES. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 9, 1915, Serial No. 20,348. Renewed Oct. 8, 1920. Serial No. 415,677. 10 Claims. (Cl. 91—12.)

1. A nozzle for the purpose described, having a plurality of small perforations arranged in a row, and a single shallow wider slanting channel extending transversely from the row of perforations.

2. The combination with a web press, of means for extruding a stream of plastic paste against the surface of the web during the travel of the web, and means for automatically stopping the stream of paste when the press is stopped.

1,378,305. WEB-ROLL TENSION AND SUPPORTING DEVICE. HENRY A. WISE WOOD, New York, N. Y., and CONRAD NORDFORS, Jersey City Heights, N. J., assignors to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 18, 1914, Serial No. 877,873. Renewed Oct. 28, 1920. Serial No. 420,318. 23 Claims. (Cl. 242—75.)

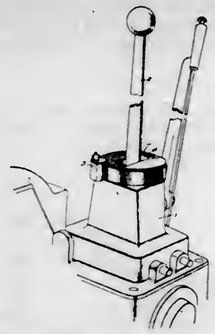


1. The combination with a printing press frame having a runway for a web roll spindle and having bearings adjacent thereto, of a member rotatably mounted in said bearings and detachably connected with the spindle for supporting the end thereof, a tension controlling device for said spindle and member mounted on the frame, and means for moving said member axially, said member being adapted to be connected with the spindle for rotating it.

1,378,306. DENTAL APPLIANCE. JACOB LOWE YOUNG, New Rochelle, N. Y. Filed July 13, 1920. Serial No. 395,835. 11 Claims. (Cl. 32—10.)

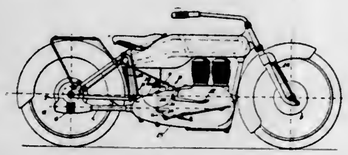
1. A dental appliance comprising three lever members pivotally connected to swing about a common axis, each of two of said members having a gripping jaw at one end thereof and the other member being provided with a slot open at one end, said slot being located adjacent the jaws on the other members when the three adjacent ends of the members are in close juxtaposition.

1,378,307. APPARATUS FOR CRACKING AND REFINING PETROLEUM PRODUCTS. WILLIAM HERBERT YOUNG, Los Angeles, Calif. Filed Nov. 5, 1917, Serial No. 200,389. Renewed Jan. 10, 1921. Serial No. 436,402. 8 Claims. (Cl. 196—14.)



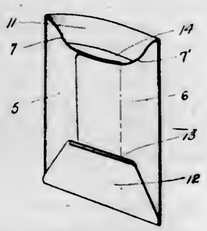
1. In improvements of the character disclosed, a furnace having a fire box, a pair of superposed coils arranged within the fire box and burner under the superposed coils, means for feeding petroleum and steam to the upper coil, an outlet for the lower coil, and connecting means between the upper and lower coils, the coils and connecting means being arranged so that the oil will course downwardly through the upper coil at a moderate heat and then be directed to the bottom of the lower coil where it is intensely heated, after which it courses upwardly through the lower coil.

1,378,308. LOCK FOR MOTOR-VEHICLES. JAMES R. ADAMS, Roanoke, Va. Filed Apr. 3, 1920. Serial No. 371,077. 3 Claims. (Cl. 70—127.)



2. A locking device for motor vehicles comprising a cap rotatably mounted on the gear shift lever, said cap being provided with an elongated slot, a stationary plate ar-

ranged within said cap, means for locking said cap to said plate, said plate and said cap being provided with register-

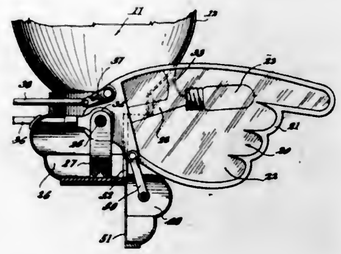


ing grooves, and locking means arranged in said grooves to prevent removal of said cap.

1,378,309. ARRANGEMENT OR GROUPING OF THE PARTS OF THE TRANSMISSION-GEAR IN MOTOR-CYCLES AND GEAR-CASE THEREFOR. FELIX AMIOT, Colombes, France. Filed Feb. 14, 1920. Serial No. 358,611. 1 Claim. (Cl. 180—33.)

A motor cycle, in which the parts serving for the mechanical transmission of the driving power are arranged in a line suitably offset relatively to the axis of symmetry passing thruogh the diametrical plane of the wheels, and a single gear case of externally regular shape relatively to the symmetry axis wherein said tranamission parts are disposed, said gear-case being provided with a cover having the form of a spherical cap with a circular joint so as to allow a tight closure of the said cover to be effected by the clamping action of the fastening bolts.

1,378,310. SANITARY DRINKING-CUP. MELVILLE B. BAIRD and GEORGE A. WALLS, Kansas City, Mo.; said Walls assignor, by mesne assignments, of his right to J. C. W. Bland, Tulsa, Okla. Filed Dec. 26, 1919. Serial No. 347,312. 3 Claims. (Cl. 229—53.)



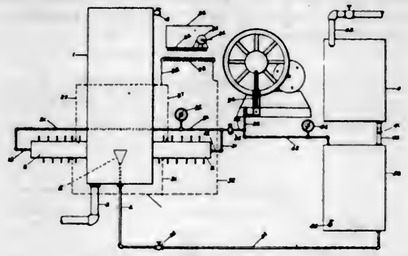
1. A drinking cup blank comprising a rectangular body portion, side flaps on the body portion having cutout, curved portions at one end of each and each flap having an inclined extension folded back upon the main flaps to form parts of a bottom for said cup, a flap at one end of the blank, foldable back upon the blank to form a reinforcing lip-engaging edge, and a flap at the other end of the blank foldable over the side flaps and over the bent-up ends thereof, the last named flap having adhesive material over the major portion thereof with an end strip devoid of adhesive material whereby the end in the finished cup may be curled outwardly to form an engaging portion.

1,378,311. DETERGENT. CLINTON CURTIS BAKER, Ottawa, Ontario, Canada, assignor of one-half to Thomas Lytton Bonsall, Ottawa, Ontario, Canada. Filed July 30, 1919. Serial No. 314,268. 1 Claim. (Cl. 87—5.)

A cleanser comprising a soft saponaceous paste, formed from the following ingredients in the proportions stated:

Grease	5½ lbs.
Water	4 gals.
Lye	1 lb.
Saw-dust	3 lbs.
Coal-oil	½ pint.
Perfume	½ oz.

1,378,312. VEHICLE-SIGNAL. VAN ROY BARNES, Urbana, Ill. Filed Jan. 22, 1920. Serial No. 353,146. 7 Claims. (Cl. 116—54.)

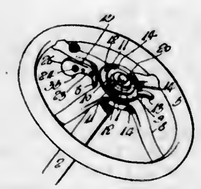


1. In a vehicle signal, the combination with a vehicle dash lamp including a casing, of a signaling semaphore pivotally carried thereby and housed within the lamp casing when in a non-signaling position, the normal outer edge of said semaphore shaped to merge into the outline of the lamp casing and form a part thereof when the semaphore is in a non-signaling position, means connected to the semaphore for moving it into a horizontal signaling position, a portion of the lower part of the lamp casing being movable relative to the casing, and means connecting said movable portion and said semaphore whereby the movable portion will be moved synchronously with movement of the semaphore.

1,378,313. TIRE CONSTRUCTION. WILLIAM F. BEASLEY, Plymouth, N. C. Filed Feb. 23, 1915. Serial No. 10,100. Renewed September 13, 1920. Serial No. 410,011. 1 Claim. (Cl. 152—1.)

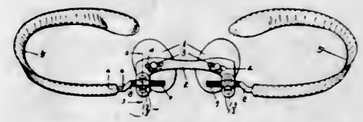
In a device of the class described, the combination with the base, of a rubber arch and a casing over said arch secured in place on said base, and means within said arch for supporting it and preventing breaking down when it has been compressed a predetermined amount by peripheral pressure, said means comprising normally separated projections rigidly secured to the inner wall of the arch and adapted to engage each other when the arch is compressed.

1,378,314. APPARATUS FOR TREATING LIQUIDS. FREDERICK N. BEYER and JOHN H. LOUNGE, Chicago, Ill. Filed May 28, 1918. Serial No. 237,103. 5 Claims. (Cl. 99—2.)



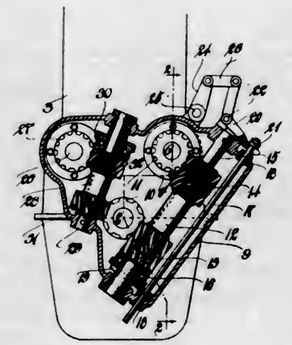
1. An apparatus of the kind described comprising the combination of a container provided with a fluid inlet, an outlet and an inlet independent of said fluid inlet for the admission of a preserving vapor, a tank connected with said fluid inlet, means on the interior of said container for spraying the liquid admitted through said fluid inlet from the tank and producing a mist, a second tank connected with said first mentioned tank, a feed pipe connected with said second tank, means for producing ozone in said container, and means for discharging the contents of the first tank into said container.

1,378,315. TIRE-CORE. WALTER A. BLACK, Rocky Ford, Colo. Filed Sept. 13, 1919. Serial No. 324,171. 5 Claims. (Cl. 152—5.)



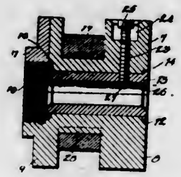
5. A core of resilient material containing a series of spaced recesses in each side portion thereof open to the side and extending inwardly to a central mass of material extending continuously and uninterruptedly around the core and from its inner to its outer sides, each recess of each series having an indentation in its inner wall extending into said central mass and the surface of said wall being disposed in reverse curves extending to the indentation whereby the wall surface on each side of the indentation is pressed together under compression action on the core and resistance to compression increased.

1,378,316. REMOVABLE STEERING-WHEEL FOR AUTOMOBILES. CLINTON R. BLOOD, Sturgeon Bay, Wis. Filed Apr. 26, 1920. Serial No. 376,745. 7 Claims. (Cl. 74—33.)



1. A steering wheel having a hub, a bracket having at one end a collar for connection with a steering post and for extending through the hub of the steering wheel, means to releasably lock the steering wheel upon the collar, and a stem carried by the bracket for universal movement and having connection with one of the spokes of the steering wheel to mount the steering wheel for vertical and horizontal swinging movement when released from the collar and swung upwardly clear of the post.

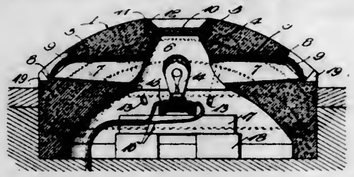
1,378,317. TRUSS. WALTER T. BOBO, Battle Creek, Mich., assignor to Battle Creek Appliance Co. Ltd., Battle Creek, Mich. Filed Aug. 7, 1919. Serial No. 315,887. 3 Claims. (Cl. 128—104.)



1. In a truss, the combination of a pad, a pair of curved spring body attaching members having horizontally and oppositely disposed serrated shanks, and a supporting bar on which said pad is mounted having downwardly projecting arms at its ends provided with serrated clips for adjustably securing the bar to said shanks, for the purpose specified.

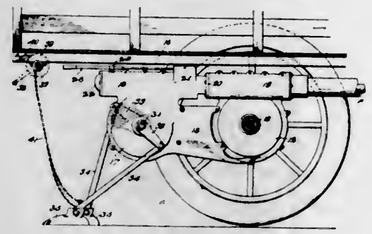
1,378,318. TIMING MECHANISM. OSCAR Z. BREWER, Spokane, Wash. Filed Jan. 29, 1920. Serial No. 354,763. 2 Claims. (Cl. 123—90.)

1. The combination with the crank shaft and the exhaust valve operating shaft having driving and driven members thereon, a shiftable sleeve having geared connection with said members for the purpose described, an inclosing gear case, a fixed axle supporting the sleeve, a thrust bearing for the sleeve, and means for bodily shifting said bearing and sleeve.



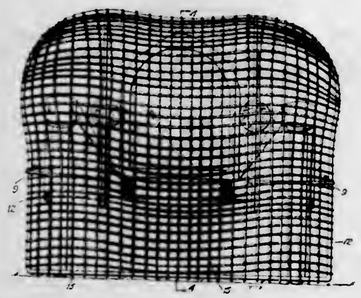
1,378,319. LATHE-CHUCK. HUGH A. BROOKS, Bainbridge, Ga. Filed June 12, 1919. Serial No. 303,534. 1 Claim. (Cl. 279—44.)

A chuck comprising a pair of semi-cylindrical sections having a center bore, said sections being provided with a



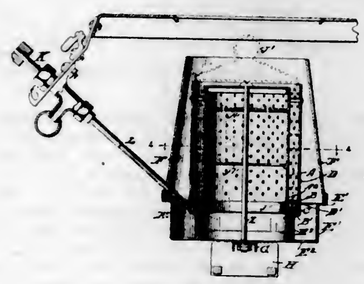
peripheral groove, a clamp arranged within the groove for detachably binding the sections of the chuck together and a face plate formed integrally with one of the sections of the chuck and extending past the end of the other section and having an axially arranged threaded bore substantially as described.

1,378,320. STREET-TRAFFIC SIGNAL. EDGAR BUCHANAN, Salina, Kans. Filed Oct. 7, 1920. Serial No. 415,236. 5 Claims. (Cl. 240—1.)



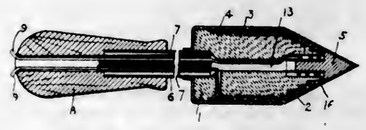
1. A street signal of the type set forth comprising a practically indestructible body including a chamber for containing illuminating means, and a plurality of horizontal radiating bores communicating with the chamber and adapted to distribute the rays of light, said bores being offset upwardly at their outer ends and lenses disposed in the offset portions of the bores.

1,378,321. PUSHING DEVICE FOR MOTOR-VEHICLES. FRITUFF CARLSON, Detroit, Mich. Filed June 24, 1919. Serial No. 306,440. 5 Claims. (Cl. 180—8.)



1. In a motor driven vehicle, the combination of a differential, a propeller shaft coupled at its rear end portion with the differential, a driven shaft extending in alinement with the propeller shaft at its rear end, said shafts being each mounted for rotation in a single plane, means for coupling said shafts, and reciprocable ground engaging means operable by the latter shaft for pushing the vehicle forwardly step by step.

1,378,322. AUTOMOBILE-FENDER. ALBERT CECKA, Minneapolis, Minn. Filed Oct. 13, 1920. Serial No. 416,715. 2 Claims. (Cl. 293—44.)

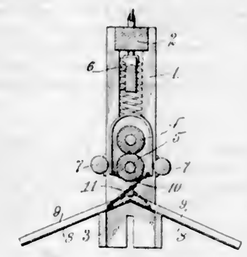


1. A fender for automobiles comprising a pair of supporting arms to be secured to the automobile axle, levers pivoted at their lower ends to the front ends of said arms and rising therefrom, an open frame carried by the upper ends of said levers and extending downwardly and forwardly therefrom, a body secured upon and covering said frame, and means for shifting the said levers connected therewith intermediate their ends and extending rearwardly therefrom.

1,378,323. HYDROCARBON-BURNER. NATHAN C. CHAPMAN, Detroit, Mich. Filed Aug. 18, 1919. Serial No. 318,103. 3 Claims. (Cl. 158—86.)

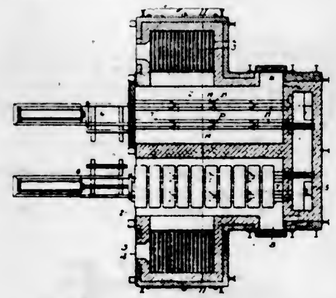
1. In a hydro-carbon burner, the combination of an inner perforated chimney consisting of superimposed sections of pipe, the lower section of the chimney being provided with an integral annular trough having a relatively low outer wall, to permit of ready access to the trough, said trough having an annular groove in its floor adjacent to its outer wall, an outer perforated chimney adapted to be supported upon the outer wall of the fuel trough, a wind guard consisting of an inner perforated flanged ring adapted to support the chimney and an outer flanged perforated ring having a perforated horizontal wall upon which the inner flanged ring is adapted to rest, a cone-shaped drum supported upon the outer flanged wall of the ring, and a valve controlled means for delivering liquid fuel to the trough.

1,378,324. ELECTRIC HEATER. CHARLES ALBERT CLARK and FRANK WELLS BLAIR, New York, N. Y. Filed May 24, 1920. Serial No. 383,802. 5 Claims. (Cl. 219—67.)



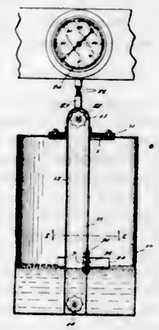
1. An electric heater, comprising an insulating core, carrying an electric heating member, covered by a relatively thin layer of insulating material, upon which is an electro-deposited metallic heat conducting covering.

1,378,325. CLOTHES-WRINGER. JAMES L. COFFIELD, Dayton, Ohio. Filed July 29, 1918. Serial No. 247,159. 2 Claims. (Cl. 68—32.)



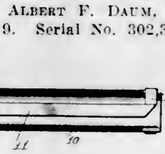
1. In a clothes wringer, the combination with the wringer rolls, of a drain-board and clothes guide rigidly mounted in the wringer frame below said rolls and extended a substantial distance on each side of the wringer frame to form a clothes guide, and a reversible water

shutter pivotally mounted between said drain-board and clothes guide and said rolls to direct the water to one



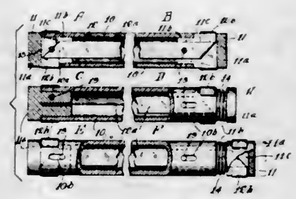
side of the said drain-board and clothes guide while the clothes are guided from the wringer on the other side to a receiving receptacle.

1,378,326. PAIR-HEATING FURNACE AND METHOD OF OPERATING THE SAME. THOMAS J. COSTELLO, Warren, Ohio. Filed Dec. 16, 1919. Serial No. 345,316. 12 Claims. (Cl. 263—6.)



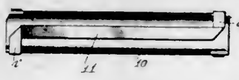
1. The herein described method of heating sheet or tin plate bars, which consists in piling separate bars flatwise in a plurality of packs extending transversely of a heating chamber, each pack containing a plurality of bars, and pushing said packs through said chamber while subject to the action of the heating medium therein, substantially as described.

1,378,327. LIQUID-LEVEL GAGE. CLAUDE E. COX, Chicago, Ill. Filed Jan. 26, 1920. Serial No. 354,024. 2 Claims. (Cl. 73—82.)



1. In a liquid gage, a housing projectable into a reservoir through an opening therein, float controlled means including a chain mounted in said housing, and a floatable member having dimensions less than the corresponding dimensions of the opening and having normal flotation dimensions one of which is greater than the maximum dimension of the said opening, said flotation member being pivotally connected to said chain, for the purpose set forth.

1,378,328. GUARD-RAIL CHAIR. WILLIE L. DAUGHTRY, Orlando, Fla. Filed Aug. 4, 1920. Serial No. 401,197. 1 Claim. (Cl. 238—20.)

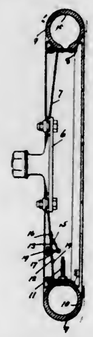


A device of the type described, including a rail guard chair comprising a base member having a neck-like constricted upward extension, said constricted upward extension being formed with laterally extended terminals, said terminals having their lower surfaces in right-lines thereby adapted to form with said base member upon each side of said constricted neck-like portion an undercut slot adapted to receive the facing base forming flanges of the track rail and the guard rail, said laterally extended terminals adapted to form an upwardly presented continuous concaved surface, the resultant terminals of which abut the track rail and guard rail along the web adjacent the tread and the web adjacent the base, respectively, all being in a continuous piece.

1,378,329. FUSE. ALBERT F. DAUM, Pittsburgh, Pa. Filed Dec. 10, 1918. Serial No. 266,057. 19 Claims. (Cl. 200—132.)

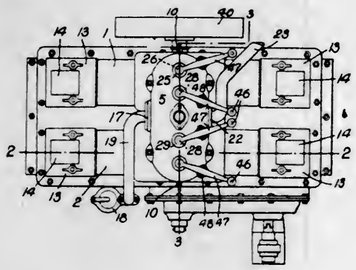
1. An inclosed fuse comprising a tubular casing of insulating material, end closures therefor, and a fusible element of strip form having its end portions exposed externally and circumferentially of the fuse and an intermediate portion traversing the interior of the casing in the direction of casing length.

1,378,330. FUSE. ALBERT F. DAUM, Pittsburgh, Pa. Filed June 7, 1919. Serial No. 302,370. 10 Claims. (Cl. 200—132.)



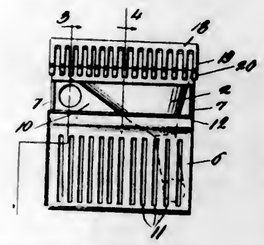
10. A refillable fuse comprising a tubular casing of insulating material, said casing having slits extending inwardly from its ends, a fusible element extending longitudinally of the interior of the casing and having its ends extending through said slits, and end caps having their skirts overlying the casing and having slits adapted to register with the casing slits for the passage of said element ends, the ends of the element extending circumferentially about and externally of the cap skirts.

1,378,331. AUTOMOBILE-TIRE. WILLIAM J. DAVIS and JAMES HAMMELL, Tipton, Ind. Filed Feb. 5, 1921. Serial No. 442,858. 3 Claims. (Cl. 152—10.)



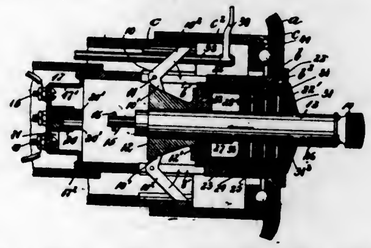
1. An automobile tire including a solid resilient body provided with a central circumferential air compartment, a duct leading into said compartment to permit the introduction of air thereinto, said body having a series of channels surrounding said compartment.

1,378,332. DISK WHEEL. EMIL R. DRAVER, Richmond, Ind. Original application filed Oct. 20, 1920, Serial No. 414,551. Divided and this application filed Feb. 7, 1921. Serial No. 442,975. 6 Claims. (Cl. 301—63.)



1. A disk wheel having in its disk a port through which the valve stem of an applied tire may be reached, a displaceable cover for said port mounted for outward opening movement, and an arm applied to the inner side of said disk, connected to said cover and normally holding the same in port-closing position.

1,378,333. INTERNAL-COMBUSTION ENGINE. EMILE DAEVET, Montreal, Quebec, Canda. Filed Mar. 24, 1920. Serial No. 368,399. 2 Claims. (Cl. 123—51.)



1. An internal combustion engine comprising a base; a horizontal cylinder having open ends mounted on said base; removable plates adapted to close said open ends; an opening on one side of said cylinder in which is secured a spark plug; a central opening in said cylinder; a head casing mounted on said cylinder; an inlet port in said head communicating with said central opening in said cylinder; an exhaust port in said head communicating with said central opening in said cylinder; a vertically operable valve in said inlet and said exhaust ports; pistons movably mounted in said cylinder adapted to operate in opposite directions; a crank shaft suitably journaled in said base; means to connect said pistons to said crank shaft; a cam-shaft mounted across said base; cam-members mounted on said shaft; means to actuate said shaft; and a vertical connecting rod connected to each of said valves; said connecting rods being adapted to contact with each of said cam-members; substantially as described.

1,378,334. OIL STRAINER AND SEDIMENT TRAP. GEORGE O. EBERHARDT, Kelliher, Minn., assignor of one-half to Joseph Jerome, Battle River, Minn. Filed Oct. 16, 1919. Serial No. 331,030. 5 Claims. (Cl. 210—149.)

1. In combination with an oil pipe, a housing surrounding the upper end of the pipe, said housing having an elongated opening formed therein, and a flexible tongue secured to the pipe and adapted to extend through the elongated opening.

1,378,335. KEYLESS LOCK FOR AUTOMOBILES. JOHN A. EDGERTON and HOWARD F. CALKINS, Newark, N. J. Filed Apr. 6, 1920. Serial No. 371,670. 7 Claims. (Cl. 70—127.)

6. In a motor vehicle, the combination with the steering wheel post, of an electric switch in extension of said post, a plunger slidably and rotatively borne in said post and capable in its extreme inner position to actuate said switch and locking means for locking said post operated by the longitudinal displacement of said plunger.

1,378,336. ART OF MAKING CATALYZERS. CARLETON ELLIS, Montclair, N. J. Filed Feb. 8, 1916. Serial No. 76,957. 9 Claims. (Cl. 23—28.)

1. The process of making catalytic material adapted for use in the hydrogenation of fatty oils which comprises incorporating an organic salt of nickel in an oily vehicle, in heating the mixture while under a pressure below atmospheric, and in removing at least the major portion of the organic radical.

2. The process of making catalytic material adapted for use in the hydrogenation of fatty oils which comprises heating an organic salt of nickel under reducing conditions and under a pressure below atmospheric, and in volatilizing at least a substantial portion of the organic radical.

3. In the preparation of catalysts, the step of subjecting a salt derived from a metal suitable for use as a hydrogenating catalyst and a somewhat volatile organic acid, while such salt is carried in a bath of oil, to heat while passing a current of hydrogen through said bath, and removing by heat at least a considerable portion of the liberated organic acid, while maintaining the pressure slightly below atmospheric.

4. A process of making a catalytic material adapted for the hydrogenation of fatty oils, which process comprises the step of heating a salt containing the radical of such an organic acid as is capable of being volatilized, combined with a metal which is itself capable of acting as a catalyst in the hydrogenation of fatty oils, under reducing conditions, and heating sufficiently to remove at least a material portion of the organic acid radical present in such salt, under pressure below atmospheric.

5. A process of making a catalytic material which comprises incorporating a salt derived from a somewhat volatile organic acid, and a metal having catalytic properties, while associated with an oily vehicle, and passing a current of hydrogen through said mass at a pressure materially below atmospheric.

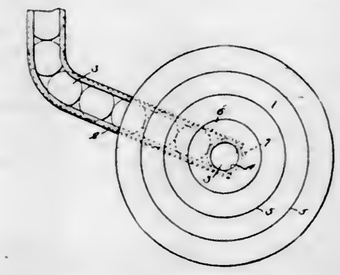
1,378,337. CATALYZER AND METHOD OF PRODUCING SAME. CARLETON ELLIS, Montclair, N. J. Filed Nov. 24, 1916. Serial No. 133,252. 32 Claims. (Cl. 23—28.)

1. A catalyzer made by reducing nickel from nickel oleate dissolved in an oil or fat, by heating said material in the substantial absence of added reducing gases.

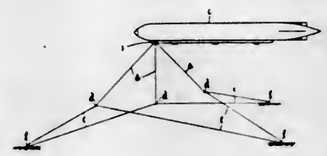
16. The herein described process which comprises heating a salt of a catalytic metal with an organic acid, to a decomposition temperature, while said salt is in an oily vehicle, in the substantial absence of added reducing gases, while under pressure below atmospheric and while passing an inert gas through said vehicle.

1,378,338. CATALYZER FOR OIL-HARDENING AND PROCESS OF MAKING. CARLETON ELLIS, Montclair, N. J. Filed Dec. 30, 1919. Serial No. 348,329. 5 Claims. (Cl. 23—28.)

1. A process of making a finely-divided, highly active mixed metal catalyst, which comprises reducing, while carried in an oily vehicle, a mixture of metallic salts of a plurality of the metals nickel, copper and cobalt.



1,378,339. REAMER. ROBERT J. EMORY, Newark, N. J. Filed Apr. 15, 1919. Serial No. 290,205. 2 Claims. (Cl. 77—75.)



1. A tool designed to engage in a hole to machine the same, said tool including a shaft provided with a slot extending lengthwise thereof, a bearing strip fitted in said slot, said shaft and strip provided with recesses coacting to form a continuous peripheral groove, a retaining ring fitted in said groove for preventing relative lateral movement between the strip and shaft, and a set screw threaded diametrically through the shaft and engaging the strip to advance the same radially out of the slot.

1,378,340. TARGET. CLIFFORD J. FAIRCHILD, Chicago, Ill., assignor to Black Products Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1919. Serial No. 336,356. 3 Claims. (Cl. 124—15.)

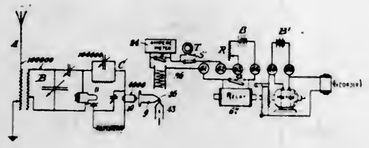
1. In a device of the class described, a target body having an opening formed therein, a guideway for successively directing fragile targets into registration with said opening, said guideway being adapted to support a plurality of fragile disks in such manner that the breaking of the disk in said opening will permit an adjacent disk to move by gravity into said opening, the lower extremity of said guideway being open in the plane of the foremost disk for the discharge by gravity of the broken disk.

1,378,341. MOORING FOR AIRSHIPS AND THE LIKE. ROBERT ALEXANDER FRAZER and LEONARD FREDERICK GEORGE SIMMONS, Teddington, England. Filed Dec. 16, 1919. Serial No. 345,388. 8 Claims. (Cl. 244—2.)

1. A mooring system for airships and the like comprising a plurality of cables attached to the airship and freely movable over swiveling pulleys anchored at definite positions relatively to the ground substantially as described.

1,378,342. GATE FOR IRRIGATING-DITCHES. WILLIAM FREUDENBERG, Enterprise, Oreg. Filed May 20, 1920. Serial No. 383,007. 2 Claims. (Cl. 61—29.)

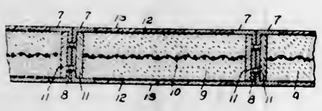
1. In a gate for irrigating ditches, a plate having an opening therein, means for guarding the opening, a splash board, means for pivotally connecting the splash board to the plate whereby it is swingingly mounted with relation to the opening, and means for holding the splash board in inoperative relation to the plate.



1,378,343. ARALKYL ESTER OF 2-PHENYLQUINOLIN-4-CARBOXYLIC ACID. ALFONS GAMS and OTTO KAISER, Basel, Switzerland, assignors to Societe of Chemical Industry in Basle, Basel, Switzerland. Filed June 23, 1920. Serial No. 391,166. 1 Claim. (Cl. 23—24.)

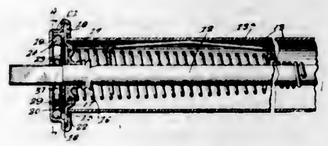
As a new article of manufacture, the herein described benzylester of 2-phenylquinolin-4-carboxylic acid, which forms citron-yellow crystals melting at 77 to 78° C., insoluble in water, moderately soluble in ether and readily soluble in oils and benzene and is capable of being employed for therapeutical purposes and has the properties of being tasteless and of being a better solvent for the uric acid than the hitherto known alkylesters and arylesters of 2-phenylquinolin-4-carboxylic acid.

1,378,344. METHOD FOR CLEANING PHONOGRAPH-RECORDS. EDWARD T. HAILS, Montgomery, Ala. Filed Feb. 4, 1920. Serial No. 356,319. 3 Claims. (Cl. 18—48.3.)



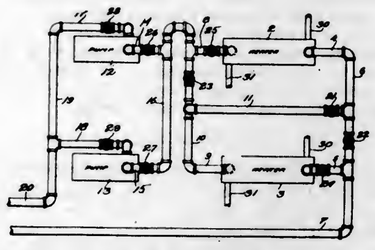
1. The method of resurfacing phonograph cylinders set forth consisting in first obliterating the record trace by wiping the record with a solvent such as kerosene and then wiping the record with a mixture of alcohol, ether and vinegar.

1,378,345. METHOD AND MEANS FOR TRANSLATING ENERGY VARIATIONS. RAY EDWIN HALL, Chicago, Ill., assignor to Hall Research Corporation, a Corporation of Delaware. Filed May 31, 1919. Serial No. 301,010. 61 Claims. (Cl. 250—8.)



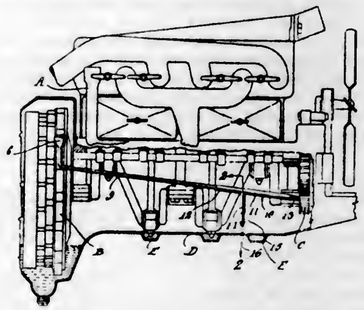
61. A wireless receiving system adapted to produce an electrical heterodyne of audible frequency, a receiver and an air column resonator tuned to the frequency of said electrical heterodyne and energized thereby, a sensitive cooling jet discharging across the mouth of said resonator, a hot wire coil surrounding the jet, a battery for heating said coil to high temperature, a floating zero relay in series in said battery circuit, a second battery and recorder in circuit with the switch of said relay.

1,378,346. OVEN-WALL CONSTRUCTION. FREDERICK C. HALLER, Pittsburgh, Pa. Filed Aug. 18, 1920. Serial No. 404,437. 7 Claims. (Cl. 107—62.)



7. An oven having a frame composed of pairs of oppositely faced channel irons secured together, said channel irons having bottom and side portions, said pairs being spaced apart from each other, blocks of reinforced heat insulating material between said pairs of channel irons and held in place by them, said blocks being of slightly less length than the distance between the bottoms of the channel irons, a heat insulating packing between the ends of the blocks and the bottoms of the channel irons, and a surfacing of heat insulating material at each side of the blocks.

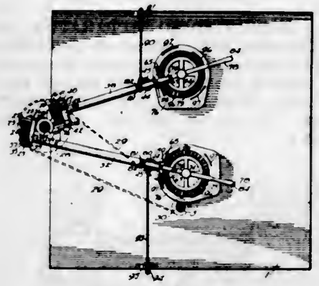
1,378,347. CURTAIN ROLLER AND BRACKET. FRANKLIN H. HART, New Haven, Conn., assignor to C. Cowles & Company, a Corporation of Connecticut. Filed Jan. 15, 1920. Serial No. 351,606. 7 Claims. (Cl. 156—36.)



4. A curtain roller and bracket, consisting of a roller comprising a shaft and tube, anti-rattling springs attached to said tube and encircling said shaft, a pawl carried by said shaft and a ratchet wheel carried by said roller, and a bracket provided with means for yieldingly holding the roller, whereby all of the parts of said roller and bracket are maintained in fixed relation to each other so that positive engagement of the pawl and ratchet wheel is insured.

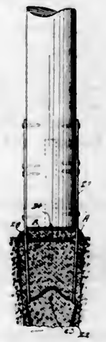
1,378,348. HOT-WATER HEATING SYSTEM. JOSEPH CHARLES HARTWELL, Providence, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed Sept. 7, 1915. Serial No. 49,137. 8 Claims. (Cl. 257—1.)

2. In a hot water heating system arranged for the continuous circulation of water therein, the combination of a plurality of water heaters independently connected to the circulating system on the supply and return sides of the same, means for supplying heat to the several heaters independently of one another, a plurality of circulating pumps included in said system in parallel relation, and means for causing the circulating water to pass through the heaters either in series or in parallel relation.



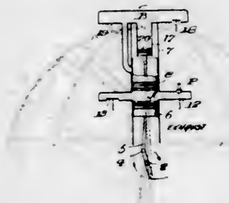
1,378,349. SAFETY DEVICE FOR OILING SYSTEMS OF MOTORS. EDWARD A. HEINLEIN and RAYMOND A. STOLLE, Los Angeles, Calif. Filed July 23, 1919. Serial No. 312,862. 6 Claims. (Cl. 184—11.)

5. The combination with the lubricating oil feed pipe for the timing gears of "Ford" motors, of a substantially



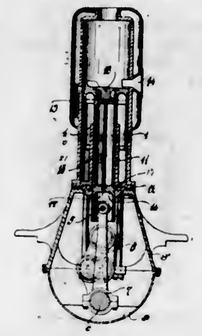
T-shaped pipe telescopically receiving one end of said lubricating oil feed pipe, a pipe telescopically connected to one branch of said T-shaped pipe, and a valve connected to said last named pipe and extending exteriorly of the motor, the end of said T-shaped pipe alining with the end which telescopically receives the feed pipe being reduced in diameter, said valve comprising a casing having an annular groove about the outer edge thereof adapted for connection with the supply hose of an air compressing pump.

1,378,350. ATTACHMENT FOR WOODWORKING-SHAPERS. WILLIAM A. HENN, Evansville, Ind., assignor of one-half to Michael D. Helfrich, Evansville, Ind. Filed July 29, 1920. Serial No. 399,865. 8 Claims. (Cl. 144—145.)



1. The combination with a woodworking shaper of a supporting member removably secured thereto, a shaft housing connected at one end with said supporting member for movement in both horizontal and vertical planes, and means carried by the shaft housing for maintaining the work in contact with the cutting blade and for moving the work to insure the shaping of the same as desired.

1,378,351. PLASTIC BASE FOR POLES. MILLARD F. HOYLE, Dallas, Tex. Filed Apr. 14, 1920. Serial No. 373,780. 3 Claims. (Cl. 72—84.)



3. In a device of the character described, a plastic base, a reinforcing member formed of a single piece of wire bent so as to provide a foot member with upright members and a central upright member terminating short of the first upright members, threaded bars engaging the central portion of the reinforcing member other threaded bars crossing the first bars at right angle, upright fastening bars secured to the central portion of the member and the last named threaded bar, and other upright fastening bars removably secured to the other or first named threaded bars.

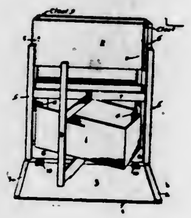
1,378,352. FOUR-CYCLE INTERNAL-COMBUSTION ENGINE. JOB HUTCHINSON, Brooklyn, N. Y. Filed Oct. 16, 1917. Serial No. 196,823. 15 Claims. (Cl. 123—51.)

1. A four cycle internal combustion engine including a cylinder having a compressor chamber at one end adapted to alternately communicate with a source of fuel supply and the atmosphere and a port in communication with said chamber, and oppositely working pistons within said cylinder, one of said pistons being adapted to alternately compress the gas and air contents of said chamber and uncover said port to release such compressed charge into the working chamber.

1,378,353. PISTON CONSTRUCTION. THOMAS A. HUTSELL, Spokane, Wash., assignor to The Hutsell Motor Company, Spokane, Wash. Filed Sept. 24, 1919. Serial No. 326,060. 3 Claims. (Cl. 74—108.)

1. The combination with the hollow piston head having a concentric, interior, hollow stem closed at its lower end, and a screw plug threaded in the head to close the upper end of the stem, an oil pipe within the stem to receive oil from the exterior of the stem, and said head, sleeve and plug having registering passages for distributing the oil from said pipe to the exterior of the head.

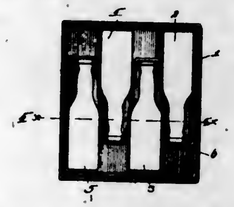
1,378,354. FOLDABLE UMBRELLA. AUGUSTA S. JOHNSON, Philadelphia, Pa. Filed Sept. 20, 1920. Serial No. 411,413. 3 Claims. (Cl. 135—20.)



3. An umbrella comprising a tubular handle, a socket mounted to slide in said handle, means for locking said socket in its innermost or outermost position in the handle, a stem having its inner end seated in said socket, a runner mounted to slide on the stem, means for locking the runner in its outermost position on the stem, means for locking the runner in its innermost position on the stem, for the runner to be withdrawn into the handle when the socket is retracted therein, main ribs mounted to swing on the stem near the outer end thereof, auxiliary ribs mounted to slide on the main ribs, braces connected to the auxiliary ribs at their points of sliding connection

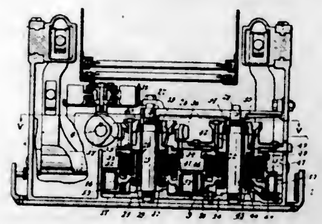
with the main ribs and having connection with said runner to be drawn therewith into the tubular handle when the socket is retracted therein and cords connected to the

extremities of the auxiliary ribs and adjustably connected to said braces for flexing said auxiliary ribs relative to the said main ribs.



1,378,355. FOLDING TABLE AND LUNCH-CASE FOR AUTOMOBILES. PAUL V. KELLEY, Everett, Wash. Filed Aug. 31, 1920. Serial No. 407,187. 2 Claims. (Cl. 190—12.)

1. In an article of the character described, a casing, in combination, composed of a folding table consisting of a top, two leaves, and six legs; four legs being rigidly attached to a rectangular box frame, and two legs hingedly secured to same frame to support the leaves, said frame being invertedly secured to the under surface of the table top and said leaves hinged to the under side of the top along its longitudinal edges, so that when the table is inverted the top thereof becomes the bottom of said casing and the leaves are adapted to be raised vertically to serve as sides of the casing; and means for securing the leaves in said vertical position, and a supplemental rectangular box frame invertedly secured between the four legs intermediate the table top and the floor.



1,378,356. METHOD OF PACKING BOTTLES. MATHIAS R. KONDOLF, Rochester, N. Y., assignor to John Jacobs, Merion, Pa. Filed Oct. 27, 1917. Serial No. 198,851. 5 Claims. (Cl. 217—23.)

1. A packing which consists of a container, a row of articles placed therein, said articles being nested with each other and a serpentine strip, having its ends anchored, separating and spacing the said articles and adapted to be drawn close around the sides of said articles, said

strip being placed under tension by the insertion of the said articles in the package.

1,378,357. ROPE-WINDING APPARATUS. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Original application filed Aug. 1, 1913, Serial No. 782,522. Divided and this application filed June 12, 1919. Serial No. 303,545. 10 Claims. (Cl. 254—166.)

1. In a winding mechanism, the combination with two adjacent stationary shafts, a rotatable sleeve upon each of the shafts, intermeshing gears fixed to said sleeves, means to rotate the gears, a rotatable rope winding drum upon each sleeve, and clutch mechanism arranged to optionally connect either of said drums with its respective sleeve.

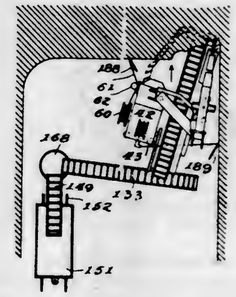
1,378,358. MINING-MACHINE TRUCK. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Original application filed Feb. 23, 1915, Serial No. 9,972. Renewed July 15, 1920, Serial No. 396,590. Divided and this application filed Nov. 15, 1919. Serial No. 338,205. 29 Claims. (Cl. 105—161.)

1. In a mining mechanism, a truck, a pan reciprocable thereon, and means for pivotally connecting said pan and truck when the front end of the pan is passed off from said truck.

1,378,359. MINING APPARATUS. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 23, 1915, Serial No. 9,972. Renewed July 15, 1920. Serial No. 396,590. 38 Claims. (Cl. 262—30.)

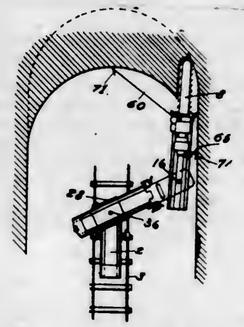
1. In a mining apparatus for forming a horizontal kerf in the face of the coal, the combination of a transporting truck element adapted to travel over mine tracks, a kerf cutting element having a cutting mechanism and power drive mechanism and adapted to rest in a predetermined position on the truck and to move off the truck and advance bodily along the coal face to cut a kerf at the floor

level, and an intermediate guiding element between the truck and cutting element movable transversely of and relatively to the truck and adapted to be engaged with the cutting element at any of several positions along the coal face to guide said element from any of said positions to the predetermined position on the truck.



1,378,360. MINING AND LOADING MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 1, 1913, Serial No. 782,522. Renewed July 17, 1920. Serial No. 397,155. 22 Claims. (Cl. 262—9.)

1. In a machine for cutting, breaking down and loading coal, the combination of a bed frame, a carriage movable forward and backward on the bed frame, a horizontal kerf cutting mechanism mounted on the carriage, two vertical shear cutting mechanisms mounted on the carriage and arranged to cut vertical kerfs disposed adjacent the sides of the horizontal kerf and terminating at their inner ends in vertical lines, an endless carrier on the carriage arranged to extend into the horizontal kerf and adapted to continuously move to and from points near the front sides of the horizontal kerf cutting mechanism, means for breaking the coal directly down upon the conveyer, said means comprising adjustably mounted reciprocating pick devices adapted to attack the coal between the vertical cutters at a transverse vertical plane near the inner ends of said vertical cutters, means for advancing and retracting the carriage on the bed frame, and means for moving the machine laterally when the carriage is retracted.

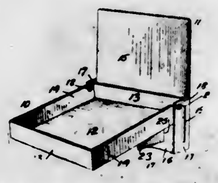


1,378,361. MINING AND LOADING MECHANISM. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 7, 1915, Serial No. 19,746. Renewed July 31, 1920. Serial No. 400,546. 10 Claims. (Cl. 262—9.)

4. In a machine for undercutting, breaking down and loading coal, the combination of a horizontal cutter frame, a kerf cutting mechanism having operative parts at both sides and at the inner end of the said frame, whereby a kerf can be cut when the frame is moving either inward or in either direction parallelly to the coal face, a conveyer having its receiving end positioned within the outlines of the frame and between the upper and lower planes of the said cutting mechanism and having its delivery end above the said planes, means above the receiving end of the conveyer for breaking down the coal, and a removable plate

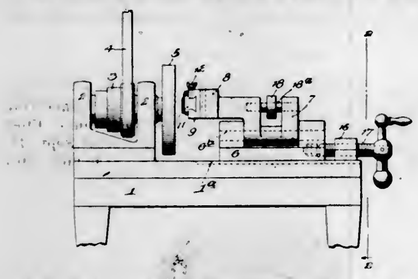
adapted to be secured at whichever side of the conveyer is rearmost when the machine is moving parallelly to the coal face.

1,378,362. MINING APPARATUS. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 11, 1917, Serial No. 174,088. Renewed Sept. 11, 1920. Serial No. 409,700. 8 Claims. (Cl. 262—30.)



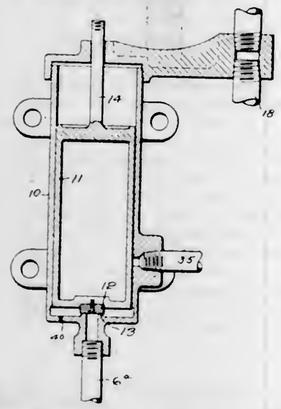
1. In a mining apparatus, the combination of a transporting truck adapted to travel over mine tracks, a complete separately operable mining machine having a relatively fixed horizontally projecting kerf cutting mechanism and adapted to rest in a predetermined position on the truck or to move off the truck and advance bodily relative to the coal face to cut a kerf therein, intermediate guiding devices comprising laterally rigid elements pivotally connected to the truck and adapted to guide the mining machine off of and onto the truck and to guide it transversely relative to the truck during its cutting operations, and pivotal devices associated with said guiding devices to permit movement of the cutting mechanism transversely of said laterally rigid element.

1,378,363. MERCHANDISE-DISPLAY BOX. FRANZ LIST, New York, N. Y., assignor to Charles A. Blades, Arlington, N. J. Filed Feb. 6, 1920. Serial No. 356,621. 3 Claims. (Cl. 211—28.)



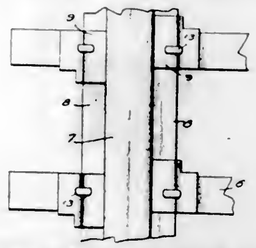
2. A merchandise display box of the character described, comprising a body portion for holding the merchandise, and a cover therefor in sliding and hinged relation thereto and adapted to be turned vertically to serve as a prop for holding the body portion in inclined display position, said cover having a bracket or foot member slit therein adapted when the cover is turned vertically to be folded for-

wardly under the elevated rear portion of said body close to the bottom thereof, and said cover having corresponding longitudinal slots in its sides and said body having



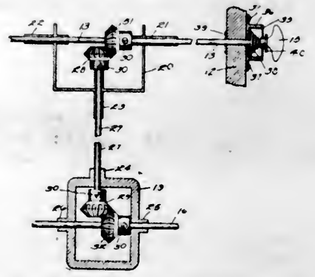
trunnions engaged in said slots, whereby the cover is permitted to slide on said body and also become hinged thereto.

1,378,364. MACHINE FOR GRINDING PALLET-STONES. EUGENE LOOSLI, Ilion, N. Y. Filed Feb. 21, 1920. Serial No. 360,326. 2 Claims. (Cl. 51—124.)



1. In a device of the kind described, a rotatable grinding disk, an arm, means for rocking said arm in an arc parallel to the face of the disk, the said arm when in intermediate position being substantially in the plane of the axis of the disk, a block carried by the arm and vertically adjustable, and a pallet stone holder carried by said block.

1,378,365. AIR-BRAKE SYSTEM. DONALD R. MACBAIN, Cleveland, Ohio. Filed Oct. 18, 1919. Serial No. 331,609. 7 Claims. (Cl. 303—26.)



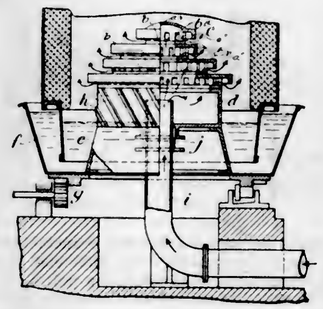
5. The combination with an automatic air-brake system operable upon reduction of pressure in the train line and including individual train line venting elements in the several cars and individual service cylinders upon said cars, of pressure operated members for actuating the venting elements, a pressure line controllable from the engine for supplying pressure to said members and means for conducting the actuating pressure from said members to the service cylinders.

1,378,366. RAIL-FASTENER. ALBERT N. MENSER, Johnstown, Pa., assignor of one-half to Joseph Moore, Johnstown, Pa. Filed Feb. 24, 1921. Serial No. 447,440. 2 Claims. (Cl. 238—344.)

2. In combination with a rail and tie, a rail fastener including a pair of plates, a portion of each of which is engaged with and extends completely across the top of the tie and embraces the base flange of the rail, both plates having portions thereof embedded in the lateral faces of the tie.

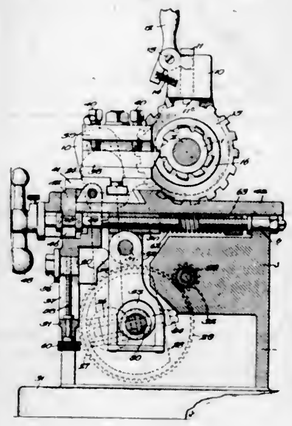
1,378,367. SIGNAL DEVICE. JOSEPH W. MICHAEL, Des Moines, Iowa. Filed Aug. 19, 1920. Serial No. 404,594. 2 Claims. (Cl. 116—46.)

1. A signal device for vehicles comprising a pair of substantially parallel rods, signal devices on the opposite ends of said rods, a bearing device on one of said rods having alined journals and a journal at right angles to said alined journals, one of said shafts being mounted in said alined journals for permitting the sliding and rotary movement of the shaft, a bearing device having alined journals receiving the second shaft and having a third journal at right angles to the second shaft, a shaft slidably and rotatably mounted in the last mentioned journal of each bearing device, a gearing detachably fixed on the first of said pair of shafts adjacent to one of said bearings, a gearing detachably fixed on the second of said shafts adjacent to one of the alined bearings thereof, gearings detachably fixed on the third shaft in mesh respectively with the first described gearings.



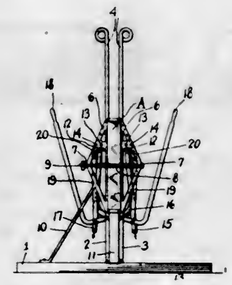
1,378,368. FLYING-MACHINE. HAROLD E. MONTAGUE, Philadelphia, Pa. Filed July 23, 1918. Serial No. 246,328. 1 Claim. (Cl. 244—30.)

In a flying machine a car having a frame including a keel and concaved ribs rising from the keel and stays or



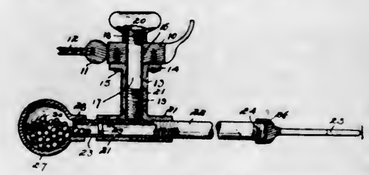
braces for the ribs, and a cover for the frame consisting of a superposed layer of metal mesh and a layer of textile material.

1,378,369. ROTARY GRATE FOR GAS-PRODUCERS. HARALD NIELSEN, Middlesex, and FREDERICK DEACON MARSHALL, Westminster, London, England. Filed Sept. 11, 1920. Serial No. 409,665. 2 Claims. (Cl. 126—182.)



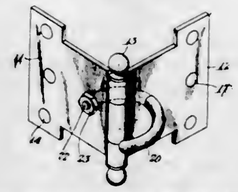
1. A rotary grate for gas producers, comprising a rotary supporting member, and a plurality of superimposed sections of different diameters carried thereby, each section comprising substantially annular upper and lower horizontal plate members, connected by a vertically disposed intermediate member provided with blast outlets, the upper plate member of each section extending outwardly beyond said intermediate member, and being provided with a downwardly extending lip, the upper plate member of the topmost section having a closed central portion forming the top of the grate, and means for supplying air to the interior of said sections.

1,378,370. MACHINE-TOOL. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1918. Serial No. 268,013. 18 Claims. (Cl. 82—19.)



1. A machine tool adapted to produce an eccentric surface, said machine having a work holder and a tool holder, means for oscillating one of them about an axis and simultaneously producing relative movement between the two in a radial direction at definite relative rates whereby the surface has a definite eccentricity or spiral when considered in a plane transverse to said axis and means for feeding the parts toward each other in a radial direction for enabling the tool to take a similar and deeper cut for each successive oscillation of the oscillating parts.

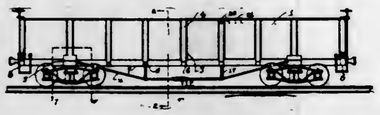
1,378,371. HONEY-UNCAPPING MACHINE. ELIAS E. COVEYOU, Petoskey, Mich. Filed June 12, 1920. Serial No. 388,529. 1 Claim. (Cl. 6—12.)



A machine of the class described comprising a guiding frame comprising a stationary part and a movable part, springs for drawing the movable part toward the stationary part, a knife adjustably mounted in each part, manual means for adjusting the knives and means for passing steam through the knives.

1,378,372. AUTOMOBILE-SIGNAL. NELSON M. DYER, Waterloo, Iowa, assignor of one-fourth to William H. Pyne, Des Moines, Iowa, and one-fourth to Lycurgus V. Darnall, Burlington, Iowa. Filed Jan. 31, 1921. Serial No. 441,340. 1 Claim. (Cl. 116—52.)

An automobile signal adapted to be secured to the windshield frame of an automobile or the like including an arm having its ends screw threaded, an indicator secured to one of the screw threaded ends of said arm, a weight secured to the opposite screw threaded end of said arm, a bearing member fixed to the windshield frame, a control shaft extended through the windshield frame and through said bearing member, the outer end of said control shaft being operatively connected with said arm near said weight, a hand engaging member mounted on the inner end of said control shaft whereby it may be engaged for swinging said arm in a vertical plane from inoperative to operative position, the parts being so arranged that the weight normally holds the arm in vertical position.

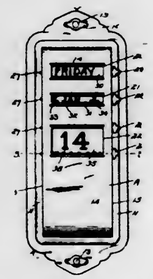


1,378,373. CASEMENT-ADJUSTER. WILLIAM K. EARLE, Ocean Park, Calif. Filed July 19, 1919. Serial No. 312,078. 2 Claims. (Cl. 16—111.)

1. A casement adjuster comprising two members adapted to be secured to the casement and casement frame

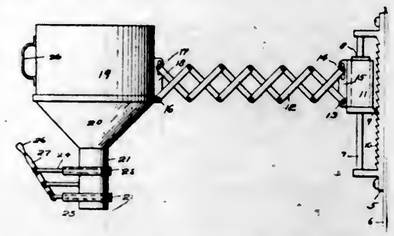
respectively; a pintle connecting said members; and an eccentrically shaped spring rod secured at one end in one of said members and frictionally engaging the other of said members.

1,378,374. CONCRETE RAILWAY-CAR. ARTHUR C. GRIEWANK, San Francisco, Calif. Filed May 20, 1920. Serial No. 382,873. 25 Claims. (Cl. 105—405.)



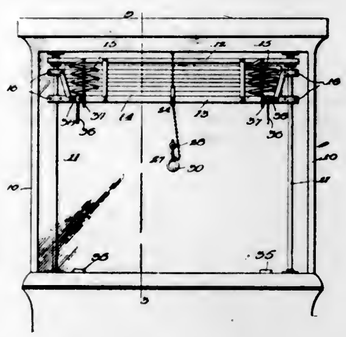
1. In a reinforced concrete car, a concrete body, having depending therefrom and integral therewith, bolsters and a chord, and depending posts and truss members which are operatively associated with the lower ends of said posts extending longitudinally beneath said body and means for transferring the stresses of same to said car-body.

1,378,375. EXTENSION-TABLE. CHARLES H. GUNN. Oakland, Calif. Filed June 14, 1920. Serial No. 388,740. 5 Claims. (Cl. 45—113.)



1. An extension table comprising a supporting frame, a central table top fixed thereto, intermediate leaves at the ends of the central top and normally depressed relative thereto, means for raising the intermediate leaves to the level of the central top, and outer end leaves normally overlapping the central and intermediate leaves and adapted to be pulled away from each other for certain predetermined distances.

1,378,376. PERMANENT CALENDAR. THOMAS QUITMAN HARRISON, Denver, Colo. Filed Jan. 31, 1921. Serial No. 441,442. 5 Claims. (Cl. 40—117.)

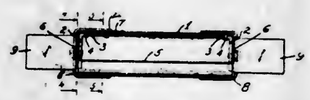


1. In a device of the class described a support having an aperture, a casing of resilient material having its back open anchored to said support so as to cover the aperture in said support, said casing having a plurality of apertures in the front surface of said casing, the sides of said casing being provided with a plurality of registering openings, a plurality of rolls received in said casing and journaled in said registering openings, actuating key members secured to one end of said rolls and adapted to extend exterior of the casing, the sides of said casing being provided with annular ribs adapted to co-act with the ends of said rolls for frictionally engaging them for preventing their undesired movement.

1,378,377. HOT-CAKE MACHINE. WILLIAM L. HEATHCOTE, Kansas City, Mo. Filed Aug. 27, 1920. Serial No. 406,308. 3 Claims. (Cl. 107—29.)

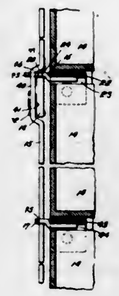
1. In combination an extensible and retractable element, a batter container mounted at the outer end thereof, a hand grasp upon the batter container a pull upon which effects the extension of the extensible element and a push upon which effects the retraction of said element, a valve mechanism for controlling the discharge of batter from the container and an operating handle for said valve mechanism operable in the plane of movement of the extensible element during the extension and retraction thereof.

1,378,378. WINDOW-GUARD. BERTILL CARL PETTERSON, Memphis, Tenn. Filed Mar. 26, 1920. Serial No. 369,058. 7 Claims. (Cl. 189—79.)



1. The combination with a window frame having a glass, of a guard screen extensible and collapsible within the window to cover the said opening and means connected to the window glass and controlled by the vibration thereof for normally holding the screen in folded or collapsed position.

1,378,379. DRIVING OR POWER TRANSMISSION BELT. FREDERICK W. RADELL, Glenside, Pa. Filed Dec. 27, 1919. Serial No. 347,766. 4 Claims. (Cl. 74—63.)



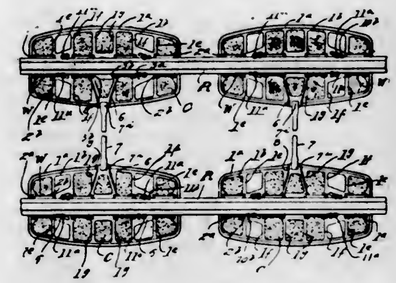
1. In a power transmission belt, a belt proper having inturned flanges forming channels within the same at opposite sides, and a bearing surface of cork having its ends received and retained within said channels with its acting face extended between the adjacent ends of said flanges.

1,378,380. RENEWABLE FUSE. LEON W. ROSENTHAL, New York, N. Y., and GUSTAVE J. LANG, Weehawken, N. J., assignors to Arthur T. Murray, Allentown, Pa. Filed Dec. 24, 1918. Serial No. 268,135. 3 Claims. (Cl. 200—132.)

1. A renewable fuse consisting of a tube, end plates fast with said tube and having openings with substantially parallel sides, a fuse passing through the tube and said openings with its ends folded over the outside of the plates to form fuse terminals, caps positioned over the ends of the tube, end screws passing through the caps into screw-threaded engagement with the plates to prevent endwise displacement of the caps on the tube and to clamp the fuse terminals between the plates and caps, said caps having expanding slots completely out of registry with the openings in the plates to provide a tortuous path for the escaping gases upon blow-out of the fuse.

1,378,381. WARDROBE-TRUNK. GEORGE SACHNOFF, Brooklyn, N. Y. Filed Mar. 5, 1921. Serial No. 449,796. 8 Claims. (Cl. 45—94.)

1. A trunk having a tier of drawers and locking mechanism therefor comprising upper and lower keepers rigidly secured to upper and lower portions of the trunk and exposed outwardly beyond the drawers, a locking bar extending vertically across the faces of the drawers and engaging said keepers, and a lock secured to the rear face of said bar adjacent to one of said keepers, said bar being offset to form a recess for said lock and a shoulder to engage the outer end of said keeper, and said keeper at the back of said bar and at the closed end of said recess being provided with a slot into which the bolt of the lock may be projected.

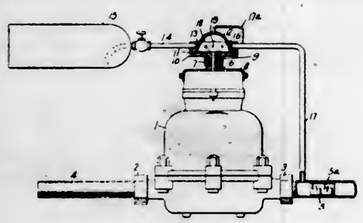


1,378,382. AVIATOR'S PARACHUTE AND PACK. ALLEN C. SCOTT, Omaha, Nebr. Filed Nov. 7, 1918. Serial No. 261,730. 3 Claims. (Cl. 244—21.)

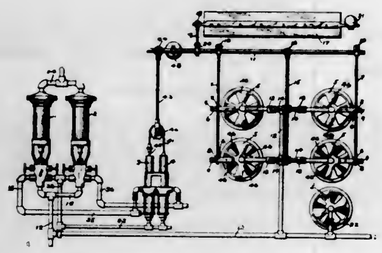
1. An aviator's safety appliance, comprising a main parachute, means adapted to be secured upon the body of the aviator and to normally retain said parachute in folded form, and means for pulling said parachute from the retaining means, comprising a small auxiliary parachute attached to the main parachute and also normally held in folded form by the retaining means, said auxiliary

parachute having a portion protruding from the retaining means and adapted to be grasped manually for withdrawal therefrom.

1,378,383. RAILROAD-TIE. JOSEPH A. SILVER, New York, N. Y., assignor to The Silver Steel Tire Company, a Corporation of Utah. Filed Aug. 5, 1919, Serial No. 315,471. Renewed Aug. 2, 1920. Serial No. 400,800. 40 Claims. (Cl. 238—111.)



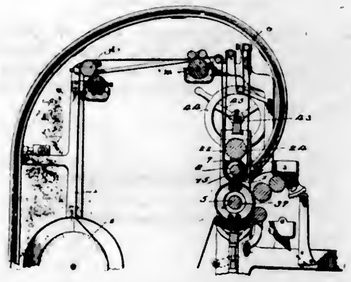
1. A sleeper comprising an approximately annular base, a plurality of spaced transversely disposed ribs connected with such base, and rail seats supported by said ribs, substantially as described.



1,378,384. APPARATUS FOR MIXING FLUIDS. WALTER O. SNELLING, Pittsburgh, Pa. Filed Oct. 14, 1915. Serial No. 55,753. 14 Claims. (Cl. 210—27.)

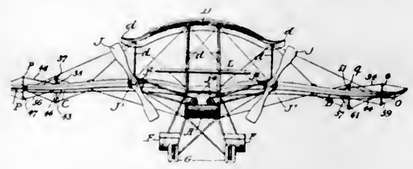
1. Apparatus for mixing fluids comprising a member defining a passage through which a stream of fluid flows,

and means operable in response to the flow of fluid in the said passage and adapted to deliver isolated and predetermined quantities of another fluid into the said flowing fluid, maintained under higher pressure.



1,378,385. AUTOMATIC FUEL-STOKING APPARATUS. CARLTON D. STEWART, Berkeley, Calif., assignor to Associated Engineering and Supply Company, San Francisco, Calif., a Corporation of California. Filed Feb. 10, 1920. Serial No. 357,631. 5 Claims. (Cl. 158—45.5.)

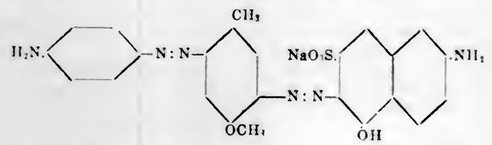
1. In a liquid fuel burning apparatus, the combination with a plurality of pipes for supplying liquid fuel to corresponding liquid fuel burners, of a valve for controlling the supply of liquid fuel to each pipe, a regulating mechanism for operating said valves and having different positions for fully opening or closing one or more of said valves, and a controlling device operated according to variations in steam pressure for effecting the operation of said mechanism.



1,378,386. WEB INTAGLIO-PRINTING PRESS. BENJAMIN R. STICKNEY, Washington, D. C. Filed May 12, 1920. Serial No. 380,715. 19 Claims. (Cl. 101—156.)

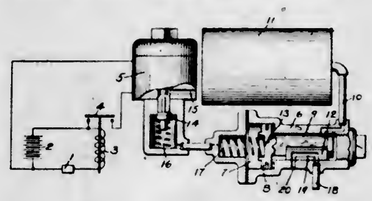
1. A web intaglio printing press including in combination a printing cylinder, an impression cylinder therefor, consisting of a free circular shell, and means for varying

the entire circularity thereof whereby the web is kept in continuous contact against the printing cylinder.



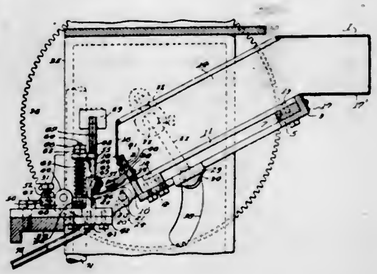
1,378,387. HYDROAEROPLANE. HARLOW T. STOKES, Brooklyn, N. Y. Filed Aug. 7, 1913. Serial No. 783,486. Renewed Jan. 6, 1920. Serial No. 349,839. 16 Claims. (Cl. 244—12.)

3. In a machine of the class described, a weight carrying plane of the bird wing type, characterized by a compound curvature lengthwise and crosswise thereof and embodying a main longitudinal beam curved in the direction of its length, and a series of cross ribs attached to said beam, said cross ribs decreasing in height and length from the rib at the inner end of the plane to the rib at the outer end of the plane, the angle of incidence of the rib at the inner end of the plane being greater than the corresponding angle of the rib at the outer end of the plane.



1,378,388. DISAZO DYE. THERESA M. SUSEMIHL, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed July 14, 1920. Serial No. 396,124. 9 Claims. (Cl. 8—1.)

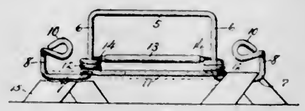
1. The herein described new disazo dye having in the form of its sodium salt the following probable formula:



said dye, in the form of its sodium salt and in the dry and powdered state, being a greenish to brownish black powder soluble in water to give a greenish violet solution, soluble in alcohol with a reddish violet color, soluble in concentrated sulfuric acid with a bluish green color, and yielding upon reduction with stannous chlorid and hydrochloric acid p-phenylendiamin, diamino-p-cresol methyl ether, and diamino-1-naphthol-3-sulfonic acid; and dyeing cotton, wool, silk, and other fibers, or mixtures of the same, reddish blue shades which can be developed on the fiber to give various shades of blue to black.

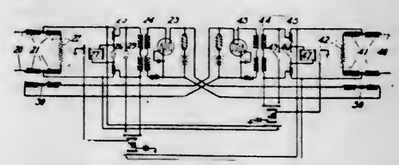
1,378,389. AUTOMATIC TRAIN-CONTROL DEVICE. WALTER V. TURNER, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 24, 1918. Serial No. 241,481. 1 Claim. (Cl. 246—29.)

In a train control system, the combination with apparatus on the train for controlling the train, of means responsive to light for controlling the operation of said apparatus and a plurality of sources of light banked together and located at a point along the track for controlling said means.



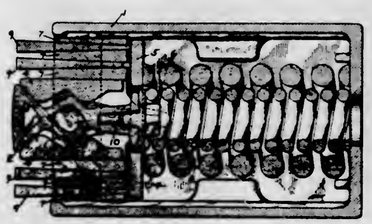
1,378,390. MULTIPLE STAPLING-MACHINE. HARRISON B. WALTER, Philadelphia, Pa., assignor to Fibre Container Company, a Corporation of Pennsylvania. Filed May 14, 1919. Serial No. 297,008. 6 Claims. (Cl. 1—3.)

1. In a stapling machine comprising means for driving and clenching staples, the combination of reciprocable means for holding a quantity of staples, means actuated by power for reciprocating said holding means to agitate said staples, longitudinal separating means in said holding means provided with spaces for separating said staples and permitting the legs of said staples to depend in said spaces during said agitating operation, means for receiving said staples from said separating means and for guiding said staples to a picking-off position, pivotally mounted means with an end thereof normally adjacent said guiding means for successively receiving staples therefrom and for holding said staples in picking-off position, power actuated means for picking off staples in a single multiple from said last mentioned means, resilient means for returning said picking-off means to inoperative position, means connected to said pivotally mounted means and said picking-off means for returning said pivotally mounted means to normal staple receiving and holding position upon the return of said picking-off means to inoperative position and guide means for guiding said staples to said driving and clenching means.



1,378,391. BUCKLE OR CLAMP. BIRDORA H. WHITE, Chicago, Ill. Filed Feb. 28, 1920. Serial No. 361,964. 6 Claims. (Cl. 24—196.)

1. A buckle comprising an inverted U-shaped supporting-frame made of one continuous piece of wire and having the lower ends of the parallel portions bent laterally away from each other and formed into hooks, the ends of which are bent upward, and a clamping member consisting of a lower and an upper horizontal cross-bar connected by tubular guides that are slidably mounted on the vertical

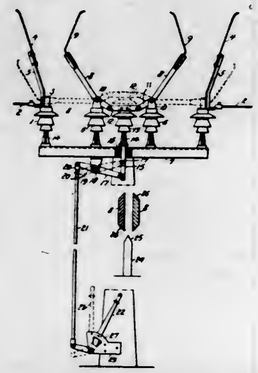


portions of said supporting-frame, said clamping member also being made of a continuous piece of wire, and the guides of several coils.

1,378,392. SIGNALING SYSTEM. DONALD F. WHITING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1919. Serial No. 347,409. 4 Claims. (Cl. 179—171.)

1. In a signaling system, in combination, two line sections, an amplifier for amplifying talking and signaling currents whose output circuit is connected with one line section, an input transformer connecting the input circuit of the amplifier with the other line section, means associated with the other line section for controlling the amplification of the amplifier to currents of talking frequencies, a loop circuit tuned to current of the signaling frequencies associated therewith and rendered effective when signaling current is impressed upon the terminals thereof to alter the effect of the amplifier controlling means upon the signaling currents, and a switching means included in said circuit.

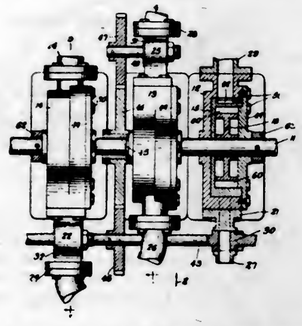
1,378,393. FRICTION DRAFT-GEAR. HARRY F. WOERNLEY, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1919. Serial No. 337,360. 4 Claims. (Cl. 213—64.)



1. In a friction draft gear, the combination with one group of wedge shaped friction plates and another group of alternated wedge shaped friction plates having relative longitudinal movement parallel with the line of draft, of wedging means for impressing a lateral pressure on said friction plates.

1,378,394. METHOD OF ANCHORING AEROPLANE, NAVIGATING, AND SUPPLY STATIONS AT ANY DEPTH OF THE OCEAN. EDWARD R. ARMSTRONG, Wilmington, Del. Filed July 25, 1919. Serial No. 313,172. 9 Claims. (Cl. 114—0.5.)

1. The herein described method of anchoring an aeroplane supply and navigation station, which consists in collocating said station with an anchorage float having an anchorage cable attached thereto of such weight, strength and length that the lifting effect of said float on said cable caused by drifting forces acting on said sea station is at its maximum insufficient to raise all of said anchorage cable from the ocean bottom.

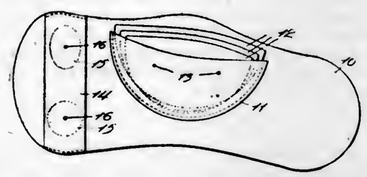


1,378,395. AIR-BRAKE SWITCH. FERDINAND BECHOFF and MAURICE M. SAMUELS, New York, N. Y., assignors to Lewis and Roth Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 3, 1917. Serial No. 166,256. 7 Claims. (Cl. 200—48.)

1. An outdoor air break switch comprising, in combination, a fixed contact, a fixed insulator, and a switch blade hinged to said fixed insulator, all freely exposed to the weather; a movable insulator operatively connected to the switch blade; and means for giving said switch blade a hammering motion to cut away ice or sleet lodged on said contact or said switch blade by a direct push and pull on said movable insulator, with avoidance of torsional or bending stresses thereon.

1,378,396. STEAM-TURBINE ENGINE. WILLIAM H. BELKNAP, New York, N. Y., assignor of one-fourth to Thomas B. Law, Brooklyn, N. Y. Filed Nov. 8, 1919. Serial No. 336,568. 3 Claims. (Cl. 253—47.)

1. An engine of the class described comprising a cylinder, a shaft passing through said cylinder, a cylinder liner for said cylinder, a rotor mounted in said cylinder liner and secured to said shaft, a plurality of intake passages in said cylinder liner, an exhaust passage in said cylinder liner, said intake and exhaust passages being provided with ports, a plurality of independent pockets in said rotor

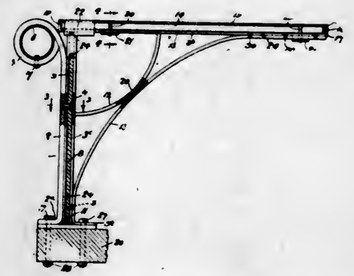


and adapted to communicate with said ports, independent intake ports in said cylinder and communicating with the intake passages of said cylinder liner, a valve device for controlling said intake ports, and an exhaust port in said cylinder and in communication with the exhaust passage of said cylinder liner.

1,378,397. DEMOUNTABLE RIM. FRANK G. BERON, Waterbury, Conn., assignor to Francis P. Guilfoile, Waterbury, Conn. Filed Nov. 30, 1917. Serial No. 204,684. 1 Claim. (Cl. 301—32.)

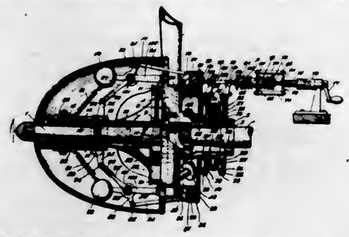
A two part collapsible and demountable tire carrying rim for vehicle wheels comprising a main rim portion forming the greater part of the wheel's circumference and provided with a rectangular aperture and a circular aperture in its respective end portions completing the wheel's circumference, a segmental rim portion having a tongue fitting in said rectangular aperture and providing a pivotal joint, said segmental section also having at the outer end thereof a disk-tongue portion fitting within said circular aperture and providing a flush joint between the rim portions, said main and segmental rim sections having side flanges and a member pivotally mounted on the main rim portion adapted to engage the under surface of said disk-tongue and with said side flanges to secure the joint thereat, substantially as set forth.

1,378,398. ARCH-SUPPORT. ALEXANDER E. BLOCK, St. Louis, Mo. Filed Aug. 22, 1918. Serial No. 250,959. 4 Claims. (Cl. 36—71.)



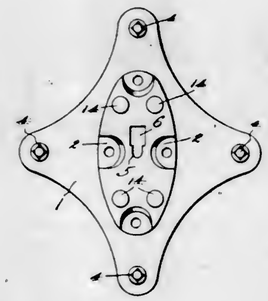
1. In an arch-support, an insole; a perforable strip secured at its ends to the lower face of said insole; and an insert having a projecting prong adapted to be seated by pressure in said strip.

1,378,399. VEHICLE-WHEEL. LYMAN D. BROWN, Flint, Mich. Filed May 10, 1919. Serial No. 296,256. 3 Claims. (Cl. 152—8.)



3. In combination with the rim and spokes of a vehicle wheel, clips having sockets thereon to slide upon the spokes, ledges on the bodies of the clips wherewith they may be securely connected with a suspended rim, a resilient rim mounted upon said clips concentric with, but some distance from the wheel rim, and fitted for mounting an ordinary stock tire thereon said clips so adjusted that weight upon the wheel will cause the wheel rim to be forced toward the part of the resilient rim that bears upon the ground and resiliency will, thereby, be imparted to the wheel.

1,378,400. BRACKET FOR DISPLAY-COUNTERS. ARCHIBALD COOK, Mount Vernon, and CHARLES GREENBAUM, New York, N. Y. Filed Dec. 1, 1919. Serial No. 341,622. 2 Claims. (Cl. 211—25.)

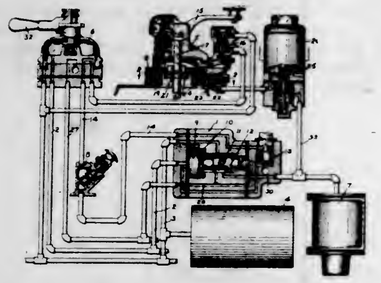


1. A bracket for display counters comprising in combination upright members, a horizontal member, an inwardly curved brace secured at one end to one of said upright members and at the other end to said horizontal member, an outwardly curved brace secured at its lower end to said upright member, at its upper end to said horizontal member and centrally to said inwardly curved brace and having feet by which the bracket may be secured to its support, a support secured to said upright members having a ring at its upper end to receive a guard rail and a foot by which it may be secured to the support upon which the display counter is to be mounted.

1,378,401. REVERSING PROPELLER. NELSON E. DAVIES, Redwood City, Calif. Filed Apr. 7, 1920. Serial No. 371,935. 10 Claims. (Cl. 170—163.)

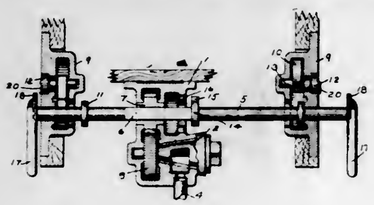
1. In a propeller mechanism, the combination of a power shaft; a propeller mounted on said shaft; a planetary differential gear concentrically mounted on said shaft; connections between said propeller and said gear adapted to change the pitch of said propeller; and a hand operated mechanism for governing said differential gears and said connections, substantially as described.

1,378,402. SHAFT-HANGER. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Feb. 8, 1917, Serial No. 147,296. Divided and this application filed Nov. 16, 1918. Serial No. 262,760. 11 Claims. (Cl. 64—14.)



1. A sewing machine stand comprising a column provided with a base having fastening means for securing it in position, a shelf secured to said column with means for maintaining in position thereon a sewing machine, and overhead shaft-bearings carried by said column and adapted to receive and sustain a power-shaft for driving the sewing machines.

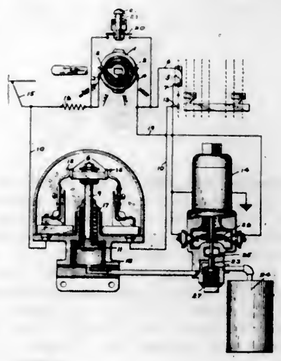
1,378,403. MILK-BOTTLE SUPPORT. DAVID DUNN, Philadelphia, Pa. Filed Apr. 17, 1920. Serial No. 374,538. 4 Claims. (Cl. 232—42.)



2. In a bottle holder of the character stated, a hood, a plate connectible with the jamb of a door, means on said plate and hood for detachable attachment of the latter with the former and sustaining said hood in operative position on said jamb, said hood having an opening in its bottom, and a horizontally extending slidable flap member in the hood adapted to close partly said opening, and a vertically extending limb with which said flap is connected as an elbow, said limb being adapted to be retained on the back wall of said hood, said wall having therethrough in its bottom a passage in which said flap member is movable.

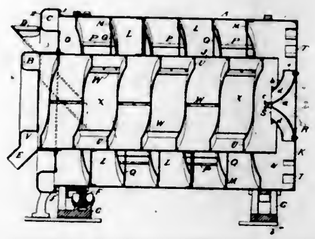
1,378,404. SAFETY CAR-CONTROL DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 5, 1919. Serial No. 294,878. 7 Claims. (Cl. 303—19.)

6. In a safety car control apparatus, the combination with a power controller and a brake cylinder for applying the brakes, of a spring tending to move the controller to off position, a lock for holding the spring under tension, a piston operated by brake cylinder pressure for releasing said lock, a valve for controlling the supply of fluid from the brake cylinder to said piston, and a magnet adapted to be energized by current supplied to the car motor for opening said valve.



1,378,405. BRAKE-PIPE CUT-OUT COCK. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1919. Serial No. 330,789. 3 Claims. (Cl. 137—139.)

1. An operating device for train pipe cut-out cocks, comprising a rotatable and longitudinally movable shaft mounted transversely of the car and operatively connected to the cut-out cock, a member carried by said shaft for locking the same against rotation and adapted to be released upon longitudinal movement of the shaft, a collar secured to the shaft near each end, and a pawl for normally preventing outward longitudinal movement of the collar and shaft.

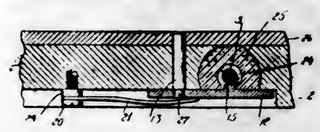


1,378,406. SAFETY CAR DEVICE. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 26, 1920. Serial No. 368,909. 9 Claims. (Cl. 303—19.)

1. In a car brake and power controlling apparatus, the combination with a power controller, of a switch device for controlling the power circuit of the controller, electrically controlled means for controlling the operation of

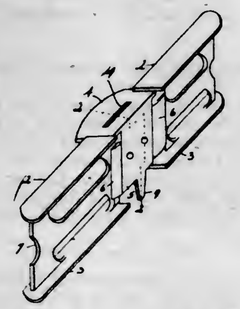
said switch, and a brake valve device for controlling the circuit of said means.

1,378,407. DRIER, COOLER, AND SIMILAR DEVICE. GEORGE HOLT FRASER, Brooklyn, N. Y. Filed Apr. 27, 1915, Serial No. 24,221. Renewed July 29, 1920. Serial No. 399,891. 15 Claims. (Cl. 34—5.)



1. In combination, a rotatable drum, means for discharging a fluid current tangentially therefrom and means for introducing material to said drum.

2. In combination a rotatable drum, means for introducing a whirling fluid current into one end of said drum, means for discharging a fluid current from the other end of said drum, means near one end of said drum for discharging material therefrom, and means for introducing material to said drum.



3. In combination, a rotatable drum, means for introducing a fluid current tangentially of said drum, a lifting unloader for discharging material from said drum, and means for feeding material into said drum.

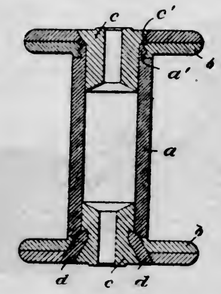
1,378,408. STEM WINDING AND SETTING DEVICE. JOSEPH A. FREUND, Newtonville, Mass., assignor to Keystone Watch Case Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 5, 1918. Serial No. 243,299. 4 Claims. (Cl. 58—68.)

3. The stem winding and setting devices for watches, comprising a plate, a winding stem, a clutch sleeve mounted on said winding stem, a clutch member coöperating with said clutch sleeve, a pendant lever operating said clutch member and pivotally mounted on said plate and having an actuating lug coöperating with said winding stem and a retaining spring engaging said pendant lever between its pivot point and actuating lug to releasably hold it in coöperation with said winding stem.

1,378,409. SAW-TOOTH GAGE. COLEMAN O. HAWKSLEY and WILLIAM J. BAUMANN, Philadelphia, Pa. Filed July 14, 1920. Serial No. 396,190. 4 Claims. (Cl. 33—202.)

1. In a gage for the raker teeth of a cross cut saw, the combination of a web, two top plates secured to said web, the inner edges of said plates being spaced apart to form an access opening, two bottom plates also secured to said web their inner edges being spaced apart, a sliding support adjustably secured to the web, a slotted gage plate carried by one end of said support, and a gage prong carried by the other end of said support.

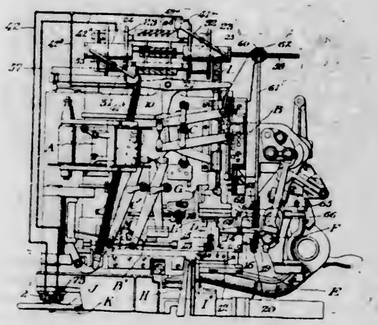
1,378,410. RECOVERY OF POTASH FROM POTASH-BEARING BRINES. GEORGE HECKER, Borosolvay, Calif., assignor to Pacific Coast Borax Company, New York, N. Y., a Corporation of Nevada. Filed Sept. 21, 1918. Serial No. 255,044. 3 Claims. (Cl. 23—22.)



3. The method of recovering potasium salts from concentrated hot liquors containing them in solution, in association with borax, which consists in simultaneously agitating and rapidly cooling by circulation of a cooling medium in indirect contact therewith the body of hot liquors until the potassium salts are precipitated as uniform coarse crystals of good white color while the borax remains in solution, and thereupon separating from the liquor the potassium salts thus obtained; substantially as described.

1,378,411. PROCESS OF TREATING ORES PREPARATORY TO SMELTING. JULIUS W. HEGELER, Danville, Ill. Filed Apr. 9, 1920. Serial No. 372,433. 8 Claims. (Cl. 75—153.)

1. In the art of zinc ore smelting, a preliminary treatment of the ore for the purpose of producing a fixed mixture of zinc ore and carbon, which consists in intimately associating and commingling zinc ore and coking coal or other coking material, and in then subjecting said mixture to a coking process, substantially as described.

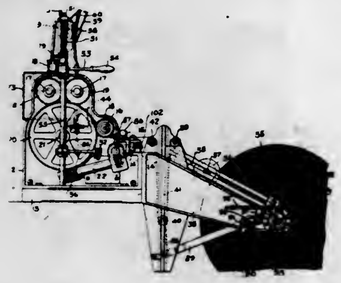


1,378,412. SPOOL FOR WINDING WARPS AND OTHER PURPOSES. GEORGE HUTCHINSON, Fall River, Mass. Filed June 9, 1920. Serial No. 387,580. 5 Claims. (Cl. 242—118.)

1. A spool for winding warps or the like embracing in its construction a tubular barrel whose opposite ends are rabbeted to form stop shoulders, the rabbeted ends being threaded, end heads having threaded engagement with said rabbeted ends and reinforcing plugs secured in the opposite ends of the barrel and having outwardly flared conical portions engaging countersunk conical surfaces

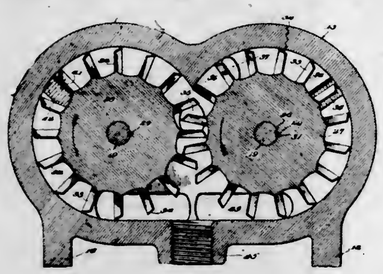
formed in both the barrel and the end heads to reinforce the threaded connection and prevent stripping the threads under endwise strain, substantially as described.

1,378,413. TYPOGRAPHIC MACHINE. MAURITZ C. INDAHL, Philadelphia, Pa., assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Sept. 12, 1919. Serial No. 323,284. 22 Claims. (Cl. 199—84.)



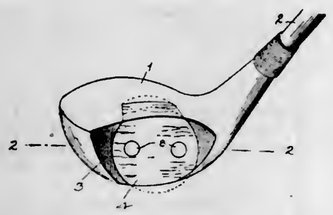
4. A typographic machine embodying the following instrumentalities to wit: a mold provided with a plurality of blades and with adjustable mechanism for determining which of said blades shall be operated, a selector device for adjusting said mechanism embodying a plurality of selector members corresponding with the various positions of adjustment of said adjustable mechanism, means for selectively operating said members, a selector plate movable against an operated member, means for connecting said plate with said adjustable mechanism, and means operated by said operated member to control the movement of said plate.

1,378,414. STRIP-PERFORATOR. MAURITZ C. INDAHL, Philadelphia, Pa., assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Sept. 20, 1919. Serial No. 325,165. 6 Claims. (Cl. 164—89.)



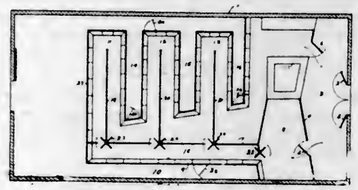
1. In a paper strip perforating machine, the combination with means for feeding the strip continuously at a uniform speed, of a perforating mechanism comprising an oscillatory punch carrier mounted on a fixed axis and having a paper passage therethrough at one side of said axis, punches mounted in said carrier to move radially with respect to said axis to intersect the paper passage,

a drive shaft mounted in bearings parallel with and on the opposite side of said axis from the paper passage, cams on said shaft coöperating with the punches to reciprocate



the latter, and eccentrics on said shaft coöperating with the punch carrier to oscillate the same during the reciprocation of the punches.

1,378,415. ROTARY ENGINE. ARTHUR B. JOHNSON, Las Animas, Colo. Filed Feb. 14, 1920. Serial No. 358,799. 3 Claims. (Cl. 253—16.5.)

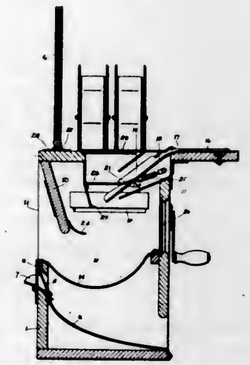


1. The combination with a casing having a pair of rotor heads, of steam supply jets formed on said rotor heads and discharging at an angle to said rotors, and a downwardly extending pointed dividing member arranged between the upper portions of said rotors.

1,378,416. GOLF-CLUB. WILLIAM J. KEYS, Hutchinson, Kans., assignor to The Crawford, McGregor and Canby Co., Dayton, Ohio, a Corporation of Ohio. Filed Oct. 29, 1919. Serial No. 334,359. 11 Claims. (Cl. 46—4.)

1. The combination with the head of a golf club, of a body of ivory inserted in the striking face thereof, the grain of the ivory insert being arranged parallel with the face of the club.

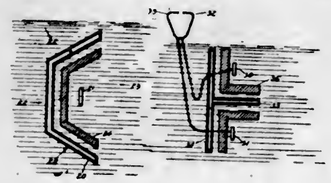
1,378,417. SELF-SERVING STORE. HOARD LEE, Shreveport, La. Filed May 11, 1920. Serial No. 380,634. 2 Claims. (Cl. 211—8.)



2. In a self-serving store, in combination with an inclosure of an entrance passageway formed of a row of shelving and a partition spaced apart, said row of shelving continuing on around the partition and following a general zigzag course so as to produce a number of parallel aisles opening toward the partition, each tier of said zigzag shelving being longer than the one just in front of it and lattice work doors for forming a back to said shelving and turn-stiles in the partition opposite the respective aisles.

1,378,418. METHOD OF PRECIPITATING ACID COLORS. AUGUST LENDLE, Forest Hills, N. Y., assignor to Kuttroff Pickhardt & Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 9, 1920. Serial No. 409,246. 4 Claims. (Cl. 8—6.)

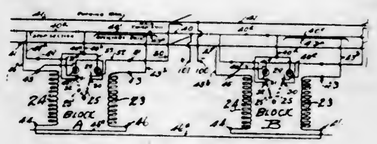
1. The method of precipitating acid colors, which consists in treating the same with a precipitating agent, and a complex acid containing an acid and tungsten.



1,378,419. TICKET DELIVERING, CHECKING, AND REGISTERING MACHINE. ALBERT MARSH, Chertsey, England. Filed May 27, 1919. Serial No. 300,160. 14 Claims. (Cl. 211—33.)

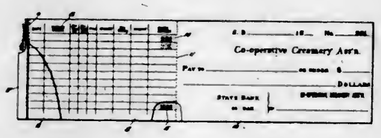
1. In a ticket delivering machine, the combination of means for supporting two separate ticket strips, a driving shaft, a pair of feed rollers loosely mounted side by side on said shaft, a clutch device slidably keyed to said shaft, a lever associated with said clutch device, locking means secured to said lever, said lever being adapted to be operated to move said clutch in either direction for driving engagement with either feed roller and simultaneously to move the locking means into engagement with the feed roller which is not being driven so as to secure the same against rotation, a second pair of feed rollers geared to and

coöperating with the first pair of feed rollers to feed the ticket strips forward therebetween, means for adjusting the pairs of feed rollers with respect to one another, and registering means for registering the tickets delivered from each strip.



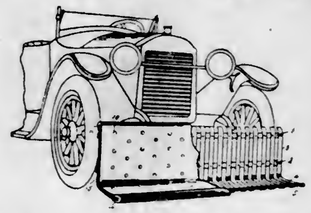
1,378,420. SUBMARINE SOUND DETECTION. ERNEST MERRITT, Ithaca, N. Y. Filed Sept. 6, 1919. Serial No. 322,220. 3 Claims. (Cl. 181—0.5.)

1. The combination of a sound screen having a yielding pressure release surface immersed in a liquid, a sound receiver immersed in the liquid in proximity to the screen and an inertia plate interposed between the screen and receiver, substantially as described.



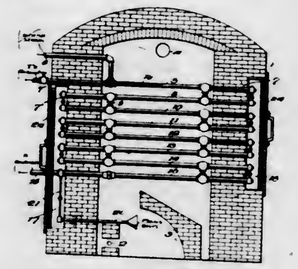
2. The combination of a sound receiver immersed in a liquid and a sound screen partially surrounding the receiver and shielding it from sounds at back and sides, and an inertia plate between the receiver and sound screen, substantially as described.

1,378,421. SIGNAL DEVICE FOR MINIATURE ELECTRIC RAILWAYS. ROBERT N. MILLER, Altoona, Pa. Filed Sept. 20, 1920. Serial No. 411,377. 8 Claims. (Cl. 246—31.)



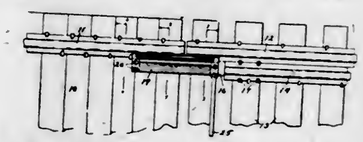
1. A railway signaling system of the class described including a home block and a distant block, a charged third rail common to both blocks, an automatic stop section and an auxiliary third rail section in each block, and means whereby a train entering the home block will render the automatic stop section of the said home block dead and simultaneously energize the automatic stop section of the distant block.

1,378,422. RECEIVING-ACCOUNT CHECK. JENS RIIS, Castlewood, S. D. Filed July 29, 1920. Serial No. 399,807. 6 Claims. (Cl. 283—58.)



1. A check pad including an upper permanent entry sheet having a series of consecutively numbered rows divided into entry spaces forming columns and headed, a series of superposed check blanks, and a series of superposed stubs beneath the columned entry sheet, detachably connected to the pad and detachably connected to the check blanks, the several stubs having headed columns like the entry sheet and having numbers corresponding to their check blanks registering with the respective numbers of the entry sheet.

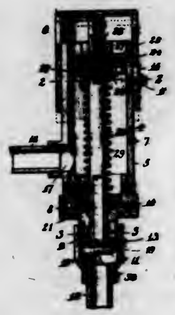
1,378,423. MOTOR-CAR FENDER. MARK ALEXANDER ROBINSON, Toronto, Ontario, Canada. Filed Aug. 9, 1920. Serial No. 402,373. 1 Claim. (Cl. 293—42.)



A motor car fender comprising spaced vertically arranged pieces having their lower ends turned outwardly forming a supporting member, transverse pieces connecting said vertical pieces, supporting brackets comprising slotted bars adjustably secured to the uppermost of said connecting pieces adjacent opposite ends thereof and projecting rearwardly at right angles thereto and adapted for adjustable connection with a vehicle and slotted bars adjustably secured to the lowermost of said connecting pieces and to the first mentioned bars, and an impact receiving pad having resilient projections forming a facing therefor.

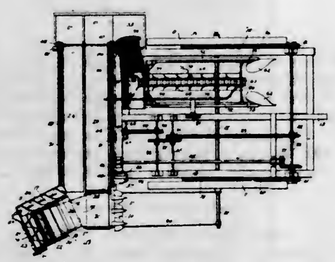
1,378,424. OIL-CRACKING PROCESS. ALLEN ROGERS, Brooklyn, N. Y. Filed June 1, 1920. Serial No. 385,646. 3 Claims. (Cl. 196—25.)

1. The process of cracking oil to form motor fuel and the like which comprises mixing such oil with about the right amount of steam to vaporize it at a temperature of 600° F., and produce a vapor mixture substantially free of liquid and progressively heating the mixture of steam and oil vapor from a temperature of about 600° F. to about 800° F., (as a thin traveling annular layer,) thereafter removing the vapors and condensing the cracked products formed.



1,378,425. APPROACH FOR TRACK-SCALES. LUCIUS R. ROSEBROOK, Oskaloosa, Iowa. Filed Aug. 25, 1920. Serial No. 405,893. 7 Claims. (Cl. 238—174.)

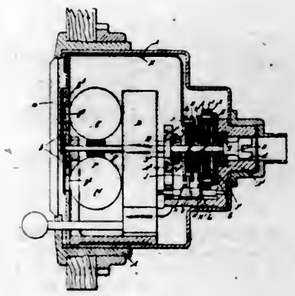
7. In an approach for track scales, a bridge member suitably mounted adjacent the initial end of a scale rail



and extending beyond the end thereof, said bridge member being formed with a straight side in contact with said scale rail and with its opposite side inclined, said bridge member being formed with a convex flangeway extending from end to end thereof parallel with said scale rail.

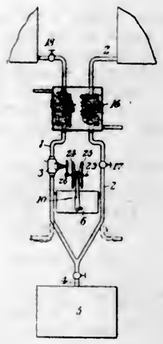
1,378,426. AIR-VALVE. ORVILLE R. SACKETT, Niagara Falls, N. Y. Filed Jan. 10, 1920. Serial No. 350,626. 5 Claims. (Cl. 251—137.)

5. An air valve comprising a two part casing, one of said parts being formed of an open-ended cylinder having a lateral outlet and being internally threaded at one end and a cap threaded into said internally threaded end and having an air inlet formed by an axially arranged bore and a valve seat at the outer end of said bore, the other part of said casing being cup-shaped to fit over the opposite end of said open ended cylinder, a valve having a valve stem extending through said bore and a valve head adapted to seat against said valve seat, a piston adjustable on said valve stem within said open-ended cylinder, and a spiral spring surrounding said valve stem and bearing with one end against said cap and with its other end against said piston.



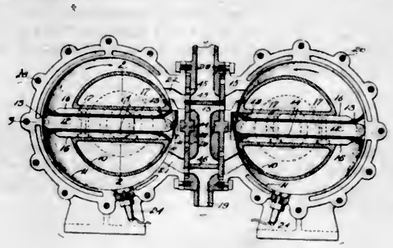
1,378,427. BEET-HARVESTER. FRITZ SLATHAR, Eau Claire, Wis. Filed Mar. 18, 1919. Serial No. 283,286. 11 Claims. (Cl. 55—107.)

1. In a beet harvester, a cutter for removing the foliage from the standing plants, a platform back of the cutter, a conveyer running above the platform to receive the foliage, a second conveyer onto which the platform conveyer discharges, a receptacle into which the second conveyer discharges, a topper operating after the removal of the foliage from the plants, a receptacle to receive the tops, and means for delivering the tops to said receptacle.



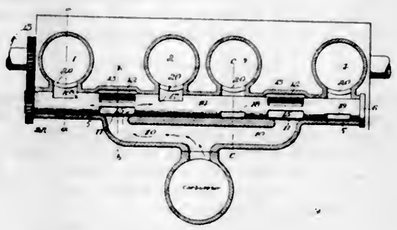
6. In a beet harvester, a cutter for removing the foliage from the standing plants, a platform carrying the cutter, a frame hinged to the rear end of the platform and free to rise and fall, a topping knife carried by the frame, and a gage bar carried by the frame in front of the topping knife.

1,378,428. SPEEDOMETER. ALFRED SPEIGHT, Wimbledon Park, England. Filed Feb. 5, 1920. Serial No. 356,517. 3 Claims. (Cl. 235—104.)



1. In a speedometer, speed indicating mechanism, a continuously driven speedometer shaft, a carrier on the said shaft, a pair of epicyclic pinions on the said carrier secured together for rotation, a pair of sun wheels of slightly different diameters gearing with the said pinions, of which sun wheels one is connected to the indicating mechanism and the other is provided with means by which it is intermittently held stationary and periodically released, and means for returning the first sun wheel to zero position at each release of the second sun wheel.

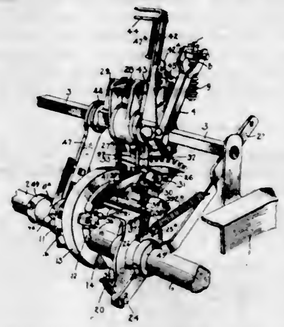
1,378,429. PROCESS AND APPARATUS FOR MIXING GASES. FREDERICK A. STAMPS, Niagara Falls, N. Y., assignor to Oldbury Electro-Chemical Company, Harrison, N. Y., a Corporation of New York. Filed Feb. 5, 1918. Serial No. 215,562. 15 Claims. (Cl. 48—185.)



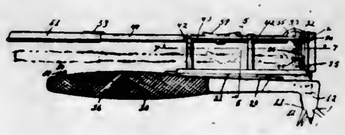
1. The process in mixing two gases, which comprises causing each of the gases to flow under pressure in a separate column of fixed cross-sectional area with a normal predetermined ratio between the velocities of flow of said gases in their respective columns, and causing a departure from said predetermined ratio to vary the velocity of flow of one of said gases and thereby restore the said normal ratio of flow.

1,378,430. ROTARY ENGINE. GEORGE H. STEARNS, Roxbury, Mass. Filed June 11, 1918, Serial No. 239,462. Renewed Oct. 14, 1920. Serial No. 417,017. 17 Claims. (Cl. 123—16.)

1. In a rotary engine the combination, with the chamber and a rotary member mounted eccentrically within it, of a piston adapted to slide through the rotary member on a diameter thereof and having flexible edges pressing obliquely against the walls of the chamber.



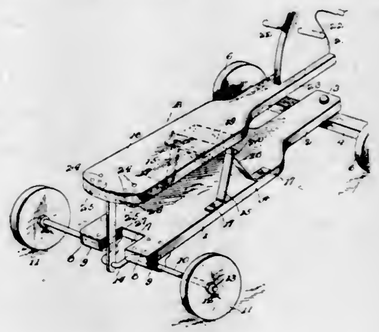
1,378,431. COMBINED MANIFOLD AND ROTARY DISTRIBUTING-VALVE FOR INTERNAL-COMBUSTION ENGINES. JOHN S. TAYLOR, Norfolk, Va., assignor, by mesne assignments, to Premier Motor Corporation of America, a Corporation of Delaware. Filed Apr. 24, 1913, Serial No. 763,467. Renewed Aug. 27, 1919. Serial No. 320,308. 2 Claims. (Cl. 123—59.)



1. In an internal combustion engine, the combination with the cylinders in which operate the pistons, the cylinders being closed at their ends opposite those constituting the explosion chambers, and each having an inlet fuel port near the said closed end, of a valve device through which the fuel mixture for the engine passes in one direction only, comprising a casing united with the cylinders and having passages communicating with the said inlet ports to the cylinders, a valve mounted in the said casing and consisting of a tube open from end to end and mounted in the said casing, the tube having outlet ports communicating with the passages to the cylinders and with inlet ports, supply passages communicating with the said inlet ports through which fuel is adapted to enter, and means for turning the valve in its casing.

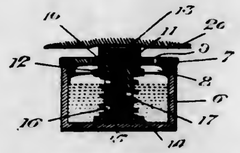
1,378,432. POWER MECHANISM FOR OPERATING GROUND-BREAKING DEVICES. ELMER E. TOWLE, Richmond, Ind., assignor to The American Seeding Machine Company, Springfield, Ohio, a Corporation of Ohio. Filed Apr. 9, 1919. Serial No. 288,769. 13 Claims. (Cl. 97—89.)

1. In a machine of the character described, a ground breaking device, a rock shaft connected with said device, power operated mechanism for rocking said shaft to raise said device to a uniform height at each raising movement thereof and for applying pressure thereto in the lowered position thereof, and means for varying the rocking movement of said shaft without varying the extent of movement of said power mechanism.



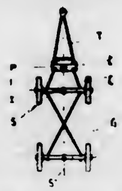
1,378,433. DENTAL INSTRUMENT. FRANK VOGELZANG, Rock Valley, Iowa. Filed Aug. 6, 1920. Serial No. 401,700. 3 Claims. (Cl. 32—34.)

3. In a device of the class described, a tooth engaging member having a frame fixed thereto, an auxiliary frame slidably mounted thereon, a cutting blade on said auxiliary frame and capable of vertical movement relative to said auxiliary frame and adapted to slide therewith, means for yieldingly holding said blade at one limit of its vertical movement, and means for moving the blade to cutting position.



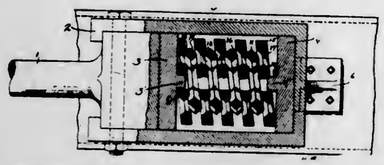
1,378,434. TOY VEHICLE. ARTHUR A. WESTER, Boone, Iowa. Filed Apr. 29, 1920. Serial No. 377,692. 1 Claim. (Cl. 208—33.)

In a toy vehicle, a running gear comprising a flat frame member having a reduced forward portion, a front axle provided with wheels, said axle being pivoted to the extreme forward end of the reduced portion whereby a short turning radius is secured, a rear axle carrying wheels and having a crank, the frame member being cut in from the rear end to permit movement of the crank of said axle, inverted Y-shaped brackets carried by said frame member



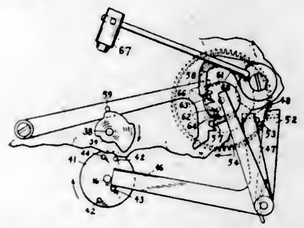
intermediate the axles and on opposite sides of the frame member, a passenger carrying body member also having a reduced forward portion and co-extensive with the frame member, said body member carrying a centrally disposed bearing, an axle carried in said brackets and said bearing, bearings at the rear extremity of said body member and receiving an axle, and a connecting rod carried by said last-mentioned axle and connected with the crank of the rear axle.

1,378,435. COLOR-PRINTING DEVICE. JOHN A. WHITTINGTON, Atlanta, Ga. Filed June 11, 1920. Serial No. 388,133. 6 Claims. (Cl. 101—201.)



1. A color printing device comprising a reservoir having a top, ink applying means leading from within the reservoir through the top, a yieldable shield movably mounted within said top to force a soft inking roller away from said means.

1,378,436. STEERING-GEAR FOR VEHICLES USED AS TRAILERS. ACHILLE ARATO, Turin, Italy, assignor to Ferruccio Botta, Turin, Italy. Filed Mar. 12, 1919. Serial No. 282,208. 3 Claims. (Cl. 280—33.5.)

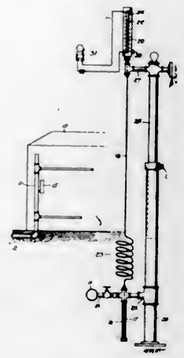


3. In a trailer comprising pivoted parts each carrying a pair of wheels, the combination of a member pivoted to swing at the head of the trailer around a vertical axis, means for connecting said member with a pulling element, ties each connected with said swinging member and the adjacent wheel carrying part at points located at the same side of and at different distances from the respective centers of rotation to cause the front wheels of the trailer to substantially follow in the tracks of the rear wheels of the pulling element, and cross ties interconnecting the front and rear wheel carrying parts to transmit the deviations of the front wheel carrying parts to the rear wheel carrying parts in reverse direction and under the same reduced ratio to cause the rear wheels to substantially follow in the tracks of the front wheels.

1,378,437. DRAFT APPLIANCE. JOHN AVELINE, Scranton, Pa. Filed Jan. 29, 1920. Serial No. 354,809. 4 Claims. (Cl. 213—64.)

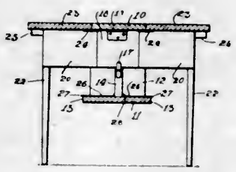
1. A draft rig comprising in combination spaced followers and a yoke embracing the same, inner and outer helical springs under tension between the followers and having the proximate surfaces of their corresponding convolutions oppositely beveled, and an intermediate sinuate spring helicoidally wound, shorter than the inner and outer springs and stopping short of engagement with the followers and having the inner and outer surfaces of its convolutions oppositely beveled, complementarily to the bevels of the inner and outer springs.

1,378,438. SHIP'S-BELLS CLOCK. SAMUEL W. BALCH, Montclair, N. J. Original application filed June 29, 1918, Serial No. 242,564. Divided and this application filed May 19, 1919. Serial No. 298,208. 3 Claims. (Cl. 58—8.)



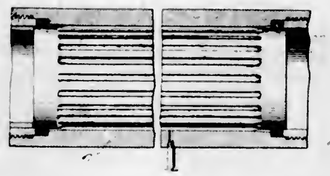
1. A striking clock having a snail, a rack, a gathering pin for the rack, a hammer, a strike train, a rigidly connected rack-detent and hammer-stop having two positions under the end of the rack in one of which the hammer-stop obstructs the raised hammer, means for releasing the strike train, and means operative following alternate releasing of the strike train for arresting the rack-detent and hammer-stop at the first of the two positions under the end of the rack, substantially as described.

1,378,439. COATING FERROUS METALS. CHARLES BASKERVILLE, New York, N. Y. Filed June 25, 1914. Serial No. 847,323. 9 Claims. (Cl. 91—68.1.)



1. A method of coating ferrous metals which comprises coating said metals first with metallic antimony in a substantially pure condition, and thereafter coating with a material containing metallic lead.

1,378,440. LIQUID SERVICE-GAGE. RUDOLPH E. BRUCKNER, New York, N. Y. Filed Oct. 2, 1919. Serial No. 327,930. 4 Claims. (Cl. 73—54.)

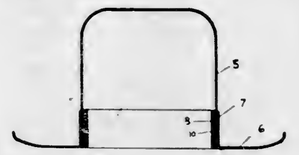


4. A gage for indicating the level of liquid in a supply tank, said gage comprising a receptacle for mercury, means for connecting said receptacle to a pipe leading from said tank, a vertically extensible tube leading upwardly from the interior of said receptacle for carrying a column of mercury, means at the upper end of said tube for permitting the height of the mercury column therein to be determined, said means being adjustable vertically relatively to said receptacle, whereby the distance between the two may be varied to suit different conditions.

1,378,441. CAMP TABLE AND BOX. WILLIAM J. BURKE, San Francisco, Calif. Filed Sept. 29, 1919. Serial No. 327,255. 5 Claims. (Cl. 190—12.)

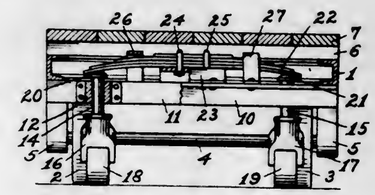
1. A folding table including a rigid frame, opposed leaves hinged to the frame, said leaves coöperating with the rigid frame to form a box structure when in their folded position, opposed blocks hinged to the rigid frame, supporting strips hinged to the said blocks and adapted to coöperate with the said leaves to support them in their unfolded position, and leg members secured to the said supporting strips and adapted to support the said strips in their unfolded position.

1,378,442. PROCESS OF CORRUGATING CYLINDRICAL BODIES. WILLIAM E. CHALFANT, Glenside, Pa., assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Nov. 16, 1917. Serial No. 202,327. 5 Claims. (Cl. 153—70.)



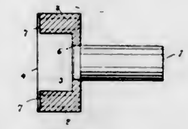
2. The process of corrugating a cylindrical body which consists in supporting said body on the interior at points spaced from each other a distance greater than the distance between desired adjacent corrugations, then applying external pressure and forcing the cylindrical wall inwardly between the points of support, then supporting the inwardly deflected portions of said wall, and finally applying external pressure and forcing the previously supported portions of the wall inwardly.

1,378,443. PROCESS FOR DYEING CELLULOSE ACETATES. RENÉ CLAVEL, Basel-Augst, Switzerland. Filed Jan. 5, 1921. Serial No. 435,225. 4 Claims. (Cl. 8—5.)



1. The herein described process for dyeing cellulose acetates, consisting in carrying out the dyeing operation with a dyestuff-solution, which contains a weak acid and at least one soluble chlorid.

1,378,444. HAT. NELSON W. COLGROVE, Providence, R. I. Filed Sept. 18, 1920. Serial No. 411,305. 3 Claims. (Cl. 2—32.)

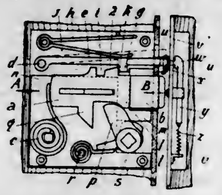


1. In a hat, a body, a sweat band, a strip of waterproof material embracing the inner face of the band comprising integral flaps overlapping the outer face of the band and in contact with said body, and stitches engaging the body solely through the sweat band and one flap.

1,378,445. TRAILER-TRUCK FOR INDUSTRIAL PURPOSES. WILLIAM E. FERRIS, Cleveland, Ohio, assignor to The Ohio Trailer Company, a Corporation of Ohio. Filed July 14, 1919. Serial No. 310,620. 5 Claims. (Cl. 280—51.)

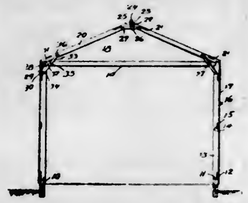
5. In a trailer truck, the combination of a frame, wheels and casters for supporting the frame, the casters having shanks, the shanks of the casters being loosely mounted in the frame to permit rotation and vertical movement thereof, a leaf spring fixed at its center to the frame and having downwardly curved free ends, and the free ends of the leaf spring resting upon said shanks of the casters, substantially as described.

1,378,446. CONNECTION FOR SHAFTS OR JOURNALS. GOTTLOB FUEGEL and HERMAN SCHMID, Brooklyn, N. Y., assignors, by mesne assignments, to Apollo Magneto Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Dec. 27, 1918. Serial No. 268,552. 2 Claims. (Cl. 287—53.)



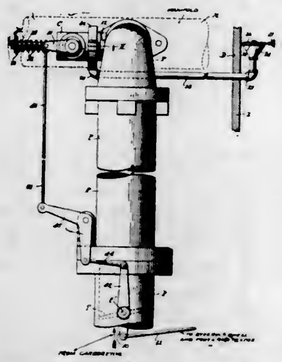
1. The combination of a cup-shaped casing having openings in its bottom, said openings being counter-bored adjacent the inner face of said bottom, and a shaft provided with projections on one end, said projections entering said openings from the outer face of said bottom, and being expanded to engage the counter-bored portions of said openings to secure the casing and shaft together.

1,378,447. AUTOMATIC LOCKING DEVICE. CONRAD GEBHARD, Munich, Germany, assignor to "Asfag" Aktiengesellschaft, Glarus, Switzerland. Filed Aug. 12, 1920. Serial No. 403,163. 2 Claims. (Cl. 292—335.)



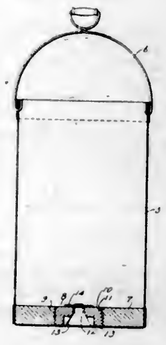
1. An automatic locking device, comprising a spring actuated bolt having notches formed therein, a keeper, a

spring actuated locking lever adapted to engage said notches the end of said lever projecting beyond the end cover of the lock in the direction of the keeper, a spring urged tappet pivotally mounted on the base plate of the lock and adapted to be turned to cause a withdrawal of the bolt from the keeper, a releasing



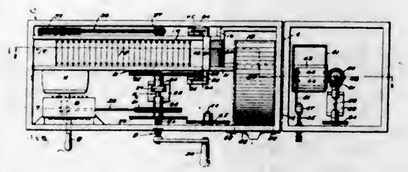
member interposed between the tappet and the lever for releasing the latter upon a turning of the tappet, and a member arranged in the keeper adapted to be brought into yielding engagement with said projecting end of the lever when the door is being opened and acting as a fixed guiding face which engages the end of the locking lever and releases the bolt when the door is being shut.

1,378,448. SECTIONAL BUILDING. ROYCE W. GILBERT, Clinton, Iowa. Filed July 11, 1919. Serial No. 310,193. 5 Claims. (Cl. 20—2.)



5. In a sectional building, a collapsible bent consisting of a plurality of ties and a plurality of members pivoted together by said ties and each movable about its pivot so that said members when in collapsed form all lie parallel and have their free ends located between said ties.

1,378,449. COMBINED PRIMER AND AUTOMATIC AUXILIARY AIR-VALVE FOR INTERNAL-COMBUSTION ENGINES. PAUL H. GRIMM, FRANK L. COCKS, and OSCAR C. DURYEA, Glen Cove, N. Y. Filed Sept. 17, 1918. Serial No. 254,398. 2 Claims. (Cl. 123—124.)

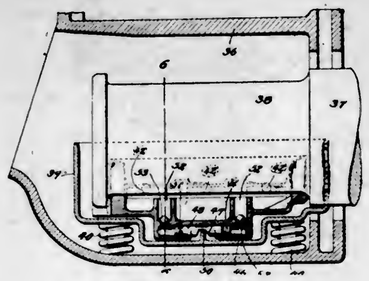


2. The combination with a manifold of an internal combustion engine, a throttle valve controlling the gas vapor to said manifold, of a combined primer and auxiliary air supply device comprising a casing provided with a conical valve seat and attachable to and flaring outwardly toward the interior of said manifold, said casing having an annular chamber in communication with an air and oil inlet and a series of radial branch conduits arranged within and communicating with the interior of said annular chamber, each of said radial branch conduits provided with a longitudinal passageway having an outlet in said conical valve seat and communicating with the interior of the manifold, a conical valve having its axis disposed parallel to said longitudinal passageways and its conical section flaring outwardly toward the interior of the manifold and constructed, arranged and coöperating with said outlets and valve seat as to be adapted to control, atomize and scatter the auxiliary air or mixture of air and oil passing out of said outlets and thoroughly intermingle the same with the vapor in said manifold, and operating means for said conical valve arranged for connection to the operating means for the throttle valve controlling the volume of vapor in said supply manifold.

1,378,450. WELL-BUCKET. TOM HARPER, Columbia, Miss. Filed May 21, 1920. Serial No. 383,270. 3 Claims. (Cl. 294—68.)

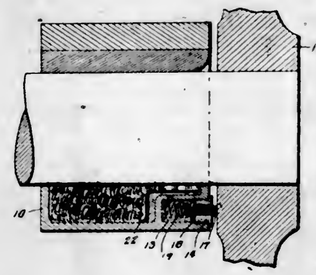
1. In a well bucket, a cylindrical body having its upper end open and provided with a central opening in its bottom, the opening having interior screw threads, a valve seat threaded into the opening, and a flap valve secured to the inner face of the valve seat.

1,378,451. VEGETABLE-CUTTING MACHINE. JOHN HARTMAN, Milwaukee, Wis. Filed July 27, 1920. Serial No. 399,325. 4 Claims. (Cl. 146—11.)



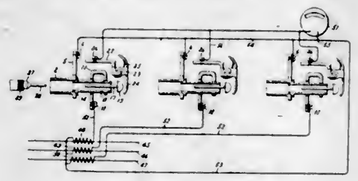
1. A machine of the class described comprising a casing and a cover therefor, cutting means carried by the cover, and means within the casing and adapted to operate said cutting means when the cover is closed.

1,378,452. AUTOMATIC JOURNAL-LUBRICATOR. JAMES J. HENNESSY, New York, N. Y. Filed Aug. 15, 1918. Serial No. 250,045. 8 Claims. (Cl. 64—24.)



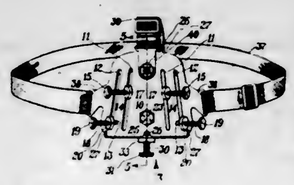
1. The combination with a journal box, of a container provided with a liquid lubricant compartment and a separate waste compartment, which container is yieldingly

supported beneath an axle journal, a pump within said container for delivering liquid lubricant from the liquid lubricant compartment to the waste compartment, and



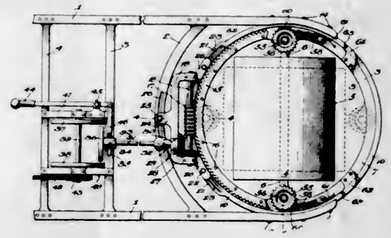
means for actuating said pump, the operation of which pump actuating means is dependent upon the longitudinal movement of the journal with respect to the container.

1,378,453. HUB-LUBRICATING DEVICE. JAMES J. HENNESSY, New York, N. Y. Filed Nov. 6, 1919. Serial No. 336,019. 6 Claims. (Cl. 64—24.)



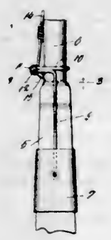
1. The combination with a journal box having a pocket which receives liquid lubricant from the chamber within the journal box, of a spring pressed member arranged for operation within said pocket and extending to the exterior of the journal box, and there being a lubricant duct formed through said member.

1,378,454. ELECTRIC SWITCH. CHARLES T. HENTSCHEL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 25, 1917. Serial No. 182,780. 14 Claims. (Cl. 175—183.)



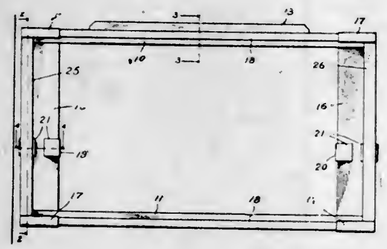
1. The combination with a plurality of conductors, transformers operatively related thereto, a measuring instrument in common to said transformers, and means for connecting said common instrument in the circuit of any transformer and simultaneously testing said instrument.

1,378,455. NOSE-SHAPER. JOHN HILGERS, Binghamton, N. Y. Filed Aug. 4, 1920. Serial No. 401,133. 15 Claims. (Cl. 128—76.)



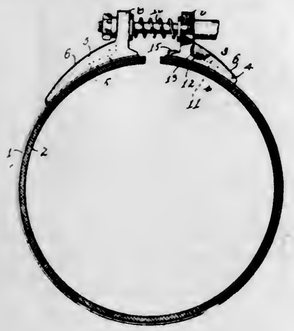
1. In a nose shaper, in combination, a non-resilient frame of the approximate configuration of a nose, a series of slots within the frame, a series of threaded members within the slots slidable therethrough and capable of inward movement therethrough, means for locking the threaded members in non-slidable predetermined positions within the slots and means for maintaining the frame in fixed position upon a nose.

1,378,456. STEERING MECHANISM. REUBEN F. HOFFMAN, Hamilton, Ohio. Filed Jan. 3, 1920. Serial No. 349,284. 20 Claims. (Cl. 180—26.)



1. A steering ground wheel, a steering member for the ground wheel, ground wheel drive means, and a power driven member normally engaging the said steering member and adapted to clear the same and engage the said ground wheel drive means.

1,378,457. BROOM-PROTECTOR. JAMES HOLLAND and WILLIAM G. WELCH, Gonic, N. H. Filed Dec. 8, 1920. Serial No. 429,119. 2 Claims. (Cl. 15—23.)

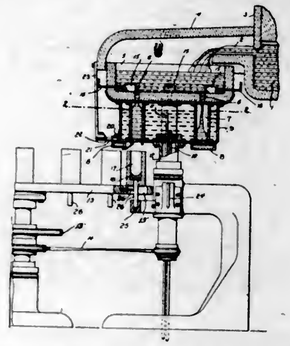


1. A broom protector including a broom head embracing member equipped with upstanding arms terminating in a U-shaped yoke which embraces the broom handle, a shaft extending through said arms and a locking lever pivotally mounted on said shaft to clamp the handle in said yoke.

1,378,458. DISPLAY-FRAME. ISAAC E. HOLT, Seattle, Wash. Filed Feb. 16, 1921. Serial No. 445,525. 2 Claims. (Cl. 40—155.)

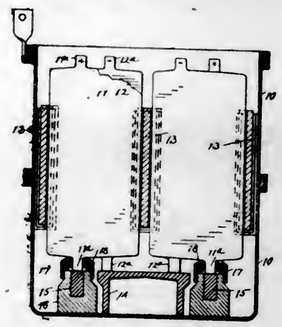
1. A display frame comprising upper and lower channel bars, vertical spacing members adapted to retain said channel bars in parallel spaced apart relation, the ends of said vertical spacing members being bent inwardly to fit around said channel bars and adapted to be slidably moved thereon, said channel bars being adapted to receive and retain the edges of a display card, and vertical partition bars adapted to fit over said display card with their ends resting in said channel bars.

1,378,459. TRANSMISSION-BAND. HENRY FRED HONS, Jr., San Francisco, Calif. Filed Mar. 15, 1920. Serial No. 365,984. 1 Claim. (Cl. 188—249.)



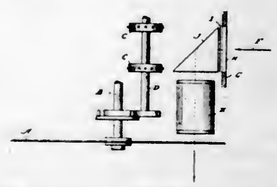
A transmission band having a removable straining ear comprising a relatively short base portion constructed with upwardly extending lugs, side flanges increasing in height toward and merging into said lugs, one of said flanges being notched, an opening in the base portion of said straining ear made to receive a stud on the band, an attaching pin engaging said stud at an angle to the circumference of the band and made to diagonally overlie the base portion of the straining ear with one end thereof lying adjacent said notch in the flange, and a groove in the base portion arranged to receive said pin substantially throughout its length.

1,378,460. DEVICE FOR OBTAINING QUANTITIES OF MOLTEN GLASS. ERNEST HOPKINSON, New York, N. Y. Continuation of application Serial No. 42,702, filed July 30, 1915. This application filed Oct. 25, 1918. Serial No. 259,612. 10 Claims. (Cl. 49—55.)



1. In combination with a molten glass container, an arcuately movable receptacle supplied by said container, a plurality of compartments underneath said receptacle for receiving molten glass flowing therefrom, the said compartments being movable about a common axis, and means for automatically opening and closing the bottoms of the compartments in succession.

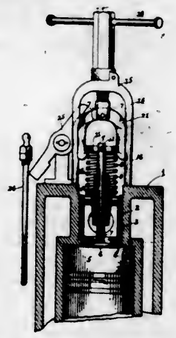
9. In a device of the class described, a source of glass supply, an auxiliary receptacle fed from said source and adapted to maintain a reserve supply of the molten glass,



means for rotating said receptacle, a plurality of compartments connected with and fed from said receptacle, and means for opening and closing the bottoms of said compartments.

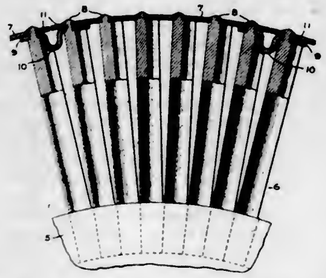
1,378,461. METHOD AND MEANS FOR MAKING ELECTRICAL CONNECTIONS. HARRY CROSS HUBBELL, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed July 12, 1920. Serial No. 395,672. 25 Claims. (Cl. 204—29.)

1. The method of maintaining good electrical contact between conductors in an electrolyte which comprises maintaining the contacting surfaces of the conductors under cathode conditions.



1,378,462. MOTION-PICTURE APPARATUS. CHARLES FRANCIS JENKINS, Washington, D. C., assignor to The Graphoscope Company, New York, N. Y., a Corporation of Delaware. Filed May 19, 1919, Serial No. 298,264. Renewed Apr. 5, 1921. Serial No. 458,697. 2 Claims. (Cl. 88—18.3.)

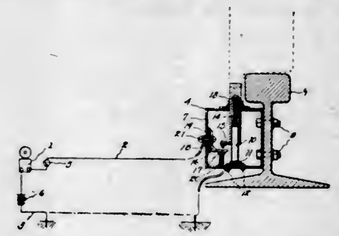
1. The combination with a driving shaft carrying a shutter, a parallel shaft carrying a film feeding drum,



and an adjacent plate parallel to the shafts and having an exposure opening across which film is fed, of two mutually engaging gears on the shafts, respectively, a projecting lens lying between said opening and the shutter, and means for deflecting to the lens light coming through the opening.

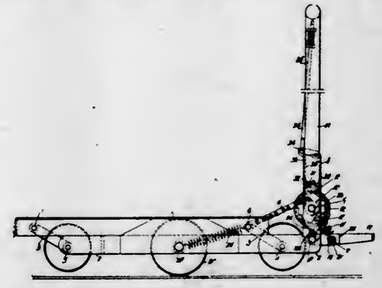
1,378,463. VALVE-REMOVER. ULYSSES E. G. JOHNSON, Pittsfield, Mass. Filed Feb. 26, 1920. Serial No. 361,428. 7 Claims. (Cl. 29—86.3.)

1. In a valve removing tool, the combination with a yoke having supporting legs, of a pair of jaws supported in said yoke, said jaws having pivotal and vertical movement, means for constraining said jaws against rotational movement, said restraining means acting to confine said jaws in their pivotal movement to a vertical plane, which makes but a slight angle with the vertical plane of the legs of the yoke, whereby said jaws may open past said legs but in close proximity thereto.



1,378,464. ELASTIC-FLUID TURBINE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 29, 1920. Serial No. 420,502. 3 Claims. (Cl. 253—77.)

1. In an elastic fluid turbine, the combination with a ring of buckets, and a sectional cover tying them together into groups, of means forming flexible connections between adjacent groups, said means being located directly beneath the adjacent ends of bucket cover sections.



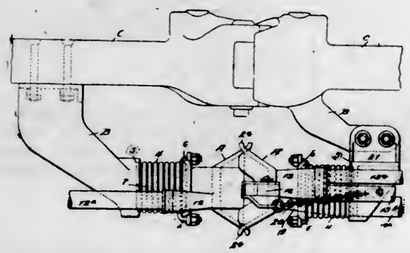
1,378,465. STREET-CAR ENUNCIATOR. ELWOOD A. KEAN and BENJAMIN L. NICHOLSON, Tacoma, Wash. Filed Mar. 15, 1920. Serial No. 366,067. 2 Claims. (Cl. 246—246.)

1. The combination with an electrically operated signaling device, a source of electricity, and a railway rail of a circuit closing device comprising a housing supported from the rail web, a post mounted vertically within the housing, a sleeve, closed at its upper end, slidably mounted on the post and extending from said housing into position to be depressed by the wheels of cars moving along the rail, a spring interposed within the sleeve to retain the same normally extended; said sleeve having a contact arm extending laterally therefrom at its lower

end, a yieldable contact member mounted within the housing engageable by the said arm when the sleeve is depressed and means electrically connecting the contact arm and contact member engaged thereby with the signaling device through the source of electricity.

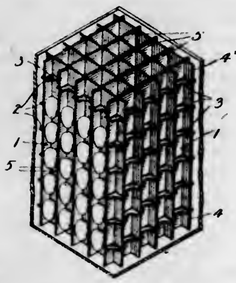
1,378,466. LIFTING-TRUCK. WALTER EDWARD KIMBER, London, England. Filed May 14, 1920. Serial No. 381,397. 4 Claims. (Cl. 254—4.)

1. A lifting truck comprising a truck frame, a movable lifting frame connected by links thereto, a lever pivoted to the truck frame, a ratchet wheel on the axle of the lever, a pawl carried by said lever and engaging said ratchet wheel on the axle of the lever, a drum mounted on the axle of said lever, a cable windable on said drum and connected with said lifting frame, a second pawl mounted on said truck frame and also engaging said ratchet wheel, a brake mounted on the axle of said ratchet wheel and means for operating said brake and said second pawl simultaneously.



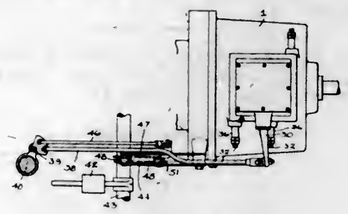
1,378,467. LAMP-SOCKET. CHARLES J. KLEIN, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 9, 1915. Serial No. 1,337. 10 Claims. (Cl. 173—362.)

1. In a lamp socket, the combination with a substantially cylindrical inclosing shell contracted at one end,



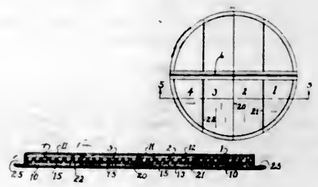
of a lamp socket fitting insertible in said shell through the open end thereof, one of said elements having a resilient catch to coöperate with a shoulder on the other for locking of said elements in assembled relation and against relative rotation and said catch having a part adjacent to the open end of said shell whereby it may be actuated to release said fitting.

1,378,468. AUTOMATIC PIPE-COUPLING. GEORGE N. KNAPP, St. Louis, Mo. Filed Dec. 10, 1919. Serial No. 343,867. 7 Claims. (Cl. 285—24.)



1. An automatic pipe coupling, consisting of two complemental parts, each of which comprises a male member and a female member arranged in the same horizontal plane with the male member in advance of the female member, the exterior of said male member being of substantially frusto-pyramidal form, a spring-pressed latch mounted on each of said female members in an opening in the outer side wall of same, and laterally projecting lugs on the outer side walls of said male members that are adapted to enter said openings and be engaged by said latches when the complemental parts of the coupling come together.

1,378,469. EGG-PACKING. MORRIS KOPPELMAN, Brooklyn, N. Y., assignor of one-half to Leon Mann, New York, N. Y. Filed July 6, 1920. Serial No. 394,066. 9 Claims. (Cl. 217—35.)

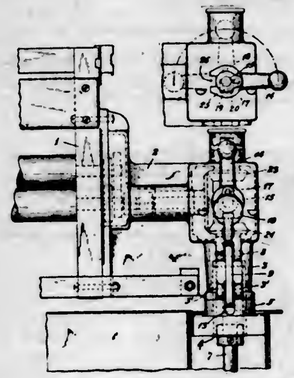


1. An egg package comprising a plurality of egg receiving cells adapted to be superposed one upon another, said cells having vertical side walls inclosing an egg receiving space, a sheet of material interposed between upper and lower cells having an opening therein of smaller diameter than the greatest lateral diameter of the egg to be placed therein, but of materially greater diameter than the smallest lateral diameter of the egg, whereby an egg placed in said opening extends therethrough and into two superposed cells, and a sufficient distance to bring the side surfaces of the egg which are at an angle greater than 45 degrees to the plane of the sheet in contact with the edges of the opening.

1,378,470. TRANSMISSION MECHANISM. CYRUS B. KURTZ, Lakewood, Ohio. Filed Nov. 21, 1917. Serial No. 203,102. 46 Claims. (Cl. 74—34.)

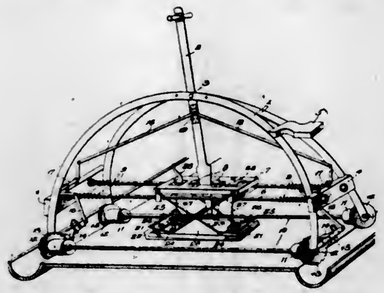
1. In a transmission device, the combination of driving and driven gears, a clutch connection between the same normally in engagement, a plurality of gear means between said driving and driven gears, said gear means including permanently meshed gears but being normally inoperative, a clutch lever for disengaging said clutch, yielding means adapted to actuate said lever to normally position the same and engage said clutch, and means adapted to operate one of said gear means upon the normal positioning of said clutch lever, said means being adapted to simultaneously render said clutch connection inoperative.

1,378,471. TABLE-MAT. CHARLES LAIDMAN, Cleveland, Ohio. Filed May 29, 1920. Serial No. 385,124. 1 Claim. (Cl. 65—53.)



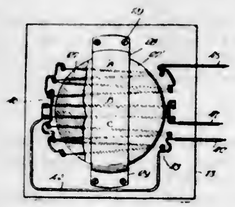
A table mat comprising a plurality of heat insulating sections, each section comprising a corrugated inner member and heat insulating members on each side of the corrugated member, and a flexible covering sheet disposed upon each heat insulating member, said covering sheets being arranged to provide hinges, which are defined by a flat portion of the sheet extending across the joint and a portion of the opposite sheet folded to extend between the adjoining edges of the sections, the upper and lower covering sheets extending beyond the corrugated filler and secured together, each hinge opening in a direction opposite to the direction of the adjoining hinge, whereby the mat may be compactly folded.

1,378,472. INTERLOCK FOR SWINGING POWER-DRIVEN WRINGERS. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 4, 1920. Serial No. 414,612. 1 Claim. (Cl. 68—32.)



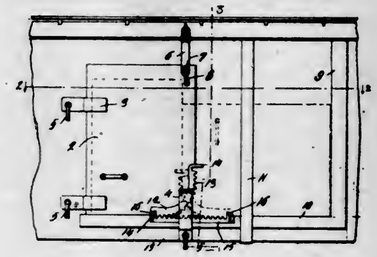
In a wringer, the combination of a power-driven shaft, a base-plate having a plurality of recesses, a support mounted on said base-plate so as to rotate about the axis of said shaft, a wringer mechanism carried by said support, a reversing mechanism contained in said support and having an actuating shaft projecting horizontally therefrom, a handle mounted upon said actuating shaft, and provided with a notch, a lever mounted on said support in a vertical plane passing through the axis of said shaft,

said lever having a finger on its lower end adapted to enter said recesses in the base-plate carrying said support



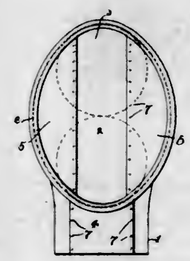
and as to which base-plate said support is revoluble and being provided adjacent to its upper end with a projection adapted to enter said notch.

1,378,473. BOWLING-ALLEY-RESURFACING DEVICE. LEO N. LAREAU, Pawtucket, R. I., and OMER J. RAINVILLE, South Attleboro, Mass. Filed June 7, 1920. Serial No. 386,984. 14 Claims. (Cl. 51—175.)



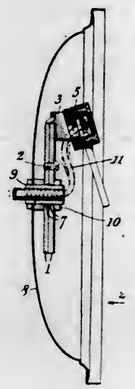
3. In a bowling alley resurfacer, a frame, a head reciprocating on the frame, means to reciprocate the head, means to progressively move the frame step by step lengthwise of the alley, and means to actuate the last named means by and through said means to reciprocate the head.

1,378,474. SAND-BATH. TIODOLF LIDBERG, Chicago, Ill., assignor to Chicago Surgical and Electrical Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1920. Serial No. 374,794. 2 Claims. (Cl. 219—43.)



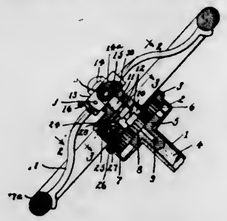
1. A heating device of the character described having a box; a bowl therein with its rim supported by the top of the box; a series of groups of heating coils attached to the convex surface of the bowl having their terminals within the box and a rotatable switch mounted on one side of the box arranged to connect the coils to vary their heat producing effect at different points in the rotation of the switch element.

1,378,475. CAR-DOOR. STEPHEN H. LOVETT, Miles City, Mont. Filed Sept. 4, 1919. Serial No. 321,521. 1 Claim. (Cl. 20—21.)



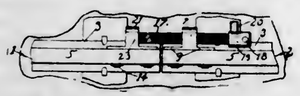
In combination with a car body having an opening, a door mounted upon said body and provided with a rounded lower corner having a curved rack member terminating in laterally extending fingers at the respective ends thereof for constituting a means for limiting the swinging movement of the door, a flat rack bar adapted to mesh with the curved rack bar carried by the door, a detachable strap lock engaging the upper end of the door for holding the same in a closed position, spaced spring members engaging the door when in the closed position for holding the same firmly upon the car, and a spring retaining member carried by said car and overhanging the lower curved corner of the door for firmly retaining the rack carried by the door in engagement with the rack carried by the car.

1,378,476. VENTILATOR. JOHN MCGEORGE, Lakewood, Ohio, assignor to The Ohio Body & Blower Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 4, 1918. Serial No. 220,170. 7 Claims. (Cl. 98—4.)



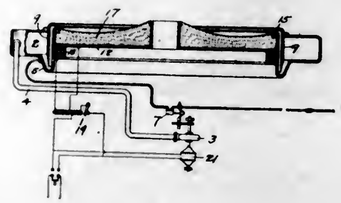
6. A ventilator cowl comprising a lower portion substantially circular in cross-section and a longitudinally curved and flared upper portion extending therefrom, said cowl having front and back plates each of which is of constant width and longitudinally curved and each of which is transversely curved on a radius substantially equal to the radius of the lower portion of said cowl, and intermediate longitudinally and transversely curved plates connecting the front and back plates, the said plates providing at their upper ends an elliptical mouth the major axis whereof is substantially twice the diameter of the lower portion of the cowl and the minor axis whereof is substantially one and one-half times such diameter.

1,378,477. ELECTRICAL FITTING CONNECTION. JOHN ANDREW MCKAY, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1919. Serial No. 333,686. 6 Claims. (Cl. 173—330.)



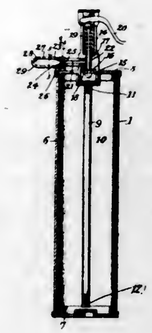
3. An electrical fitting comprising: a mounting for a terminal member consisting of two superposed and pivotally connected jaws, an angularly extending lug carried by each jaw, said lugs having bearings that are in alinement with each other when the jaws are swung into a given position and said jaws having openings that are in register when the bearings are brought into alinement, a support extending through the registered openings, means for receiving the jaws on the support and a terminal member pivotally supported in said bearings.

1,378,478. STEERING-WHEEL. THOMAS D. MCMULLEN, East Cleveland, Ohio. Filed Dec. 9, 1919. Serial No. 348,512. 5 Claims. (Cl. 74—33.)



1. Steering mechanism for motor vehicles, comprising a steering shaft, a driving shaft, planetary gearing operatively connecting said shafts, a steering wheel pivoted on a transverse axis, and means whereby tilting movement of said wheel disconnects said planetary gearing.

1,378,479. RAILWAY-JOINT EXPANSION-JACK. JAMES E. MCNEIL, Los Angeles, Calif. Filed Dec. 27, 1920. Serial No. 433,264. 3 Claims. (Cl. 238—151.)



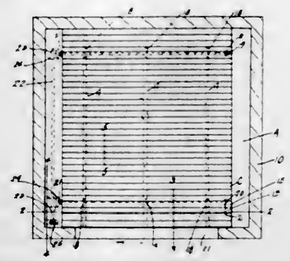
3. The combination with a thrust nut, a thrust block having a socket in one face, means to secure said thrust nut and thrust block to the sides of abutting ends of the T-rails; and a thrust screw screwed through the nut and having a tip seated in the socket; and a detachable handle for turning the thrust screw.

1,378,480. LIQUID-FUEL BURNER. ROLAND G. MARX, Palo Alto, Calif. Filed Apr. 11, 1917. Serial No. 161,173. 4 Claims. (Cl. 158—28.)

1. A liquid fuel burner, comprising a stationary air chamber having a discharge aperture and a depending portion forming a trough, a blower for forcing air into said chamber, means for introducing fuel under pressure into said trough, and a blade disposed in the chamber and spaced from the walls thereof and extending down into said trough, whereby a reverse passsage is formed within the chamber.

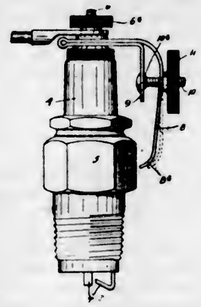
1,378,481. METHOD OF APPLYING LIQUID ANTISEPTICS. LEWIS KEMPTON MOBLEY, New York, N. Y. Filed July 19, 1919. Serial No. 311,947. 8 Claims. (Cl. 128—182.)

1. The method of applying liquid medicinal solutions, which consists in placing a liquid medicament in combination with a volume of carbonic acid gas sufficient to carbonate the solution to the desired degree of pressure in the reservoir chamber of a normally hermetically-sealed container, discharging a volume of the combined solution from said container under the said pressure whereby the liquid medicament is applied by action of the gas, and simultaneously with said gas-pressure discharge converting the combined solution at the point of ejection into the outer air and by the pressure action of the combined gas into a medicated carbonated spray.



1,378,482. HORSE-HITCH. MILLARD F. MORGAN, Bailey, N. C. Filed Sept. 27, 1920. Serial No. 412,963. 1 Claim. (Cl. 119—121.)

A horse hitch comprising a worm adapted to be screwed into the ground to serve as an anchor; a cylindrical head permanently mounted at the top of the worm, said head having a rectangular recess formed in its top side; a housing rotatively mounted over said head, same having its lower edge turned inwardly below the head to form a retaining flange, and having an integral rectangular tongue depending interiorly from the top of the housing adapted to freely engage the recess in the head to lock the housing to the head against rotative movement, and having an

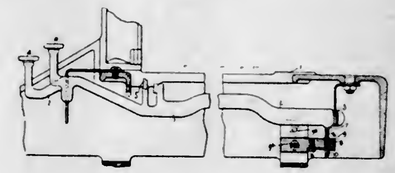


exterior integral eye formed at the top of the housing as means for securing the animal thereto; and an expanded coil spring mounted in said recess, and adapted to press said tongue upwardly clear of said recess so as to permit the normal rotative movement of the housing upon the head.

1,378,483. GARAGE-FLOOR. ANTON LAWRENCE OLSON, Welch, Minn. Filed Jan. 22, 1920. Serial No. 353,298. 4 Claims. (Cl. 20—6.)

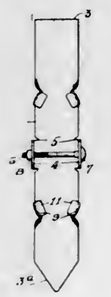
1. In a device of the class described, the combination of a drain pit, a floor over the pit, said floor comprising a stationary draining rack and a movably disposed closure grate beneath the rack, said grate being adapted, in one position, to obstruct the openings in the rack and supplement the support afforded thereby and, in another position, to clear the openings in said draining rack.

1,378,484. SPARK-PLUG TESTER. HARRY L. OPSAHL, Minneapolis, Minn. Filed Sept. 7, 1920. Serial No. 408,443. 5 Claims. (Cl. 175—183.)



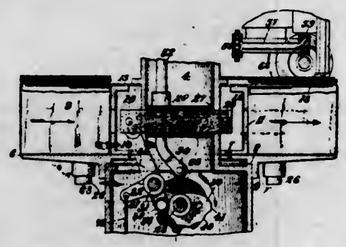
1. A spark plug tester comprising a single narrow strip of flexible material bent intermediate its ends to form a double thickness thereof and being attached to a spark plug through this double thickness, the ends thereof further bent to extend downwardly along the side of the spark plug in spaced relation, one end forming a testing electrode and the other end forming a base of resistance for adjusting said electrode toward and from the plug, and means for adjusting said electrode.

1,378,485. PROCESS OF DECOMPOSING, TRANSPOSING, DISSOLVING, OR RENDERING SOLUBLE DIFFICULTLY-SOLUBLE BODIES. HARRY D. RANKIN, San Francisco, Calif., assignor to Corrosion Extraction Company, a Corporation. Filed Apr. 24, 1916. Serial No. 93,125. 16 Claims. (Cl. 23—12.)



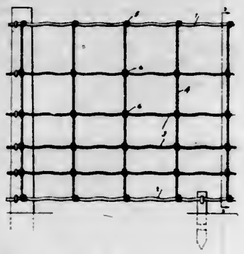
1. The process of decomposing, transforming, dissolving or rendering soluble substances heretofore considered practically insoluble, which consists in heating a mixture of the substance and an amount of acid, not materially greater than that required to thoroughly wet the substance, in a closed vessel to a sufficient temperature to boil the acid.

1,378,486. TYPEWRITING-MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 18, 1916. Serial No. 120,853. 18 Claims. (Cl. 197—33.)



2. The combination with a plurality of springs, a plurality of adjustable tension controlling members, one for each spring, and a support for said members, of a single device for locking said members against accidental displacement while affording individual adjustments of said members to any desired extent.

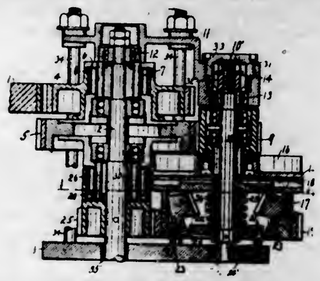
1,378,487. HARROW-TOOTH BLADE. JULIAN N. SHEFFIELD, Chapin, N. Y. Filed Oct. 29, 1919. Serial No. 334,228. 5 Claims. (Cl. 55—97.)



1. A harrow tooth blade comprising a blade body formed from flat stock and having a pair of rearwardly extending clamping arms, a bolt connecting said arms to draw them in firm engagement with the harrow tooth and means on the blade body for interlocking with the free end of the harrow tooth.

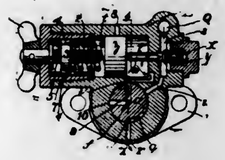
1,378,488. CONTAINER CLOSING AND STAPLING APPARATUS. ELLIOTT SHEPARD, Fresno, Calif. Filed Oct. 19, 1920. Serial No. 418,017. 8 Claims. (Cl. 1—15.)

1. An apparatus for stapling container flaps together when the same are folded one overlying the other, said apparatus comprising a movable support on which the container rests, means for intermittently moving the support, a clenching anvil movable with the support and over which said flaps are folded, a stapling machine into coöperation with which the container is moved on the intermittent movement of the support, means for intermittently moving the container from said support when the same is at a period of rest and longitudinally of said anvil, and means for operating said stapling machine to insert a retaining staple through the said flaps and into contact with said anvil for the clenching thereof during the interval of rest of the container in its movement longitudinally of the anvil.



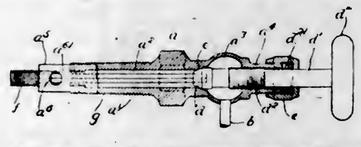
1,378,489. WIRE FENCE. WILLIAM H. SOMMER, Peoria, Ill., assignor, by mesne assignments, to The First Trust & Savings Company, Cleveland, Ohio, a Corporation of Ohio, and John A. Chapman, Chicago, Ill., trustees. Filed Oct. 27, 1917. Serial No. 198,782. 1 Claim. (Cl. 245—8.)

A wire fence including horizontally arranged top and bottom marginal wires and intermediate wires, the said top and bottom marginal wires being each approximately oblong in cross-section and having their widest faces arranged vertically, and vertically arranged stay-wires having end portions with each of the latter wrapped around the marginal wires with the line of wrapping at an angle to the vertical, the said end portions of the stay-wires being each tightly and closely wrapped a number of times around each of said top and bottom wires so as to form a series of wrappings each having long parallel sides and narrow ends, the ends acting to bite into the narrowed top and bottom edges of the said marginal wires.



1,378,490. TRANSMISSION-GEARING. LAWRENCE B. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 25, 1915. Serial No. 10,458. 8 Claims. (Cl. 74—97.)

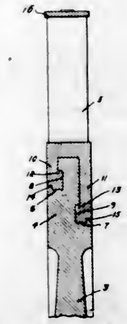
1. In a constant speed transmission system, a driving portion, a driven portion, a friction clutch connecting said portions, means responsive to the speed of the driven portion for varying the pressure on the engaging surfaces of said friction clutch, and automatic means for driving



said driven portion directly from said driving portion when the ratio of speed of the driving portion to that of the driven portion reaches a predetermined value.

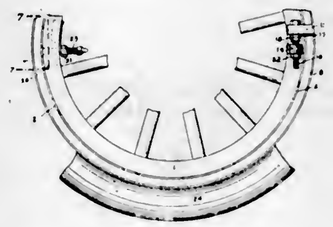
1,378,491. UNITARY REGULATING AND CONTROLLING MEANS FOR DRILL FEED MECHANISM. HAROLD I. STAGE, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 4, 1920. Serial No. 363,164. 2 Claims. (Cl. 121—9.)

1. In fluid actuated feeding mechanism for drills having forward and reverse movement, a unitary regulating and controlling device mounted in operative relation to the feeding mechanism and comprising a valve casing having a plurality of regulating valve chambers, one of which is supplied with motive fluid under line pressure, an automatic pressure reducing valve operating in said chambers, an adjacent throttle valve chamber in said valve casing communicating with both chambers of said regulating valve, and a throttle valve in said throttle valve chamber for controlling the forward and reverse action of the feed mechanism whereby the feed mechanism may be supplied with motive fluid under line pressure directly from one regulating valve chamber or with reduced pressure from the other regulating valve chamber.



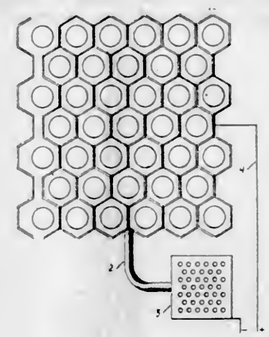
1,378,492. COCK AND VALVE. EDWARD SANFORD STANLEY and CARLETON BOSWORTH GAY, Whitman, Mass., assignors of one-fifth to Charles S. Smith, Lincoln, Mass., one-fifth to Fred H. White, Charlotte, N. C., and one-fifth to Ernest Clark, Abington, Mass. Filed July 7, 1920. Serial No. 394,527. 3 Claims. (Cl. 277—34.)

1. In a cock or valve, the combination with a body having a passage therethrough, an entrance to said passage, and a valve-seat, and a main movable valve-member in screw-threaded engagement with said body, of an auxiliary screw-threaded movable valve-member coöperating with said entrance, and a key in detachable engagement



with said movable valve-members, through which the auxiliary valve-member is turned in unison with the main movable valve-member, and by means of which the auxiliary valve-member is screwed into open position as the main movable member is screwed into normal working relation with respect to its seat, and whereby the auxiliary member is screwed into closed position when said main member is screwed abnormally far from said seat, as in effecting removal thereof.

1,378,493. ELASTIC-FLUID TURBINE. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 20, 1919. Serial No. 325,197. 2 Claims. (Cl. 253—77.



1. In a turbine, a rotor having a rim provided with grooves on opposite sides thereof, the groove on one side being located at a greater radial distance from the periphery of the rotor than that on the other side, and buckets having legs of unequal length which straddle said rim and are provided with projections fitting in said grooves.

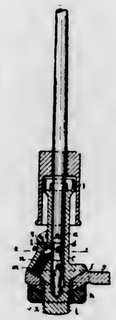
1,378,494. DEMOUNTABLE RIM. LEONARD U. STENGER and RALPH SUMMERFIELD, Alameda, Calif. Filed May 22, 1919. Serial No. 298,863. 4 Claims. (Cl. 301—17.)

1. In combination, a wheel, a felly band, a demountable rim loosely embracing the band to allow of circumferential movement thereon, coacting means secured to the confronting faces of the band for causing the latter to tightly embrace the former when it is partially rotated, said means comprising spaced guideways having oblique surfaces and spaced guide openings each of which is formed with a plurality of oblique surfaces, means for locking the rim in tightened position, the felly of said wheel being formed with a circumferentially extending slot to slidably receive a valve stem, a cover plate hinged to the inner periphery of the felly and adapted to span said slot, said plate being formed to straddle the valve stem, and a nut on the valve stem adapted to engage said plate.

1,378,495. ELECTRIC DISPLAY. RAY F. STODDARD, Dayton, Ohio. Filed Apr. 14, 1920. Serial No. 373,777. 1 Claim. (Cl. 40—133.)

In an electric display, lamps or groups of lamps in staggered relation, equally spaced in desirable numbers and mounted in receptacles suitably fastened to a support, with desirable electrical connections for the illumination of the same, having abutting cup strips of suitable substance—preferably metal—comprising halves of hexagonally shaped cells or cups formed alternately in each side and being suitably arranged about each lamp or group of lamps and being fastened to the support in such a manner that said cells form horiozntally straight lines and two sets of oppositely diagonally straight lines at sixty degrees, substantially as described.

1,378,496. CHECK-PROTECTOR. OSCAR J. SUNDSTRAND, Rockford, Ill. Filed Jan. 3, 1921. Serial No. 434,410. 10 Claims. (Cl. 101—23.)

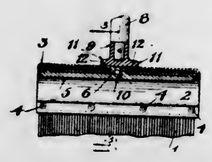


1. A check protector comprising, in combination, a pivoted roller shaped in the form of a truncated cone, a series of projecting teeth formed on the conical periphery of said roller, and means for rolling said roller upon a sheet of paper whereon said teeth describe an indented path to prevent the alteration of erasure of writing thereon.

1,378,497. SPINDLE. HOMER A. TIFFANY, Paterson, N. J. Filed May 14, 1920. Serial No. 381,298. 3 Claims. (Cl. 118—65.)

1. In combination, a spindle having a circumferential stop-shoulder, a housing structure having a bearing for the spindle and also an upwardly reaching bore terminating at said bearing and at its terminus forming a stop-shoulder relatively reverse to the first stop-shoulder, and a detent-device in said bore occupying a position where it is interposed between and is adapted to bear on

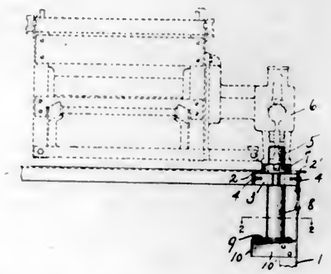
said shoulders, said bore near its said terminus preventing movement of said device from said position in a direction substantially perpendicular to the spindle and the housing structure having elastic means holding the detent-device in said position and also having a downwardly



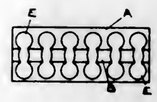
reaching aperture leading from the exterior of the housing to the terminal portion of the bore and adapted to admit an implement for displacing said device in the bore and from the terminal toward the opposite end of the bore.

1,378,498. FLOOR-COVERING. JOHN J. TOMEC, Trenton, N. J. Filed June 21, 1918. Serial No. 241,123. 1 Claim. (Cl. 154—49.)

A floor covering, consisting of a sheet of asphaltic material, a sheet of linoleum secured thereto and constituting the top of the covering and a reinforcing reticulated metallic sheet embedded in the bottom side of the first named sheet.



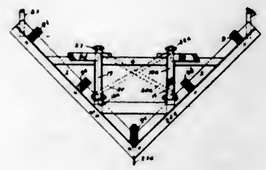
1,378,499. MOP-HOLDER. SAMSON L. TOPLITZ, New York, N. Y. Filed Jan. 25, 1921. Serial No. 439,733. 3 Claims. (Cl. 15—56.)



1. A device of the class described comprising a mop having a loop portion, a bar lying within said loop, said loop having a central aperture, a threaded boss on said bar extending into said aperture, and a mop handle having a threaded end adapted to enter said boss.

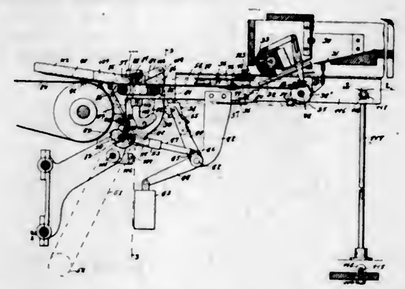
1,378,500. WRINGER-SUPPORT. ERNEST TWIGG, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 20, 1920. Serial No. 418,269. 1 Claim. (Cl. 68—32.)

In a machine comprising a swinging power-driven wringer, the combination of a frame, a base block secured to the upper portion of said frame for supporting the wringer, a tubular member carried by said base block and extending upwardly and downwardly therefrom, a socket secured to said frame below said base block and surrounding the lower end of said tubular member, the upper end of said tubular member being adapted to receive and act as a bearing for said swinging power-driven wringer.

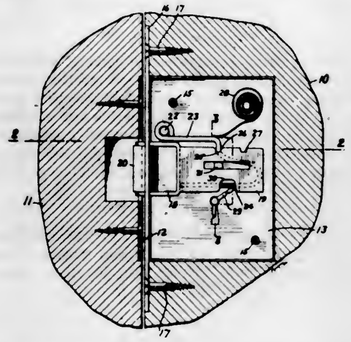


1,378,501. PIN COMPONENTS AND METHOD OF MAKING THE SAME. ASHBEL T. WALL, Providence, R. I. Filed Apr. 28, 1920. Serial No. 377,301. 2 Claims. (Cl. 29—160.6.)

2. The process of forming components consisting of plating a strip of solder upon a metal plate of less width than the plate, and cutting a blank from the plate transversely of the solder strip.



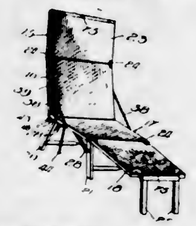
1,378,502. SNOWPLOW. WILLIAM L. WARD, Anoka, Minn. Filed Jan. 19, 1920. Serial No. 352,549. 10 Claims. (Cl. 37—5.)



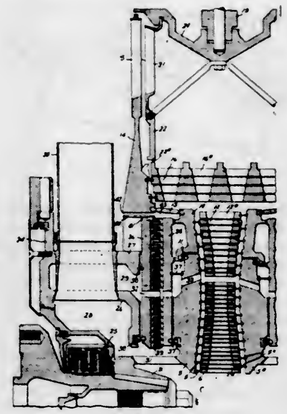
1. The combination, with a power propelled vehicle frame, of a snow plow comprising a frame having rearwardly diverging plow wings and forward and lateral push blocks mounted on said frame and having seats for the forward portion of said truck frame.

1,378,503. TRANSFER MECHANISM. GEORGE WHITE, Jersey City, N. J., assignor to Panayiotis Panoulias, Jersey City, N. J. Original application filed July 19, 1913, Serial No. 779,985. Divided and this application filed May 15, 1918. Serial No. 234,642. 24 Claims. (Cl. 193—48.)

1. The combination of a box having an outlet, a table adjacent to said box, and adapted to receive articles discharged from said outlet, chains having portions extending lengthwise of said table adjacent thereto, and cross bars connecting said chains and arranged to move lengthwise over said table and under the outlet of said box, said bars being arranged to move between the chains and the table.



1,378,504. LOCK. ISAAC WHITE, Wilmington, Del. Filed June 30, 1920. Serial No. 392,974. 7 Claims. (Cl. 70—29.)

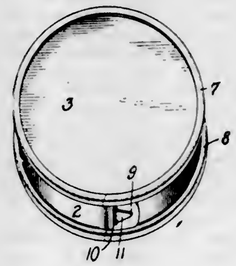


1. A lock having a casing, a sliding bolt, a spring actuated lever pivoted to the casing, a detent on said lever, a plurality of recesses in the bolt arranged to be engaged by the detent to lock the bolt in different positions, and means on the lever for maintaining the bolt under spring pressure in one direction when in one position.

1,378,505. COMBINATION CHAIR AND COT. JOHANNAH L. WHITE, Chicago, Ill. Filed Jan. 16, 1918. Serial No. 212,009. 3 Claims. (Cl. 155—45.)

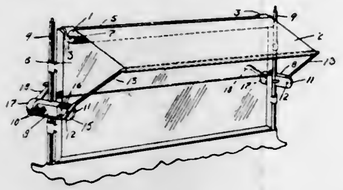
1. A portable, convertible cot and chair comprising seat, foot extension, and back sections foldable against and upon each other, the latter provided with a foldable head section, constructed with means to be adjusted as a chair and cot, and pairs of supporting legs hinged to the seat, foot, and back sections, the latter permanently hinged to the back section below the hinge between the back and head sections, said legs being permanently spaced on and adapted to be folded against the respective sections.

1,378,506. ELASTIC-FLUID TURBINE. OSKAR ANTON WIBERG, Finspong, Sweden, assignor, by mesne assignments, to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden, a Corporation. Filed Feb. 19, 1920. Serial No. 360,009. 9 Claims. (Cl. 253—16.5.)



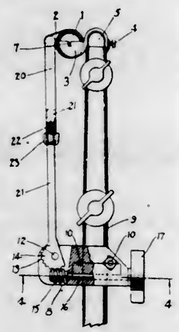
1. The combination with an elastic-fluid turbine having a rotor, of means forming an ejector for causing cooling fluid to circulate adjacent said rotor.

1,378,507. HELICAL-SPRING BELT. HENRY J. WIEGAND, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed July 19, 1919. Serial No. 312,031. 2 Claims. (Cl. 74—66.)



2. The combination with a helical spring belt, of a threaded rawhide member having its opposite ends threaded into adjacent portions of said belt to secure the same together.

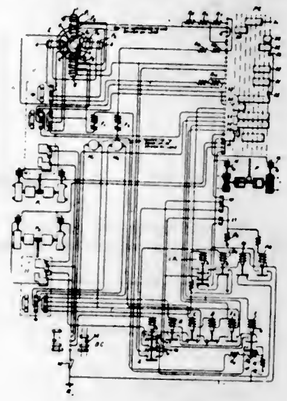
1,378,508. BOX OR RECEPTACLE. OSCAR WOODWARD, Babylon, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Oct. 22, 1917. Serial No. 197,853. 4 Claims. (Cl. 220—61.)



1. A knockdown box consisting of two heads and a flexible binding strip which constitutes the body of the box, the ends of the binding strip being provided with locking devices which when operative enable said strip to exert a clamping effect around said heads, said binding strip having annular seats which receive the heads and maintain them a fixed distance apart.

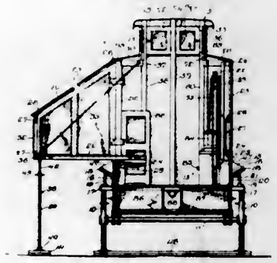
1,378,509. WINDSHIELD-SHADE. JOSEPH ACKERLAND, Minneapolis, Minn., assignor to George M. Seemann, Minneapolis, Minn. Filed Apr. 13, 1920. Serial No. 373,620. 5 Claims. (Cl. 296—95.)

1. In a wind-shield, a flexible shade, a spring-actuated shade-roller having one end of the shade secured thereto and normally tending to wind the shade thereon, means operatively to mount said roller adjacent the top of said wind-shield, a member connected to said shade near its opposite end to stretch the shade in forwardly extended position across the wind-shield as the shade is unrolled, a pivotal mounting for said member adjacent said wind-shield, and means bodily movable to engage said member on opposite sides of the pivot thereof whereby the shade may be held in rolled-up or extended positions.



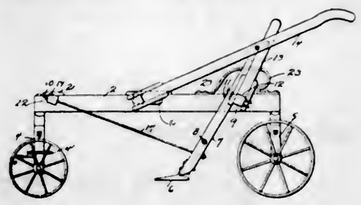
1,378,510. WINDSHIELD-SHADE. JOSEPH ACKERLAND, Minneapolis, Minn., assignor to George M. Seemann, Minneapolis, Minn. Filed July 2, 1920. Serial No. 393,546. 3 Claims. (Cl. 296—95.)

3. In a wind-shield, a flexible shade, a spring-actuated shade-roller having a fixed pivot, said shade roller having one end of the shade secured thereto and normally tending to wind the shade thereon, detachable brackets having ends fitted over the top of the wind shield and in which the roller pivot is held, a member connected to said shade near its opposite end to stretch the shade in forwardly extended position across the wind-shield as the shade is unrolled, a bearing support for said member adapted to project forwardly of the wind-shield and shaped pivotally to bear the terminal portion of said member, an element movably borne by said support and forwardly terminating adjacent said pivotal bearing, means on said member and element adjacent said pivotal bearing cooperable, upon movement of said element, to move the member to and maintain the same in a plurality of shade-extending positions.



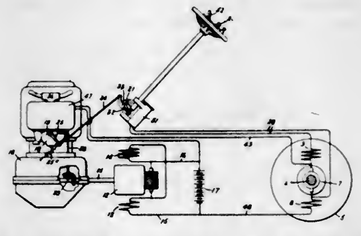
1,378,511. ELECTRICAL SYSTEM OF POWER TRANSMISSION AND REGENERATIVE BRAKING. CLINTON J. AXTELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1919. Serial No. 303,603. 9 Claims. (Cl. 172—179.)

1. The combination in a regenerative control system of a source of supply, a dynamo electric machine comprising an armature and a series field winding, the said machine having its armature and series field winding connected in series to the source of supply and adapted to operate as a motor to drive a load or as a generator to brake a load by delivering energy to the source of supply, an exciter connected to the load and driven thereby sup-



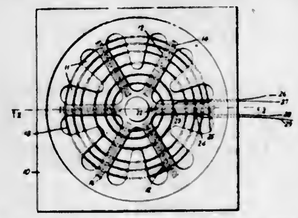
plying the excitation for the series field of said machine during generator operation, the said exciter having inherent means comprising a main field winding energized responsively to the voltage of the source and a differential winding energized responsively to the regenerated current for automatically regulating the regenerated current to produce a predetermined braking effect on said load.

1,378,512. CAMPING-VEHICLE. FOREE BAIN, La Grange, Ill., assignor to The Miami Trailer Company, a Corporation of Ohio. Filed Nov. 10, 1919. Serial No. 336,937. 6 Claims. (Cl. 296—23.)



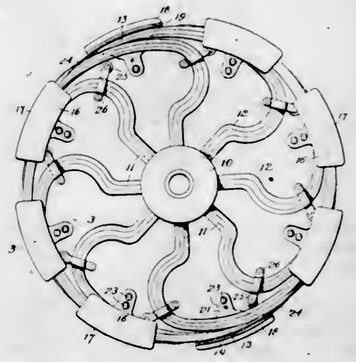
4. A camping vehicle having in combinative association a body; a bed frame hinged at its ends near one side of the body to swing outwardly into horizontal position and to swing inwardly into vertical position within said body; a side panel, the side wall of the body when closed, hinged at its upper edge to swing upwardly to provide a roof for the bed frame when the latter is extended and to swing into vertical position to close the body when the frame is in vertical position; an extension panel hinged to the bottom edge of the side panel, adapted to swing into vertical position when the panel is extended, and to swing upwardly, parallel with the side panel, when the latter is in vertical position, and two end doors hinged to swing outwardly to close the opening at the ends of the bed frame when the latter and the said side panel are extended and to swing inwardly into positions between said frame and side panel when said frame and panel occupy substantially vertical positions.

1,378,513. COTTON-CULTIVATOR. JAMES SAMUEL BARNETT, Dallas, Tex. Filed May 6, 1920. Serial No. 379,412. 1 Claim. (Cl. 97—48.)



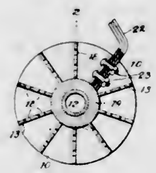
A device of the class described comprising a main frame mounted upon trucks, handle members mounted upon the frame, a stock beam and hanger supported from the handle members and a support for the stock beam mounted on the frame, said support being mounted transversely of said stock beam and positively limiting the upward movement of said beam beyond the top of said support.

1,378,514. DRIVING SYSTEM FOR AUTOMOBILES. SVEN R. BERGMAN, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 9, 1918. Serial No. 221,462. 2 Claims. (Cl. 290—16.)



1. In a system of the character described, the combination of an engine, a generator driven thereby, a storage battery, a motor connected to the generator and battery, a conduit having two branches through which operating fluid flows in parallel to the engine, a valve in one of said branches which is normally open and is moved toward closed position when the speed of the engine increases, a valve in the other branch which is normally closed and is moved toward open position when the load increases, and a manually controlled valve in said conduit in series with and in advance of said first named valves as regards the flow therethrough.

1,378,515. ELECTRIC HEATING DEVICE. ARTHUR FRANCIS BERRY, London, England, assignor to General Electric Company, a Corporation of New York. Filed Dec. 26, 1917. Serial No. 208,782. Renewed Sept. 8, 1920. Serial No. 409,032. 6 Claims. (Cl. 219—37.)

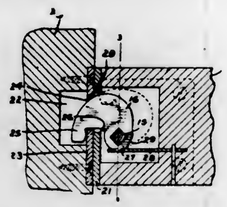


1. An electric heater comprising a bare resistance element, means carrying said element, and a metal plate provided with openings separated by ribs covering said means.

1,378,516. SPRING-WHEEL. WILLIAM J. BEISEL, Brooklyn, N. Y. Filed May 20, 1918. Serial No. 235,681. 7 Claims. (Cl. 152—29.)

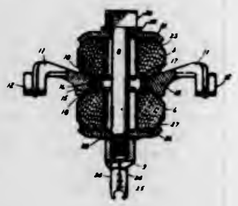
2. A spring wheel for vehicles comprising a hub and a series of leaf spring spokes secured thereto having radial inner portions and being bent in the plane of the wheel at a sharp angle at points uniform distances from the hub and the outer portions from that point outwardly being bent on a gradual curve until they pass back across the radial lines of the inner portions with the outer ends tapering in thickness with the outer leaf of each spoke longest and the radius of the curve gradually increasing until the tip ends of adjacent spokes rest on each other forming a practically continuous circular rim and adapted to move radially and circumferentially on each other without breaking the continuity of the rim and tire retaining members clamped to said spokes near their outer ends and projecting beyond the margin of said rim to hold a tire in place without interferring with the relative longitudinal and radial movement.

1,378,517. WHEEL-HUB. WILLIAM J. BEISEL, Port Richmond, N. Y. Filed May 20, 1918. Serial No. 235,682. Renewed Oct. 5, 1920. Serial No. 414,828. 4 Claims. (Cl. 21—31.)



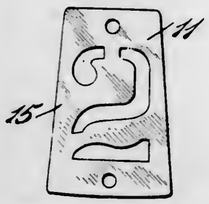
1. A wheel hub comprising a wooden core, metal end plates fitting against the ends of said core and radially arranged metal plates rigidly connected to said end plates and extending along and outwardly from said wooden core.

1,378,518. COMBINED CRIB AND BED CONSTRUCTION. CHARLES H. BOARDMAN, Columbus, Ohio. Filed Sept. 27, 1920. Serial No. 413,148. 2 Claims. (Cl. 5—58.)



1. In a bed of the class described, spaced head and foot members, a side frame positioned between said members, a lock for connecting said side frames with said members, said lock comprising a hook shaped lock member pivotally mounted within a recess formed in one of the ends of said frames, a keeper plate having an opening formed there-

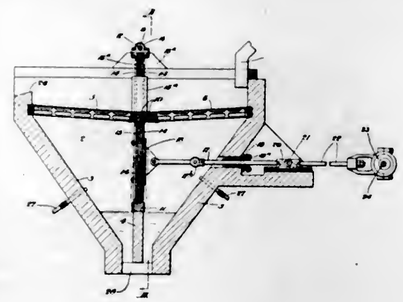
in carried by one of said members and arranged to receive the hook-shaped locking extremities of said lock member,



an actuating shaft for said lock member, and a spring for maintaining said lock member in active or inactive positions.

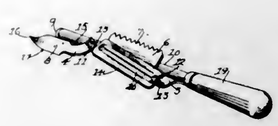
1,378,519. SUSPENSION FOR TROLLEY-WIRES AND THE LIKE. GEORGE W. BOWER, Schenectady, N. Y assignor to General Electric Company, a Corporation of New York. Filed Oct. 19, 1920. Serial No. 418,091. 6 Claims. (Cl. 191—42.)

5. In combination, a yoke having a central opening and supporting pads on opposite sides, annular insulators resting on said pads, a bolt extending through the openings in said insulators and yoke, said bolt having a head and a threaded end, and a trolley ear screwed on said threaded end, the insulators being clamped between said bolt head and trolley ear.



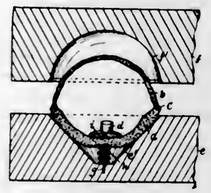
1,378,520. STENCIL-CHARACTER PUNCH AND PROCESS OF MAKING SAME. ANDREW J. BRADLEY, New York, N. Y. Filed Jan. 10, 1921. Serial No. 436,127. 6 Claims. (Cl. 101—28.)

1. The process of making stencil character punches which comprises welding of the cutting members to a thin welding strip and mounting said strip on a suitable base.



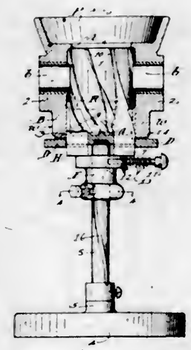
1,378,521. COAL-WASHER. WILLIAM BRINLEY and WALTER COLLINS, Benton, Ill. Filed Feb. 11, 1921. Serial No. 444,179. 4 Claims. (Cl. 83—79.)

1. Coal washing apparatus, comprising a tank, a pair of coal supporting screens arranged transversely of the tank and sloping upwardly and downwardly from the ends thereof; a pendulum plunger having upwardly extending hangers formed integral therewith and journaled on a



transverse shaft, said shaft being mounted in bearings located above the tank, and means for oscillating said plunger.

1,378,522. CULINARY IMPLEMENT. CHARLES H. CARTER, Brooklyn, N. Y., assignor to Montagu M. Sterling, Brooklyn, N. Y. Filed Oct. 22, 1919. Serial No. 332,489. 3 Claims. (Cl. 30—20.)

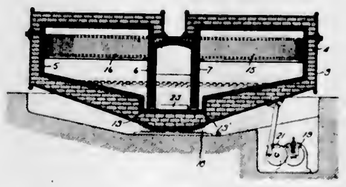


1. A culinary implement having a body portion and two journal bearings, one of which is resilient and adapted to be flexed out of normal position for the insertion and removal of a blade; and a cutting blade mounted in said bearings.

1,378,523. METHOD OF FORMING HOLLOW RUBBER ARTICLES. FRANK A. CIGOL, Paterson, N. J. Filed July 31, 1920. Serial No. 400,318. 2 Claims. (Cl. 18—59.)

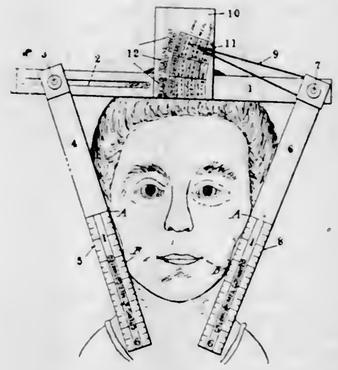
1. The method of forming a hollow rubber article having a relatively infusible insert embedded therein which consists in first forming a closed hollow rubber body and in the forming thereof immuring therein a gas-forming substance, then placing said hollow body and the naked insert in a closed mold detached from each other and then subjecting the mold to vulcanizing heat until the gas generated from said substance by the heat expands and fuses said body in the mold and causes the material thereof to flow over the surface of and thus come to embed the insert therein.

1,378,524. CORE-BOX FOR PISTONS. EDWARD W. CLARK, Los Angeles, Calif., assignor of one-fourth to Stanley S. Turner, one-fourth to Susie M. Clark, and one-fourth to Violet E. Turner, Los Angeles, Calif. Filed Aug. 19, 1920. Serial No. 404,675. 20 Claims. (Cl. 22—10.)



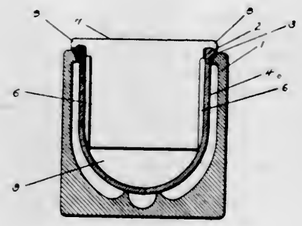
2. A core box having a body, and a relatively movable member therein for forming spiral recesses in the periphery of the core produced thereby.

1,378,525. PAPER-CLIP. CLARENCE C. COLLETTE, Amsterdam, N. Y. Filed Apr. 25, 1919. Serial No. 292,706. 1 Claim. (Cl. 24—261.)



A clip for sheet material comprising a U-shape member having returned leg portions, the portions of the clip lying in the same plane, one of the legs of the U and its returned portion lying wholly within, beside and parallel to the other leg and the returning portion of the said other leg, the return portion of the said other leg of the U lying without and beside the first named leg of the U, sharp pointed projections located on opposite sides of the legs of the U and the returned portions thereof, the projections of opposite sides of the clip being alternately located along the clip and so that the projections on one side will be located at points along the clip intermediate the projections on the opposite side when the legs of the U and their returned portions clamp opposite sides of the sheet material.

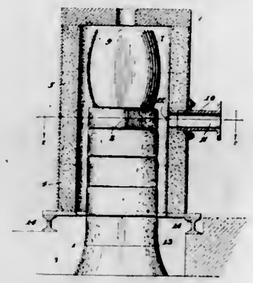
1,378,526. MELTING-FURNACE. EDGAR F. COLLINS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 10, 1920. Serial No. 350,487. 6 Claims. (Cl. 204—64.)



1. An electric furnace comprising a chamber adapted to contain a pool of molten material, electric heating means in said chamber, a second chamber adapted to receive charges of unfused material, said chambers being connected by a conduit and means for causing currents of molten material to be interchanged through said conduit between said chambers thereby subjecting unfused material to the washing action of molten material while retaining solid impurities in the second chamber.

1,378,527. GAGE FOR SELECTING ARTIFICIAL TEETH. WILLIAM C. DALBEY, Du Quoin, Ill., assignor, by mesne assignments, to Dentists' Supply Company, a Corporation of New York. Filed Apr. 21, 1919. Serial No. 291,676. 8 Claims. (Cl. 33—98.)

7. In a gage for selecting artificial teeth to be used in dentures, the combination of means adjustable to the angular conformation of the human face, with a chart having tooth form designations thereon to correspond to the requirement of faces of different shapes, said chart and adjustable means coöperatively arranged for indicating upon the chart the proper tooth form for the particular angular conformation of the human face.



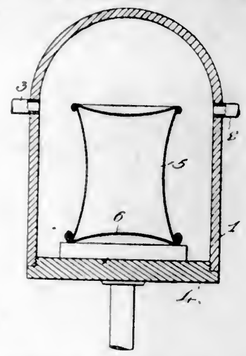
1,378,528. PITCH-POT. ARTHUR E. DEMERS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 10, 1919. Serial No. 337,062. 2 Claims. (Cl. 126—284.)

1. An optical pitch pot comprising a container for the pitch, an inclosing member providing a heating chamber therefor encircling the container, said container having an exteriorly flared portion interlocking with the inclosing member and having interiorly projecting ribs and a combination partition and scraper member having a de-

pending portion spanning the pot and slidably received between the ribs and having laterally projecting portions engaging the flaring edge of the pot for limiting the downward movement of the partition, said member being further provided with an upwardly projecting scraper portion, substantially as illustrated.

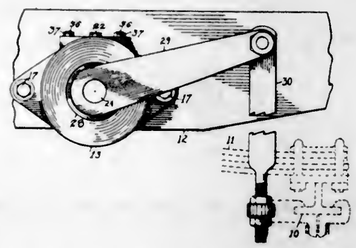
1,378,529. FURNACE. JOHN DOERSOM, Columbus, Ohio. Filed June 19, 1919. Serial No. 305,256. 2 Claims. (Cl. 263—14.)

1. In a flame heated furnace, a foundation including an open pit, a pedestal of refractory material arising vertically from said foundation and capable of supporting a crucible on the top thereof, an open bottomed casing located above said pit and formed to surround said pedestal and crucible for the purpose of defining a heating chamber, said latter having its lower end in open communication with said pit, and flame introducing means entering said casing at a position immediately below said crucible and substantially midway of the height of said casing.



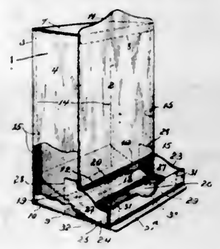
1,378,530. TOOTHBRUSH. LEO E. EVSLIN, New York, N. Y. Filed Jan. 23, 1919. Serial No. 272,668. 1 Claim. (Cl. 15—39.)

A tooth brush comprising a tubular handle, a tubular member removably carried thereby and extending forwardly therefrom, said member being bent slightly intermediate its ends to form an obtuse angle, a brush head carried by said member, and means for locking said brush head against movement relatively to the handle, said means comprising a flattened member removably carried by the handle and engaging the brush head, said flattened member passing through the tubular handle and the tubular member and that part passing through the tubular member being carried so as to bring a flattened face thereof against the inner wall of the tubular extension.



1,378,531. METHOD OF STERILIZING CANNED GOODS. WILLIAM B. FENN, New York, N. Y. Filed July 15, 1920. Serial No. 396,559. 4 Claims. (Cl. 99—15.)

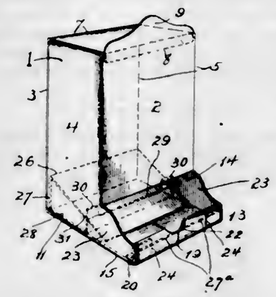
1. The process of sterilizing canned goods which consists in placing an unsealed can in a position other than its top-side up position, then subjecting the can and its contents to steam under pressure, so that the steam enters into the



can and agitates the contents thereof, then shifting the can to its normal top-side up position, and finally completely sealing the can.

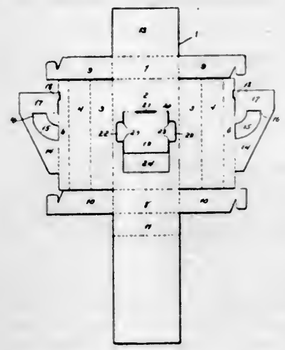
1,378,532. SHOCK-ABSORBER. FRANK H. FIELD, Jamestown, N. Y. Filed July 1, 1920. Serial No. 393,451. 3 Claims. (Cl. 188—89.)

1. A shock absorber connected to the running gear of a vehicle comprising a casing having a semi-circular chamber therein, a blade piston rotatably mounted in said chamber to be actuated by said running gear, a liquid reservoir above said chamber having passages to each end of said semi-circular chamber, and a plurality of valves in said passages to each end of said chamber to adjustably control the action of said blade piston.



1,378,533. DISPENSING AND DISPLAYING CARTON. RAY H. FITZ GERALD, Pittsburgh, Pa. Filed June 23, 1919. Serial No. 306,196. 5 Claims. (Cl. 229—17.)

1. The combination with the body of a carton having a discharge opening, of a tray communicating with said discharge opening, an inclined bottom platform, and baffle tongues projecting upwardly from said inclined bottom platform rearwardly of said discharge opening.

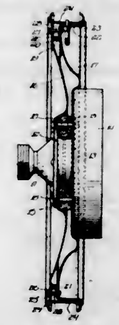


5. The combination with the body portion of a carton having a discharge opening and a bottom extension below said opening, of a tray mounted on said bottom extension, said tray made from a single blank and comprising a bottom, a folded front, end members connected with the body of the carton, and tongues projecting from the end members and entering between the folds of the front of the tray.

1,378,534. DISPENSING AND DISPLAYING CARTON. RAY H. FITZ GERALD, Pittsburgh, Pa. Filed June 23, 1919. Serial No. 306,197. 2 Claims. (Cl. 229—17.)

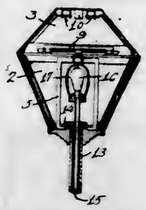
2. A blank for a carton comprising front, back, side, and bottom members, portion of the front member cut away forming a discharge opening and end members for a tray, an extension from the bottom member to form the bottom of a tray and a portion of said extension being foldable upon itself to form a front for said tray, the portions forming the ends of the tray having tabs to enter between the folds of the front of the tray, and the portions forming the ends of the tray having tongues to overlie the bottom of the tray and said tongues having other tongues to enter between the folds of the front of the tray.

1,378,535. DISPLAY-BOX. RAY H. FITZ GERALD, Pittsburgh, Pa. Filed June 23, 1919. Serial No. 306,198. 5 Claims. (Cl. 206—44.)



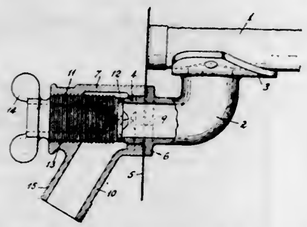
1. In a display box, the combination with a bottom member, having an opening, end members, and side members, of easel members integral with the side members and insertible through the opening in the bottom member, and an easel member integral with the bottom member and extending between and connected with the first-mentioned easel members.

1,378,536. OUTAGE-GAGE. EDWARD J. FLYNN, Parkersburg, W. Va., assignor to Standard Oil Company, (Inc. in N. J.) Filed Dec. 15, 1919. Serial No. 344,785. 3 Claims. (Cl. 73—121.)



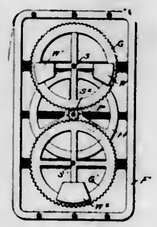
1. An outage gage comprising a tubular body slotted lengthwise throughout one side, a slide telescoping within the body and extendable beyond, a laterally extending foot on the outer end of both the body and the slide, said feet extending in relatively opposite directions, a lifting hook secured to the slide and projecting through the body slot, and a latch pivoted to the body on one side of the slot and adapted to swing across the slot in the path of the projecting hook to engage the same and thereby hold the slide within the body.

1,378,537. DISK WHEEL. GEORGE H. FORSYTH, Chicago, Ill. Original application filed Nov. 26, 1918, Serial No. 264,253. Divided and this application filed Feb. 21, 1921. Serial No. 446,860. 8 Claims. (Cl. 301—63.)



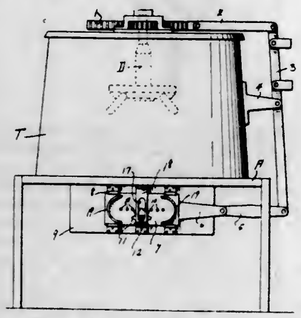
1. In a wheel, the combination of a hub portion, a tire-carrying portion, a medial disk portion provided with a step adjacent its periphery, and a tire-retaining member having a fulcrum bearing at its inner edge upon the step.

1,378,538. ADVERTISING DEVICE. ISSIC H. GARSON, Detroit, Mich. Filed July 12, 1917. Serial No. 180,122. 2 Claims. (Cl. 40—77.)



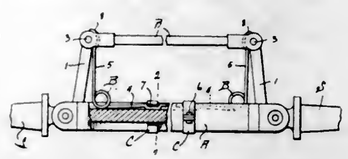
1. An advertising device for holding a series of transparent films for display comprising a several sided lamp structure having a base part open at the top and a separable top part, each side of the base having an opening therein and being provided with grooves on each side of the opening interiorly of the base and in parallel relation for supporting the film, said top part also having apertured sides corresponding in number to the number of apertured sides of the base providing a cover therefor, spring-actuated members on the upper and lower ends respectively on each of the apertured sides of the top interiorly thereof adapted to hold a transparency, and an illuminating means within the structure.

1,378,539. FAUCET. ROBERT E. HAINES, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 22, 1920. Serial No. 375,846. 4 Claims. (Cl. 251—156.)



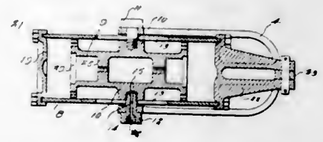
2. In a faucet, a base member having a flange and a valve seat whose face is on a tubular projection and thereby spaced away from said flange, in combination with a tubular spout member having a flange and carrying a screw-plug adapted to engage said face, said flanges having alining openings, said tubular projection entering said tubular spout member with a sliding fit and surrounding the axis of said valve seat, and means in said openings for securing said flanges together in definite relation to one another.

1,378,540. GRADOMETER. SIDNEY WILSON HALL, San Antonio, Tex. Filed May 13, 1920. Serial No. 381,125. 2 Claims. (Cl. 33—215.)



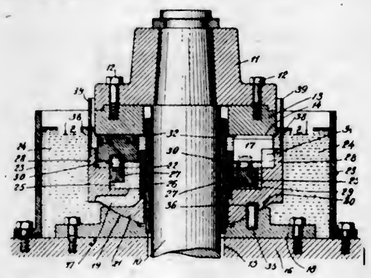
2. A gradometer comprising, a gear, weights carried at diametrically opposite points upon said gear and disposed below the center of support of the same, a second gear spaced from the first gear, a weight carried by the second gear and disposed below the center of support of such gear, a pinion interposed between the gears and meshing with the same, and an indicating wheel movable by said pinion, for the purpose described.

1,378,541. WASHING-MACHINE. ORLA L. HUFFMAN, Weatherford, Tex. Filed Jan. 27, 1920. Serial No. 354,442. 1 Claim. (Cl. 74—27.)



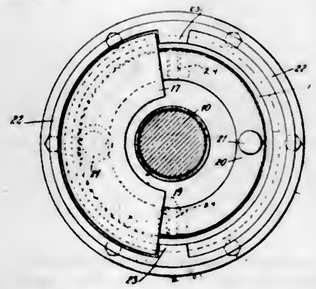
In combination with a body, means for supporting said body at an elevation, a vertically disposed rotatable member carried by said body and extending thereabove, a vertically disposed rock lever supported by the body to one side thereof, a rack slidably supported upon the body and coacting with the rotatable member to rotate said member upon reciprocation of the rack, an operative connection between the lever and the rack whereby the rack is reciprocated upon swinging movement of the lever, a plate depending from the bottom of the body, a second plate supported for slidable movement by the first named plate, a plurality of alined pins projecting outwardly from the second plate, arcuate guide members carried by said second plate adjacent the end pins, a bracket depending from the bottom of the body and provided with a vertically disposed slot, a rotatable and vertically oscillating shaft extending through the slot of the bracket, a pinion carried by the shaft for engagement with the pins, said shaft extending beyond the pinion for contact with the arcuate guide members, whereby said pinion engages the pins from above and below, and a link connecting the second named plate and the lower end portion of the lever so that the reciprocation of the plate by the pinion 11 rocks the lever.

1,378,542. STEERING ATTACHMENT. ORLA L. HUFFMAN, Weatherford, Tex. Filed Jan. 27, 1920. Serial No. 354,443. 1 Claim. (Cl. 280—94.)



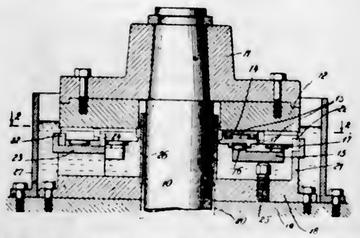
In combination with an axle provided in one of its faces with a longitudinally disposed recess, a steering spindle carried thereby and a spindle arm coacting with the spindle, a vertically disposed coil spring seated within the recess of the axle and held against vertical displacement by the walls of said recess, said spring being positioned inwardly of but in close proximity to the spindle arm, the opposite end portions of said spring being laterally extended to provide arms, one of said arms extending longitudinally of the axle, the second arm extending in the same general direction as the spindle arm and terminating in a hook bearing against the outer end portion of the spindle arm, and means for clamping the free end portion of the first named arm of the spring to the axle.

1,378,543. PUMP. FRANK JOHNSON, Aurora, Ill. Filed Sept. 11, 1920. Serial No. 409,512. 1 Claim. (Cl. 230—27.)



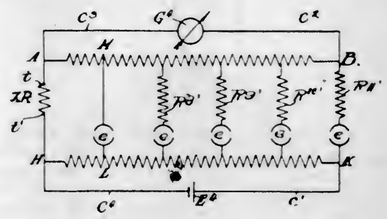
An air pump including a base having upstanding arms, a cylinder mounted between said arms and provided with longitudinal slots, bolts extending through said arms and slots for supporting the cylinder, a piston mounted within the cylinder and engaged by said bolts whereby longitudinal movement of the piston is prevented, check valves mounted on the opposite ends of said piston to permit alternate ingress of air through said valves upon movement of the cylinder, one of said bolts having a central bore communicating with the piston to withdraw the air from the latter.

1,378,544. BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Filed Mar. 25, 1916. Serial No. 86,535. 45 Claims. (Cl. 64—25.)



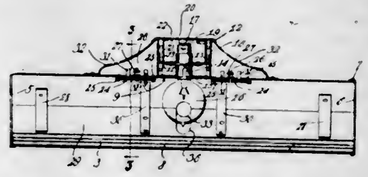
1. A thrust bearing comprising a plurality of tiltable bearing shoes or members, equalizing blocks each adapted to support a group of adjacent shoes, and means for distributing the load between the several equalizers.

1,378,545. THRUST-BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Original application filed Mar. 25, 1916, Serial No. 86,535. Divided and this application filed Aug. 29, 1917. Serial No. 188,726. 33 Claims. (Cl. 64—25.)



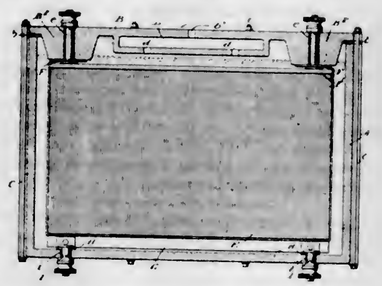
1. A thrust bearing comprising an equalizing member mounted to tilt about an axis extending through the axis of the bearing, and a pair of bearing shoes tiltably mounted on said member, one on each side of the bearing axis, on a line at right angles to the pivotal axis of said member.

1,378,546. BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Original application filed Mar. 25, 1916, Serial No. 86,535. Divided and this application filed Aug. 29, 1917. Serial No. 188,727. Renewed Sept. 21, 1920. Serial No. 411,810. 35 Claims. (Cl. 64—25.)



9. A thrust bearing comprising the combination of a base having an annular flange, a plurality of bearing shoes arranged in concentric rings within the flange, and equalizing blocks pivotally mounted on the base and so arranged that each of said blocks supports two shoes of one ring and one shoe of the other ring, with webs extending inwardly from the base flange between the blocks and having lugs extending upwardly between the shoes of the inner group, and other lugs extending inwardly from the said flange between the shoes of the outer group.

1,378,547. RESISTANCE MEASUREMENT. HENDRIK ABRAHAM WIJNAND KLINKHAMER, Hengelo, Netherlands. Filed Apr. 24, 1920. Serial No. 376,409. 5 Claims. (Cl. 175—183.)

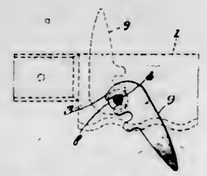


1. An arrangement for the direct reading of electrical resistances comprising a main circuit including the resistance to be measured, a branch resistance circuit including an ammeter associated with said main circuit, a second branch resistance circuit including a source of current supply associated with said main circuit and said first mentioned branch circuit, and means for varying the resistance of said main circuit and the degree of coupling thereof with respect to said branch circuits, whereby different reduction factors are obtained for the same division of the scale of said ammeter.

1,378,548. ILLUMINATOR FOR LICENSE-PLATES. WILLIAM H. LYNCH, Berkeley, Calif. Filed June 16, 1920. Serial No. 389,526. 2 Claims. (Cl. 40—132.)

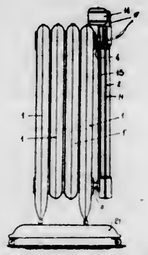
1. An illuminating attachment for license tags including a housing having an outlet slot, an extension housing, a plate insertible into the extension housing, a lamp socket carried thereby, a reflector connected to the plate by said socket, a lamp supported by the socket and within the housing, a cover plate for the extension housing, means carried thereby for holding the plate in the extension housing.

1,378,549. BATTERY. ARTHUR P. MANCHESTER, Providence, and HARRY M. SPOONER, Cranston, R. I. Filed Dec. 16, 1912. Serial No. 736,969. 1 Claim. (Cl. 204—38.)



An electrode for batteries formed of cupric oxid (CuO) cuprous oxid (Cu_2O) and the residua of a saccharine binder, the volatile and combustible elements of which have been eliminated by heat.

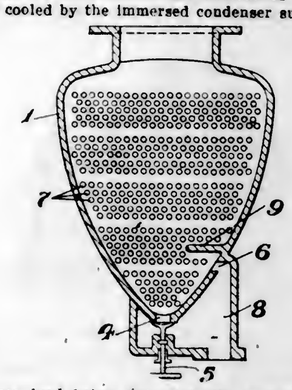
1,378,550. NAIL HOLDING AND SPACING DEVICE. ELI J. MILLER, York, Pa. Filed Oct. 5, 1920. Serial No. 414,903. 7 Claims. (Cl. 1—56.)



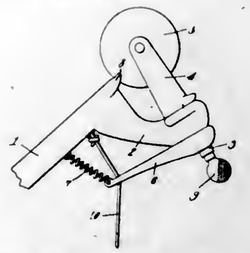
2. As a new article of manufacture, a nail-holding and spacing strip consisting of a strip of rubber of width and thickness suitable for holding nails, said strip provided with recesses along one edge and communicating with a face of the strip, and nails arranged in said recesses.

1,378,551. KNIFE DIRECTOR AND GUIDE-GAGE. ELI J. MILLER, York, Pa. Filed Oct. 21, 1920. Serial No. 418,539. 5 Claims. (Cl. 30—20.)

2. In a knife director and guide for slicing bread, in combination, a knife blade, a screw threaded post clamped to said knife blade at the handle end of said blade, means on said post for adjusting a guide to and from the knife blade, and means for clamping said guide in its adjusted position, said guide adapted to touch the face of the loaf about to be cut in order to determine the cutting position of the knife blade, and to be withdrawn from contact with said face at the termination of the cutting stroke or strokes.



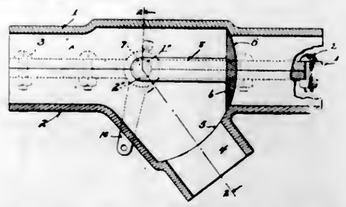
1,378,552. ELECTRIC-HEATED THERMOSIPHON-RADIATOR. GIOVANNI MONTE, Turin, Italy. Filed Dec. 20, 1919. Serial No. 346,349. 8 Claims. (Cl. 219—38.)



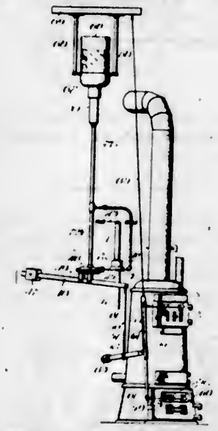
1. A device for heating thermosiphon radiators comprising a casing arranged parallel with and adjacent to the radiator sections, means connecting the upper and lower ends of said casing with the adjacent ones of said radiator and a plurality of electrically heated means, each extending from the top to the bottom of said casing, the heat developed by said means heating the water and maintaining it in circulation through said radiator and casing around said heating means.

1,378,553. APPARATUS FOR CONDENSING STEAM. DONALD B. MORISON, Hartlepool, England. Filed Dec. 5, 1918. Serial No. 265,471. 13 Claims. (Cl. 257—33.)

1. A steam condenser having a restricted outlet proceeding from its base and means for controlling said outlet whereby at any predetermined steam load, determined by the setting of the controlling means for the outlet, the condensate can flow away freely and be uncooled but as the steam load increases beyond the predetermined load condensate will collect in the bottom of the condenser and be cooled by the immersed condenser surface, increasing steam load being automatically accompanied by increasing depth of immersion of condenser surface.

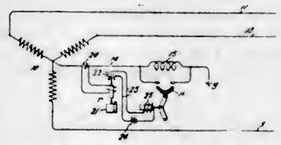


1,378,554. TROLLEY. GEORGE B. NUSSBAUM, New Philadelphia, Ohio. Filed Dec. 1, 1920. Serial No. 427,532. 3 Claims. (Cl. 191—74.)



1. In a trolley the combination with a pole and an arm extending from the end thereof and offset relative thereto, of a harp mounted to rotate on and supported by the arm, a trolley wheel journaled within the harp, oppositely extending guard fingers upon the pole and concentric with the axis of rotation of the harp, the ends of the fingers normally extending past the periphery of the wheel, an arm mounted to swing with the harp, means for holding the harp and wheel in a predetermined position relative to the pole.

1,378,555. MUFFLER. PAUL O'SULLIVAN, Milwaukee, Wis. Filed Feb. 10, 1921. Serial No. 443,908. 1 Claim. (Cl. 251—18.)

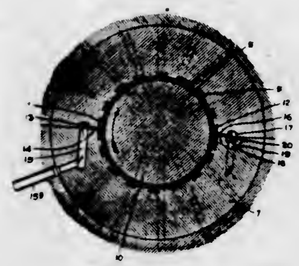


A cut-out valve comprising a tubular shell forming a main gas passage, the shell embodying a pair of longitudinal separable units having companion recesses forming a crank bearing, one of the units having an integral angular nozzle radially disposed with relation to the bearing, the nozzle and main passage formed by the shell units being provided with a common uninterrupted circular valve track, concentrically disposed with relation to the crank bearing, a one-piece valve head engageable with the track and adapted to selectively close the main passage of the shell or nozzle, the one-piece valve head including integral crank straps terminating with studs journaled in the shell bearings, one of which carries an actuating arm.

1,378,556. HEAT-REGULATOR. THOMAS O. PERRY, Oak Park, Ill. Filed Oct. 31, 1918. Serial No. 260,542. 10 Claims. (Cl. 236—87.)

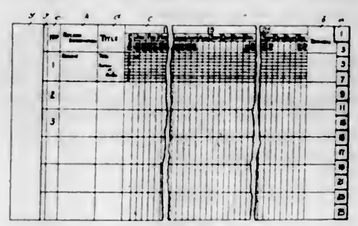
10. In a heat regulator, the combination with a motor whose actuations are thermostatically controlled, of two dampers one of which is self-closing, a damper yoke extending between said dampers with pivotal connection at either end with each damper, a lateral arm extending from the side of said yoke and operative connection between said arm and said motor, whereby angular movement imparted by said motor to said yoke about either pivotal connection may open or close the other damper, substantially as herein set forth.

1,378,557. ELECTRICAL SYSTEM. ERNEST W. PRAGST, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 30, 1920. Serial No. 399,985. 7 Claims. (Cl. 175—294.)



1. The method of protecting systems of electrical transmission and distribution which consists in connecting reactance in the connection from the neutral of the system to ground and in short circuiting the same when a fault to ground which has developed in the system endures more than a predetermined period of time.

1,378,558. WINDOW-GUIDE. PAUL RISSMAN, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Aug. 5, 1920. Serial No. 401,428. 6 Claims. (Cl. 20—52.1.)

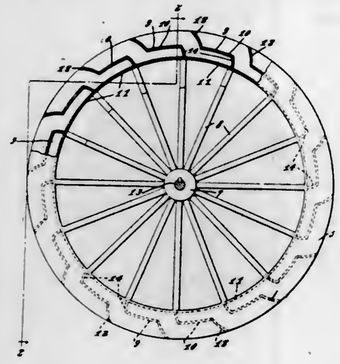


5. In closed body construction, a window guide in the form of a sheet metal channel having walls of spring material provided with struck-in lips at spaced points.

1,378,559. BEARING AND METHOD OF LUBRICATING SAME. JAMES L. ROBERTS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 1, 1919. Serial No. 293,900. 7 Claims. (Cl. 64—24.)

1. The combination with a shaft and a bearing on which it rotates, of means for feeding lubricant to the bearing surface on the side of the bearing at which the direction of movement of the shaft is upward, and means for discharging lubricant from the other side of the shaft, whereby said shaft acts as a pump to pump lubricant through the bearing to lubricate and cool it.

1,378,560. DIARY. GEORGES HENRI ROBICHON, Three Rivers, Quebec, Canada. Filed Apr. 3, 1918. Serial No. 226,541. 1 Claim. (Cl. 283—1.)

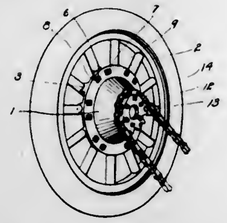


A diary comprising sheets, each ruled to provide vertical columns, each of which is provided with month designations, each of said month columns being ruled to provide two sub-columns provided with calendar designations other than months, the sheet being further ruled to provide two columns at one side of and adjacent the first-mentioned columns and a number column adjacent one of said two columns, horizontal lines intersecting all of the columns forming horizontal rows, subject matters designations being provided for said last-mentioned columns all of said designations being disposed at the top of the sheet.

1,378,561. WATER-WHEEL. CAIUS A. ROWLETT, Palmetto, Fla. Filed Nov. 26, 1919. Serial No. 340,718. 1 Claim. (Cl. 170—111.)

A water wheel including circular plates, a hub, means for providing connection between the circular plates and hub, a plurality of pockets supported between the plates, each of said pockets including a circumferentially extending wall, a curved member having connection with the inner edges of the circular plates, and forming one of the walls of the pockets, said circumferentially extending walls of the pockets being disposed in spaced relation

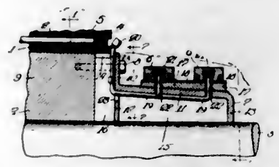
with the curved member, one end of each circumferentially extending walls having connection with the curved



member, and a curved wall forming a part of each circumferentially extending wall to provide a mouth.

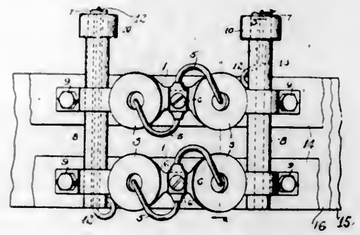
1,378,562. FLOTATION OF MINERALS. RALPH E. SAYRE, Pittsburgh, Pa., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed Jan. 25, 1921. Serial No. 439,832. 10 Claims. (Cl. 83—85.)

1. The method of effecting the concentration of minerals by flotation, which comprises adding to the mineral pulp a small amount of an aldehyde condensation product, and subjecting the resulting mixture to a flotation operation; substantially as described.



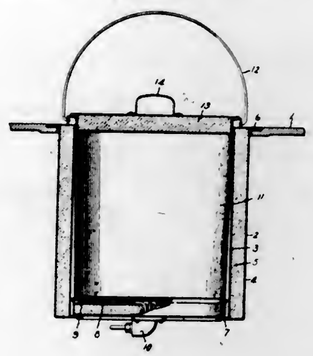
1,378,563. CLAMP FOR SPOKE-WHEELS. GEORGE L. SCHOFIELD, Kansas City, Mo. Original application filed July 1, 1918, Serial No. 242,911. Divided and this application filed May 10, 1920. Serial No. 380,169. 3 Claims. (Cl. 301—6.)

1. A sprocket supporting member comprising a shell having an inwardly projecting flange at one end, means for securing the sprocket to said flange and an outwardly projecting flange at the other end provided with spoke engaging seats and means for binding the seats and spokes together.



1,378,564. COLLECTOR-RING SUPPORT. THEODOR SCHOU and RICHARD L. BEHRENS, Mansfield, Ohio, assignors to The Ideal Electric & Manufacturing Co., Mansfield, Ohio, a Corporation of Ohio. Filed July 14, 1920. Serial No. 396,083. 4 Claims. (Cl. 171—322.)

1. In a dynamo-electric machine having collector rings, a collector ring support comprising an annular frame including a nearly cylindrical body part with end flanges thereon disposed inwardly to bear on the shaft and an outwardly disposed flange at its inner end, the last-men-

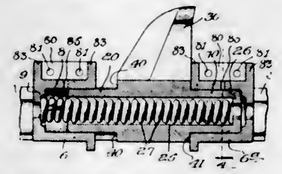


tioned flange being provided with a rim disposed toward the core of the machine whereby a housing is provided for the collector ring leads.

1,378,565. BRUSH-HOLDER. THEODOR SCHOU, Mansfield, Ohio, assignor to The Ideal Electric & Manufacturing Co., Mansfield, Ohio, a Corporation of Ohio. Filed July 14, 1920. Serial No. 396,251. 9 Claims. (Cl. 171—324.)

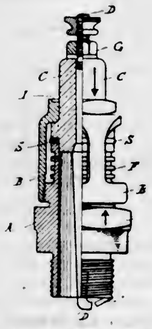
6. In combination a plurality of insulated collector rings disposed side by side, a pair of studs spaced outward therefrom, parallel with the ring axis and equidistant therefrom, and a plurality of oblong multiple-box brush holders disposed side by side opposite said rings respectively, supported on said studs and insulated therefrom.

1,378,566. ELECTRIC COOKER. JACOB L. SHROYER, Oak Park, Ill., assignor to General Electric Company, a Corporation of New York. Filed Sept. 19, 1919. Serial No. 324,902. 6 Claims. (Cl. 219—35.)



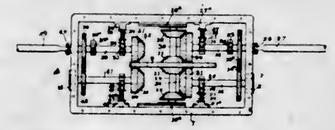
1. A cooker for ranges and the like comprising a cooking utensil having a heat insulating cover, a heat insulating bottom for the utensil having a heating unit in heat conductive relation therewith and a heat insulating casing surrounding the utensil and coöperating with the cover and the bottom to completely inclose the utensil.

1,378,567. STRAP CONNECTION FOR JACQUARD DEVICES. HERBERT SIESHOLTZ, Allentown, Pa. Filed Oct. 4, 1920. Serial No. 414,528. 4 Claims. (Cl. 139—80.)



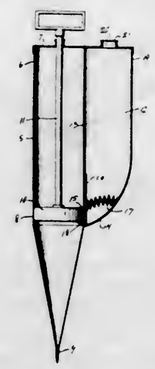
1. A harness connecting link for Jacquard looms comprising a pair of lengthwise shiftable parallel arms having hooks at their outer ends and having overlapping inner ends, a spring embracing the said overlapping ends and loosely engaged by the inner end of one of the arms, the other of said arms having an inwardly opening bend in which a portion of the spring is seated whereby the spring may be rotated to shift the same with respect to the said arm.

1,378,568. CAR-STOP. GEORGE N. SIMPSON and RAY W. WILLIAMS, Chicago, Ill., assignors to Car Dumper & Equipment Company, a Corporation of Illinois. Filed Feb. 5, 1921. Serial No. 442,750. 5 Claims. (Cl. 104—252.)



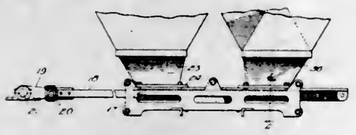
1. In a car stop, a rail, a pair of boxes attached to the rail, a hollow spindle slidably mounted in the boxes and having a stop adapted to engage a wheel passing on the rail, and means within the hollow spindle for yieldingly holding it at one extremity of its sliding movement.

1,378,569. SPARKING PLUG. HENRY SINGLETON-GRIESBACH, Liverpool, England. Filed Aug. 10, 1920. Serial No. 402,677. 2 Claims. (Cl. 123—169.)



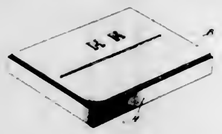
1. A spark plug comprising a hollow member provided with cooling fins, an electrode within said hollow member an insulator partially surrounding said electrode and seated on said hollow member, and a cap engaging said insulator and threaded to said hollow member below the cooling fins.

1,378,570. VARIABLE-SPEED POWER TRANSMISSION. CONRAD A. SLOCUM, Sedro Woolley, Wash. Filed Mar. 15, 1921. Serial No. 452,473. 3 Claims. (Cl. 74—26.)



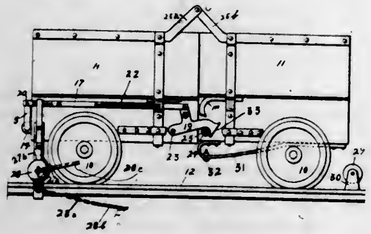
1. In a power transmission, in combination, a friction disk gear mounted fixed centrally on a revoluble shaft which is slidable to parallel positions; a conical friction gear fixed concentric to each side of said disk; a conical friction gear mounted fixed on and near each end of said slidable shaft; main and auxiliary friction gears mounted fixed on separable shafts, on opposite sides of said disk, engageable therewith and with said central conical gears; main and auxiliary friction gears mounted fixed on separable driven shafts, on opposite sides of said disk, engageable separately with said disk, with said central conical gears, and with said end conical gears; means to engage and disengage said driver gears in and from contact with said disk and with said central conical gears; means to engage and disengage said driven gears in and from contact with said disk, with said central conical gears and with said shaft-end conical gears; and means to move said disk shaft to parallel positions.

1,378,571. INJECTION-PUMP. WILLIAM I. SMELLEY, Demorest, Ga. Filed June 16, 1920. Serial No. 389,402. 2 Claims. (Cl. 47—37.)



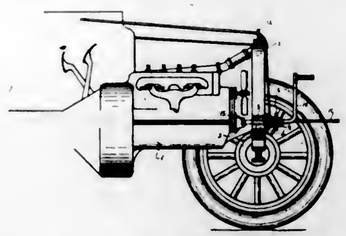
1. A device of the character described comprising a casing having a conical end tapering to a needle point, a plunger in said casing, a reservoir carried by said casing, a portion of the casing forming one wall of the reservoir, said wall having an opening adjacent the conical end, a valve plate slidable within and guided by a portion of the side walls of the reservoir, said reservoir having a bottom sloping toward said opening, a spring carried by said bottom and connected to the valve plate for urging said plate into engagement with the casing, said spring also urging the plate toward one end of the reservoir to uncover the opening therein.

1,378,572. MEASURING DEVICE. FREMONT C. STEVENS, Chicago, Ill., assignor to American Building Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 26, 1919. Serial No. 347,321. 4 Claims. (Cl. 221—96.)



1. In a device of the kind described, the combination of a guideway formed with spaced parallel side plates whose upper and lower edges are inturned to provide flanges, a bed plate supported on the lower flanges of the side plates and having a central discharge opening, a carriage adapted to be reciprocated within the guideway mounted on rollers which travel adjacent the sides of the bed plate, the upper sides of the carriage being formed to provide blank surfaces and openings therebetween from each of which depend walls to provide a compartment having a definite cubical capacity, the lower edges of said walls terminating adjacent the bed plate to prevent escape of loose material from each compartment except when the same is in register with the discharge opening in the bed plate, and a plurality of hoppers mounted on the guide-way having means for discharging from each hopper loose material into one of the carriage compartments only when the carriage is properly positioned thereunder, and means for reciprocating the carriage whereby materials are discharged in measured quantities first from one hopper and then from another into different carriage compartments preliminary to a subsequent discharge through the bed plate opening, substantially as described.

1,378,573. PRINTING-BLOCK AND METHOD OF MAKING THE SAME. ARTHUR K. TAYLOR, Baltimore, Md., assignor to Taylor Registering Projector Company, Baltimore, Md., a Corporation of Maryland. Filed Oct. 10, 1917. Serial No. 195,763. Renewed Oct. 22, 1920. Serial No. 418,765. 6 Claims. (Cl. 101—382.)



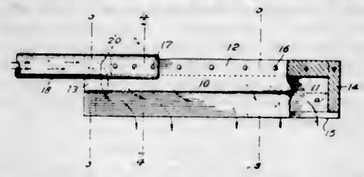
5. A printing block comprising a base, a plate, and an intermediate, adhesive coated composite fabric and rubber sheet.

1,378,574. CONVEYING-RECEPTACLE. CLARENCE J. WESTON, Fort Dodge, Iowa. Filed Jan. 2, 1920. Serial No. 349,031. 9 Claims. (Cl. 214—58.)

2. In a device of the class described, the combination of a car, comprising two sections hinged at their upper ends, lugs fixed on opposite sides of one of said sections near its lower inner end, hook shaped levers on the adjacent section in engagement with said lugs, a link pivoted to each of said hook shaped levers and extending longitudinally to the outer end of said section, a crank shaft on the end of said section having vertically extending arms pivoted to said links, and a trip lever positioned in the path of said car to engage said crank shaft and thereby disengage said levers from the lugs.

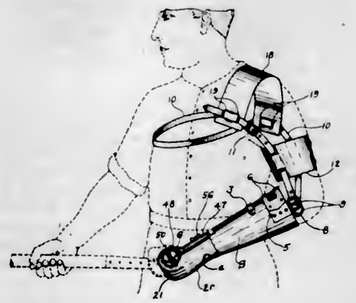
1,378,575. DRAFT ATTACHMENT FOR MOTOR-VEHICLES. LOUIS W. WORSHAM, Houston, Tex. Filed Jan. 20, 1920. Serial No. 352,820. 1 Claim. (Cl. 254—166.)

The combination with a motor vehicle having a motor, the forward end of whose crank shaft is formed into a clutch member, a drum shaft, one end of which is adapted to be connected with and disconnected from said clutch member, a drum fixed to said shaft, a pulley carried by said vehicle, a cable bearing also carried by said vehicle, a cable wound around said drum, one end of which passes around said pulley and is attached to a stationary object and the other end of which passes through said cable bearing and is free.



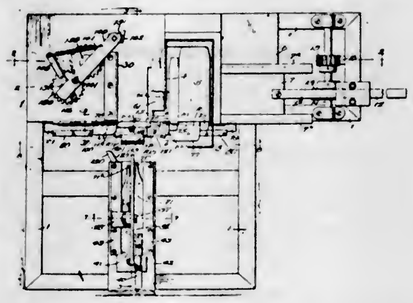
1,378,576. PORTABLE LOADING DEVICE. CHARLES J. ALLEN, San Francisco, Calif. Filed July 31, 1919. Serial No. 314,530. 2 Claims. (Cl. 214—41.)

1. In a load lifting and transferring device, a cable, a derrick to which one end of the cable is attached above the load, a chain attached to the other end of said cable, a detachable hook by which the load is attached to the chain, a distant anchored pulley, a second cable passing about the pulley and having one end secured to the free end of the chain, a motor driven load carrier adapted to be attached to the other end of the last mentioned cable, said carrier being movable in a line between the pulley and load, and a rope extending from the load to one leg of the derrick, and adapted to act in unison with the other cables and chain in lifting and swinging the load to one side of the motor carrier, as said carrier moves forward.



1,378,577. ICE AND SNOW CUTTING IMPLEMENT. HENRY W. BAHRENBURG, Newark, N. J. Filed June 1, 1920. Serial No. 385,862. 4 Claims. (Cl 262—1.)

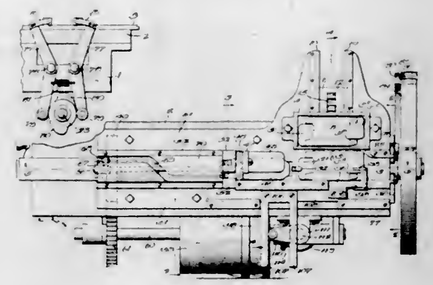
1. A cutting device of the character described comprising a blade formed to provide a steam chamber extending longitudinally substantially the entire length of the blade, the blade being tapered to form a cutting edge, the cutting edge being formed with a longitudinally extending



orifice communicating with the interior of the steam chamber, and a tubular shank conducting steam to the steam chamber.

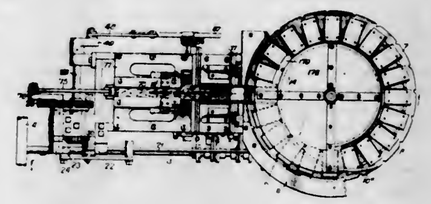
1,378,578. ARTIFICIAL LABORING-HAND. MARTIN BAUMAN, Akron, Ohio. Filed Dec. 27, 1920. Serial No. 433,520. 7 Claims. (Cl. 3—12.)

1. An artificial laboring hand comprising a socket member, a body hingedly engaged with the socket member, yieldable means for constantly urging the body in one direction relative to the socket member, and means for locking the body against swinging movement, said means comprising a slide carried by the body and engageable within a recess carried by the socket member.



1,378,579. BOX-FORMING MACHINE. DOMINIK M. BERNOTOW, Chicago, Ill., assignor, by mesne assignments, to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1918. Serial No. 244,538. 15 Claims. (Cl. 93—55.)

1. In a machine for setting up cartons, an operating table, a plunger adapted to enter one end of the carton for squaring it, and a finger adapted to move toward and from the table for intermittently gripping the rear end flap of the carton for holding the latter while the squaring means is entering the carton, the finger being located between the lateral edges of the carton and the plunger being slotted to accommodate said finger.

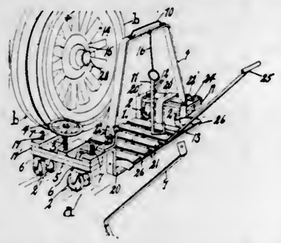


7. A box forming machine adapted to support an open ended box, a rotatable member having a fixed pivot on the machine, a folder pivoted to the free end of said rotatable member, means for rotating said folder about its pivot, and means for rotating said rotatable member about its pivot for folding in the end flaps of the box.

1,378,580. MACHINE FOR SETTING UP AND FOLDING CARTONS. DOMINIK M. BERNOTOW, Chicago, Ill., assignor, by mesne assignments, to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1919. Serial No. 306,039. 30 Claims. (Cl. 93—55.)

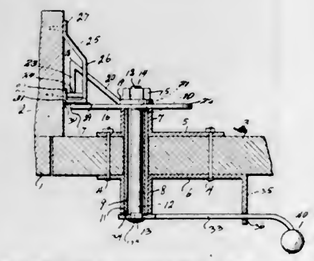
1. In a machine for setting up cartons, the combination of a member adapted to enter one end of the carton and means for moving said member both upward and sidewise for swinging the top of the carton into position above the bottom of the carton.

1,378,581. MACHINE FOR LINING CARTONS. DOMINIK M. BERNOTOW, Chicago, Ill., assignor, by mesne assignments, to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1919. Serial No. 341,097. 20 Claims. (Cl. 93—36.)



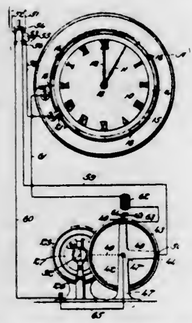
1. A machine for lining cartons having a turn table adapted to support the cartons, said table being rotatable to bring the cartons to the operating point of the machine, means located at the operating point for inserting the lining, and a stationary shoe at the operating point adapted to override the cross flap of the carton as the latter approaches the operating point for holding said flap out of the way of the entering lining.

1,378,582. DUAL-WHEEL REMOVER. WILLIAM A. CHIPPS, Los Angeles, Calif. Filed Sept. 18, 1919. Serial No. 324,692. 9 Claims. (Cl. 280—61.)



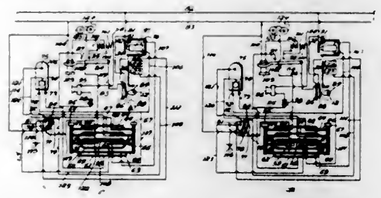
9. A wheel remover comprising a carriage having a frame and means to raise and lower the frame; and provided at one side with a handle and an arched standard; said standard being hinged at one end to one end of the carriage and detachably connected to the other end of the carriage and rigidly supported by its hinge and con-

nection; said carriage being adapted to be moved sidewise by the handle to bring the carriage underneath an



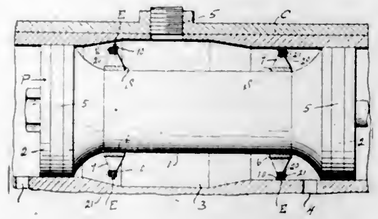
elevated wheel; and a latch bar provided with a hook to engage the spokes of the wheel and provided with notches to engage the standard.

1,378,583. DOOR-LATCH. THOMAS L. CHURCH, Gilbert, Minn. Filed Sept. 6, 1919, Serial No. 322,174. Renewed Oct. 9, 1920. Serial No. 415,947. 5 Claims. (Cl. 292—238.)



1. In a latch, the combination with a keeper on the jamb of a door opening, of latching means mounted in bearings of a door transversely thereof and provided with a hasp on one end adapted to cam under and into engagement with the keeper, and a gravity actuator carried by the opposite end on the exterior of the door, to automatically move the hasp in engagement with the keeper, a plate mounted on the exterior face of the door and having a right angle portion provided with a vertical slot, in which the actuator is mounted for vertical movement, and means adapted to engage the upper end of the slot, to retain the actuator in the lower end of the slot, thereby preventing the hasp from entirely disengaging from the keeper.

1,378,584. SIGNALING DEVICE. ISIDOR M. COLE and BURR MCKINNEY, Indianapolis, Ind. Filed June 18, 1920. Serial No. 389,839. 3 Claims. (Cl. 161—1.)

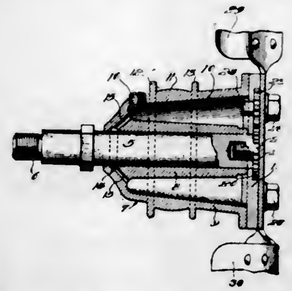


2. In a clock controlled signaling device, the combination of a signal, an electric motor, a normally open circuit for the motor, a rotatable shaft operatively connected with the motor, a pinion on said shaft, a gear wheel meshing with the pinion, a member carried by and adjustable radially of the gear wheel, a connection between said member and signal whereby the rotation of the gear wheel will operate the signal, clock controlled means for closing the motor circuit, and means operated by the motor for breaking the motor circuit when the gear wheel has completed one revolution.

1,378,585. TELEPHONE SYSTEM. ELMER CURNUTT, Garnett, Kans. Filed Aug. 14, 1917. Serial No. 186,205. 2 Claims. (Cl. 179—30.)

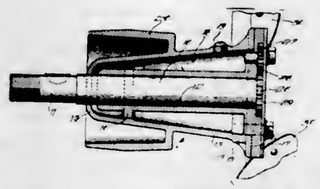
1. In a party line telephone system, the combination with a pair of main leads and a plurality of receiving and transmitting sets connected thereby, a normally open switch in each set disconnecting said set from the said leads, a polarized step by step magnetic means for each switch to close the switch when energized by alternating current, a reversing switch, a generator adapted to generate direct and alternating currents and in series with the said reversing switch and the said magnetic means, a multiple contact switch, circuits connecting said generators, magnetic means and said normally opened switches, and a means associated with each magnetic means operable when a direct current from said generator is generated to restore the step by step mechanism to initial position and thus open the switch.

1,378,586. VALVE-CLEANER. JACOB E. DONNELLY, Pittsburgh, Pa. Filed Mar. 27, 1920. Serial No. 369,359. 9 Claims. (Cl. 121—193.)



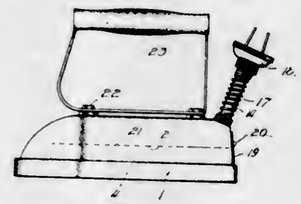
1. In combination with a piston valve including a barrel provided with heads, a scraping means carried by the barrel inwardly of and in close proximity to each of the heads, said scraping means coacting with the wall of the chamber in which the valve operates, each of said scraping means being entirely independent of the heads.

1,378,587. HUB-BEARING. TRUMAN B. FUNK, Moline, Ill. Filed May 3, 1920. Serial No. 378,461. 3 Claims. (Cl. 64—26.)



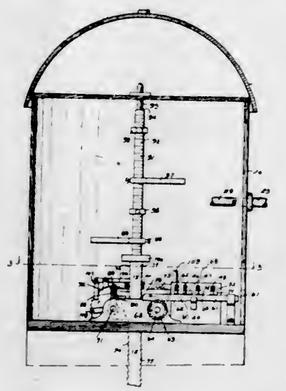
1. A pressure lubricated bearing or the like comprising, in combination, a stationary stud, a circular body member rotatably mounted on said stud and comprising an integral element having a circular sleeve journaled on the stud and also having an integral shell integral at its inner end with said sleeve and spaced away from the sleeve in its central and outer end portions to provide

with the sleeve an annular oil space, there being an inwardly facing groove on said body member at its inner end and in direct communication with the stud, an oil passage connecting said groove with said annular oil space, a flange plate in conjunction with the outer ends of the sleeve and shell aforesaid and serving to inclose said oil space, there being a circular recess in the outer face of said plate concentric with the stud, and there being another circular recess in the outer face of the plate in peripheral communication with the first mentioned recess, a gear in the first mentioned recess and rigid with



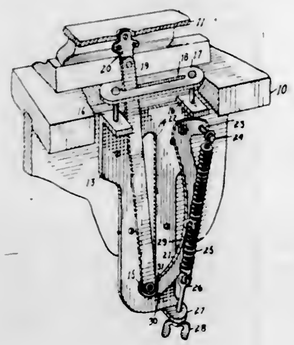
respect to the end of the stud and also serving to retain the plate in position with respect to the stud, a pinion in the second mentioned recess meshing with the gear, there being an oil passage extending through the plate and in communication with the line of travel of the pinion teeth, and there being an oil discharge recess in the front face of the plate establishing communication of the point of enmeshment of the pinion and gear teeth with the end of the stud, and a cover plate secured to the outer end of the flange plate and closely engaging the gear and pinion, substantially as described.

1,378,588. HUB-BEARING. TRUMAN B. FUNK, Moline, Ill. Filed May 3, 1920. Serial No. 378,462. 3 Claims. (Cl. 64—26.)



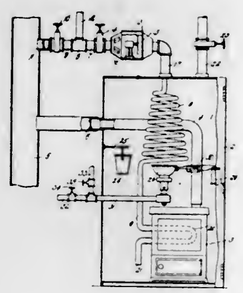
1. A pressure lubricated bearing comprising, in combination, a stationary stud, a sleeve journaled thereon, an outstanding flange at the outer end of said sleeve, a concentric shell surrounding said sleeve and spaced away therefrom to provide an annular oil space, the inner end of the shell being supported by the inner end of the sleeve, and the outer end of the shell being in engagement with the peripheral portion of the sleeve flange to inclose the oil space aforesaid, there being a circular recess in the outer face of the sleeve flange concentric with respect to the stud, a gear located in said recess and rigid with respect to the stud, there being another circular recess in the outer face of the sleeve flange and in peripheral communication with the first mentioned recess, a pinion rotatably mounted in the second mentioned recess, a cover plate extending over the gear and pinion and said recesses and serving, in conjunction with the sleeve flange, to inclose said recesses, there being an oil passage extending through the sleeve flange and establishing communication between the oil space and the path of travel of the pinion teeth, and there being another recess establishing communication between the point of enmeshment of the teeth of the pinion and gear and the end of the stud, substantially as described.

1,378,589. ELECTRIC SADIRON. LEO B. LINCOLN, Chicago, Ill. Filed July 11, 1919. Serial No. 310,077. 5 Claims. (Cl. 219—25.)



1. A sad iron comprising a body having a broad flat chamber arranged near the bottom and extending substantially throughout the length of the body, said chamber opening out through the rear end of the body, a broad flat heating unit fitting in said chamber and adapted to be moved into and out of the chamber through the open rear end, there being a pocket opening upwardly out of the rear end of said chamber, an insulating block arranged in said pocket so as to lie wholly above said chamber and permit the insertion and removal of said heating element without disturbing the block, leading in wires from the exterior of the iron to the block, wires extending from said unit to said block, and means carried by the block for connecting corresponding wires together.

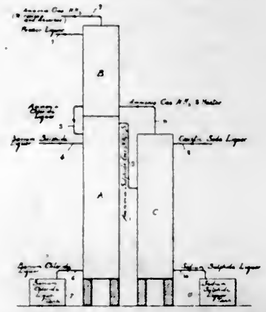
1,378,590. COIN-OPERATED MECHANISM FOR GASOLENE-VENDING MACHINES AND THE LIKE. ARTHUR J. LUDWIG, Baxter, Iowa. Filed Mar. 24, 1920. Serial No. 368,445. 12 Claims. (Cl. 194—60.)



1. In a machine of the class described, a casing, a coin chute therein having a portion adapted to receive and hold a coin, a cylinder extending from said portion, a rod in said cylinder, a slide bar connected with said rod, a plunger adapted to engage a coin in said portion for forcing the coin into said cylinder and actuating said slide bar, a locking bar, said slide bar and locking bar having portions adapted to engage when the said bars are in certain positions of their movement, for holding the slide bar against movement in one direction, means tending to yieldingly move the slide bar in another direction, an actuating bar, devices for locking said actuating bar against sliding movement in either direction, means for actuating one of said devices from said slide bar, a member slidably and rotatably mounted, adjustable means thereon for limiting the movement of said actuating bar, means for limiting the sliding movement of said member, and means adapted to be actuated by the movement of said member for moving the locking bar to inoperative position.

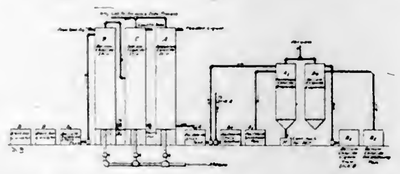
1,378,591. LID-SUPPORT. ELMER E. LUTZHOFF, Jamestown, N. Y. Filed June 21, 1920. Serial No. 390,562. 12 Claims. (Cl. 217—60.)

1. In combination with a hinged lid, a supporting member movably connected to the lid, and a spring tensioned member arranged to lie in a substantially horizontal plane when the lid is open and to be moved downwardly by said supporting member upon closing of the lid, said spring tensioned member being formed with a curved face and with a free end and said supporting member being arranged to ride on the curved face and then over said free end of the spring tensioned member when the supporting member is in down position.



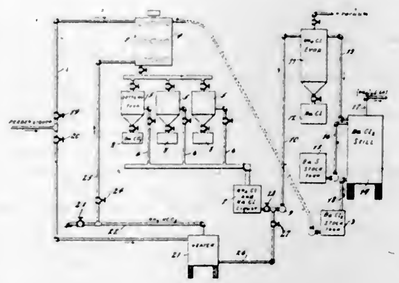
1,378,592. HEATING SYSTEM. PATRICK MCLAUGHLIN, Dover, N. H. Filed July 8, 1920. Serial No. 394,664. 3 Claims. (Cl. 126—116.)

1. A heating apparatus, comprising a closed chamber having a relatively small hot air outlet at its upper portion, an air inlet pipe coil located within the chamber and discharging downwardly into the chamber, and a burner located below the coil, said burner operating to heat the coil and the air entering therethrough and the products of combustion from said burner commingling with said hot air and passing out through said outlet.



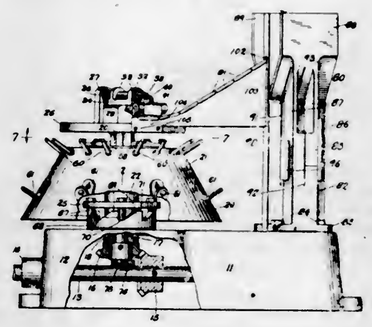
1,378,593. RECOVERY OF AMMONIA. JAMES H. MACMAHON, Saltville, Va., assignor to The Mathieson Alkali Works (Inc.), Providence, R. I., a Corporation of Virginia. Filed Sept. 3, 1919. Serial No. 321,348. 22 Claims. (Cl. 23—21.)

1. A process for recovering ammonia vapor from the fixed ammonia present in the feeder liquor of the ammonia soda process, which comprises treating the ammonium chlorid of said liquor with the sulfid of an alkaline earth metal to form ammonium sulfid and a chlorid of said metal, separating said salts, and reacting upon



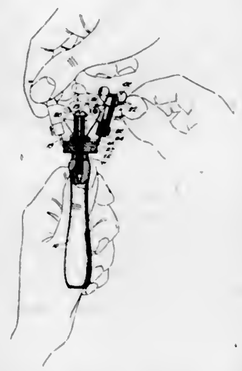
the ammonium sulfid with an alkali metal oxygen compound, to liberate the ammonia in gaseous form from said ammonium sulfid.

1,378,594. METHOD FOR THE PRODUCTION OF BARIUM CHLORID. JAMES H. MACMAHON, Saltville, Va., assignor to The Mathieson Alkali Works, Inc., a Corporation of Virginia. Filed Jan. 20, 1920. Serial No. 352,860. 8 Claims. (Cl. 23—13.)



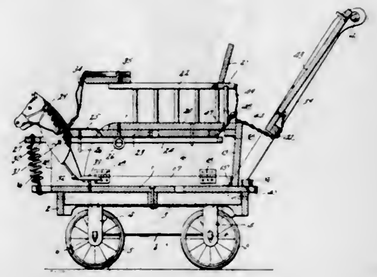
1. The method of producing barium chlorid consisting in separating the ammonium chlorid from the feeder liquor of the ammonia soda process, dissolving the ammonium chlorid crystals so obtained, mixing a solution of barium sulfid with the ammonium chlorid solution, forming barium chlorid and ammonium sulfid, and then separating the barium chlorid from the liquor by crystallization.

1,378,595. METHOD OF PRODUCING CARBONATES OF THE ALKALINE-EARTH METALS. JAMES H. MACMAHON, Saltville, Va., assignor to The Mathieson Alkali Works, Inc., a Corporation of Virginia. Filed Feb. 19, 1920. Serial No. 359,891. 3 Claims. (Cl. 23—13.)



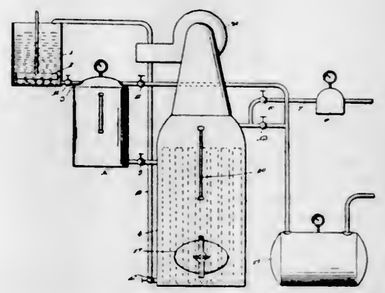
1. The method of making barium carbonate, which comprises converting the ammonium bicarbonate content of the feeder liquor of the ammonia soda process into barium carbonate by reaction with a solution of barium chlorid, separating the barium carbonate from the solution, reacting upon the resultant solution with barium sulfid to form barium chlorid, and utilizing the barium chlorid so produced in additional conversion of ammonium bicarbonate into barium carbonate.

1,378,596. MACHINE FOR AUTOMATICALLY ATTACHING CLOSING-CLIPS FOR FLEXIBLE TUBES. LOUIS MARINSKY, New York, N. Y., assignor to Israel F. Greenbaum, Brooklyn, N. Y. Filed July 2, 1919. Serial No. 308,235. 14 Claims. (Cl. 113—57.)



1. In a machine of the class described, a workpiece supporting member, means for supporting a plurality of tubes on said member, means for giving said member a combined intermittent rotary and vertical movement, means for straightening one end of said tubes, means for placing V-shaped sealing clips on said end portion of said tubes in the vertical movement of said member, and means for compressing said clips onto said end portions of the tubes.

1,378,597. SHARPENER FOR PHONOGRAPH-NEEDLES. GEORGE WILLIAM MAYER, New York, N. Y. Filed May 3, 1920. Serial No. 378,424. 3 Claims. (Cl. 51—205.)

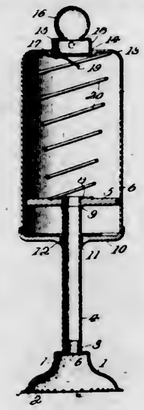


1. A sharpener for phonograph needles, comprising a handle, a screw rod detachably secured to the forward end of the said handle, a grinding wheel removably held on the said screw rod, a nut screwing on the said screw rod adjacent the said grinding wheel, an angular arm mounted to swing on the said rod between the said nut and the head of the screw rod, a bearing pivoted on the outer end of the said arm, a socket adapted to hold a needle and mounted to turn in the said bearing, and a handle on the said socket to turn the latter in the bearing and to swing the needle-holding socket, bearing and arm bodily around on the screw rod.

1,378,598. FOLDING CONVERTIBLE GOCART, HIGH CHAIR, AND BABY-JUMPER. OTTO H. MEYERS, New York, N. Y. Filed Apr. 1, 1920. Serial No. 370,551. 4 Claims. (Cl. 155—38.)

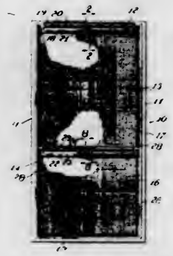
1. The combination with a wheeled supporting base of a mechanism of the character described, comprising a seat, a slotted arm supported on the base, a platform slidably mounted on the arm adapted to support the seat at various elevations, and means for locking the arm in various positions of adjustment, whereby the seat is supported at various elevations.

1,378,599. PROCESS AND APPARATUS FOR MAKING ELECTRODES. WILLIAM G. MICHEL, Niagara Falls, N. Y. Filed Dec. 17, 1919. Serial No. 345,659. 8 Claims. (Cl. 204—29.)



1. An electrode composed of pulverized dry carbon, the particles of carbon being held together by a fluid hydrocarbon mixed therewith and baked to a solid mass, said fluid being heated and mixed with the carbon by vacuum and pressure.

1,378,600. HAND-OPERATED AIR-DASH WASHER. ISAAC B. MILLNER, Washington, D. C. Filed Sept. 1, 1920. Serial No. 407,478. 4 Claims. (Cl. 68—5.)



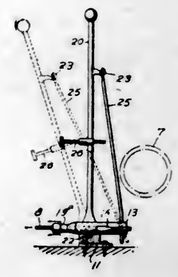
1. A device for washing fabrics comprising a member adapted to be projected against the fabric to be washed to loosen the dirt, said member having a plurality of fabric engaging fingers formed with adjacent air outlets, and

means operated by the projection of said member against a fabric for causing a flow of air into said member and

outwardly through said outlets whereby to force air about said fingers and through the mesh of said fabric to assist in removing the dirt.

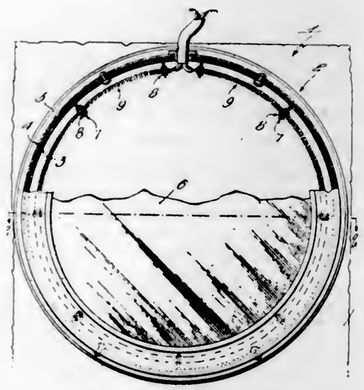
1,378,601. FLY-ESCAPE SCREEN. GEORGE W. MITTELSTAEDT, Morton Grove, Ill., assignor to Fly Escape Screen Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1920. Serial No. 386,551. 6 Claims. (Cl. 156—37.)

6. In a fly escape screen of the type described comprising a frame having a rail provided in its outer face with a pair of vertically spaced cavities, fly escape passages connecting said cavities and other passages leading from the lower cavity to the interior of said screen, said cavities and passages being open to the light and screening material covering said passages and said lower cavity.



1,378,602. SHOE-FASTENER. KINTARO MIYAKAWA, San Francisco, Calif. Filed Sept. 10, 1919. Serial No. 322,945. 3 Claims. (Cl. 267—74.)

2. A fastener for lace shoes comprising a rigid arcuate body member, a pair of buttons slidably carried thereby, and means yieldably connecting said buttons with the body member.

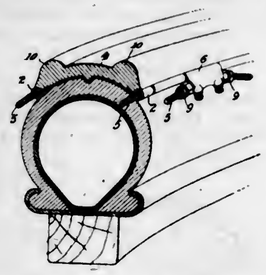


1,378,603. AUTOMATIC STOP FOR GRAPHOPHONES. MALCOLM MOLLAN, Brooklyn, N. Y. Filed Mar. 30, 1920. Serial No. 369,907. 7 Claims. (Cl. 192—116.)

3. An automatic stop device for graphophones comprising in combination with the graphophone tone arm and brake lever, a mounting base fixed to the graphophone frame, a horizontal cylinder fixed to said mounting base, a plunger rod shiftable in said cylinder and in engagement with the graphophone brake lever during rotation of the

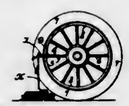
graphophone turn-table, a post adjustably fixed to said mounting base, a rod supported on said post and in engagement with said plunger rod adapted to be engaged by the tone arm for shifting the plunger rod to effect the setting of the brake lever.

1,378,604. CONDENSATION-PREVENTING DEVICE. JOHN W. MURPHY, Cambridge, Mass. Filed June 17, 1920. Serial No. 389,718. 3 Claims. (Cl. 219—19.)



1. A device of the class described comprising a frame for disposition against a plate of glass, a strip of packing material carried by the frame and extending therefrom, being adapted to fit against the plate of glass, a pane of glass also carried by said frame, a heating coil, and a clamping member for retaining the packing material in position and for supporting said coil and retaining the latter in position.

1,378,605. TIRE-PROTECTOR. RAPHAEL NETTER, New York, N. Y., assignor to Marvin C. Altmayer, New York, N. Y. Filed Nov. 15, 1919. Serial No. 338,201. Renewed Nov. 16, 1920. Serial No. 424,509. 3 Claims. (Cl. 152—17.)

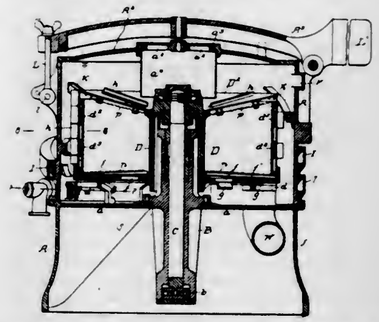


2. A tire protector comprising a series of overlapping metal plates of a shape conforming to the tire to which they are to be applied, each plate but one having its edges folded back to form side loops, the said one plate having its edges flattened for the attachment thereto of a metal

block and having an adherent rubber tread surface in combination with flexible wires or cables strung through

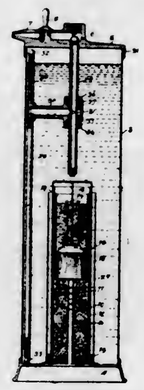
the pockets formed by said loops and passing through perforations in the said blocks and means for securing the ends of said wires to said blocks.

1,378,606. TIRE-CHAIN-APPLYING DEVICE. ALBERT S. NOONAN, Philadelphia, Pa., assignor to Foss-Hughes Company, Philadelphia, Pa., a Corporation of Pennsylvania and Massachusetts. Filed Nov. 11, 1919. Serial No. 337,312. 5 Claims. (Cl. 152—14.)



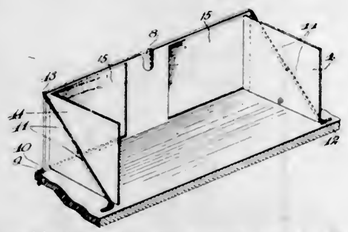
1. A tire chain attaching device consisting of a forked body section having a portion formed to engage a spoke of a wheel; a stem section projecting from said body; and a second spoke-engaging section projecting from said stem section substantially parallel to the first named spoke-engaging portion.

1,378,607. DUST-BAG. ROXANNA A. NORTON, New York, N. Y. Filed Oct. 24, 1919. Serial No. 333,095. 5 Claims. (Cl. 150—1.)



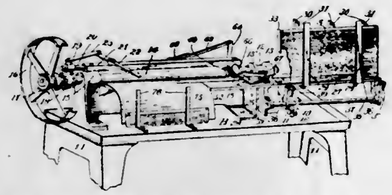
1. A dust bag, comprising a bag body provided with a slot extending a distance downward from the mouth of the bag to allow of passing the stick of a duster down the slot with the head of the duster within the bag body, and a bar held on the bag body and extending from the mouth to the bottom of the bag body, the bar having a slot registering with the said bag body slot.

1,378,608. EXTRACTOR. THOMAS S. PATTERSON, Rosemont, Pa., assignor to F. Royal Hammett, Philadelphia, Pa. Original application filed Feb. 26, 1912, Serial No. 679,932. Divided and this application filed Aug. 7, 1916. Serial No. 113,608. 2 Claims. (Cl. 210—66.)



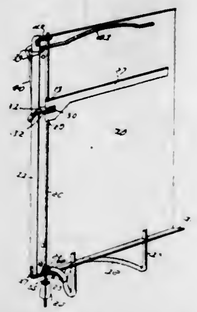
1. The combination in an extractor, of a casing; a basket rotatably mounted in the casing; a steam pipe extending into the casing; an opening in the bottom of the casing; a central, contracted opening at the top of the casing; a series of radial blades on the top of the basket; and blades on the periphery of the basket, said blades being so arranged that, as the basket is rotated, air will be drawn through the inlet opening to the top of the basket and will be forced by the top blades of the basket toward the periphery and will be drawn down between the basket and the casing and will flow through the outlet opening in the bottom of the casing, carrying with it any steam that may accumulate in the casing.

1,378,609. FIRE-EXTINGUISHER. GEORGE T. PEARSONS, New York, N. Y. Filed Nov. 27, 1916. Serial No. 133,521. 7 Claims. (Cl. 169—27.)



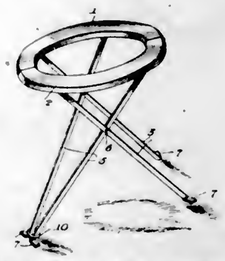
3. In a fire extinguisher, the combination of a reservoir having an opening in the top; a removable cover for said opening having a discharge outlet therein for the reservoir; a cage secured centrally to the bottom; a gas generator adapted to be carired within said cage, having an outlet leading into the reservoir; a tube connected to the discharge outlet of the cover to extend into the reservoir with its end closed and adapted to abut against the generator to maintain the generator in the cage, the bore of said tube constituting a continuation of the discharge outlet and having lateral ports; and means to connect said tube with the liquid in the lowermost part of the reservoir in all positions of the extinguisher, substantially as and for the purpose specified.

1,378,610. LUGGAGE-CARRIER. EARL R. PERKINS, Manitowish, Wis. Filed Feb. 8, 1919. Serial No. 275,807. 1 Claim. (Cl. 224—29.)



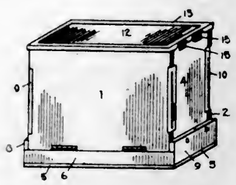
The combination with the running board of an automobile; of a luggage carrier comprising a wall pivoted to the running board for folding on top thereof, and having one side provided with foot scraper bars which are on top of the plate when it is folded, foldable braces extending between the wall and the running board, and end wings carried by the wall and extending across the running board, said wings being pivoted to the wall and adapted to be folded thereagainst when it is folded on top of the running board, the side of the wall against which the wings are foldable being recessed to receive the same.

1,378,611. APPARATUS FOR REFINISHING OR RETOUCHING THE TEETH OF SAW-BLADES. REINHART W. PITTMAN, New York, N. Y., assignor to Alston Saw & Steel Company, New York, N. Y., a Corporation of Pennsylvania. Filed June 26, 1918. Serial No. 241,926. 19 Claims. (Cl. 76—38.)



1. The combination of a support for a pile of toothed blades; means to operate upon the teeth of a blade; means operable to feed a blade from the pile and present the blade to the means to operate upon the teeth thereof; means to actuate said blade feeding means normally inoperative and operable to cause the blade feeding means to be actuated as a blade is delivered from the means to operate upon the teeth thereof.

1,378,612. COPY-HOLDER. ENOCH PROUTY, Arcadia, Fla. Filed Feb. 10, 1920. Serial No. 357,527. 6 Claims. (Cl. 120—34.)



1. A copy holder having an easel or rest, a plunger rod reciprocably mounted in a plane parallel with said easel or rest, an indicator arm having a sliding frictional engagement with said rod, a dog connected with the indicator arm and engaged with the easel or rest for resisting upward while permitting downward movement of said arm, and a key for imparting movement to said plunger rod.

1,378,613. PORTABLE AND COLLAPSIBLE ARTICLE OF FURNITURE. FRANK WELLINGTON PUTMAN, Newport, R. I. Filed Oct. 4, 1920. Serial No. 414,574. 6 Claims. (Cl. 155—136.)

1. A portable article of furniture for the purpose set forth, including a seat having elements on the bottom thereof, pivotally connected crossed legs having their upper ends provided with means for engaging said elements, and means engaging one of the opposed legs of the respective pairs of legs for forcing said legs together at the lower portions thereof and for spreading the upper portions of both pairs of legs for locking all of the legs with the elements of the seat.

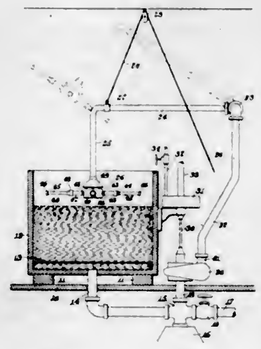
1,378,614. COLLAPSIBLE CRATE OR PACKING-CASE. NORMAN JAMES MCLEOD and CLARENCE FERDINAND RAINSFORD, Adelaide, South Australia, Australia. Filed Oct. 15, 1919. Serial No. 330,937. 2 Claims. (Cl. 217—15.)

1. A collapsible crate or case comprising; a tray formed of the bottom of the crate and shallow side and end pieces rigidly fastened thereto; ends hinged to the bottom of the tray adjacent to the end pieces of the tray and adapted to fold down the one upon the bottom of the tray and the second upon the first; sides hinged to the top of the side pieces of the tray and adapted to fold down the one above the upper end piece and the second above the first; a lid made in two parts each part being hinged at one edge to the top of one of the ends; supporting cleats secured to the inner side of the sides near their top edges, and two metal clips each comprising a central trough and two side wings, one of which wings is fastened to one part of the top and the other of which rests upon the other part of the top; and a locking rod which is carried, when the crate is erected, by two eyes in the upper edges of the side of the crate and, when the crate is collapsed, by two eyes in the side pieces of the tray.

1,378,615. AUTOMOBILE-SLEEPER. JAMES J. REHANEK, Columbia, S. C. Filed Apr. 1, 1920. Serial No. 370,491. 1 Claim. (Cl. 155—7.)

An automobile body having forward and rear seats of which the former is provided with a hingedly mounted foldable back member and means for securing the same in its upright position, foldable legs mounted on the rear side of said back member adjacent opposite sides and the top edge to support the back member in the plane of the seat members, the free extremities of said legs overlapping when the latter are in forward position, a spring clamp

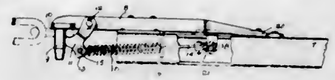
mounted medially on the rear side of said back member and adapted to releasably secure the overlapping extremities of said legs to hold the same in horizontal parallelism with the plane of the back member to serve as a robe rail, and foldable filler members for arrangement in a common plane with said seat members.



1,378,616. PROCESS OF MAKING CALCIUM BISULFITE. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed June 10, 1919. Serial No. 303,104. 6 Claims. (Cl. 23—13.)

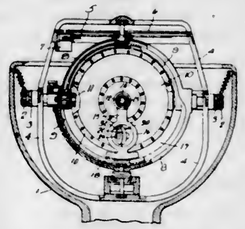
1. A process of making calcium bisulfite cooking liquor which consists in first acidulating water with sulfur dioxid in one absorbing chamber, and then causing such acidulated water to react with lime in a separate absorbing chamber.

1,378,617. METHOD OF MAKING CALCIUM-BISULFITE COOKING LIQUOR. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 5, 1919. Serial No. 321,975. 4 Claims. (Cl. 23—13.)



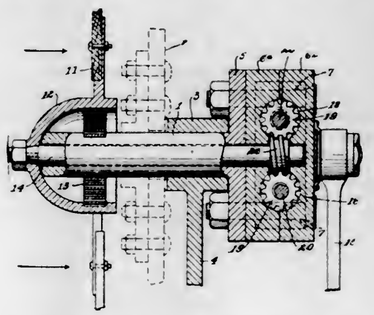
1. The herein described process of making a calcium bisulfite solution, which comprises pulverizing limestone containing magnesium and calcium carbonate, and causing a reaction between such pulverulent material, water and sulfur dioxid.

1,378,618. APPARATUS FOR DYEING. CHARLES H. ROBBINS, Gleasondale, Mass., assignor to C. A. Claflin Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1920. Serial No. 377,386. 9 Claims. (Cl. 8—19.)



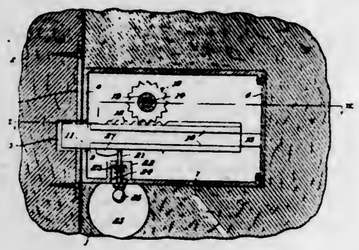
1. The combination with a dye-vat having a perforated false bottom; a circulating pipe for the dye liquor having a branch extending downwardly into said vat; and a spraying device freely revoluble about the lower end of said branch pipe above the liquor and provided with means for ejecting jets downwardly onto said liquor and at an angle thereto.

1,378,619. SHACKLE. GEORGE BRYANT ROBERTSON, Keene, N. H. Filed Dec. 14, 1920. Serial No. 430,742. 2 Claims. (Cl. 213—67.)



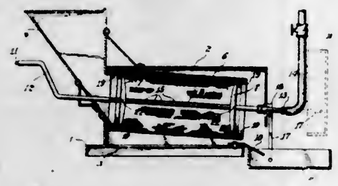
1. A shackle, including a base member, a fixed jaw secured to said member, a second jaw swingingly secured to said base member and adjacent said first named jaw, said second jaw being formed with a shoulder, a rod having one of its ends pivotally secured to such shoulder, a stop, and a spring having one of its ends coöperating with said shoulder, its opposite end bearing against said stop.

1,378,620. GYROSCOPIC COMPASS. GEORGE A. ROSSITER, Brooklyn, N. Y., assignor to The Carrie Gyroscopic Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1920. Serial No. 357,155. 8 Claims. (Cl. 33—204.)



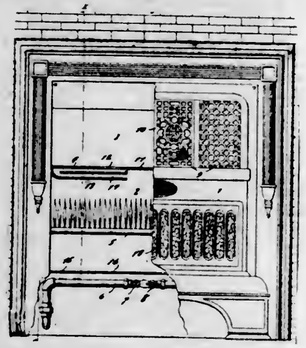
1. In a gyro compass provided with a directive axis; a pendulum pivoted from said axis as a center; and a gyroscopic device carried by and forming a part of the weight of said pendulum, substantially as described.

1,378,621. STROKE-REGULATOR FOR WINDMILLS. ALFRED B. SABIN, Laramie, Wyo. Filed June 21, 1920. Serial No. 390,430. 6 Claims. (Cl. 103—85.)



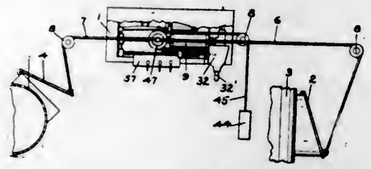
1. In an automatic stroke-regulator for a windmill, the combination of a shaft for the main wind wheel, a crank arm carried by the shaft, a crank pin guided in said crank arm and adapted to be attached to the connecting rod that actuates the pump, threaded adjusting means mounted in the crank arm for moving the crank pin in or out on the arm, an auxiliary wind wheel rotatably mounted on the axis of the shaft, a spring connecting the same with the shaft and mounted so that its tension will be increased by an accelerated rotation of the auxiliary wheel, and means actuated by the auxiliary wheel and coöperating with the threaded means for automatically adjusting the crank pin on the arm.

1,378,622. DOOR-LOCK. MIKE SARBIJ, Ludlow, Mass. Filed July 27, 1920. Serial No. 399,234. 2 Claims. (Cl. 292—142.)



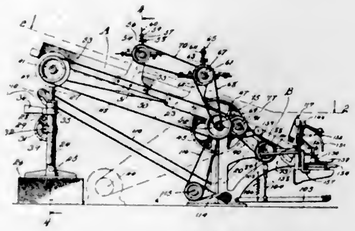
1. A lock of the type described comprising a casing, a bolt slidable therein, teeth formed upon one side of the bolt, a gear wheel engaging said teeth for shifting the bolt, means for holding the bolt in its operative and inoperative positions, said means comprising a tensioned pin carried by the lock casing and an elongated lug having a curved bottom face carried by the bolt adapted to be engaged by the pin.

1,378,623. ASH-SIFTER. HENRY J. SCHAFFER, Brooklyn, N. Y., assignor to Jacob Schaffer, Brooklyn, N. Y. Filed June 5, 1920. Serial No. 386,853. 7 Claims. (Cl. 83—60.)



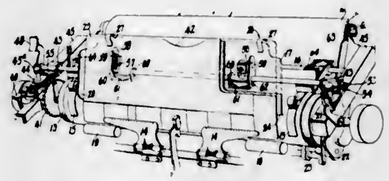
1. In a sifter, a screen, a casing inclosing said screen, a support rotatably carried by said casing and mounting said screen for a sifting movement within the casing, means for feeding a substance to be sifted to the screen, and means for supplying a dust allaying liquid through the support to the substance and screen.

1,378,624. GAS-HEATER. WILLIAM H. SCHOFIELD, Brooklyn, N. Y., assignor to The Sanitary Heating Company, a Corporation of New York. Filed June 16, 1920. Serial No. 389,469. 5 Claims. (Cl. 126—85.)



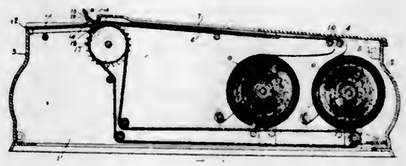
1. A gas heater comprising a lower combustion chamber containing a gas burner, an upper heating chamber, a perforated diaphragm separating said chambers and a heating structure provided with a tortuous passage leading from the middle portion of the combustion chamber to the perforations in said diaphragm.

1,378,625. MOTOR FOR REGULATORS. ROBERT J. SEATOR, Battle Creek, Mich., assignor of one-half to Herbert Matthews, Battle Creek, Mich. Filed May 17, 1920. Serial No. 381,878. 12 Claims. (Cl. 121—40.)



1. In a structure of the class described, the combination of a cylinder, oppositely seating inlet and exhaust valves for said cylinder, the exhaust valve being adapted to open the inlet valve when the exhaust valve is closed, a pivoted valve actuating lever engaging said exhaust valve, a plunger, a weight for returning said plunger, a reciprocatingly mounted actuating rod adapted to engage said valve lever, said actuating rod being provided with a pair of stops limiting its movement, actuating springs on said actuating rod, a tappet on said plunger adapted to place said springs under stress by the stroke of the plunger so that when the actuating rod is released it is actuated thereby, a locking member for said actuating rod, a trip on said plunger coacting with said locking member on the out-stroke of the plunger, a trip lever also coacting with said locking member and provided with a detent for said plunger, an electromagnet comprising an armature constituting a lock for said trip lever, an actuating spring for said trip lever placed under stress by the return of the plunger to its initial position, and electrical connections for said electromagnet comprising three relatively fixed contact members, two of which are electrically connected to said electromagnet, a contact member on said plunger adapted to coact with the third of said relatively fixed contact members and with one of the pair connected with the electromagnet, said actuating rod being adapted to coact with the other of said pair to complete the circuit when the parts are in their initial position, the circuit being broken when the actuating rod is in position to open the inlet valve.

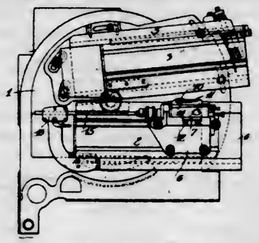
1,378,626. PACKING-MACHINE FOR HAIRPINS. HOMER P. SMITH, Appleton, Wis., assignor, by direct and mesne assignments, to Scolding Locks Hairpin Co., Appleton, Wis., a Corporation of Wisconsin. Filed Dec. 26, 1918. Serial No. 268,318. 34 Claims. (Cl. 163—8.)



1. A machine for packing hairpins and like articles including a table provided with longitudinal channels, means for separating articles on the table and causing said articles to travel in the channels, a series of guides extending in mutual divergence from one end of the table and arranged to receive articles from the channels of the table, means for supporting a series of containers adjacent the ends of the guides and means for feeding articles from the guides into said containers.

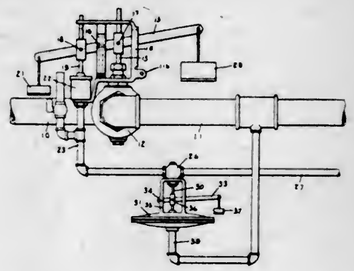
1,378,627. TYPEWRITING-MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 8, 1919, Serial No. 309,435. Renewed Oct. 13, 1920. Serial No. 416,749. 18 Claims. (Cl. 197—127.)

1. In a typewriting machine, the combination with a revoluble platen and a rear paper-table, of line-spacing devices adapted to rotate said platen, to carry a record-sheet past the printing point at the front of the platen, a collating-board in front of the platen and above it, comprising a clip to hold a work-sheet thereon, and a device for tilting said collating-board to enable the record-sheet to pass beneath it when inserted from behind the platen.



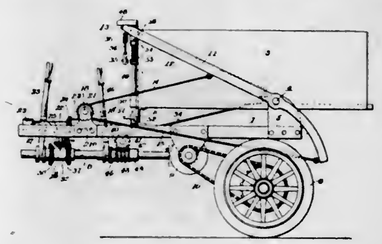
1,378,628. AUTOGRAPHIC REGISTER. MILTON C. STERN, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed July 2, 1920. Serial No. 393,624. 4 Claims. (Cl. 281—6.)

1. In an autographic register, the combination with paper strip feeding devices and a casing with a lid in two sections, one section having a tear-off edge, and the other section having a paper guide bar having one edge located in such proximity to the feeding device that the paper strips enter upon the bar and having its upper surface sharply inclined to lift the paper toward the tear-off edge.



1,378,629. TOOL MECHANISM FOR GEAR-CUTTING MACHINES. ARTHUR L. STEWART, EDWARD W. BULLOCK, and SCHUYLER H. EARL, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Original application filed Oct. 24, 1919, Serial No. 333,014. Divided and this application filed June 1, 1920. Serial No. 385,645. 9 Claims. (Cl. 90—8.)

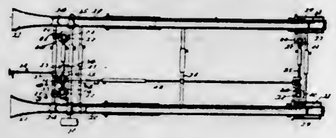
1. The combination with a reciprocating tool slide, of a pivoted clapper block, a tool secured to the clapper block, and means for tilting the clapper block on the return stroke of the tool comprising a friction clamp, a connecting rod slidable in the friction clamp, the clapper



block having a recess therein, and a projecting portion carried by the connecting rod and engaging said recess.

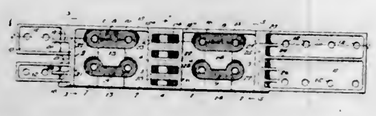
1,378,630. STEAM-PRESSURE REGULATOR. COLE STICKLE, Indianapolis, Ind. Filed Aug. 11, 1919. Serial No. 316,806. 1 Claim. (Cl. 50—10.)

The combination with high and low pressure pipes, and reduction valve mechanism connecting them having an upwardly extending valve stem, of a frame rigidly mounted on said valve mechanism through which said valve stem reciprocates, a lever fulcrumed between its ends in said frame, a weight on each end of said lever, means for pivoting the lever to the valve stem for controlling it, a plunger mounted on the frame, a plunger rod extending therefrom and reciprocable in the frame and pivoted to said lever for actuating it, an auxiliary pipe connected with said plunger for operating it by fluid under pressure therein independently of the high pressure pipe, and means controlled by the fluid under pressure in the low pressure pipe for regulating the pressure in said auxiliary pipe.



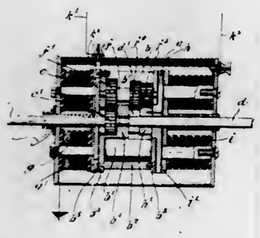
1,378,631. VEHICLE LOADING AND UNLOADING DEVICE. HERBERT C. STONE, Brooklyn, N. Y. Filed Mar. 9, 1920. Serial No. 364,465. 10 Claims. (Cl. 298—21.)

1. The combination with a vehicle and the body thereof, of a U-shaped traversing frame pivoted astride said body to swing in a vertical plane, the side members of said



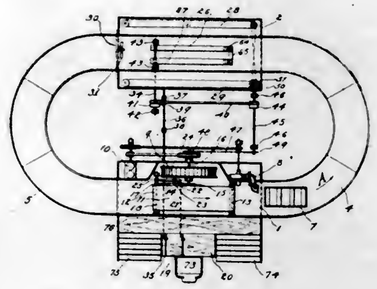
frame being intermediately pivoted to the vehicle, a shaft, cables wound in opposite directions on said shaft and connected to said side members of the frame at opposite sides of the pivots thereof, and means for actuating said shaft in either direction for swinging the frame in either direction.

1,378,632. AUTO-JACK AND POWER MECHANISM. RALPH S. SWOPE, Redfield, S. D. Filed Nov. 12, 1918. Serial No. 262,255. 3 Claims. (Cl. 254—89.)



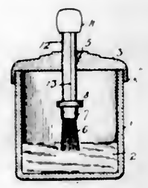
1. A mechanism of the class described having wheel tracks, jacks for engagement with the axle of an automobile, a drive shaft having treads or spools for contact with the treads of the drive wheels of the automobile, connections between said drive shafts and the jacks for communicating movement thereto, guides carried by certain of the jacks, the drive shaft extending through said guides, and springs tensioned between the drive shaft and the tops of said certain jacks, whereby the treads or spools of the drive shaft are maintained in contact with the drive wheels of the automobile as the latter is elevated by the jacks.

1,378,633. DRAFT-RIGGING. THOMAS H. SYMINGTON, Baltimore, Md., assignor, by mesne assignments, to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed June 30, 1917. Serial No. 177,930. 5 Claims. (Cl. 213—42.)



2. A cheek-plate for tandem spring draft rigging comprising a main web, a plurality of stop members extending inwardly therefrom and, respectively, forming the three main follower stops, and a plurality of longitudinally extending flanges spaced inwardly from said main web and respectively reinforcing said stop members, the spaces between said flanges and the main web opening upon the inner face of the cheek-plate.

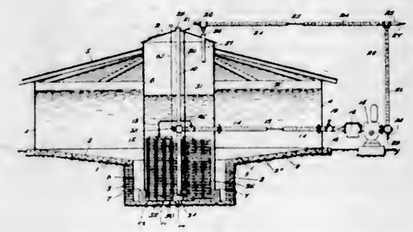
1,378,634. VARIABLE-SPEED-TRANSMISSION MECHANISM. WALTER K. THOMAS, Brooklyn, N. Y. Filed Mar. 16, 1920. Serial No. 366,261. 15 Claims. (Cl. 74—34.)



1. A variable speed transmission mechanism embodying therein a driving shaft, a member carried by and rotatable therewith, a gear wheel loosely mounted thereon, a driven shaft, a gear wheel carried by and rotatable therewith, a rotatable shaft carried by said member, gears carried thereby and rotatable therewith meshing with said gear upon said driving shaft and said gear upon said driven shaft respectively, an electromagnet and an armature coöperating therewith, one of which is carried by said member and the other of which is operative upon said gear wheel upon said driving shaft, and means controlling the circuit to said magnet.

1,378,635. AMUSEMENT APPARATUS. MORRIS UNGER, Pittsburgh, Pa. Filed Mar. 11, 1921. Serial No. 451,431. 10 Claims. (Cl. 104—73.)

1. In an amusement device of the character described, the combination of a plurality of transportable wagons provided with a channel-like bottom, and of water channels connecting said wagons.

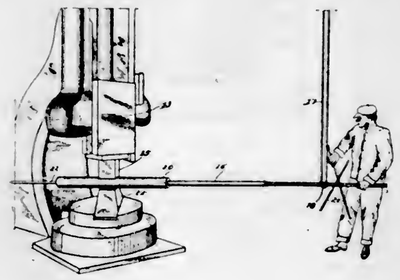


1,378,636. BRUSH FOR MUCILAGE AND PASTE BOTTLES. SALOMON VOS, Brooklyn, N. Y. Filed July 6, 1920. Serial No. 394,058. 4 Claims. (Cl. 91—67.2.)

1. A device of the class described comprising a cap adapted to be applied to a bottle or jar to support a brush, and a brush comprising a bristle portion, a shank slidable through said cap, an enlargement or knob on the upper end of said shank and an expansible sleeve surrounding said shank and frictionally engaging said cap and adapted to hold the brush at various elevations in relation to the cap.

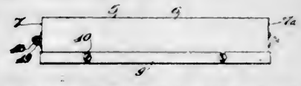
1,378,637. METHOD AND APPARATUS FOR HANDLING ASPHALT. MARION P. WALL, Chattanooga, Tenn., assignor to One Fire Asphalt Plant Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed June 7, 1920. Serial No. 387,228. 9 Claims. (Cl. 257—205.)

5. In an apparatus for handling asphalt, the combination of an outer tank adapted to contain asphalt in a solid state; an inner tank adapted to hold asphalt in a molten state; a connection between said tanks; a steam coil in said inner tank; means to supply steam to said coil; a pump provided with a suction pipe surrounding said steam supplying means for withdrawing the molten asphalt from said inner tank; means to deliver a portion of said molten asphalt to the point of use; a steam pipe for maintaining the asphalt in its molten condition while



being conveyed by said last named means; and means for delivering another portion of said molten asphalt back into said inner tank, substantially as described.

1,378,638. SHADE-ROLLER BRACKET. HARVY M. WARD, Jay, N. Y. Filed Dec. 21, 1918. Serial No. 267,800. 1 Claim. (Cl. 156—23.)

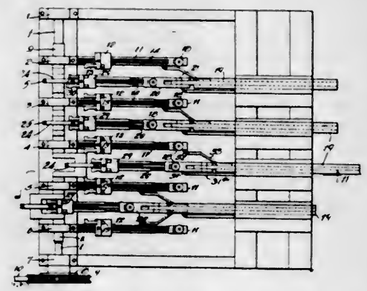


A shade roller support comprising a bar for transverse positioning on a window frame, the bar being provided adjacent each end with a pair of longitudinally disposed alining slots, shade roller supports provided with ribs and engaging one each in the endmost slots, set screws and washers engaging the rib and bar respectively for securing the said roller supports in place, pressure jaws also provided with ribs one each engaging in the remaining slots, the pressure jaws being provided with ears, the bar being provided with ears, and thumb screws threadingly engaging the ears on the bar and loosely engaging the ears on the pressure jaws with respect to which they are secured against longitudinal movement, and set screws and washers engaging respectively the ribs on the jaws and the bar, for the purpose specified.

1,378,639. PROCESS FOR FORMING METALLIC TUBES. EMILL WARNER, Chicago, Ill. Filed June 26, 1917. Serial No. 176,956. 1 Claim. (Cl. 78—81.)

The method of forging a metallic tube from a heated piece of metal having an opening therethrough, which consists in inserting a mandrel into said opening; then pounding the sides of the piece of metal while positioned on said mandrel; and manually, longitudinally and rotatively shifting said piece of metal during the pounding thereof, substantially as described.

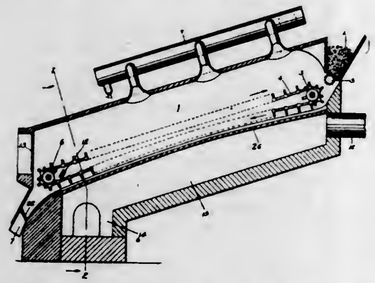
1,378,640. LICENSE-INDICATOR. HERBERT O. WIEMANN, Chesterton, Ind. Filed Apr. 20, 1920. Serial No. 375,314. 1 Claim. (Cl. 40—132.)



A license indicator comprising a casing having an open front, a frame fitted over the latter and composed of top, bottom and side sections, a stenciled license plate within the frame, a translucent plate behind the license plate, backing abutments for the latter, and screws entering opposite walls of the casing, corresponding walls of the frame having slots through which the screws pass, said slots running in a direction transverse of the casing and rendering the frame adjustable to the thickness of the license and translucent plates.

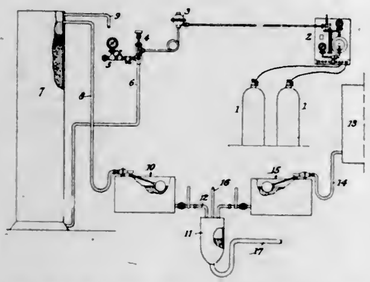
1,378,641. ART OF PRODUCING LIFELIKE SIMULATIONS TO INANIMATE OBJECTS. JOHN ERNEST WILLIAMSON, Norfolk, Va. Filed Mar. 19, 1917. Serial No. 155,962. 22 Claims. (Cl. 46—70.)

1. Means for producing life like motions of an inanimate object, comprising a main casing representing the body of said object, an elongated casing extending from the main casing, means for normally holding the elongated casing in a bent condition and air controlling means for varying a pressure uniform throughout the inner surface of the elongated casing to vary the effect of the bending means.



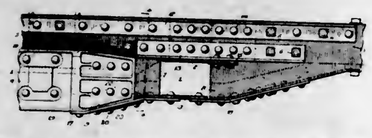
1,378,642. PROCESS AND MACHINE FOR MAKING CRANK-SHAFTS FOR ENGINES, COMPRESSORS, AND THE LIKE. LUCIEN I. YEOMANS, Chicago, Ill., assignor, by mesne assignments, to Amalgamated Machinery Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 25, 1917. Serial No. 176,689. 16 Claims. (Cl. 82—9.)

1. A crank-shaft lathe having, in combination, means for supporting and rotating a crank-shaft, said shaft hav-



ing a disk of metal of low fusing point cast upon the middle portion of a crank pin of the crank-shaft, a tool carrier having a bearing adapted to contain said disk, a tool on said carrier positioned to turn a portion of the crank-pin at one side of said disk, and means for feeding the tool.

1,378,643. RETORT FOR EXTRACTING OIL, &c. AXEL V. YOUNG, De Beque, Colo. Filed Feb. 20, 1919. Serial No. 278,128. 4 Claims. (Cl. 196—19.)

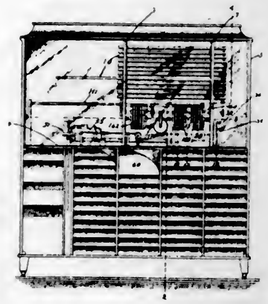


1. A retort of the character described, comprising a retort proper having an inclined bottom arched upwardly longitudinally thereof, a hopper, means to feed material from said hopper to the retort, sprocket wheels at opposite ends of the retort adjacent the bottom thereof, a conveyer chain mounted on said sprocket wheels to be driven thereby, said chain having depending pusher feet operative to push the material downwardly along said inclined bottom, and means to heat said retort.

1,378,644. PROCESS OF STERILIZING. JOHN C. BAKER, Ridgefield Park, N. J. Filed Sept. 13, 1919. Serial No. 323,650. 4 Claims. (Cl. 167—3.)

1. The process of sterilizing herein described, which consists in bringing together continuously during the period and at the rate of the use of the product the materials necessary for the production of an equeous solution of nitrogen trichlorid, and utilizing the same as it is produced as a sterilizing agent.

1,378,645. CAR-UNDERFRAME. DONALD S. BARROWS, Rochester, N. Y. Filed July 29, 1919. Serial No. 313,985. 5 Claims. (Cl. 105—420.)



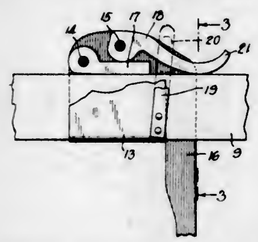
1. In a car underframe, the combination with wooden center sills of metallic draft plates connected to the vertical faces of the said sills, each of said metallic plates being provided with a depending portion, said portion gradually increasing in depth from a point in rear of the body bolster and being adapted to embrace the said bolster, and means for reinforcing the lower edges of said depending portions, said means comprising members connected to the lower member of the said bolster and extending forwardly and rearwardly thereof and adapted to underlie and to be connected to the adjacent portions of said plates.

1,378,646. GLOVE-FINGER-SUPPORTING TUBE. DAVID BAUM, Livermore Falls, Me. Filed Apr. 27, 1920. Serial No. 377,062. 3 Claims. (Cl. 223—20.)

1. A glove finger supporting device, comprising a tube having a circular series of outwardly bowed spring tongues at its end.

1,378,647. AUTOMATIC SOUND-REPRODUCING MACHINE. JAMES T. BEARD, Jr., Brooklyn, N. Y. Filed July 12, 1917. Serial No. 180,056. 96 Claims. (Cl. 274—10.)

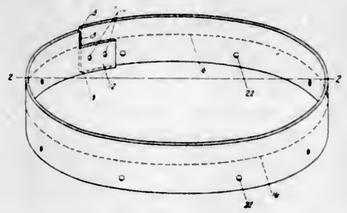
1. In a sound reproducing machine, a record support and actuating means therefor, a record magazine, selectively operable mechanisms to move a single record from the magazine to a predetermined position with respect to the support, and additional means subsequently operable to convey the record to playing position upon the support.



9. In a sound reproducing machine, a horizontally disposed rotary record table and actuating means therefor, a record magazine including independently movable record supports, means for selectively moving the supports to dispose a disk in predetermined relation to the table, automatically operable means to remove the disk from the support, and automatic means to reverse the movement of the support, said record removing means subsequently operating to position the record upon the table.

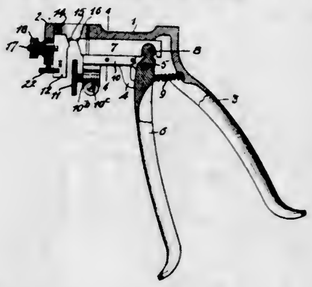
16. In a sound reproducing machine, a horizontally disposed record disk table and means for rotating said table, a normally stationary plate disposed below the upper surface of the table, and means for automatically elevating said plate upon the completion of the playing operation to move the record disk to a position above and in spaced relation to the table.

18. In a sound reproducing machine, a rotary record table, an actuating means therefor, a tone arm mounted for swinging movement above the table and equipped with a sound box swiveled thereon and having a reproducing stylus, electro-mechanical means for rotating the sound box to dispose the stylus in inoperative position, and additional electro-mechanical means to initially move the tone arm inwardly over the record disk, and then break the circuit of the first-named electro-mechanical means to release the sound box whereby the stylus is permitted to engage in the record groove.



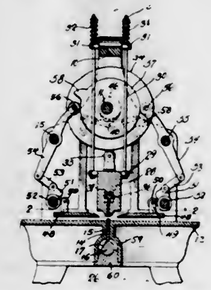
20. In a sound reproducing machine, a rotary record table and actuating means therefor, a tone arm mounted for swinging movement above the table and having a sound box swiveled thereon provided with a reproducing stylus, means operatively connected to the sound box to sustain the stylus in inoperative position, automatic means for initially swinging the tone arm inwardly to dispose the stylus in starting position above the record groove and including means operable to permit the sound box to rotate whereby the stylus may engage in the record groove and to also break the operative connection of said means with the tone arm to permit of the continued inward movement of the tone arm over the record independently of such initial positioning means.

1,378,648. PAPER-GRIPPING DEVICE. SAMUEL BECKER, Brooklyn, N. Y. Filed Sept. 16, 1920. Serial No. 410,643. 3 Claims. (Cl. 101—408.)



1. A paper gripping device comprising a platen adapted to receive paper, a plurality of paper gripping arms cooperating therewith, a plurality of slides on said arms, an integral resilient finger on each slide adapted to contact with the paper, a brake shoe on the slide adapted to contact with the arm, and a cam to hold the brake shoe against the arm.

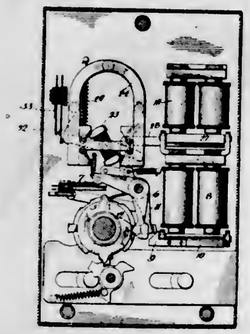
1,378,649. COVER-SECURING HOOP. GEORGE H. BLISS, Boston, Mass., assignor to A. G. Bradish & Son, Inc., Boston, Mass., a Corporation of Massachusetts. Filed May 29, 1920. Serial No. 385,242. 1 Claim. (Cl. 217—89.)



A hoop adapted to embrace the upper end of the periphery of a circular receptacle and secure a cover thereto, said hoop being formed from an elongated sheet metal strip having overlapping joint-forming portions 13 at its opposite ends, said portions overlapping and being united to form a joint which is narrower than the maximum width of the strip, so that the hoop has a continuous receptacle-embracing lower zone including said joint, and a bead-forming upper zone, the continuity of which is interrupted by a crevice above the joint, said upper zone being rolled inward after the formation of said joint to form a cover-securing bead, located entirely above said joint.

1,378,650. SAW-SET. CHRISTIAN BODMER, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 22, 1920. Serial No. 375,678. 1 Claim. (Cl. 76—69.)

In a saw set, a main body having a sight opening in its forward portion, a vertically adjustable anvil at the forward side of said body and in the zone of said sight opening, a plunger carried by said body portion and movable to and fro in a channel in the underside thereof and operating at right angles to said anvil, a cover plate for holding said plunger in place in said channel, a pair of depending clamping jaws adjacent the front end of said plate and having a threaded passage between them, a stop having a threaded stem adapted to said threaded passage and held by said jaws, said stop having a vertical saw supporting face adjustable to and fro only, and means carried by said jaws for locking said stop in adjusted position, and a lever carried by said body portion and operatively connected with said plunger to move the same.

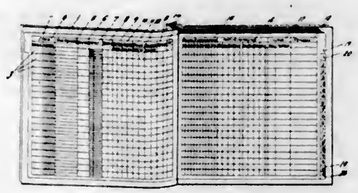


1,378,651. SHEET-METAL-SEAMING MACHINE. JOHN W. BROWN and WILLIAM HESS, Philadelphia, Pa., assignors, by direct and mesne assignments, to Benjamin P. Obdyke, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed June 27, 1919. Serial No. 307,150. 5 Claims. (Cl. 113—54.)

1. In a seaming machine, the combination of a frame, a table on the frame to support metallic sheets with ends overlapping, a former mounted to rise through the table beneath the overlapping ends of the sheets, a former block suspended over the table above the former, tucker shoes arranged at opposite sides of the former block and

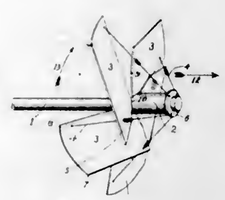
bodily movable vertically and horizontally, means for raising said former, means for depressing the former block, means for advancing said tucker shoes downwardly toward the table and horizontally toward each other, a hammer in the former block, means for impacting the hammer toward said former, and a single operating device connected to all of said means for operating the same in sequence to form and seal the seam.

1,378,652. RECORDING-LOCK. JAMES W. BRYCE, Binghamton, N. Y., assignor to The International Time Recording Company of New York, a Corporation of New York. Filed Aug. 18, 1919. Serial No. 318,233. 3 Claims. (Cl. 234—1.5.)



2. In a recording lock system, the combination with a lock, a recorder and intermediate circuits connecting the same, of a group of circuit closers in the lock in independent circuits and adapted to be set or operated in different combinations and permutations by the insertion of a key, of means in the recorder for establishing under the control of the lock circuit closers a circuit path which will correspond to the combination or permutation of circuit closers operated, a source of current and an indicating magnet and means for connecting them with the circuit established in the recorder.

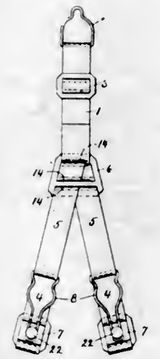
1,378,653. SECONDARY CLOCK. JAMES W. BRYCE, Binghamton, N. Y., assignor to The International Time Recording Company of New York, a Corporation of New York. Filed May 17, 1920. Serial No. 382,115. 3 Claims. (Cl. 58—27.)



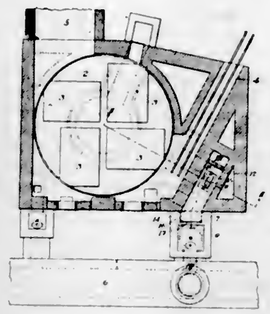
1. In a secondary clock of the kind herein described, the combination with the train of an accelerating device, comprising an electromagnet, a pivoted armature lever therefor, a ratchet wheel, the shaft of which constitutes a fixed stop for a projection on said armature lever, a spring actuated pawl lever pivoted to the armature lever and limited in its vibratory movement by a fixed stop thereon and normally engaging with the ratchet, a means, such as a fan wheel in gear with the clock train and under the control of the ratchet, these parts being so constructed and arranged that upon a movement of the armature lever under the magnetizing influence of the magnet, the pawl lever is moved out of engagement with the ratchet, but upon the cessation of magnetism and return of the said armature lever is moved back into engagement with the said ratchet.

1,378,654. INDUSTRIAL CAR-RECORD BOOK. JAMES R. BUCHANAN, Huntsville, Ala. Filed Oct. 20, 1919. Serial No. 331,838. 4 Claims. (Cl. 283—36.)

1. In a book of the character described, a plurality of series of leaves, leaves of each series comprising permanent and detachable tabs with like indexing indicia displayed thereon, the detachable tabs being superimposed in each series, and the last leaf of each series having its permanent tab underlying the detachable tabs of the preceding pages of its respective series.



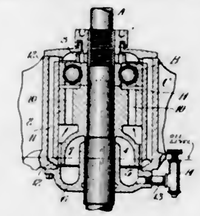
1,378,655. PROPELLER. CHARLES E. BURROUGHS, Cincinnati, Ohio. Filed Sept. 26, 1917. Serial No. 193,251. 1 Claim. (Cl. 170—169.)



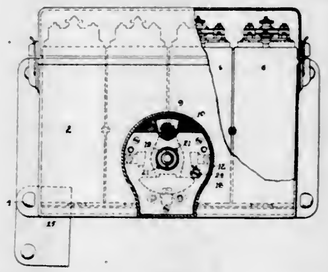
A propeller for air and water craft comprising an axis or driving-shaft, a sleeve or hub mounted on and adapted to rotate with said driving-shaft, a circular series of rectangular, plane-faced, flat blades projecting from said sleeve and having their respective outer ends slightly beveled and curved such curvature being that of an arc of a circle beginning at the outer left-hand corner of the respective blades and gradually rising or extending outwardly to the right-hand corner of each blade, and extensible guy-wires stretched from one blade to the next one of the series of blades and thence to the outer end of said sleeve and thereby adapted to adjustably sustain the flat plane-faced blades whereby the said driving-shaft shall always be longitudinally-oblique but not at any point at right-angles to any line of the plane of the flat surface of the several blades of the propeller, substantially as shown and described.

1,378,656. GARMENT-SUPPORTER. JAMES H. BURT, Springfield, Mass., assignor, by direct and mesne assignments, to Thrift-Garter Co. Inc., New York, N. Y., a Corporation of New York. Filed July 29, 1920. Serial No. 399,731. 4 Claims. (Cl. 241—1.)

1. As an improved article of manufacture, a hose supporter comprising a hanger, a pair of long tabs formed of a single strip connected with said hanger, and a pair of short tabs formed of two strips also connected with said hanger, all solely dependent on friction to hold them in place, said tabs being provided with stocking-fastening members.



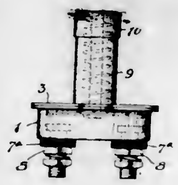
1,378,657. FLATTENING-OVEN FURNACE. HENRY F. CLARK, Pittsburgh, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 7, 1918, Serial No. 233,005. Renewed Oct. 9, 1920. Serial No. 415,949. 4 Claims. (Cl. 158—1.)



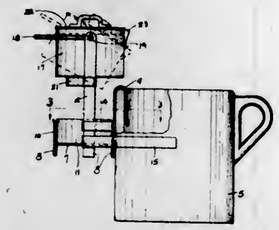
1. A glass flattening oven having a flattening chamber, a shove-in opening at one side of such chamber, a combustion chamber at the outer side of the shove-in opening, an air chamber below the floor of the combustion chamber, a gas chamber or passage below the floor of the air chamber, the floors of the combustion and air chambers having vertically alined openings therein, and a tube extending vertically through the air chamber and connecting the said openings, said tube having an upwardly converging interior passage, and there being a space around that portion of said tube within the opening of the floor of the combustion chamber through which air from the air chamber can pass into the combustion chamber; substantially as described.

1,378,658. LUBRICATOR FOR BALL-BEARINGS. FRANK H. CLEMENT, Rochester, N. Y.; Louisa S. Clement, Mary G. Clement, and Benj. H. Clement, executors of said Frank H. Clement, deceased, assignors to American Woodworking Machinery Company, Rochester, N. Y., a Corporation of Pennsylvania. Filed Dec. 28, 1918. Serial No. 268,736. 7 Claims. (Cl. 64—56.)

1. The combination with a ball bearing housing and a revoluble spindle therein carrying a ball bearing, of a sleeve secured to said spindle concentrically therewith and closely fitting the housing lugs on the periphery of the sleeve projecting into a body of oil contained in said housing, and having their sides angled with reference to the axis of the spindle, whereby the oil is forced outward and upward to the ball races and a by-pass in the housing for the return of the oil.

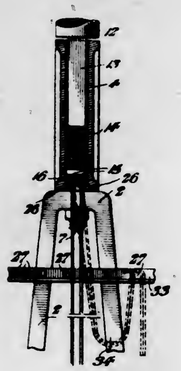


1,378,659. SAFEGUARD FOR ELECTRIC CIRCUITS. WARREN R. COX, Cleveland, Ohio. Filed Oct. 1, 1917. Serial No. 194,116. 19 Claims. (Cl. 175—357.)



1. A coil box, sparking units removably mounted in said box, an electric switch and means for establishing and grounding an electric circuit for said units, and key-controlled mechanism to operate said switch and prevent removal of said units from said box.

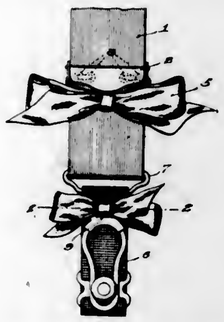
1,378,660. SWITCH. CHARLES F. CUNO, Meriden, Conn. Filed Feb. 12, 1920. Serial No. 358,042. 8 Claims. (Cl. 200—159.)



1. In a switch of the character described, a housing, a metallic channeled piece resting in the bottom thereof, a channeled piece of insulating material resting in said metallic channel and supported thereby and projecting upwardly therefrom, a plurality of terminal pieces located in the bottom of said insulating channel, each of said terminal pieces having a shank extending through said parts but insulated therefrom with means on each of said shanks for holding all of said parts assembled, a switch blade located in the channeled insulating piece and guided thereby and arranged to electrically bridge the said terminals when moved into contact therewith, and means for carrying said blade and for moving the same into and out of contact with said terminal pieces.

1,378,661. SHAVING-MUG ATTACHMENT. CHARLES J. DARABAN, Chicago, Ill., assignor of one-half to Herman Allen, Chicago, Ill. Filed Sept. 27, 1920. Serial No. 413,052. 6 Claims. (Cl. 132—80.)

3. A device of the class described comprising a hook adapted to engage the edge of a shaving mug; clips operatively connected with said hook adapted to engage the sides of the mug; means for supporting a burner from said hook at the side of the mug; standards operatively connected with said hook and said clips and extending above the hook; and a tank pivotally mounted on said standards in position to empty into the mug when tipped about its pivotal axis, substantially as described.

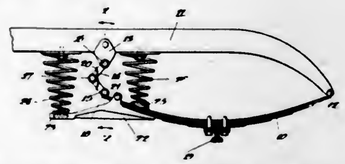


1,378,662. MACHINE FOR MAKING MACARONI. ANTONIO DI DOMENICA, Philadelphia, Pa. Filed Jan. 10, 1920. Serial No. 350,516. 3 Claims. (Cl. 107—14.)

1. A machine of the character stated, comprising in combination, a frame-work, a trough therein, a removable apertured floor for said trough, a plunger within said trough, means for actuating said plunger, a plurality of cores for said apertured floor, each of which comprises a body portion extending between two of the above mentioned floor apertures, having its ends bent at substantially right angles and positioned axially within a pair of apertures, means for elevating said plunger, and means below said trough for receiving and supporting material expressed therefrom in loop-like form.

1,378,663. HOSE-SUPPORTER. CHRISTOPHER C. DONAHUE, Bridgeport, Conn. Filed Dec. 2, 1920. Serial No. 427,727. 2 Claims. (Cl. 241—1.)

1. In a hose supporter, a tape having a looped end for supporting a metal part of the structure, an integral eyelet having spaced eyes for securing the end of the loop

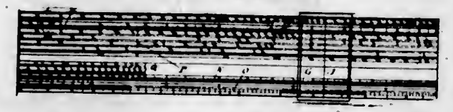


to the tape body, and a ribbon threaded through each of the eyes and tied into a knot.

1,378,664. MOLDING. HERBERT R. DUCKWALL, Indianapolis, Ind. Filed Sept. 3, 1919. Serial No. 321,488. 2 Claims. (Cl. 155—184.)

1. An upholstering molding comprising a flexible core strip, headed fasteners extending through said core strip with their heads flush with the outer curved surface of said strip, a cushion strip of yielding material lying adjacent to and covering the top and sides of the surface of said core strip and the heads of the fasteners, and a surface strip conforming to the curved surfaces of said core strip and cushion strip and surrounding both of said strips for providing the finished outer surface.

1,378,665. SHOCK-ABSORBER. PETER DU FORD, Ontario, Oreg. Filed May 20, 1919. Serial No. 298,449. 6 Claims. (Cl. 267—28.)

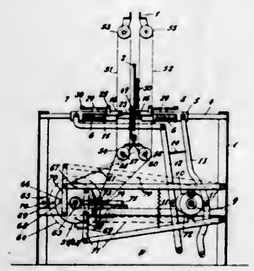


1. The combination with a leaf spring, of toggle levers yieldingly supporting one end thereof, and means for controlling yielding movement of said end of the spring including a bearing bracket connected to, and projecting beyond, the spring end, and a volute spiral compression spring engaging the said bracket beyond the leaf spring.

1,378,666. CALCULATING DEVICE. HARRY L. EASTMAN and FRANK B. RAE, Cleveland, Ohio, assignors, by direct and mesne assignments, of four-tenths to said Rae and six-tenths to said Eastman. Filed July 21, 1916. Serial No. 110,484. 4 Claims. (Cl. 235—70.)

4. A calculating device for use of printers, etc., comprising a base member having a graduated logarithmic

scale arranged thereon and also having a graduated type scale, the graduations of the type scale having a progression similar to the graduations of the logarithmic scale, said type scale indicating the number of ems of type which could be set up in a line of the length indicated by the various graduations of the logarithmic scale, a slide cooperating with the base, said slide having a graduated reducing scale thereon and a graduated enlargement scale

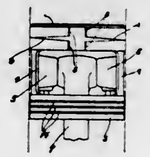


thereon, the graduations of the enlarging scale having a progression which corresponds with the progression of the logarithmic scale, the graduations of the reducing scale having progression similar to the logarithmic scale but in opposite direction, the designations of its graduations progress reversely with respect to the graduations of the logarithmic scale, for the purpose described.

1,378,667. CABLE-CLAMP. GRANDON E. ECKERT, East Liverpool, Ohio, assignor to The R. Thomas & Sons Co., East Liverpool, Ohio, a Corporation of Ohio. Filed Oct. 19, 1920. Serial No. 418,121. 6 Claims. (Cl. 24—135.)

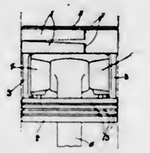
5. A suspension clamp, comprising a suspension bolt with threaded shank, a pair of complementary cable clamping members, the lower of which is longitudinally channeled to afford a cableway, and provided with upwardly extending side guide wings for holding the cable in said way, lateral projections at the mid-areas of said clamping members arranged to one side of said way and pierced to permit the passage of the bolt therethrough, and a nut on said bolt shank for drawing said clamping members together.

1,378,668. AUTOMATIC EMBROIDERING-MACHINE. OTTO FAHRNI, Thoune, Switzerland, assignor to Walter Gerber, Thoune, Hofstetten, Switzerland, and Ernst Schneider, Bächimatte, Thoune, Switzerland. Filed Nov. 17, 1920. Serial No. 424,758. 13 Claims. (Cl. 112—94.)



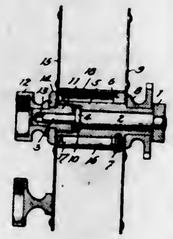
1. In an embroidering machine of the class described, the combination with a framework, and an embroidering frame movably mounted therein, of a slide mounted on the framework to move to and fro perpendicularly to said frame, needle-holders carried by said slide, a thread-tightening member mounted in the framework at the same side of said frame as said needleholders, and means adapted to be controlled by a pattern card and arranged to move said member a shorter distance each stitch corresponding to the consumption of thread, substantially as described.

1,378,669. FIGURE FOR BALLROOM DANCING PRACTICE. SIDNEY E. FEIST, Brooklyn, N. Y. Filed Feb. 3, 1921. Serial No. 442,225. 5 Claims. (Cl. 35—16.)



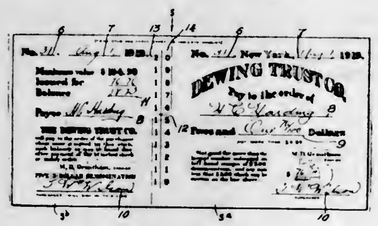
1. A figure used in dancing instructions comprising a body, a leg connected with the back of the body and out of the way of the feet of a student using the figure and means for connecting a student's hand to the body near the back thereof.

1,378,670. PISTON. JOHN FLAMMANG, University City, Mo., assignor to Ottmar G. Stark, St. Louis, Mo. Filed Sept. 24, 1919. Serial No. 325,993. 10 Claims. (Cl. 74—108.)



1. A piston, comprising a pair of split resilient annular members, each of which has one end free and its opposite end integrally united with the piston body, said members tapering from their union with the piston body to their free ends.

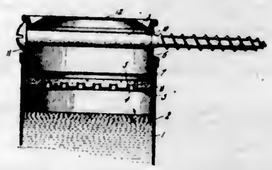
1,378,671. PISTON. JOHN FLAMMANG, University City, Mo., assignor to Ottmar G. Stark, St. Louis, Mo. Filed Sept. 24, 1919. Serial No. 325,994. 10 Claims. (Cl. 74—108.)



1. A piston, comprising a split resilient annular member, integrally united with the piston body and having its ends overlapping in contact with each other throughout their length.

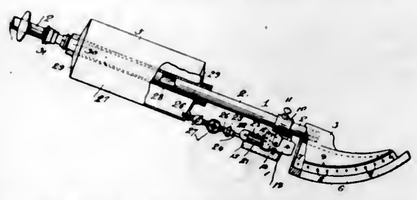
1,378,672. RIBBON-SPOOL FOR TYPEWRITERS. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, Harrisburg, Pa., a Corporation of Delaware. Original application filed Dec. 14, 1914, Serial No. 877,216. Divided and this application filed Aug. 17, 1918. Serial No. 250,315. 7 Claims. (Cl. 242—70.)

1. The combination with a hub section, of a spindle rotatably supporting said section, means retaining the hub section against endwise movement on the spindle, a second hub section also rotatable on the spindle and movable longitudinally thereof to connect with the hub section first named and a ribbon shell rotatable with the hub sections and removable when said hub sections are disconnected.



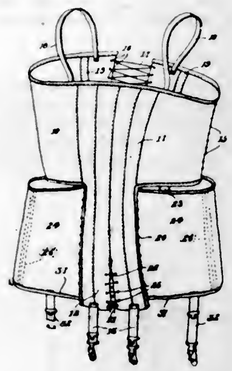
1,378,673. NEGOTIABLE PAPER. CLAUDE D. GRATON, Newark, N. J. Filed Sept. 23, 1919. Serial No. 325,627. 3 Claims. (Cl. 283—9.)

1. A negotiable paper comprising a stub section and a check section having two columns of figures positioned at the juncture of said stub section and check section arranged so that adjacent numbers of respective columns are read together before the check is torn from its stub, said check being capable of being torn from the stub so as to leave any number of the combined column of figures on the check section or any single number on the check section, said check section having printed matter thereon directing a certain institution to pay the sum written thereon, a line for said sum, a line for the payee's name and a line for the payor's name, said check having in the printed matter means indicating the denomination of the check which denomination is multiplied by the highest number left on the check from said two columns of figures when the check is torn therefrom, and a line arranged on the stub section for receiving in writing figures indicating the value of said check.



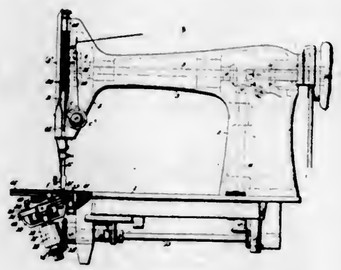
1,378,674. CONTAINER. JOHN LAFOUREADE HAMILTON, Boston, Mass., assignor to Safandshur Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 25, 1920. Serial No. 419,465. 5 Claims. (Cl. 169—35.)

1. A container for fire extinguishing liquid comprising a body for receiving a liquid, a cover formed in said body having perforations therein arranged so that the material pressed therefrom forms spurs extending outwardly whereby when the liquid is passing through said perforations the spurs will finely divide the same so as to produce



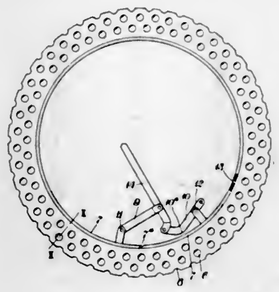
a better distribution in a minimum time, a gasket arranged on said cover, and a cap engaging said gasket for sealing the end of the container carrying said perforations.

1,378,675. AUTOMATIC ASPHALT-SMOOTHING IRON. ARTHUR E. HAUCK, New York, N. Y.; Adolph H. Stein executor of said Arthur E. Hauck, deceased. Filed Oct. 16, 1919. Serial No. 330,959. 3 Claims. (Cl. 158—27.)



2. In a device of the class described, a handle with a smoothing iron fixed to one end thereof, a burner and a tank slidably mounted on said handle and means for fixing them at any desired location so that the flame may be projected so as to heat the smoothing iron with the desired intensity when the device is in use.

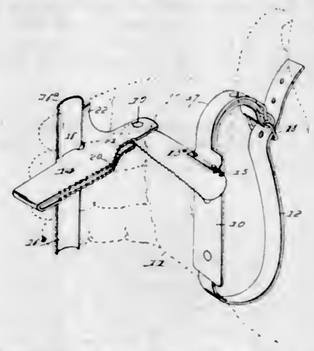
7,378,676. DETACHABLE BRASSIÈRE AND CORSET COMBINATION. FRANCES HEINDRICH, New York, N. Y. Filed July 30, 1920. Serial No. 400,051. 5 Claims. (Cl. 2—73.)



1. In a garment of the class described, a brassière having a complete body encircling portion and a front central portion extending downward, a corset having a front vertical opening, and means carried on the side edges of the downwardly extending portion of the brassière and the edges of the front corset opening to connect said edges and thereby unite the brassière and corset.

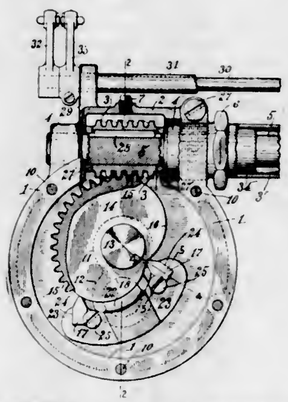
1,378,677. LOCK-STITCH SEWING-MACHINE. MARTIN HEMLER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Mar. 21, 1917. Serial No. 156,357. 23 Claims. (Cl. 112—181.)

1. In a sewing machine, in combination, a reciprocating needle, a circularly moving loop-taker, a take-up, a thread-case support sustained by said loop-taker, and a thread-case sustained by said support, said thread-case being formed with an elongated thread-mass cavity whose longest dimension is inclined upwardly at an acute angle to the needle-path substantially coincident with the plane of action of the loop-taker, and substantially at right angles to the line of seam-formation.



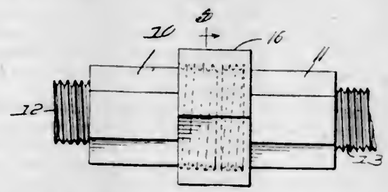
1,378,678. MOLD FOR TUBES AND TIRES. IRVING S. HOFFMANN, Columbus, Ohio. Filed Dec. 15, 1919. Serial No. 344,915. 3 Claims. (Cl. 18—38.)

1. A vulcanizing mold member for rubber tubes consisting of a circular seamless unitary casing of metal circumferentially open at its inner side and provided with indentations to form the design to be imparted to the rubber tube and means for closing said circumferential opening.



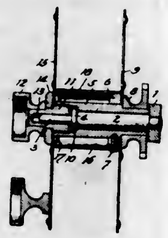
1,378,679. MAIZE-HEADER. ANDREW P. JORDAN, Winters, Tex. Filed Jan. 29, 1920. Serial No. 354,859. 1 Claim. (Cl. 30—9.)

A heading implement having pivotally connected fixed and movable blades, means attachable to the hand of an operator for supporting one of said blades, and means carried by the other blade for receiving the pressure of the fingers of said hand, one of the blades being provided with spaced parallel cutting edges separated to receive the cutting edge of the other blade and having its said



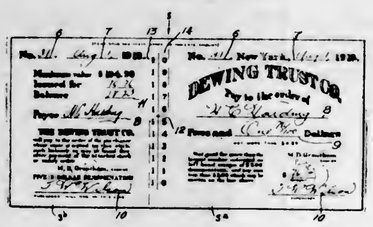
edges adjacent to the pivotal end of the blade provided with receding or reëntrant portions forming a pocket.

1,378,680. STEERING-GEAR. JOSEPH N. KELLY, Dayton, Ohio. Filed Mar. 8, 1920. Serial No. 364,178. 12 Claims. (Cl. 74—79.)



1. In a steering mechanism, a steering post, a cam mounted independently of said steering post and rotatable in a fixed plane, a connection between said cam and said steering post to enable said cam to be moved in either direction by said steering post, a rocker mounted independently of said cam and having parts arranged in said fixed plane to engage the periphery of said cam at points on opposite sides of its axis, whereby the movement of said cam in said fixed plane will actuate said rocker, and a steering arm connected with said rocker.

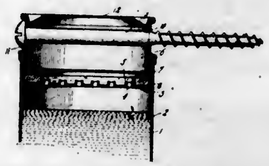
1,378,681. LOCK-NUT. FRANK P. KIRK, St. Albans, Vt. Filed Nov. 12, 1919. Serial No. 337,429. 1 Claim. (Cl. 151—15.)



A nut lock consisting of two internally threaded sleeves enlarged at one extremity and provided with threads

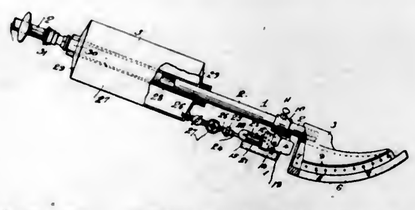
1,378,672. RIBBON-SPOOL FOR TYPEWRITERS. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, Harrisburg, Pa., a Corporation of Delaware. Original application filed Dec. 14, 1914, Serial No. 877,216. Divided and this application filed Aug. 17, 1918. Serial No. 250,315. 7 Claims. (Cl. 242—70.)

1. The combination with a hub section, of a spindle rotatably supporting said section, means retaining the hub section against endwise movement on the spindle, a second hub section also rotatable on the spindle and movable longitudinally thereof to connect with the hub section first named and a ribbon shell rotatable with the hub sections and removable when said hub sections are disconnected.



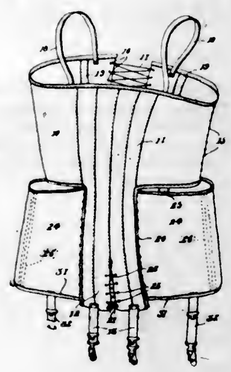
1,378,673. NEGOTIABLE PAPER. CLAUDE D. GRATON, Newark, N. J. Filed Sept. 23, 1919. Serial No. 325,627. 3 Claims. (Cl. 283—9.)

1. A negotiable paper comprising a stub section and a check section having two columns of figures positioned at the juncture of said stub section and check section arranged so that adjacent numbers of respective columns are read together before the check is torn from its stub, said check being capable of being torn from the stub so as to leave any number of the combined column of figures on the check section or any single number on the check section, said check section having printed matter thereon directing a certain institution to pay the sum written thereon, a line for said sum, a line for the payee's name and a line for the payor's name, said check having in the printed matter means indicating the denomination of the check which denomination is multiplied by the highest number left on the check from said two columns of figures when the check is torn therefrom, and a line arranged on the stub section for receiving in writing figures indicating the value of said check.



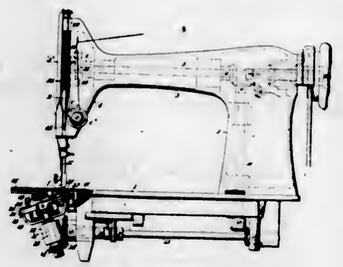
1,378,674. CONTAINER. JOHN LAFOUREADE HAMILTON, Boston, Mass., assignor to Safandshur Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 25, 1920. Serial No. 419,465. 5 Claims. (Cl. 169—35.)

1. A container for fire extinguishing liquid comprising a body for receiving a liquid, a cover formed in said body having perforations therein arranged so that the material pressed therefrom forms spurs extending outwardly whereby when the liquid is passing through said perforations the spurs will finely divide the same so as to produce



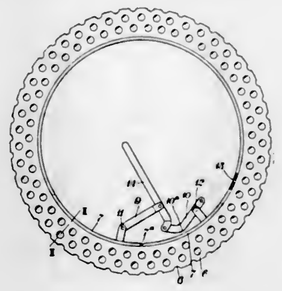
a better distribution in a minimum time, a gasket arranged on said cover, and a cap engaging said gasket for sealing the end of the container carrying said perforations.

1,378,675. AUTOMATIC ASPHALT-SMOOTHING IRON. ARTHUR E. HAUCK, New York, N. Y.; Adolph H. Stein executor of said Arthur E. Hauck, deceased. Filed Oct. 16, 1919. Serial No. 330,959. 3 Claims. (Cl. 158—27.)



2. In a device of the class described, a handle with a smoothing iron fixed to one end thereof, a burner and a tank slidably mounted on said handle and means for fixing them at any desired location so that the flame may be projected so as to heat the smoothing iron with the desired intensity when the device is in use.

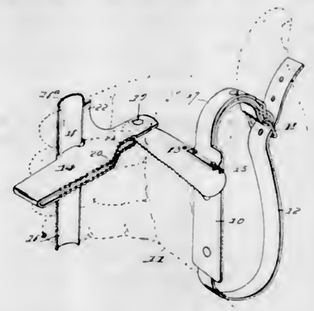
7,378,676. DETACHABLE BRASSIÈRE AND CORSET COMBINATION. FRANCES HEINDRICH, New York, N. Y. Filed July 30, 1920. Serial No. 400,051. 5 Claims. (Cl. 2—73.)



1. In a garment of the class described, a brassière having a complete body encircling portion and a front central portion extending downward, a corset having a front vertical opening, and means carried on the side edges of the downwardly extending portion of the brassière and the edges of the front corset opening to connect said edges and thereby unite the brassière and corset.

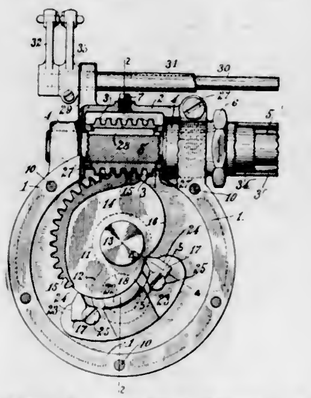
1,378,677. LOCK-STITCH SEWING-MACHINE. MARTIN HEMLER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Mar. 21, 1917. Serial No. 156,357. 23 Claims. (Cl. 112—181.)

1. In a sewing machine, in combination, a reciprocating needle, a circularly moving loop-taker, a take-up, a thread-case support sustained by said loop-taker, and a thread-case sustained by said support, said thread-case being formed with an elongated thread-mass cavity whose longest dimension is inclined upwardly at an acute angle to the needle-path substantially coincident with the plane of action of the loop-taker, and substantially at right angles to the line of seam-formation.



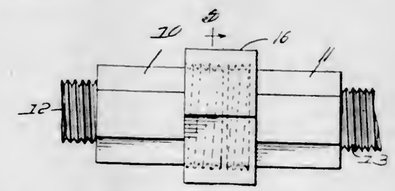
1,378,678. MOLD FOR TUBES AND TIRES. IRVING S. HOFFMANN, Columbus, Ohio. Filed Dec. 15, 1919. Serial No. 344,915. 3 Claims. (Cl. 18—38.)

1. A vulcanizing mold member for rubber tubes consisting of a circular seamless unitary casing of metal circumferentially open at its inner side and provided with indentations to form the design to be imparted to the rubber tube and means for closing said circumferential opening.



1,378,679. MAIZE-HEADER. ANDREW P. JORDAN, Winters, Tex. Filed Jan. 29, 1920. Serial No. 354,859. 1 Claim. (Cl. 30—9.)

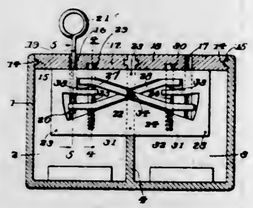
A heading implement having pivotally connected fixed and movable blades, means attachable to the hand of an operator for supporting one of said blades, and means carried by the other blade for receiving the pressure of the fingers of said hand, one of the blades being provided with spaced parallel cutting edges separated to receive the cutting edge of the other blade and having its said



edges adjacent to the pivotal end of the blade provided with receding or reëntrant portions forming a pocket.

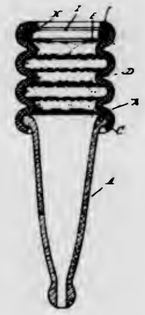
1,378,680. STEERING-GEAR. JOSEPH N. KELLY, Dayton, Ohio. Filed Mar. 8, 1920. Serial No. 364,178. 12 Claims. (Cl. 74—79.)

1. In a steering mechanism, a steering post, a cam mounted independently of said steering post and rotatable in a fixed plane, a connection between said cam and said steering post to enable said cam to be moved in either direction by said steering post, a rocker mounted independently of said cam and having parts arranged in said fixed plane to engage the periphery of said cam at points on opposite sides of its axis, whereby the movement of said cam in said fixed plane will actuate said rocker, and a steering arm connected with said rocker.



1,378,681. LOCK-NUT. FRANK P. KIRK, St. Albans, Vt. Filed Nov. 12, 1919. Serial No. 337,429. 1 Claim. (Cl. 151—15.)

A nut lock consisting of two internally threaded sleeves enlarged at one extremity and provided with threads

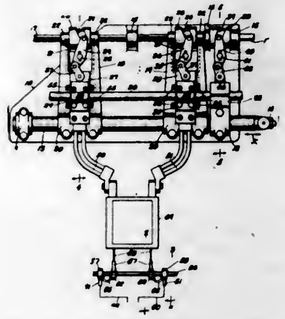


thereon the reverse of the internal threads, and a locking ring threaded to engage said internal threads and provided with an inturned flange or stop at one end for abutting engagement with the shoulder formed at the enlarged portion of one of the said elements, both the elements and the locking ring being provided with a wrench seat.

1,378,682. MONEY-RECEPTACLE. CHARLES W. KIRKPATRICK, New York, N. Y. Filed Feb. 11, 1920. Serial No. 357,797. 4 Claims. (Cl. 232—6.)

1. A money receptacle comprising a casing of lock free exterior finish, having a money receiving opening therein, another opening in said casing, a movable cover for said receptacle, locking means including a spring actuated plunger and interconnected lever located within the receptacle, and a key provided with a hook end designed to be inserted through the aforesaid opening and engage the free end of the aforesaid lever for manipulating the locking mechanism and releasing the cover.

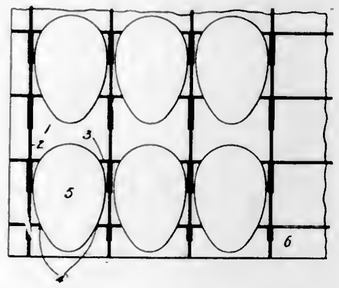
1,378,683. TEAT-CUP FOR MILKING-MACHINES. BERNARD A. KNOWLES, Azalia, Mich. Filed June 19, 1920. Serial No. 390,145. 4 Claims. (Cl. 31—102.)



1. The combination with a tubular rigid body for supporting the teat, of a member formed of flexible elastic material molded and disposed to permit collapse of the member longitudinally under atmospheric pressure, said member having a longitudinally adjustable engagement with the upper end of the rigid tubular body.

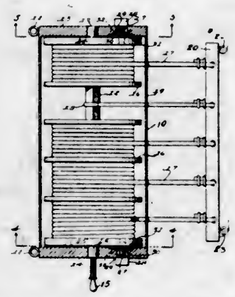
2. The combination with a rigid tubular body member for supporting the teat, of a longitudinally collapsible flexible extension at said body having a series of annular corrugations therein for alternative engagement with said body to vary the total length.

3. The combination with a rigid tubular body portion for supporting the teat, of a flexible member forming an extension at the upper end of said body, said flexible member having a series of annular corrugations therein, imparting flexibility thereto for longitudinal collapsing, and said corrugations also forming adjustable means of engagement with said rigid body to alter the total length thereof.



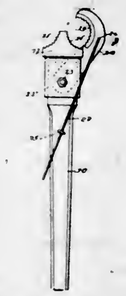
4. The combination with a rigid tubular body portion for supporting the teat, of a flexible extension provided with a series of annular corrugations, a bead on said body portion for alternative engagement with the several corrugations to alter the total length, a sealing diaphragm apertured for engagement with the teat and provided with a peripheral rigid reinforcement for sealing engagement with said extension.

1,378,684. ELECTRIC HEATING APPARATUS. FRANK P. KOBERT, Amityville, N. Y. Filed June 5, 1920. Serial No. 386,864. 16 Claims. (Cl. 219—11.)



1. A heating apparatus comprising two movable electrodes, said electrodes being spaced longitudinally of and adapted to engage a workpiece to feed it into a suitable machine, and means whereby said workpiece will be heated in the operation of feeding the same into a machine by said electrodes.

1,378,685. EGG-PACKING. MORRIS KOPPELMAN, Brooklyn, N. Y. Filed Jan. 10, 1921. Serial No. 436,040. 12 Claims. (Cl. 217—35.)



1. The combination of a plurality of compartments having vertical walls adapted to inclose the medial portion of an egg, but being of depth materially less than the length of the egg to be placed therein, a sheet of material extending over the said compartments provided with openings of a size to receive the end portion of an egg and to permit the egg to extend therethrough to a sufficient extent to bring its side surfaces in contact with the edges of the opening between the end and the medial portion thereof, a sheet of material extending under said compartments provided with similar openings, whereby the medial portion of each egg is surrounded by the compartment, with the end portions thereof extending through the openings and beyond the top and the bottom thereof, and the egg is held against vertical as well as lateral movement, by frictional coaction between its sides and the edges of the openings.

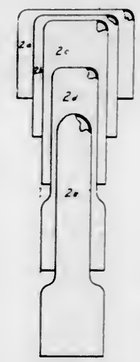
1,378,686. CLOTHESLINE-REEL. KAZIMIERAS L. KRIŽEVIČIUS, New Haven, Conn. Filed July 20, 1920 Serial No. 397,585. 1 Claim. (Cl. 242—101.)

In a device of the character described, a means for locking and unlocking the line reels, comprising pins adapted to be engaged into any of a plurality of holes in said reels, pegs on said pins to both sides of the same and heads on the outer ends of the pins for limiting the movement of said pins in one and the other directions substantially as described and for the purpose set forth.

1,378,687. WRENCH. GEORGE KUHNS, Temple, Okla. Filed Apr. 1, 1920. Serial No. 370,498. 1 Claim. (Cl. 81—98.)

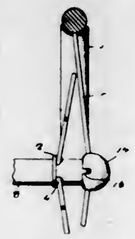
A wrench having its shank provided at one end with a bifurcation forming parallel spaced ears, fixed jaw members having oppositely directed concaved faces and also provided at their inner sides with cavities or seats for receiving said ears, a common bolt extending through the ears and the fixed jaw members for securing the latter in operative relation with the handle, and a pivotal jaw mounted upon said bolt in the interval between the spaced ears and having a concaved gripping face for opopsing relation with the faces of the fixed jaw, a bushing being interposed between said bolt and the movable jaw.

1,378,688. SHOESTRING-TIP. ALLSTON C. LADD, Turlock, Calif. Filed June 30, 1920. Serial No 392,983. 1 Claim. (Cl. 24—143.)



As a new article of manufacture, a shoe string, tips on the outside of the ends of the shoe string, integral spring tongues on the tips facilitating the movement of the string through an eyelet in one direction and preventing the accidental retrograde movement of the string through an eyelet.

1,378,689. OIL-BURNER. JOHN ANDREW LARSON, Glendale, N. Y. Filed June 2, 1920. Serial No. 385,992. 2 Claims. (Cl. 158—38.)

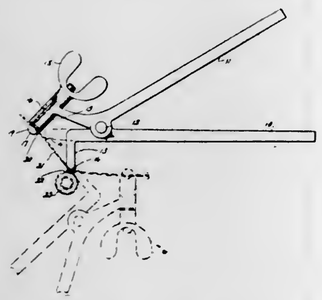


1. A burner, including a bowl, tubes extending through said burner bowl and terminating at a point above the same, a feed pipe having one of its ends projecting through said burner bowl at a centrally located point within the same, and a screening enveloping the end of the feed pipe, said screening extending within the burner bowl.

1,378,690. METHOD OF MAKING CONNECTING-RODS. HEBRON BERNARD LAYMAN, New York, N. Y., assignor to the Layman Pressed Rod Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 24, 1916. Serial No. 93,052. 31 Claims. (Cl. 29—156.5.)

1. The process of forming a connecting rod shell, which consists in fashioning the said shell in tubular form from a single piece of relatively thin material and then separating the shell through one end to form a cap.

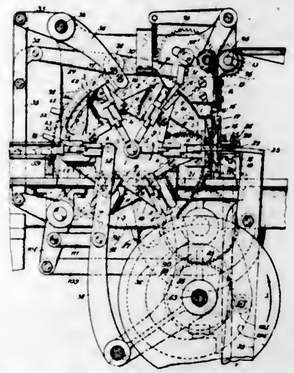
1,378,691. HUB-CAP. THOMAS LEBLANC, West Gardner, Mass. Filed Nov. 11, 1919. Serial No. 337,373. 2 Claims. (Cl. 301—108.)



1. A hub cap having notches in its edge to receive wheel spokes and also having wall portions to close the mouths of the notches and thereby connect the cap of itself to spokes.

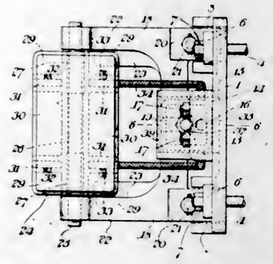
1,378,692. DISPLAY-RACK. ANCEL B. LEFFEL, Springfield, Ohio. Filed Dec. 6, 1920. Serial No. 428,711. 3 Claims. (Cl. 211—14.)

2. In a displaying apparatus for fabrics, a support comprising a frame constructed of angle irons, hollow holders for the fabrics to be displayed, pivotally secured to the longitudinal members of the support, each of said holders having its outer end closed and its bottom formed with a central opening extending entirely therethrough, the bottom wall of the holder having upstanding flanges at the confronting edges thereof dividing the interior of the holder into spaced compartments or pockets, the fabrics to be displayed having their ends folded and received in the respective compartments, and a cross sectionally round weighted element arranged in each of the folds for holding the upper ends of the fabrics in the respective compartments.



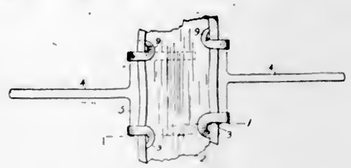
1,378,693. COUPLING-FASTENER. JOHN E. LENHOLT, Guilford, Conn., assignor of one-half to Charles R. Tainter, Guilford, Conn. Filed Oct. 22, 1919, Serial No. 332,483. Renewed Oct. 20, 1920. Serial No. 418,342. 2 Claims. (Cl. 81—9.3.)

2. In a device of the character described, the combination with a pair of pivotally connected arms, one of said arms being notched at the end thereof adjacent to the pivotal connection and the other arm having a head at the end thereof, a jaw having a shank slidably mounted thereon, with means for securing said jaw in its closed position, said jaw having a head thereon which extends upon either side of said shank, whereby two pieces may be secured by said jaw with an open space between them; and a lip upon each of said projecting portions of said head which register with a detent in the head on said arm.



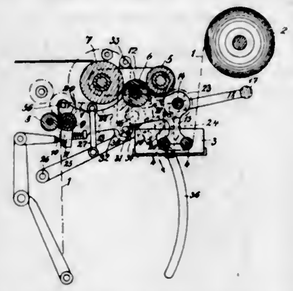
1,378,694. APPARATUS FOR WRAPPING UP ARTICLES OF PARALLELEPIPED FORM. RICHARD LEUMANN, Chailly-sur-Lausanne, Switzerland. Filed Oct. 29, 1919. Serial No. 334,290. 5 Claims. (Cl. 93—2.)

1. An apparatus for wrapping articles of parallelepiped form, comprising means for gripping the article to be wrapped, means for moving the article to be wrapped against the wrapper, and then moving both article and wrapper into said gripper, means for stepping the gripper past a folding surface to bend the projecting edge of the wrapper at right angles, means for tucking the edge of the wrapper into the gripper to overlap the opposite edge of the wrapper, end folding mechanism folding the ends



into peaks at substantially the middle of the ends and means to fold the peaks over onto the back of the package as it is discharged from the gripper.

1,378,695. CONTACT-SHOE. HENRY G. LEWIS and WALTER S. MAYER, Philadelphia, Pa., assignors to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 20, 1918. Serial No. 263,259. 9 Claims. (Cl. 191—49.)



1. In an electrical contact device, the combination with a supporting member, of an oscillatory member connected in reversible relation thereto, a contact member carried by said oscillatory member, and mechanism comprising reversible means whereby said oscillatory member can be pressed in opposite directions.

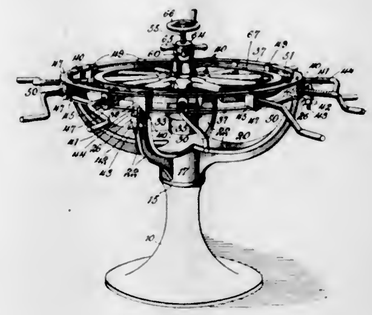
1,378,696. TIRE-TOOL. NICOLAUS LEWSEN, Portland, Me. Filed Mar. 19, 1920. Serial No. 367,202. 10 Claims. (Cl. 152—27.)

10. A tire tool, including a handle bar having a longitudinal arm arranged to engage the exterior of a tire for turning the same inside out, and means located on opposite sides of said arm for engaging the tire at the bead thereof, said means having hook-shaped terminal portions with rounded ends projecting laterally of the tool and extending outwardly at a direction longitudinally of the tire.

1,378,697. ROLLER COPYING-MACHINE. EDMUND LICHTENSTEIN, Berlin, Germany. Filed Aug. 7, 1920. Serial No. 402,035. 12 Claims. (Cl. 91—13.5.)

1. A roller copying machine comprising in combination working rollers adapted to be separated the one from the other, for the introduction between them of a web of paper supplied by a supply roller and a cutting device provided with cutters for cutting said web into separate sheets, some of said members being movable relative to others in such a way, that the web may be introduced between said rollers and between said cutters without the use of special introducing means and without the operator having to put his hands between said cutters or said rollers, or to separate or to swing away any part of the main frame.

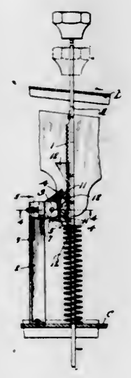
1,378,698. NAIL-SET OR PUNCH. ARTHUR LINDSTROM, South Bellingham, Wash. Filed Nov. 22, 1920. Serial No. 425,791. 5 Claims. (Cl. 145—46.)



1. The combination of a series of interchangeable tool sections each having a characteristic tool end and all cooperating simultaneously to form an effective tool, and means independent of the said sections for holding them in assembled position with the smaller end of one section projecting beyond said holding means.

1,378,699. METHOD OF TREATING ORES. RICHARD L. LLOYD, New York, N. Y., assignor to Dwight & Lloyd Metallurgical Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 22, 1919. Serial No. 319,266. 3 Claims. (Cl. 75—18.)

1. The herein described method for treating a zinc-bearing ore or material containing a negligible quantity of sulfur, the same consisting in mixing with a mass of such material a reducing agent, subjecting the commingled materials to a temperature lower than that at which zinc reduces and volatilizes, then subjecting the mass to the action of a solvent and dissolving out therefrom the zinc component.

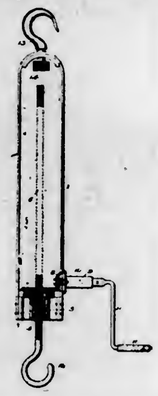


1,378,700. WHEEL-COMPRESSING MACHINE. FRANK LOUFEK, Cedar Rapids, Iowa. Filed Aug. 28, 1919. Serial No. 320,371. 3 Claims. (Cl. 157—1.)

1. In a wheel compressing machine, a support composed of a plurality of arms, each arm having a curved or arched formation, said arms rising from a central portion consisting of a depending sleeve, a boss above the sleeve, and an upstanding threaded flange rising from the boss, all of said parts being formed from a single casting, an

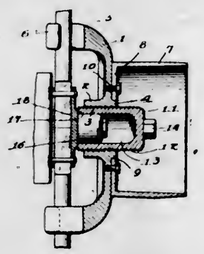
adjustable center rest composed of a hub engaging conical portion and a depending interiorly threaded flange engaging with the first-mentioned flange, a hub clamping bolt passing through the center rest and engaged with the boss, and a cone mounted on the bolt above the center rest.

1,378,701. FULL-STROKE COMPELLING DEVICE. GORDON H. LYLE, East Falls Church, Va. Filed May 28, 1918. Serial No. 237,087. 5 Claims. (Cl. 235—129.)



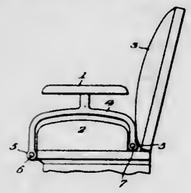
2. In a calculating machine, the combination of an operating key, rack means thereon, a plate slidable transversely of the key and constituting a pawl carrier, pawls mounted on said pawl carrier and adapted to alternately co-act with the rack means of the key, and means on the key for causing sliding movement of said carrier to shift one pawl into engagement with the rack means while the other pawl is being shifted out of such engagement, the pawl carrier being provided with an opening through which the key operates.

1,378,702. WIRE AND CABLE PULLER. VERNON M. MCDONALD, Denver, Colo., assignor of fifty-five one-hundredths to James Robert Kearney, Kansas City, Mo. Filed Mar. 10, 1920. Serial No. 364,779. 4 Claims. (Cl. 254—67.)



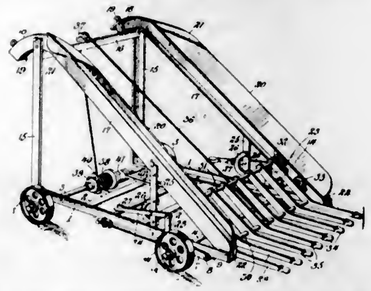
1. The combination with a frame made of a bar of metal bent at the center, a casting having a bore connect-

ing its ends, a bushing rotatable in the bore, and means for turning the bushing, of a tension-rod having threads



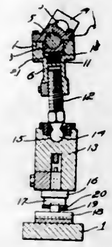
which the internal threads of the bushing engage, whereby said rod is moved endwise as the bushing is turned.

1,378,703. PULLEY ATTACHMENT FOR AUTOMOBILES. LEO VINCENT MCLAUGHLIN, Chester, Pa. Filed Mar. 30, 1921. Serial No. 456,891. 3 Claims. (Cl. 74—106.)



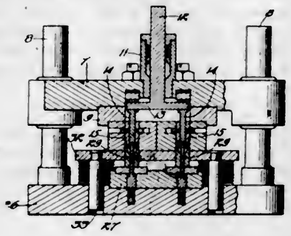
1. In an apparatus of the class described, a spider member comprising a body, a hub portion and hook arms adapted to engage the spokes of the wheel, a threaded bell member in threaded engagement with the hub of the spider member and chambered to fit over the hub cap of the wheel and engage the shoulder of the hub adjacent thereto, a pulley member secured to said spider member and means on said bell-screw member for receiving a wrench by which it may be turned.

1,378,704. ARMREST. WALTER JAMES MCPARTLAND, Cambridge, Mass. Filed Aug. 9, 1920. Serial No. 402,143. 1 Claim. (Cl. 155—112.)



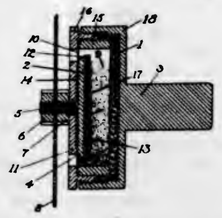
An arm rest for use in conjunction with the seats of automobiles, railway cars and the like, comprising an arm rest, a support therefor adjustable longitudinally of a seat, and longitudinal connections in parallelism to the seat and on which the support is adjustable; the support being maintained above the seat whereby the arm rest may be positioned at various points intermediate of the ends of said seat.

1,378,705. BEET-LOADER. WILLIAM MABLE, Fort Collins, Colo., assignor of forty-nine one-hundredths to Carl C. Christensen, Fort Collins, Colo. Filed June 14, 1919. Serial No. 304,185. 5 Claims. (Cl. 214—108.)



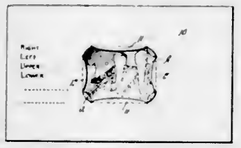
1. A beet loader comprising a vehicle with inclined channel tracks on opposite sides, with the channels facing each other and each curved downwardly at the upper end, a carrier provided with rollers spaced apart lengthwise thereof and adapted to run in the channels, each curved portion having stop means at its extremity for the rollers, said stop means coöperating with the curved portions to tilt the carrier to dumping position, said stop means being removable so that the carrier may be replaced by another carrier.

1,378,706. DWELLING PITMAN. GEORGE P. MALLORY, Yorklyn, Del., assignor, by mesne assignments, to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed Aug. 30, 1919. Serial No. 320,809. 1 Claim. (Cl. 74—47.)



In combination with a crank shaft, a crank and a crank pin, a dwelling pitman carrying at its lower end a presser member, and having a head formed with a slot extending longitudinally in from the end thereof, and having an expansible bearing for the crank pin, said expansible bearing comprising two members separable from each other, each having a semi-cylindrical groove, the two grooves together forming a cylindrical bearing for the crank pin when the two semi-bearing members are closed together, one of said semi-bearing members being made fast to the end of the pitman and forming a cap for the said slot, the other of said semi-bearing members being slidable in said slot toward and away from said fixed semi-bearing member to expand the bearing, and a spring held in a socket in the end of the pitman which forms a seat for said slidable member and causes the presser member to exert a yielding pressure, and which is compressible to allow a dwell of the pitman while the crank pin continues a further downward movement.

1,378,707. MACHINE FOR FORMING SPOONS AND OTHER FLATWARE ARTICLES OUT OF SHEET MATERIAL. GEORGE P. MALLORY, Yorklyn, Del., assignor, by mesne assignments, to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed Nov. 20, 1919. Serial No. 339,283. 3 Claims. (Cl. 113—49.)

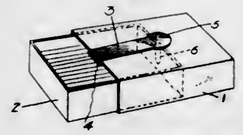


1. A machine for forming articles out of sheet material, having in combination a movable cutting die formed with a vertical opening therethrough, a clamping member movable within said opening, a forming member having two side branches which serve as bending members lying in said opening on opposite sides of the said clamping member, the walls of the cutting die being formed with horizontal pin holes opening into the vertical passage in which the said forming and clamping members are located, and pins which fit loosely in said horizontal holes and pass through holes in the forming members.

1,378,708. MICROPHONE. RAY H. MANSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed June 23, 1917. Serial No. 176,512. 10 Claims. (Cl. 179—122.)

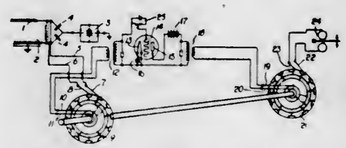
9. In a microphone, a casing provided with parallel inner walls and having an open end, a flexible diaphragm clamped to said casing to form a closure therefor, an electrode, a beveled mount for said electrode located in said casing and secured to said diaphragm, a second electrode coöperating with the first, and comminuted resistance material engaging the opposing faces of said electrodes.

1,378,709. HOLDER FOR DENTAL X-RAY FILMS. JAMES MADISON MARTIN, Dallas, Tex. Filed Aug. 10, 1920. Serial No. 402,510. 1 Claim. (Cl. 40—158.)



As a new article of manufacture, a film holder of the indicated class presenting an opening, said opening being defined at the four sides by elongated retaining members presenting convexed edges and each extending from a point adjacent to one corner to a point adjacent to the opposite corner; together with smaller retaining members presenting convexed edges and disposed at the corners to alternate with said elongated retaining members.

1,378,710. LINING FOR KILNS. ALBERT FRITZ MEYERHOFER, Mannheim, Germany, assignor to Dynamidon G. M. B. H., Mannheim-Waldhof, Germany, a Firm. Filed June 16, 1914, Serial No. 845,389. Renewed Oct. 23, 1920. Serial No. 419,070. 14 Claims. (Cl. 222—7.)

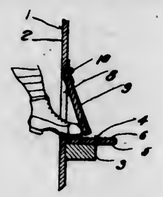


13. A lining for the purposes set forth which consists of an inner layer containing a high percentage of corundum combined with an insulating layer of porous brick.

1,378,711. MATCH-BOX. BENJAMIN F. MICHEL, Denver, Colo. Filed Oct. 11, 1919. Serial No. 329,939. 1 Claim. (Cl. 206—33.)

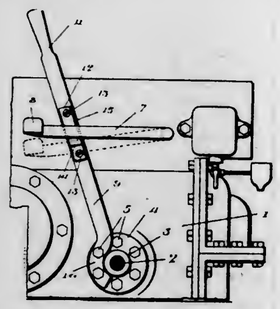
An attachment for match boxes comprising a strip having a hook at one end for engaging the end edge of the cover of the box and a pointed projection adjacent the other end, extending at right angles to the body of the strip and adapted to be forced through the cover to engage the end pieces of the drawer.

1,378,712. AMPLIFIER. JOSEPH W. MILNOR, New York, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1918. Serial No. 212,331. 5 Claims. (Cl. 178—88.)



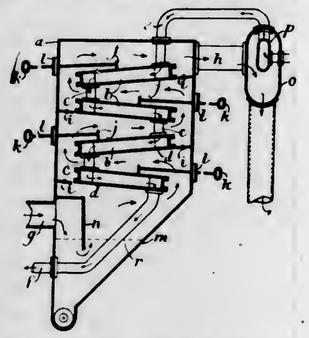
2. Signal amplifying apparatus such as described, comprising, in combination with an audion, a step up transformer controlling the controlling circuit of the audion, means comprising a make and break device for breaking up incoming signal impulses each into a large number of separate impulses of high frequency as compared with the incoming impulses, and for causing such high frequency impulses to operate the audion through the step up transformer, and signal receiving means operated by such amplified impulses.

1,378,713. STIRRUP. JOSEPH P. NAMI, Cristobal, Canal Zone, Panama. Filed Apr. 12, 1919. Serial No. 289,498. 1 Claim. (Cl. 244—31.)



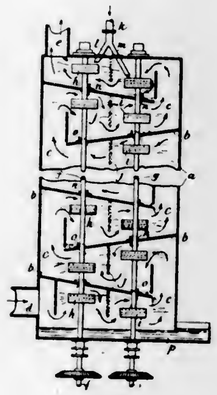
In combination, a fuselage having an opening and a brace secured to its inner face and located in a plane below the opening, a substantially flat horizontally disposed

plate secured to the top face of the brace and disposed in a plane with the lower wall of said opening and having a serrated upper face, said plate extending from the inner face of the fuselage to a point beyond the brace to form a step of a length substantially equal to the length of a



person's foot, and a flap hinged to the inner face of the fuselage at the upper end of the opening and adapted to normally close said opening by gravity and having its outer face flush with the outer face of the fuselage and capable of swinging inwardly by pressure of a person's foot thereagainst to expose the plate.

1,378,714. CLUTCH-RELEASE CATCH. WALTER I. NELSON, Galva, Ill. Filed Oct. 20, 1919. Serial No. 331,788. 1 Claim. (Cl. 74—81.)

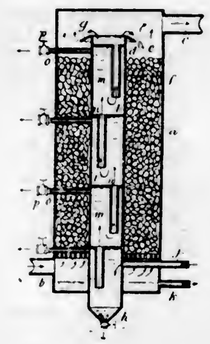


A catch of the kind described comprising a resilient bar having means at one end for attaching it to a support, and a handle at its other end, and a strip having its ends secured to said bar between the ends thereof, said strip being bent from one end to form a hook and from the other end to form a cam extending to the end of the hook.

1,378,715. HEAT-EXCHANGE APPARATUS. HARALD NIELSEN, Middlesex, and FREDERICK DEACON MARSHALL, Westminster, London, England. Filed Sept. 11, 1920. Serial No. 409,663. 3 Claims. (Cl. 257—218.)

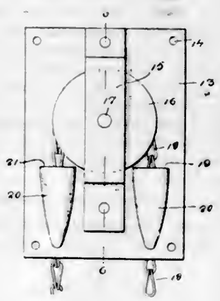
2. In a heat exchange apparatus, a closed casing having inlet and outlet openings for one of the heat exchanging mediums, a series of closed boxes located within the casing and connected together to form a continuous zigzag passage, inlet and outlet pipes for the other heat exchanging medium connected with said boxes, said boxes being of substantially the same width as the casing, and providing spaces between their opposite ends and the adjacent wall of the casing, and dampers located in said spaces adjacent to opposite ends of alternate boxes, the inlet pipe for the first mentioned medium being located adjacent to the lower end of the casing, and a downwardly extending deflector within the casing adapted to extend below the surface of a body of water in the lower end of the casing to form a water seal.

1,378,716. GAS-WASHING APPARATUS. HARALD NIELSEN, Middlesex, and FREDERICK DEACON MARSHALL, Westminster, London, England. Filed Sept. 11, 1920. Serial No. 409,664. 1 Claim. (Cl. 261—111.)



Apparatus for washing, cooling or absorbing gas, comprising a tower having a gas inlet adjacent to the bottom and a gas outlet adjacent to the top and being provided internally with inclined shelves extending from one side of the tower in a downwardly inclined direction nearly to the opposite side, said shelves extending in alternation from opposite sides of the tower, to divide the tower into a series of compartments and form a zigzag gas passage, said shelves being provided with vertically alined apertures, and vertically extending flanges adjacent to the lower edges of said apertures to facilitate the discharge of liquid therethrough, a plurality of vertical revoluble shafts extending through the tower each shaft passing through the vertically alined apertures in said shelves, a rotary spraying basket on each of said shafts above each of said shelves, and partitioning curtains formed by depending strands, located in each of said compartments above the respective shelves, and between the adjacent rotary shafts, the spraying baskets on each of said shafts being located in different horizontal planes from those on an adjacent shaft, and means for supplying liquid to the uppermost spraying basket of each shaft.

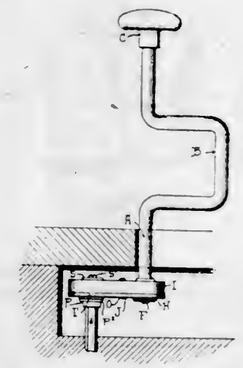
1,378,717. AIR-SATURATING TOWER. HARALD NIELSEN, Middlesex, and FREDERICK DEACON MARSHALL, Westminster, London, England. Filed Sept. 11, 1920. Serial No. 409,667. 3 Claims. (Cl. 261—97.)



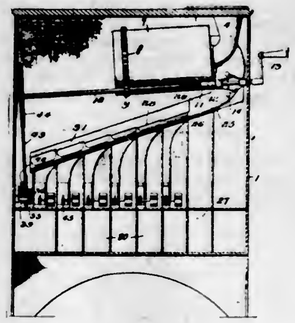
1. A gas saturating apparatus comprising a closed outer cylinder, having a gas inlet at the bottom and a gas outlet at the top, and a concentric inner cylinder of less diameter providing an annular space, containing filling material,

said inner cylinder being closed at its lower end and provided adjacent to its lower end with a liquid inlet, and

having its upper end provided with a liquid distributing device discharging within the outer cylinder, into said annular space, upon the filling material therein.



1,378,718. SASH ATTACHMENT. EWELL W. PENDERGRAFT, Vicksburg, Miss. Filed May 10, 1919. Serial No. 296,109. 1 Claim. (Cl. 16—116.)

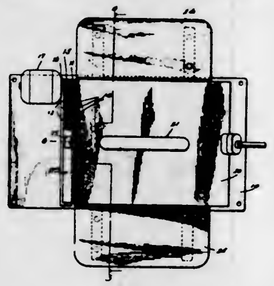


A sash attachment comprising a plate formed with spaced alined slits and pressed to provide elongated openings and inclined guides positioned over said openings, a substantially U-shaped bracket secured to the plate between the openings, a grooved pulley rotatably mounted between the bracket and plate above the opening, and a flexible element passing over said pulley, dropping through the respective openings and directed to the sash by said guides aforesaid.

1,378,719. WRENCH. CLIFFORD O. POOLE, Cobden, Ill. Filed Aug. 20, 1919. Serial No. 318,718. 1 Claim. (Cl. 81—57.)

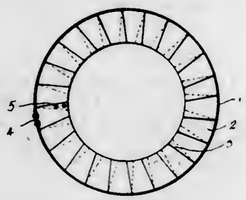
A wrench comprising an oblong casing with integral lugs on the edge thereof, a cover with recesses to receive said lugs, said casing and cover having registering openings therein, a bit socket journaled in said openings and having an annular shoulder adapted to bear against a flange about one of said openings, a plate fastened to one end of said socket and bearing against the face of the casing, a sprocket wheel rotating with said socket, a bitstock having an end journaled in openings in the casing and cover, a sprocket wheel rotating with the portion of the bitstock within the casing, and a sprocket chain passing about said wheels, the diameter of the driven sprocket being greater than that of the driving sprocket for the purpose of obtaining increased torque.

1,378,720. AUTOMATIC COIN SEPARATING AND COUNTING MACHINE. HENRY WILLIAM ROELING, EDWARD HUGH WILLIAMS, and JOHN GEORGE BAUER, New Orleans, La. Filed Apr. 29, 1920. Serial No. 377,641. 5 Claims. (Cl. 133—3.)



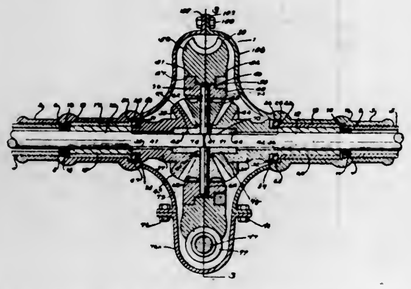
1. In an automatic coin separating machine, a receiver for the coins, a chute having means to separate the coins passing therethrough, a rotary drum between the receiver and chute having slots to deliver the coins from the drum, and inclined ribs in the drum for directing the coins through the slots, substantially as described.

1,378,721. ELECTRIC ENVELOP-SEALER. JOHN ROHDIEK, New York, N. Y. Filed Aug. 6, 1920. Serial No. 401,744. 2 Claims. (Cl. 120—6.)



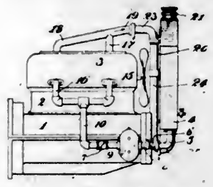
1. A device of the character described comprising a casing, a plurality of rollers journaled therein, a motor for driving said rollers simultaneously in the same direction, a cover for said casing, a plate within the cover,

coöperating with said rollers whereby to press against an envelop disposed between the rollers and the cover, and



means for heating said cover comprising an electric heater carried thereby, and means for simultaneously energizing said heater and said motor.

1,378,722. REINFORCEMENT FOR ICE-CREAM TUBS OR THE LIKE. LEWIS ROMAN, Akron, Ohio. Filed Jan. 22, 1921. Serial No. 439,240. 5 Claims. (Cl. 217—89.)



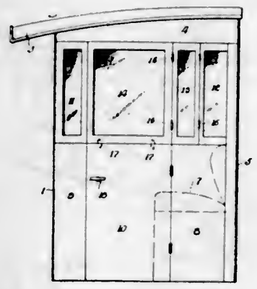
5. A reinforcement for ice cream tubs, comprising a hoop adapted to fit the lower portion of the tub, and an annular-shaped bottom comprising a plurality of portions of metal formed integrally with the hoop, extending inwardly therefrom and having the edges of adjacent portions overlapping and welded one to another.

1,378,723. DIFFERENTIAL GEARING. MATT F. ROSS, Windfall, Ind. Filed Jan. 20, 1919. Serial No. 272,179. 3 Claims. (Cl. 74—99.)

3. In a gearing, a housing, a worm-wheel in the housing, a worm in the housing engaging the worm-wheel, the worm-wheel having hub extensions and having pockets positioned about the hub extensions, pinions rotatably mounted in the pockets of the worm-wheel, driving shafts extending into the housing, bushings in the housing about the driving shafts, and gears loosely fitting upon the hub extensions of the worm-wheel and engaging said pinions, said gears having hub extensions rigid upon the driving shafts and engaging the bushings to hold the bushings in place.

1,378,724. COOLING SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Continuation of application Serial No. 428,885, filed Dec. 7, 1920. This application filed Mar. 21, 1921. Serial No. 454,285. 10 Claims. (Cl. 123—174.)

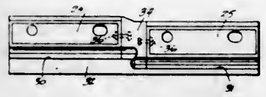
1. In a motor vehicle of the general type characterized by an internal combustion engine of widely variable speed and heating capacity and water-jacketed for cooling purposes; an air cooled radiator located in front of one end of the motor, comprising an intermediate portion of great heat radiating capacity affording a multiplicity of transverse paths for through flow of the cooling air, and interior, up-and-down paths for upflow of steam and drainage of water by gravity, a lower portion of small heat radiating capacity affording a collecting cavity into which said paths drain and in which the water level is maintained below the level in the water jacket, and an upper cavity to which all said paths are open for escape of air; and a conduit with force pumping means leading from the lower collecting space in the radiator to the water jacket; and, in combination with the said elements of such a vehicle, means for operating said pumping means at a rate sufficient to over-supply the water-jacket, and a single continuous return conduit for the surplus water and steam leading from the upper part of the water jacket discharging into said lower collecting space in the radiator, thereby causing separation of the surplus water and steam in the lower part of the radiator and continuous flow of steam upward into said upward paths, forcing air or other excess fluids above it into the upper cavity in the radiator.



1,378,725. TANK. THOMAS RYAN, Jenks, Ala. Filed Aug. 1, 1919. Serial No. 314,766. 1 Claim. (Cl. 220—5.)

A sectional plate construction comprising plates having their proximate edges bent back against the planes of the plates forming marginal thickened ribs, a keeper having marginal flanges properly proportioned to engage the ribs therebetween, a band spanning the interval between the plates opposite the keeper, a gasket interposed between the band and the plates, bolts passed between the ribbed edges of the plates and through the keeper, the band and the gasket, and means for exerting clamping pressure upon the bolts.

1,378,726. VEHICLE-CAB. ANDREW SAUTER, Detroit, Mich. Filed June 23, 1919. Serial No. 306,147. 4 Claims. (Cl. 296—45.)

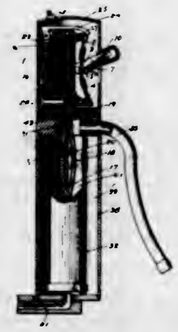


1. In a vehicle cab having a rear wall, and a door, a window adapted to be connected with the door for movement therewith, and means constructively arranged for constantly supporting said window relative to the rear

wall of the cab and independent of said door so that said window may be bodily swung into parallelism with and against said rear wall.

1,378,727. [WITHDRAWN.]

1,378,728. RAIL-CONNECTING CHAIR-PLATE PATTERN. CHARLES J. SHIELDS, Columbus, Ohio. Filed Aug. 27, 1920. Serial No. 406,324. 5 Claims. (Cl. 22—158.)

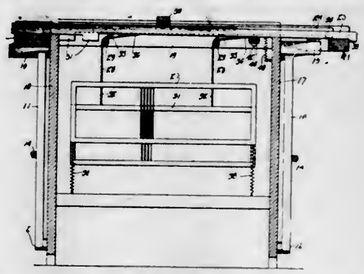


1. A pattern for the casting of intermediately offset rail connecting chair plates, including end rail engaging sections of standard sizes to fit standard rails, and interchangeable intermediate sections forming connecting members for the end sections having offsets to correspond with particular sizes of end sections, as described.

1,378,729. FUNNEL. TADAMITSU SHIMADZU, Tokyo, Japan. Filed Sept. 28, 1920. Serial No. 413,450. 2 Claims. (Cl. 226—37.)

1. A device of the class described comprising a receptacle, an hourglass shaped member having an upper and a lower end, stoppers closing said ends, a tube passing through the lower end and located adjacent the open end of said receptacle, a float arranged in said receptacle, a valve member arranged in the lower part of said hourglass shaped member and means connecting said float to the valve member.

1,378,730. OVERLOAD-SWITCH. MILTON H. SHOENBERG, San Francisco, Calif. Filed Dec. 27, 1919. Serial No. 347,734. 3 Claims. (Cl. 200—122.)



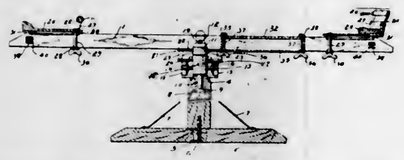
1. In combination with an electric switch comprising an oscillating member adapted to snap into either extreme position about a pivot under the action of a spring, at which point the circuit is interrupted, and upon displacement of the opposite end of the spring with respect to said central pivot, and including latch means adapted to retain the member in an intermediate position and in contact with circuit terminals.

1,378,731. HAIR-RESTORER. THEODORE E. SILVERA, Philadelphia, Pa. Filed Aug. 14, 1920. Serial No. 403,505. 5 Claims. (Cl. 67—5.)

2. A cocoanut oil salve comprising when cooled below summer temperature, a viscous, opaque paste and having the fatty acids liberated.

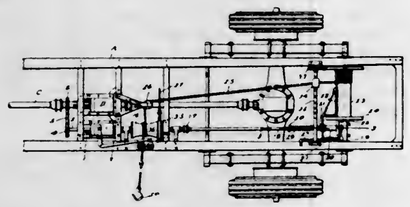
5. The method of making a hair tonic from the meat of the cocoanut which consists in finely dividing the meat, treating it with hot water, straining the heated mixture of cocoanut oil and water obtained, boiling the water, maintaining the temperature of the product not much above the boiling point of water, decanting the liquor, straining the liquor and allowing to cool.

1,378,732. HARNESS-ACTION FOR LOOMS. ADELARD B. SIMONEAU, Waterville, Me. Filed Jan. 19, 1920. Serial No. 352,438. 12 Claims. (Cl. 139—12.)



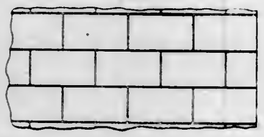
1. In a loom, a lay, a plurality of harnesses, means adapted to be selectively connected to the harnesses and movable transversely of the loom to operate such harnesses as are connected thereto and connections from the lay to the harness operating means to actuate the latter, substantially as set forth.

1,378,733. SEESAW. FRANK SIMONS, St. Louis, Mo. Filed Mar. 11, 1920. Serial No. 364,916. 7 Claims. (Cl. 46—27.)



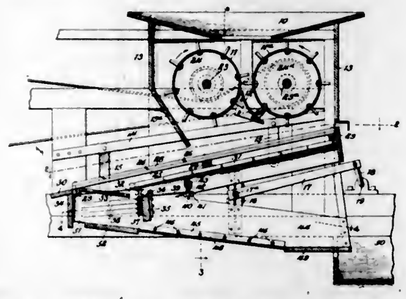
1. In a device of the character described, a plurality of superposed members having sockets therein and spindles

projecting therefrom, the spindles being adapted to be rotatably and removably received in the sockets of the adjacent member, a relatively stationary base rotatably



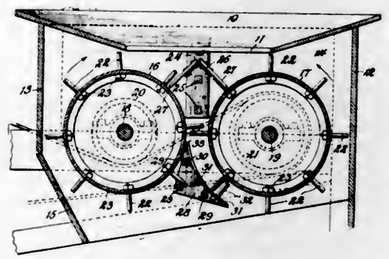
supporting the lowermost of said members, a horizontal trunnion extending from each of said members, and a beam for each of said mebmers and rotatably supported on the trunnion thereof for oscillating movement.

1,378,734. CAPSTAN DEVICE FOR MOTOR-TRUCKS. HENRY G. STEINBERG, Milwaukee, Wis. Filed June 4, 1920. Serial No. 386,557. 2 Claims. (Cl. 254—166.)



1. In combination with the transmission of a motor truck, a hoisting device comprising a shaft having means whereby it may be driven from the transmission of the truck, a capstan carried by said shaft, a winding drum driven by said shaft and carrying a cable wrapped about the capstan, and automatic means for varying the speed of rotation of the drum in proportion to the number of layers of cable thereon, said means comprising a friction disk carried by one end of the drum, a shaft slidable on said first named shaft and in a plane at right angles thereto, and a spring-pressed member engaging the outermost layer of cable upon the drum and connected with said second named shaft whereby to shift the position of said second named disk with respect to the center of said first named disk.

1,378,735. BUILDING-BLOCK. GEORGE H. TALBOT, Newtonville, Mass. Filed Sept. 5, 1919. Serial No. 321,854. 4 Claims. (Cl. 72—29.)



1. A building block comprising a top face having ribs adjacent its edges forming a mortar receiving groove therebetween, and a bottom face having flat surfaces complementary to said mortar receiving groove but of less depth, the lower face being chambered, whereby mortar in said groove which is displaced by a superimposed block will enter the chamber in the latter without overflowing from said groove and will serve more effectively to bond the blocks of successive courses, and the flat edge portions of the superimposed blocks will be directly engaged without the interposition of mortar therebetween.

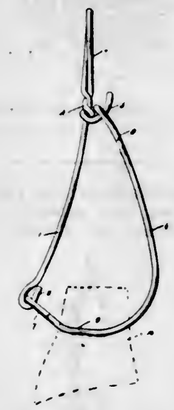
1,378,736. RIDDLE FOR SEED-EXTRACTING MACHINES. BURL N. TRAUTMAN, Fort Collins, Colo. Filed Apr. 12, 1920. Serial No. 373,331. 22 Claims. (Cl. 130—19.)

1. In a riddle, a series of rigid slats spaced from each other but parallel and slanting, fingers provided on alternate slats and pointed downwardly in the direction of the slant of the slats, those slats having the fingers rising above the other slats, and means beneath the slats for catching all material which finds its way between the slats.

1,378,737. CRUSHER FOR SEED-EXTRACTING MACHINES. BURL N. TRAUTMAN, Fort Collins, Colo. Filed Apr. 12, 1920. Serial No. 373,332. 12 Claims. (Cl. 146—9.)

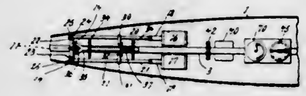
1. In a crusher for seed extracting machines, a pair of rolls having teeth, cleaning means for both the rolls and the teeth thereof mounted between and below the rolls, said cleaning means being so shaped as to deflect crushed material from one of the rolls and deliver the same in a stream beneath the other roll.

1,378,738. CHAIR-TIP. ARTHUR D. VARIELL, Waterbury, Conn. Filed Apr. 6, 1920. Serial No. 371,602. 2 Claims. (Cl. 16—4.)



1. An attachment for furniture legs comprising a metallic concavo convex body of substantially circular form having its edges formed with a plurality of equally spaced parallel spear shaped prongs having sharpened ends, the inner faces of all the prongs being formed with a plurality of transverse ratchet shaped barbs.

1,378,739. HAM-HANGER. JOSEPH VLACH, Jr., Hanover, Kans. Filed Apr. 14, 1920. Serial No. 373,827. 1 Claim. (Cl. 248—22.)

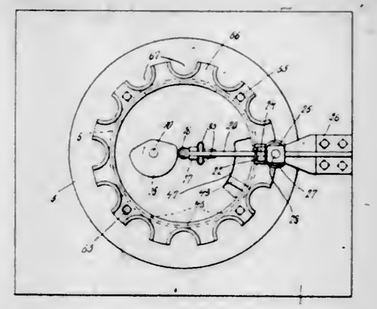


A hanger of the class described having a rod section provided with an eyelet, an elongated portion extending

therefrom, said section above the eyelet being formed into a suspending loop, the section from said loop having coils disposed around the elongated portion to close the loop and then extending outwardly and upwardly into a hook, said coils also rigidifying the hook, a second section of substantially rigid material having an eyelet pivoting it to said first-named eyelet for vertical and lateral movement, the second section having a suspending portion

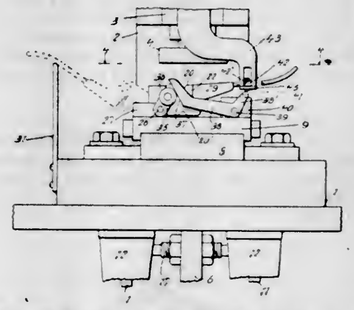
and an elongated portion extending therefrom, opposite the said first-named elongated portion and the elongated portion of the second section having an elongated eyelet to engage said hook, said elongated portions extending on opposite sides of a vertical line passing through the loop so as to support an article on the suspending portion in the line of the center of gravity.

1,378,740. AUTOGUBERNATOR. SAMUEL THOMAS WALKUP, New York, N. Y. Filed July 30, 1917. Serial No. 183,506. 6 Claims. (Cl. 172—282.)



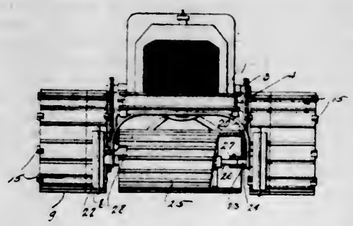
1. In a vehicle steering mechanism, a compass, a gear upon which said compass is mounted, a pair of contacts carried by said gear, a second gear in mesh with the first gear and provided with a key socket for turning, located exteriorly of the vehicle casing, and a key having a circular flange marked with the points of the compass adapted to be inserted in said socket, the compass marking on the said flange coöperating with a mark on the vehicle for the purpose set forth.

3. In combination with a directing member of a vehicle, a locking device normally holding said member in neutral position, means for operating said directing member, said means in its normal operation acting first to release the said locking device, and means acting automatically to return the directing member to neutral position and reapply the locking device.



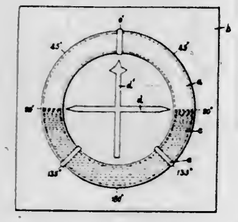
1,378,741. FLOWER-PRESS. SAMUEL THOMAS WALKUP, New York, N. Y. Filed Feb. 7, 1919. Serial No. 275,666. 8 Claims. (Cl. 41—2.)

1. In a press, a presser member, a slide adapted to carry an object to said presser member to be acted upon thereby, and means for alternately operating said presser member and moving said slide, including a pair of rocker



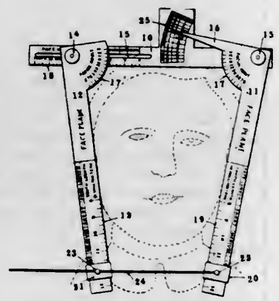
arms in operative relation respectively with said presser member and slide and a pair of cams in respective engagement with said rocker arms.

1,378,742. PRESS THROW-OUT. SAMUEL THOMAS WALKUP, New York, N. Y. Filed Oct. 21, 1919. Serial No. 332,221. 1 Claim. (Cl. 41—2.)



In a press, a die, a reciprocatory carriage a jaw member pivoted on said die carriage, a second jaw member pivoted on the first jaw member, resilient means holding said jaw members closed, a cam-faced lever adapted to cause said jaw members to swing on the pivot of the first jaw member, a pawl carried with the presser head and adapted to engage and operate said lever when the presser head is ascending, and means for causing said jaws to open when so swung, said means comprising a stop adapted to be engaged by a projection on the second mentioned jaw member.

1,378,743. TRACTOR ATTACHMENT. FRANK L. WARDEN, Dewar, Okla. Filed Apr. 30, 1919. Serial No. 293,684. 3 Claims. (Cl. 55—6.)



1. The combination with a tractor having a pair of rear wheels and a pair of front wheels; of land roller elements, and means for detachably mounting said land roller elements on said rear wheels and between said front wheels.

1,378,744. AEROPLANE LEVEL OR POSITION INDICATOR. HAROLD ERNEST WATKINS, Stone Legh, Newton-le-Willows, England. Filed Apr. 24, 1919. Serial No. 292,335. 1 Claim. (Cl. 33—206.)

Means for indicating the position in flight of an aeroplane or aircraft, consisting of a vertically arranged base, an annular tube secured on said base, a quantity of mercury approximately half filling the tube, angularly related pointers fixed vertically of the base, one of the pointers having an arrow head at the upper end, and scale marks for the mercury surfaces within the tube, said scale marks having their lowest indication in line with the arrow head of the vertical pointer, the scale marks increasing in both directions from such lowest pointer to the maximum indication in line with the lowest point of the vertical pointer.

1,378,745. GAGE FOR SELECTING ARTIFICIAL TEETH. JOHN A. WAVRIN, St. Louis, Mo., assignor to Dentists' Supply Company, a Corporation of New York. Filed July 30, 1919. Serial No. 314,313. 6 Claims. (Cl. 33—98.)

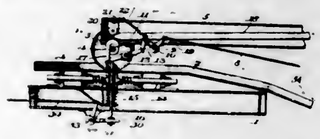
1. A tooth gage for determining shapes and sizes of artificial teeth to be used in dentures, the combination with a cross bar of a pair of face blades pivoted to said cross bar, one of said face blades also sliding relative to said cross bar, means for securing equal angles between said cross bar and the two face blades, a tooth conformation chart carried by the cross bar, and an indicator actuated by one of said face blades for traversing the chart in determining the tooth conformation suitable for the particular shaped face to which the gage is applied.

1,378,746. AIR-TURBINE. FRANK A. WHEELER, Flint, Mich. Filed June 21, 1920. Serial No. 390,390. 5 Claims. (Cl. 253—56.)

1. A turbine comprising a cylinder, detachable blocks fitted therein having inlet ports, a circular air supply pipe, inwardly directed radial branch pipes connected with the supply pipe and communicating with the ports of the blocks,

flanges carried by the branch pipes seated against and secured to the blocks, and a rotor journaled in the cylinder.

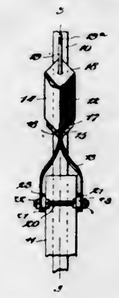
1,378,747. LOSS-PREVENTING DEVICE. ALBERT WHITE, Williamstown, N. J. Filed Oct. 2, 1920. Serial No. 414,242. 2 Claims. (Cl. 63—24.)



1. A device of the character described comprising an elastic casing adapted to embrace the back and sides of a time piece, and a plurality of outstanding teats formed on the outer face of the casing adapted to engage the walls of a pocket to prevent the loss of the time piece therefrom.

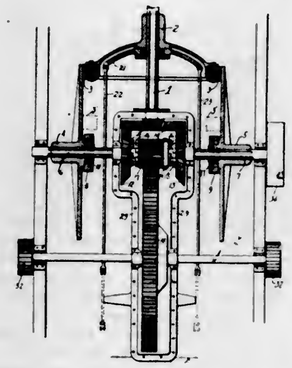
1,378,748. MATRIX AND MATRIX-HOLDER. FRANK WIGGINS, Knoxville, Tenn. Filed Jan. 15, 1921. Serial No. 437,543. 5 Claims. (Cl. 32—17.)

1. A flexible matrix band adapted to extend completely around a tooth with its ends in close relation, said band being provided near said ends with outwardly extending engaging elements stamped therefrom, and a resilient holding member having jaws to engage behind said elements and notches to receive the elements.



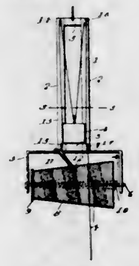
1,378,749. TRAILER-BRAKING MEANS FOR TRUCKS AND TRACTORS. SIDNEY B. WINN, Lapeer, Mich., assignor to Lapeer Tractor Truck Company, Lapeer, Mich., a Corporation of Michigan. Filed Aug. 5, 1918. Serial No. 248,291. 8 Claims. (Cl. 188—3.)

1. In combination, a tractor and a trailer adapted to be coupled together with the forward end of the trailer supported by the tractor, a coupling device connecting said tractor and said trailer, said coupling device being adapted for engagement and disengagement by relative



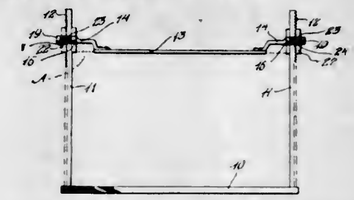
movement of the trailer and tractor in the general direction of length of the trailer, a brake mechanism for said trailer, and brake operating mechanism carried by said tractor and operatively connected to the brake mechanism of said trailer, said operating mechanism being adapted to be rendered inactive automatically by the separation of the trailer and tractor.

1,378,750. LUBRICATOR FOR GUIDE-RAILS. CHARLES F. WOLFE, New York, N. Y. Filed Oct. 18, 1920. Serial No. 417,534. 4 Claims. (Cl. 184—21.)



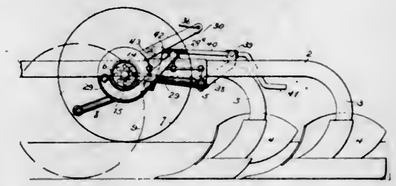
1. A lubricator for guide rails comprising a lubricator receptacle having depending legs formed integrally with the receptacle, a pair of clamping members, a bolt for securing said legs to said members and for holding said members in spaced relation, and means for effecting clamping action of the free ends of said members.

1,378,751. POWER TRANSMISSION. ROSS ALEXANDER WORKMAN, Springfield, Mo. Filed Sept. 26, 1919. Serial No. 326,482. 2 Claims. (Cl. 74—26.)



1. Transmission gearing including a longitudinal drive shaft, a pair of alined transverse shafts, friction disks slidably mounted on said transverse shafts, a friction wheel slidably mounted on the longitudinal shaft between the friction disks to contact therewith, bevel gears secured on the transverse shafts and having clutch portions, an idler bevel gear mounted in mesh with said bevel gears, means for sliding said friction disks to engage and disengage said friction wheel, the adjacent ends of said transverse shafts being disposed in abutment between said first named bevel gears, a pinion slidably mounted on the adjacent ends of said transverse shafts and having clutch portions to alternately engage the aforesaid clutch portions, a gear wheel opposite to the longitudinal shaft meshing with said pinion, and operating means for shifting said pinion having a portion projecting in between the first named bevel gears and engaging the pinion.

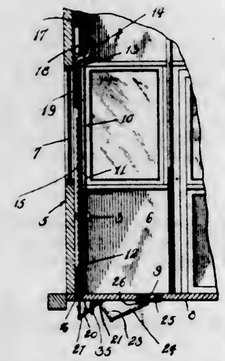
1,378,752. TWINE-HOLDER. LEO WRIGHT, St. Catharines, Ontario, Canada. Filed July 29, 1919, Serial No. 314,004. Renewed Apr. 7, 1921. Serial No. 459,414. 3 Claims. (Cl. 242—143.)



1. A device of the class described comprising a frame, a bracket at the lower end of said frame having downwardly parallel portions, a shaft rotatably mounted in said portions and adapted to receive a ball of twine, an outwardly extending arm at the upper part of the bracket having an eye therein through which the twine passes, a weight slidably mounted in the frame and guiding means on the frame and weight for the twine after it leaves the eye.

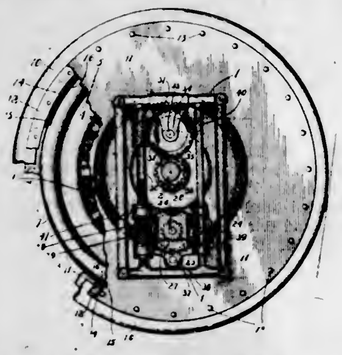
1,378,753. PAPER-HOLDER. THEODORE F. ZWILLING, Upper Sandusky, Ohio. Filed Sept. 15, 1919. Serial No. 324,016. 2 Claims. (Cl. 129—28.)

1. A device of the character described comprising a supporting base, a pair of spaced uprights rising therefrom and having their outer faces formed with notches, a plate disposed between and terminating short of said uprights, and a pair of clamping members carried by said plate and engaging said uprights, each of said clamping members including a vertically disposed plate portion bearing against the inner side of the uprights and formed with an arm terminating in an attaching foot secured to said first named plate, a lateral arm extending from said clamping plate, and a spring-pressed plate pivoted upon said last named arm and toothed for engagement with said notches.



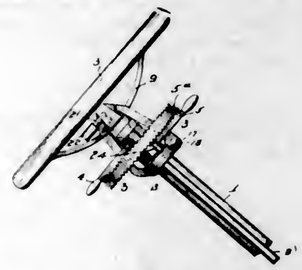
1,378,754. WHEEL-OPERATED LIFT MECHANISM. HERMAN E. ALTGELT, New Braunfels, Tex., assignor to Oliver Chilled Plow Works, South Bend, Ind. Original application filed Apr. 5, 1919, Serial No. 287,756. Divided and this application filed Apr. 10, 1920. Serial No. 372,795. 6 Claims. (Cl. 97—55.)

1. In mechanism of the character described, the combination with an axle, and a wheel, of a cam member



secured to the axle, a second cam member coöperable with said first-mentioned cam member, a lifting member loose on the axle, means connected with said second cam member and coöperable with said lifting member and with the wheel to lock said lifting member to the wheel, means for operating said second cam member to lock the lifting member to the wheel, means operable automatically to release the lifting member from the wheel, and means operating to hold said second cam member in the position to which it may be moved.

1,378,755. SUPPORTING DEVICE FOR SWITCH-ACTUATING BARS. VICTOR AUGER, Montreal, Quebec, Canada, assignor of one-half to Arthur Ferron, Montreal, Canada. Filed Mar. 19, 1921. Serial No. 453,804. 7 Claims. (Cl. 246—264.)

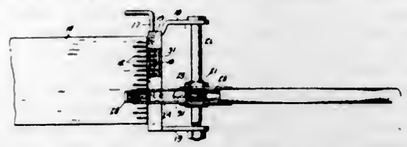


1. The combination with a street railway car or the like having openings in the lower side thereof, a hook within the car for supporting the switch actuating bar, closures for the openings, and an operative connection between the closures and said hook, substantially as and for the purposes set forth.

1,378,756. RESILIENT WHEEL AND TRANSMISSION THEREFOR. FRANCIS N. BARDWELL, Passaic, N. J. Filed July 9, 1919. Serial No. 309,718. 7 Claims. (Cl. 180—71.)

1. A resilient wheel comprising a body portion, a traction member free to rotate independently of said body portion, resilient means between said body portion and traction member around the entire periphery of said body portion for sustaining said parts normally in concentric relation, and adapted to permit depression of the traction member in any radial direction, and means for rotating the said traction member.

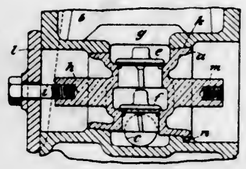
1,378,757. AUTOMOBILE-LOCK. JAMES W. BARWICK, Pinepark, Ga. Filed Jan. 15, 1920. Serial No. 351,735. 1 Claim. (Cl. 70—126.)



An automobile steering post lock comprising a lock loop formed of two legs diverging from one end toward the other, the ends of the legs constituting the narrower end of the loop having intermeshing eyes for the reception of the shackle of a padlock and the legs being hinged together at the other ends with one of the legs there provided with a side bend bridging the space between the legs at the wide end of the loop, and that end of the side bend where the other leg is hinged to it being provided with a pin directed toward the smaller end of the loop.

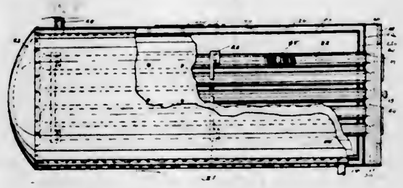
1,378,758. THREE-FINGER MITTEN. EDWIN T. BASKIN, Kansas City, Mo. Filed Sept. 7, 1920. Serial No. 408,618. 1 Claim. (Cl. 2—9.)

A hand covering comprising a body blank cut to form a palm and finger sections integral therewith, one edge of said blank being folded over and stitched to form the sides and back of the forefinger, back sections stitched to the remaining finger sections and to each other to form the back of the glove, and a thumb blank folded on itself and stitched to form the thumb, the folded portions of both blanks having slits defining elliptical thumb openings and elliptical ears, the later being integral with the blanks at the front ends of the thumb openings and being folded onto and stitched along their edges to said blanks, the two blanks being stitched together with their thumb openings registering with each other thus forming the completed three fingered hand covering, substantially as set forth.



1,378,759. BELT-LACING APPLIER. FLOYD W. BERNERO, Memphis, Tenn. Filed Mar. 8, 1920. Serial No. 364,095. 6 Claims. (Cl. 1—50.)

5. A belt lacing applier comprising a bar having slits formed in one face properly spaced to receive the bended

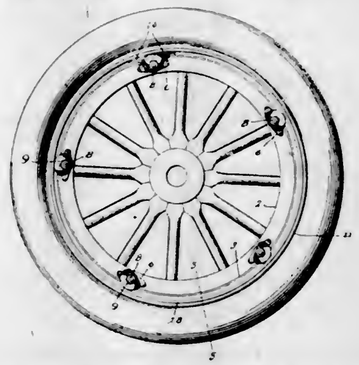


ends of a plurality of lacing hooks, means insertible within the bar to engage within the bended ends of the hooks and retain the hooks within the slits, a guide member rigidly positioned relative to the bar and in parallelism therewith, crossed handles slidable upon the guide member and jaws carried by the crossed handles extending over the bar in position to exert compression upon some of the hooks.

1,378,760. VALVE OF PUMPS. FRANCIS WHITWELL BRACKETT, Colchester, England. Filed Nov. 26, 1919. Serial No. 340,840. 3 Claims. (Cl. 277—61.)

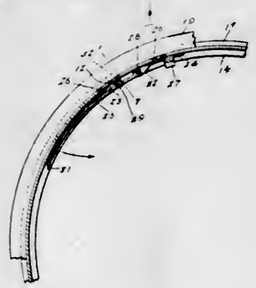
1. In a pump, a valve casing having an internally ported and open ended conical seating socket and passages communicating with the seating and with, respectively, the pump inlet pipe and the pump plunger chamber, the axes of the said seating being at an angle to the axis of the plunger chamber connecting passages, a hollow conical plug housed in said socket and provided with seatings, alined and independently guided suction and delivery valves mounted on said seatings, the axes of the valves being at an angle to the axis of the plug, and means for mechanically adjusting the plug in position lengthwise of its seating to take up wear.

1,378,761. ELECTRICAL BOILER. LEONARD R. BRUNSWICK, Superior, Wis. Filed Sept. 22, 1920. Serial No. 412,044. 7 Claims. (Cl. 219—38.)



1. An electrical boiler comprising inner and outer shells arranged in spaced relation, a series of spaced openings formed in one end wall of the boiler through said inner and outer shells, tubes within the boiler having their inner ends closed, said tubes extending through said openings, said tubes being secured to said inner and outer shells at the sides of the opening through which they extend to form a fluid-tight joint, the space intermediate said inner and outer walls forming a heat insulation for the interior of the boiler, electrical heating units disposed within said tubes, the outer shell of said boiler projecting beyond the end thereof provided with the tube receiving openings and being adapted for the reception of a false end and a door formed in said false end and providing access to the exposed ends of said electrical heating units.

1,378,762. CREAM-WHIP COMPOSITION. ARTHUR W. BULL, Haverford, Pa. Filed Mar. 19, 1920. Serial No. 367,159. 3 Claims. (Cl. 99—11.)

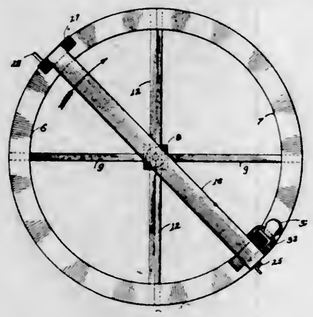


1. A composition for whipping cream comprising the reaction products of the following materials, namely a strong sugar solution, an excess of slaked lime and a small amount of a neutralizing acid, such acid being one of which the calcium salt is freely soluble in alkaline solutions.

1,378,763. DEMOUNTABLE-RIM CONSTRUCTION. JOHN T. CADENHEAD, Ensley, Ala. Filed Feb. 4, 1920. Serial No. 356,174. 1 Claim. (Cl. 301—30.)

A split, resilient, radially-contractible, demountable rim having at its inner side adjacent to its ends means for the engagement of a manipulating implement; one end portion of said rim being movable longitudinally and radially to and from an inner position in lapped and spaced relation to the other end portion thereof, and the rim being provided with shallow exterior edge flanges, in combination with tire-locking rings at the inner sides of the exterior flanges of the rim and in and against which the rim is capable of being expanded; the rim having apertures the end wall of the inner portions of which are under-cut, and one of the tire-locking rings being provided with dove-tail studs for coöperation with said apertures and the under-cut end portions thereof.

1,378,764. DEMOUNTABLE RIM. JOHN T. CADENHEAD, Ensley, Ala. Filed June 12, 1920. Serial No. 388,615. 2 Claims. (Cl. 301—33.)



1. The combination with a split contractible and expansible rim having lugs at the inner sides of its end portions and a stud on one lug and an aperture in the other end portion to receive said stud, of a lever pivotally connected with said lugs.

1,378,765. TOY. HAROLD CEDERBLAD, San Francisco, Calif. Filed Oct. 5, 1920. Serial No. 414,822. 1 Claim. (Cl. 46—27.)

In a toy, the combination with a sectional circular track and a cross timber connecting the sections of said track, of a grooved U shaped clamping element adapted to hold the sections of said track in fixed relation, a top board having an integral recessed support formed thereon, a bearing disposed between said support and said clamping element, wheels connected to and depending beneath said board, a pedaling element penetrating one of said wheels,

a figure associated with said board and having a portion thereof connected with said pedaling element, means attached to said top board for supporting said figure, and

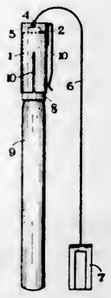
winding mechanism for imparting rotary movement to said wheels to cause the same to travel over the circular track.

1,378,766. AUTOMOBILE-BOOT. ALBERT CHAPMAN, Kellogg, Idaho, assignor to The Eagle Claw Tire Boot Company, Kellogg, Idaho, a Corporation of Idaho. Filed Oct. 6, 1919. Serial No. 328,663. 1 Claim. (Cl. 152—24.)

A blow-out boot for pneumatic tires comprising a body portion, a transversely curved strap located at each end of the shoe and spaced longitudinally disposed wires connecting the straps and having their ends extending through openings in said straps and terminating in radially extending penetrating points for engagement with a tire casing to hold the boot in position.

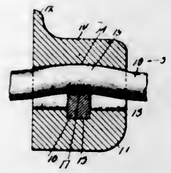
1,378,767. RAIL. HIRAM O. CONGER and CHARLES W. MCCUE, Warren, Ohio. Filed June 9, 1919. Serial No. 302,676. 1 Claim. (Cl. 238—145.)

In a rail, a base provided with a central upwardly projecting flange and with ribs at opposite sides of the flange and integrally connecting the same and the base, the upper edges of the ribs being inclined downwardly to the flange, and a head member provided with integral flanges at opposite sides of and equidistant from its transverse center, said flanges fitting tightly against the lateral faces of the flange of the base member and having their lower edges inclined similarly to and in contact with the upper edges of said ribs.



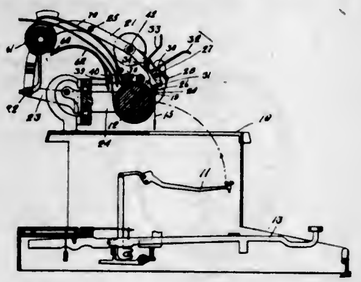
1,378,768. LIQUID-LEVEL GAGE. LEON DE VRIENDT and LOUIS DE VRIENDT, Blankenberghe, Belgium. Filed Dec. 10, 1919. Serial No. 343,906. 4 Claims. (Cl. 73—82.)

1. A fluid level indicating apparatus comprising an element mounted for rotation on an axis inclined to the level of the fluid, and buoyant members carried by the element to be successively immersed as the fluid level



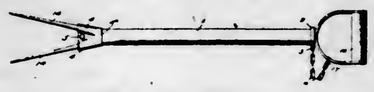
changes, said members varying the state of equilibrium of the element in accordance with the number thereof immersed.

1,378,769. REMEMBRANCER. DERMOT DONELAN, London, England. Filed July 27, 1920. Serial No. 399,304. 8 Claims. (Cl. 116—67.)



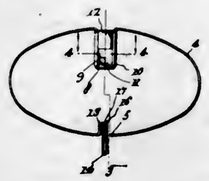
1. A remembrancer comprising in combination a bell having a striker freely suspended within said bell and flexible means for suspending said bell from the person, and means, on the article of which the person is to be reminded, adapted to receive said bell and to hold said striker in-active, substantially as and for the purpose hereinbefore set forth.

1,378,770. THREADLESS NUT. JOHN B. DOWNEY and ARTHUR C. EDGECOMB, Topsham, Me. Filed Jan. 23, 1920. Serial No. 353,431. 1 Claim. (Cl. 85—36.)



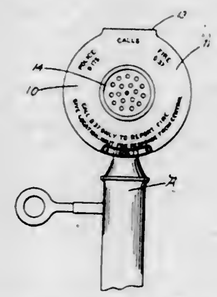
A threadless nut comprising a body having an elliptical opening therethrough internally bilged, a key-way transecting the opening and registering with the bilge, a tapered key formed to fit the key-way and provide sliding restricted to the direction of the key-way and a removable pin adapted to be placed through the key and removably confine the key to the key-way.

1,378,771. MACHINE FOR IMPRESSING CHARACTERS ON STENCIL-BLANKS. STERLING ELLIOTT, Newton, Mass. Filed Oct. 27, 1916. Serial No. 128,122. 21 Claims. (Cl. 197—135.)



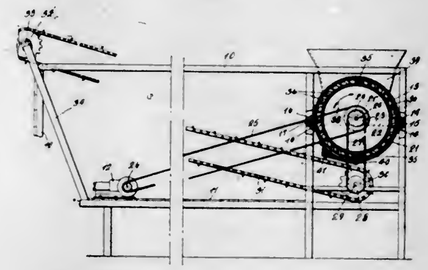
1. In a machine for impressing characters on stencil-blanks, the combination with the cylinder of a typewriting machine, a carriage, and a set of type, of holding-means borne by the carriage and vertically movably arranged adjacent and independent of the cylinder and adapted to engage and clamp a stencil-blank and hold it in flat form in tangential relation to the surface for the cylinder.

1,378,772. FORK FOR HANDLING FODDER. WILLIAM F. ELLIOTT, De Kalb, Ill. Filed Apr. 12, 1920. Serial No. 373,260. 2 Claims. (Cl. 294—100.)



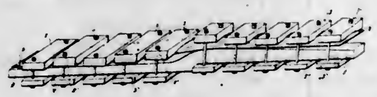
1. A fork for handling hay, fodder, etc., comprising a tubular shank member, outwardly flaring tubular guides formed at one end of said member, a plunger adapted to be manually reciprocated within the member, a pair of opposed pointed tines flexibly connected to one end of the plunger and traversing the flaring guides, said tines being forced to assume an outwardly flaring position by the guides when the plunger is moved in one direction and being housed wholly within the guides and tubular member when the plunger is forced in the opposite direction.

1,378,773. SOFT-COLLAR SUPPORT. VICTOR H. FAIRLESS, Trenton, Tenn. Filed Oct. 12, 1920. Serial No. 416,368. 2 Claims. (Cl. 211—24.)



2. An improved collar support comprising a spring wire having divided ends bent into substantially circular form and adapted to fit between the folds of a double collar at the upper closed portion of the same, the intermediate portion of the wire at the back of the collar being offset downwardly to provide a pair of spaced apart and substantially parallel bars with a coupling piece connecting the bars at their lower ends, a plate having edges curled about said parallel bars and provided with a bendable portion adapted to engage with a support, one of the free ends of the wire at the front portion of the collar being bent a substantially right angles to the circle of the wire and extending inwardly thereof, said inwardly bent free end being formed into a clip with a mouth opening downwardly adapted to slip over the upper edges of the tabs of the collar, said free end of the wire being further bent into a substantially U-shape to form a second clip lying inwardly of the first clip and having its mouth opening upwardly and concealed by the collar tabs, substantially as described.

1,378,774. TELEPHONE ATTACHMENT. THOMAS JAMES FARMER, Omaha, Nebr. Filed June 29, 1920. Serial No. 392,689. 1 Claim. (Cl. 40—1.)

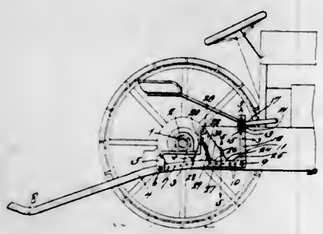


A telephone attachment comprising a circular shield adapted for conforming engagement upon the transmitter of a telephone and provided centrally with a hole through which the mouth piece of the transmitter is passed whereby the mouth piece will hold the shield in position, the upper portion of the shield being formed with a flattened plate portion terminating at its rear edge in a depending clip engaging against the back portion of the transmitter, said flattened top portion bearing legends as to the office and residence phone number of the subscriber, and the front portion of the shield bearing the number of the phone and also legends as to the police and fire headquarters telephone numbers.

1,378,775. PEAT-SPATULATING MACHINE. FRANKLIN FARROW, West Brooksville, Me. Filed Oct. 30, 1920. Serial No. 420,660. 2 Claims. (Cl. 44—28.)

2. In a peat spatulating machine, the combination of a cylinder and a rotor in the cylinder, means for delivering material to one end of the cylinder, means for delivering material from the other end of the cylinder, and a plurality of teeth carried upon the peripheral surface of the rotor and extending in a general direction toward the inner wall of the cylinder to impinge material between the teeth and the cylinder, said teeth being inclined transversely at substantially 30° with respect to the axis of the rotor and being inclined rearwardly with respect to the direction of rotation of the rotor at substantially 30° whereby said teeth are adapted to effect a wiping action against the material in the cylinder and to advance the material forwardly therein.

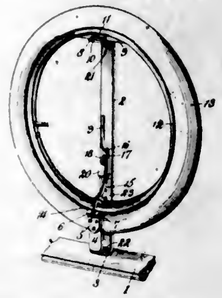
1,378,776. PROPELLER. ANTOINE PADOUE FILIPPI, Paris, France, assignor to Henri Joseph Leon Marie de la Chevardiere de la Grandville, Paris, France. Filed Aug. 24, 1917. Serial No. 188,057. 5 Claims. (Cl. 170—159.)



1. The herein described method of making propellers, which comprises assembling a plurality of flat unshaped laminations or leaves which are of the full length of the propeller to be made, with an adhesive applied to their meeting faces, submitting such laminations, while the adhesive is unset, to compression between surfaces shaped to mold one side of the assembled laminations throughout the length thereof to the desired form, thus giving the proper pitch and shape to the blades at the one and same side of the propeller, and maintaining such compression until the adhesive has become set and capable of maintaining the laminations in molded form.

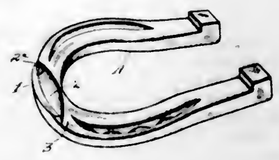
4. A propeller comprising superposed glued or cemented resilient laminations bent in shape to form the blades, the laminations extending continuously from one blade to the other blade at the same side of the propeller, the blades being maintained in proper form and with the proper twist by the glue or cement which unites the laminations.

5. Apparatus for us in the making of propellers, comprising a profiled matrix forming the counterpart of the blades and hub to be obtained, and a suitable number of presses to coöperate with said matrix, each press having its lower face of a width to extend entirely across the blade of the propeller, said face having a profile corresponding to the transverse profile of the portion of the matrix with which it coöperates.



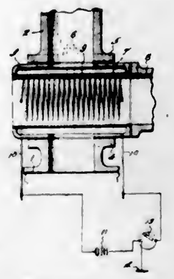
1,378,777. AUTOMATIC CLUTCH-RELEASE. TIMOTHY J. FLAHERTY, La Salle, Ill. Filed Sept. 27, 1919. Serial No. 327,009. 4 Claims. (Cl. 180—82.)

1. The combination with a tractor provided with a foot clutch pedal, of a foot clutch pedal releasing bar pivotally mounted on the rear axle casing of the tractor and comprising long and short arms, the former being adapted to engage the ground, a sliding link connection between the latter and the foot clutch pedal, whereby as the forward end of the tractor tends to tilt upwardly the long arm of the bar will contact with the ground to release the foot clutch pedal, means coöperating with the forward end of the short arm for automatically locking the releasing bar with its rear ground engaging end in different adjusted positions relatively to the ground.



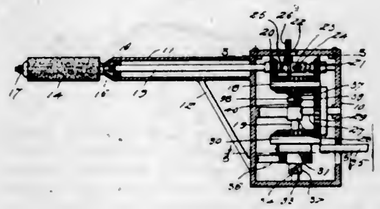
1,378,778. TIRE-RACK. ROE STUBBS FREEMAN, Atlanta, Ga. Filed July 12, 1919. Serial No. 310,327. 5 Claims. (Cl. 224—29.)

1. A tire rack for attachment to an automobile in an upright position, comprising a post with an overhang end and a saddle fast thereto, said post having a yoke portion at the end remote from the saddle and a return portion continued from the yoke portion in spaced parallel relation to the post, a lever pivotally mounted on the return portion and movable into engagement with the post, said



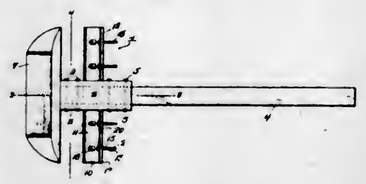
lever carrying means in coactive relation to the saddle and spaced therefrom to engage the inner portion of a demountable rim when the diametrically opposite portion of the rim is pendently hung from the saddle, and means for fastening the lever to the post to lock the rim on the rack.

1,378,779. HORSESHOE. THOMAS H. FREEMAN, Lynch Mines, Ky. Original application filed Oct. 4, 1919, Serial No. 328,377. Divided and this application filed Dec. 13, 1920. Serial No. 430,354. 2 Claims. (Cl. 168—29.)



2. A horseshoe having a calk projecting beyond the general tread surface of the shoe, and a depression in said general tread surface rearward of said calk, said calk having its rear wall merging into the front wall of said depression.

1,378,780. VAPORIZER. JOSEPH F. FRIEND and PETER R. FRIEND, Kenosha, Wis. Filed Apr. 28, 1919. Serial No. 293,083. 1 Claim. (Cl. 219—38.)



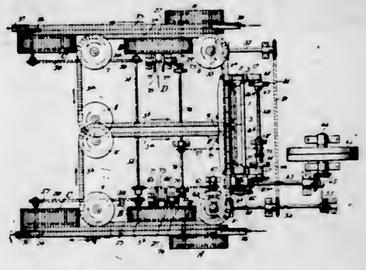
The combination with a carbureter having an attaching flange and an intake manifold having a flange, of a casing arranged snugly between said first and second named flanges and securely attached to the same, said casing having its upper and lower sides formed with passages in alinement with said carbureter and said intake manifold, an exhaust conveying pipe extending transversely through said casing between the upper and lower sides of the same and intersecting the longitudinal axis of said intake manifold, said exhaust conveying pipe being provided with an attaching flange secured to said casing, and a heating coil arranged in tubular formation within said exhaust conveying pipe in spaced relation to the side walls of the same and extending longitudinally of the exhaust pipe to permit of the free flow of the exhaust through the pipe, said heating coil intersecting the longitudinal axis of said intake manifold.

1,378,781. TOOTHBRUSH. ERNEST GLASS, Reading, Pa. Filed Dec. 26, 1919. Serial No. 347,363. 3 Claims. (Cl. 15—37.)

1. A device of the class set forth comprising a rotary brush, a shaft carrying the brush, a support common to said brush and said shaft and adapted in the use of the device to be manipulated to reciprocate the brush, a driving element rotatably carried by the support, means adapted to be actuated by the manipulation of the support to rotate said driving element in reverse directions alternately, and means carried by said support through which the alternate reverse rotations of said driving element impart a continuous one-way rotary movement to said shaft.

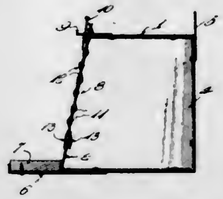
1,378,782. COKE-SHOVEL. EDDIE FLOYD GRIFFIN, Uniontown, Pa. Filed July 12, 1918. Serial No. 244,627. 1 Claim. (Cl. 214—23.)

In a coke puller, a head comprising a heavy solid body formed with a socket opening, a bar having its end portion projecting into the socket opening, the head extending transversely of the bar, a wing hingedly mounted at the rear of the head, means for limiting the movement of the wing, and bolts extending longitudinally of the head and transversely of the bar, and securing said head and bar together and a heavy transverse element parallel with the head, independent thereof and spaced therefrom, one of said transverse elements constituting primarily a pushing device and the other a pulling device.



1,378,783. SAFETY LOCKING DEVICE AND ANTI-RATTLER. WILLIAM G. GRIFFETH, Athens, Ga. Filed Mar. 17, 1919, Serial No. 283,182. Renewed Apr. 29, 1920. Serial No. 377,689. 3 Claims. (Cl. 74—17.)

1. In combination with a joint, comprising the end of a steering arm, the end of a transverse connecting rod and an engaging bolt, of an antirattling and locking attachment, comprising a body portion having ears connecting

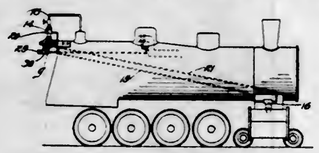


with said bolt to hold it in place, and a tubular extension having in it a follower bearing on the end of said arm, and a tension spring bearing on the follower.

1,378,784. APPARATUS FOR PACKING MATCHES IN BOXES FOR MATCH-MAKING MACHINES. HENRY ALFRED GSELL, Paris, France. Filed Jan. 14, 1919. Serial No. 271,115. 10 Claims. (Cl. 226—10.)

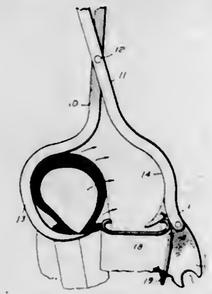
10. In a match boxing machine, movable match carrying bars, match ejectors coöperating with said bars, a plurality of endless chains each having a portion parallel to a different portion of the length of a carrier bar, whereby each chain will receive matches from a different portion of the length of said bar.

1,378,785. HEN'S NEST. DENNIS HALEY, Mount Pleasant, Iowa. Filed Nov. 22, 1920. Serial No. 425,779. 4 Claims. (Cl. 119—45.)



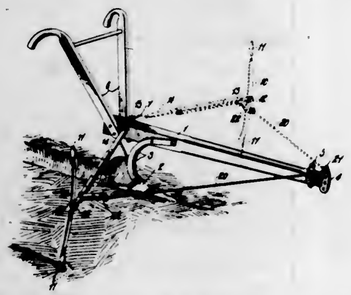
1. A hen's nest comprising an open front box including a relatively short vertical front wall, an apertured forwardly extending ear at the top of the box, a quick detachable wire mesh door disposed over the open front of the box, said ear extending through one of the spaces between the wires of said door, a retaining pin arranged in the aperture in said ear, and co-acting means between the lower edge of the door and said front wall to hold the door closed.

1,378,786. DRIFTING-VALVE. JOHN H. HANLON, Somerville, Mass. Filed Oct. 30, 1918. Serial No. 260,222. 6 Claims. (Cl. 121—137.)



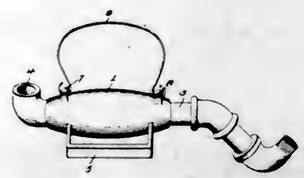
1. In a device of the character described, a main valve controlling a steam passage leading from the boiler to the cylinders of the locomotive, throttle actuated mechanism to open said main valve by the movement which closes

the throttle, a trip cylinder operatively connected with said main valve and connections to the trip cylinder entering said steam passage at a point near the cylinders



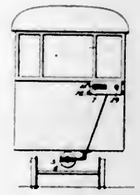
of the locomotive whereby an accumulation of pressure in the cylinders of the locomotive will produce pressure in the trip cylinder and actuate the trip cylinder to permit the closing of the said main valve.

1,378,787. AUTOMOBILE-TIRE TOOL. FRANCIS J. HARBERT, Twin Falls, Idaho, assignor of one-half to Willis T. Harbert, Twin Falls, Idaho. Filed Feb. 17, 1921. Serial No. 445,707. 2 Claims. (Cl. 157—6.)



1. A tire tool comprising a pair of pivoted handles having opposing, curved jaws that terminate in bead-engaging fingers, and a dog pivoted to one of the jaws contiguous to its fingers having a rim-engaging portion that forms a rim bearing for the tool, and having a bead-engaging surface that extends a substantial distance beyond the free end of such finger, when the dog lies alongside of the finger, such surface being on a plate of substantial longitudinal and lateral extent.

1,378,788. FURROW-MARKER. JOHN S. HARWELL, Murrycross, Ala. Filed Dec. 13, 1919. Serial No. 344,734. 2 Claims. (Cl. 97—82.)



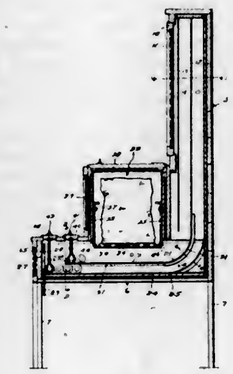
1. In an earth marking tool for plows, a marker beam comprising flat bars provided with spaced perforations, the outer of said bars having one end bent upon itself to provide a loop, a link member engaged within said loop and embracing the other bar of said marker beam, a rigid brace rod universally hinged to the front end of the beam and having spaced members provided with alined bolt holes and adapted to be connected to the marker beam with said spaced members embracing the outer bar of said beam, and a bolt adapted to be inserted through the bolt holes to secure the brace rod to the marker beam.

1,378,789. CARBURETER-HEATER. EDWARD D. HISCOCK, Odell, Oreg. Filed June 11, 1920. Serial No. 388,154. 3 Claims. (Cl. 263—5.)

1. An attachment of the class described comprising a hollow body having a discharge terminal at one end and an upturned receiving cup at its other end, and fuel containing means carried by said body and positioned to direct the heat issuing therefrom around said body.

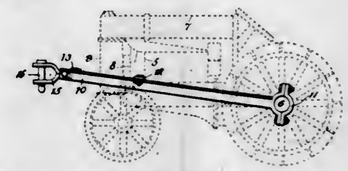
1,378,790. STREET-CAR SIGNAL. JOHN C. HOPKINS, Cedar Rapids, Iowa. Filed June 12, 1919. Serial No. 303,596. 1 Claim. (Cl. 116—36.)

A signal of the character described comprising an elongated casing having a longitudinally disposed slot formed in one side wall of the casing, and an opening spaced from the slot but in align therewith, an arm pivoted within the casing at a point between its ends for vertical movement, a semaphore carried by one end of the arm, upper and lower disks carried by the opposite end of the arm, said disks being of different color and adapted to be moved singly to a position behind said opening, a lamp within the casing, means for normally holding the semaphore above the slot and one disk arranged behind said opening, and means for actuating said arm to bring the semaphore and the other disk behind the said slot and opening respectively for the purpose specified.



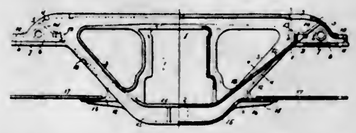
1,378,791. FRUIT-THINNING IMPLEMENT. PER FRITIOF JOHANSON, Trail, Oreg. Filed Apr. 17, 1920. Serial No. 374,644. 2 Claims. (Cl. 30—11.)

2. A device of the character described, comprising a hollow pole, a fixed blade carried by one end thereof, a movable blade pivotally connected with the fixed blade, a cylindrical sleeve carried by the butt end of the pole, a lever extending transversely therethrough and pivotally mounted, a flexible member connected with said member and with the movable blade, a spring for normally holding said movable blade away from the fixed blade, and means for limiting the movement of the movable blade under the influence of the spring comprising a ring ro-



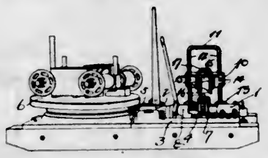
tatably mounted on said sleeve and engaging said lever, said ring being stepped whereby to provide portions of different widths.

1,378,792. COMBINED DISPENSING AND REFRIGERATING APPARATUS. ROBERT A. JOHNS and FRANK LEROY MYERS, Mobile, Ala. Filed Feb. 3, 1921. Serial No. 442,067. 5 Claims. (Cl. 211—8.)



1. A device of the character described of substantial L shape in cross section and divided longitudinally into a plurality of compartments, guideways in each of said compartments adapted to maintain bottles transversely of said compartments and conduct them by a rolling motion upon their sides from the vertical to the horizontal part of the compartment, means for maintaining water at a predetermined level in the horizontal portions of said compartments and at a level to cover the bottles therein and an ice box having an open bottom for which the water in said compartments constitutes a water seal, said horizontal part of the compartment being wider than the ice box to provide a projecting portion outwardly of said ice box, closures hinged for vertical swinging movement upon said projecting portions and bottle gripping elements carried by said closures of a length to dip beneath the water level and grip a bottle about its circumference to remove the same when the closure is opened.

1,378,793. TRACTOR-HITCH. ALVIA E. JOHNSON, St. Francis, Kans. Filed Oct. 9, 1920. Serial No. 415,812. 3 Claims. (Cl. 213—67.)

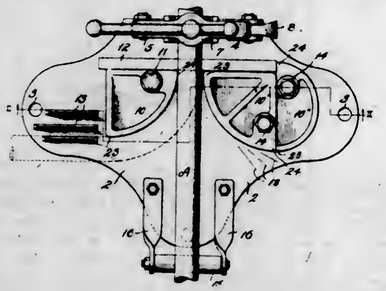


1. A tractor hitching device comprising a pair of longitudinal members, means at one end of each member for holding the same to the rear axle of the tractor, said members converging forwardly relative to the tractor, a cross-piece joining the longitudinal members near their forward ends and adapted to lie in front of the radiator of the tractor, means to hold up the forward end of the hitch, and a clevis pivotally mounted on the hitch forwardly of the cross-piece to swing about a horizontal axis whereby the hitch may be connected to an agricultural implement.

1,378,794. TRUCK SIDE FRAME. GEORGE T. JOHNSON and HARRY W. STERTZBACH, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Filed July 17, 1920. Serial No. 397,094. 7 Claims. (Cl. 105—205.)

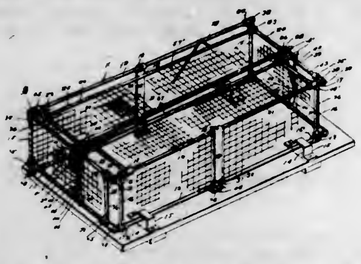
1. A truck side frame having extensions from the juncture of the diagonal tension members with the top member, each diagonal tension member having a plate or web diagonally disposed relatively thereto and having a vertical bolt opening near its upper end, and each of said extensions having inwardly projecting ribs integral at one end with said plate or web and at the other end with the top of said extension.

1,378,795. GUIDE FOR DRIVE-CHAINS. HORACE G. JOHNSTON, Corsicana, Tex., assignor to Genevieve Johnston, Corsicana, Tex. Filed Aug. 2, 1920. Serial No. 400,805. 6 Claims. (Cl. 74—51.)



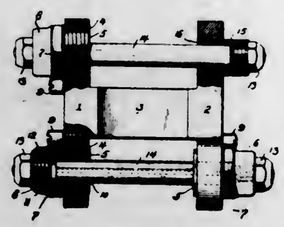
1. In a driving mechanism for well drilling rotaries, a base, a driving mechanism thereon comprising a wheel, a flexible driving element engaging the wheel, a guide member adjacent said wheel embracing the edges of said flexible driving element, a support for the guiding member rigidly mounted on said base and extending upward therefrom, and means adapting the guide member to be adjusted along said support and be secured in adjusted position.

1,378,796. PIPE-BENDING DEVICE. LOUIS W. JONES, Cleveland, Ohio. Filed Feb. 14, 1920. Serial No. 358,658. 3 Claims. (Cl. 153—32.)



1. In a pipe bending device, the combination of a base, a pipe vise supported at one end of the base, an abutment

ridge rising from the base in front of the vise, a removable bending former adapted to rest upon the base and having one face adapted to bear against the said abutment



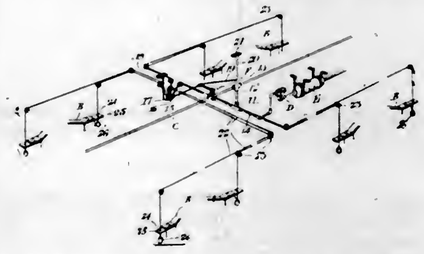
ridge, and another face curved with a heel in line with the pipe to be bent when held in the vise and means for securing the former to the base in the position stated.

1,378,797. COLLAPSIBLE CRATE. MICHAEL KING, St. Louis, Mo. Filed Oct. 16, 1919. Serial No. 331,056. 5 Claims. (Cl. 220—6.)

1. A collapsible crate having a base, side walls horizontally hinged to the base and having frames composed of upper and lower marginal rods connected by vertical links vertically hinged end walls carried by the extremities of one of the side walls, and complemental top sections carried respectively by the side walls and consisting of inner marginal rods connected by links to the upper marginal rods of said side walls.

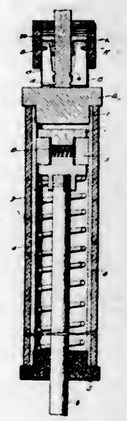
7,378,798. SHACKLE. HENRY A. KROH, Detroit, Mich. Filed June 7, 1919. Serial No. 302,486. 3 Claims. (Cl. 267—54.)

I. A shackle comprising arms, bushings in said arms having the inner ends for engagement with the eye of a spring and adjustable for wear thereagainst, and a headless pin floating in said bushings.



1,378,799. DEVICE FOR TRUING CRANK-SHAFTS OF ENGINES. HENRY G. KUPER, Columbus, Nebr. Filed Jan. 29, 1919. Serial No. 273,773. 3 Claims. (Cl. 82—2.)

8. A device for truing crank shafts including a connecting rod and its integral bearing section receiving one portion of the bearing portion of the crank-shaft, a body detachably secured to the bearing section, and a knife



carried by said body and adapted to shave the face of the bearing portion on rotation of the crank shaft.

1,378,800. AUTOMATIC TRAIN-STOP. SINAI LAFLEUR, Foleyet, Ontario, Canada, assignor of one-third to J. Edouard Coron, Montreal, Quebec, Canada. Filed Nov. 19, 1920. Serial No. 425,187. 5 Claims. (Cl. 246—170.)

1. An automatic train stop comprising a valve operatively connected to the air brake system, adapted when opened to permit the escape of air and cause the application of the brakes, spring means tending to move the valve to open position, a trip device normally retaining the valve in closed position, releasing means for the trip device including cables extending to different parts of the car construction, and pulleys supporting the cables.

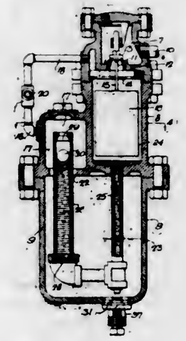
1,378,801. ELECTRIC-CABLE TAP. HOMER M. LAMB, West Frankfort, Ill., assignor of one-third to Louis Klein and one-third to George B. Greenbaum, Frankfort, Ill. Filed Aug. 9, 1920. Serial No. 402,418. 7 Claims. (Cl. 191—12.)

1. In a device for the purpose set forth, an insulated tube, a hook removably secured to one end thereof, and a spring influenced rod movable through the opposite end thereof.

1,378,802. SANITARY CLOTHES-LOCKER. HOMER M. LAMB, West Frankfort, Ill., assignor of one-third to Louis Klein and one-third to George B. Greenbaum, Frankfort, Ill. Filed Aug. 9, 1920. Serial No. 402,419. 6 Claims. (Cl. 45—13.)

1. An elevated locker having an open bottom and a slidable door for closing the bottom, and means for locking the door.

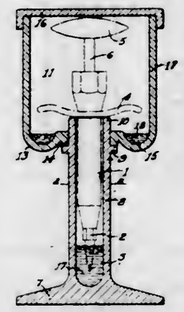
1,378,803. STAPLE-NAIL. CHARLES A. LOVE and CHARLES GOLDSTON, Paris, Tenn. Filed Apr. 21, 1920. Serial No. 375,504. 1 Claim. (Cl. 85—49.)



A staple-nail including a shank and head portion and a prong depending from the head-portion and shorter than the shank, one lateral side of the prong being beveled, the plane of the bevel crossing the vertical axis of the shank, the other side of the prong being substantially parallel to the corresponding side of the shank, the one beveled side presenting to the wood an inclined plane to deflect the said prong laterally with respect to the vertical axis of the shank on its vertical axis to impart a twisting movement to the shank within the wood.

1,378,804. GAS-STOPPING LINING FOR USE IN AIRCRAFT AND MEDIUM FOR FIXING SAME. VINCENT CRANE RICHMOND, Harrow-on-the-Hill, England. Filed Feb. 10, 1921. Serial No. 443,996. 8 Claims. (Cl. 18—57.)

1. A gas stopping lining for fabric comprising a central layer of very low permeability to hydrogen, a protective layer and an attachment layer.

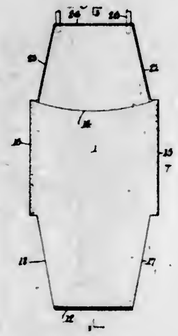


1,378,805. DRY-PIPE ACCELERATOR. ARTHUR C. ROWLEY, Philadelphia, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 11, 1920. Serial No. 388,336. 15 Claims. (Cl. 169—20.)

1. An accelerator consisting of a valve controlling the flow of air under pressure to the intermediate chamber of a dry pipe valve; a float for operating said controlling valve; a body of liquid; and means for causing said

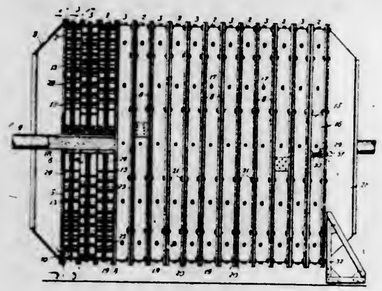
liquid to act on the float to open said valve when a reduction of the air pressure occurs in the air chamber of the dry pipe valve.

1,378,806. HYPODERMIC-SYRINGE CONTAINER. HERMAN AUSUBEL, New York, N. Y. Filed Dec. 30, 1919. Serial No. 348,275. 6 Claims. (Cl. 167—3.)



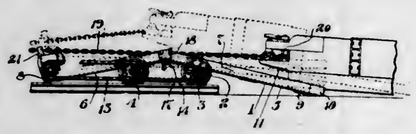
1. A container for hypodermic syringes of the class described having the combination of a base, a tubular portion extending upwardly from said base and adapted to contain disinfecting material in the bottom thereof, the upper end of said tube adapted to hold the syringe whereby its cylinder is disposed within said tube with its needle immersed in the disinfecting material, said tube having a ledge, a casing surrounding the upper part of the syringe having a floor adapted to slip over the upper end of said tube and resting in place on said ledge, said floor having an annular groove adapted to contain disinfecting material, and a cover for closing said casing.

1,378,807. HOLDER. HENRY L. BROWN, Atlantic City, N. J. Filed Sept. 25, 1920. Serial No. 412,789. 4 Claims. (Cl. 224—5.)



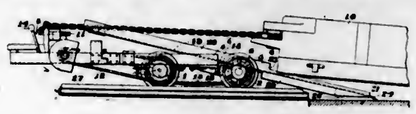
1. In a holder for cards, pads, stationery and the like, a central partition, open pockets partly cut away along

their side portions, said pockets having their vertical sides secured to the partition and to each other, a common



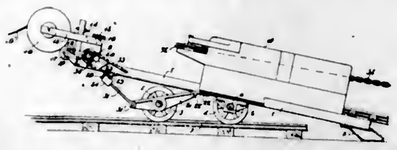
bottom for said pockets and flexible means attached to the top-portion of said central partition for carrying said holder.

1,378,808. DRIER. WILLIAM M. BROWNELL, Brooklyn, N. Y. Filed Apr. 6, 1917, Serial No. 160,243. Renewed Oct. 28, 1920. Serial No. 420,322. 10 Claims. (Cl. 34—42.)



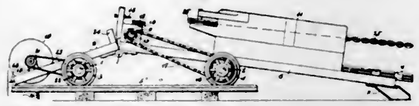
1. In a drier a rotary unit consisting of a series of radial spokes, a strip in the form of a coil secured to said spokes, forming a spiral drying channel, an outer rim in which the outer ends of said spokes are secured and foraminous diaphragms secured at the sides of the unit, substantially as described.

1,378,809. MINING-MACHINE TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor, by mesne assignments, to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 18, 1916. Serial No. 132,121. 28 Claims. (Cl. 105—161.)



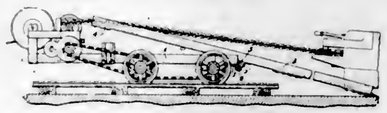
1. In a mining machine truck, a plurality of normally angularly disposed wheeled frames, each mounted on a pair of supporting wheels and each bodily vibratable vertically around the axis of its wheels, and means pivotally connecting their adjacent ends.

1,378,810. TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 17, 1917. Serial No. 197,084. 14 Claims. (Cl. 105—161.)



1. In a mining machine truck, a plurality of wheeled truck elements, one of said elements comprising a machine supporting frame tiltable into inclined position for the loading of a machine thereon, axle boxes carried by one of said elements, and a pivotal connection between said other element and said axle boxes.

1,378,811. TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 11, 1918. Serial No. 266,314. 56 Claims. (Cl. 105—161.)



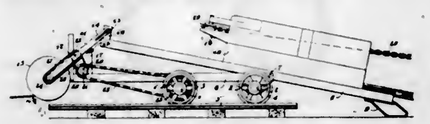
1. In a mining machine truck, a tiltable machine carrying frame pivotally mounted on a support and tiltable by a machine moving thereover, and friction means for retaining said frame in tilted position.

1,378,812. TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 12, 1918. Serial No. 266,479. 18 Claims. (Cl. 105—161.)

1. In a mining machine truck, a tiltable truck body, a wheeled pivot therefor, said body being tiltable about the pivot to loaded or unloading position by a mining machine movable thereover, and trailer means having a separate wheeled mounting engaging the body at one end thereof for supporting that end when said body is loaded.

1,378,813. MINING-MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 28, 1919. Serial No. 279,866. 11 Claims. (Cl. 105—161.)

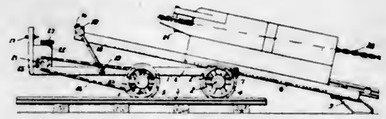
1. In combination, a truck frame, a transverse plate thereon, and a tilting member turning directly on said plate during its tilting operation.



2. In combination, a truck frame, means forming a transverse knife edge at the front thereof, and a tilting member turning on said knife edge during its tilting operation.

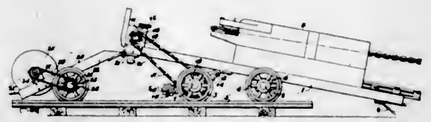
3. In combination, a truck frame, means forming a transverse bearing at the front end thereof, and a tilting machine supporting member slidable relative thereto during its tilting operation.

4. In combination, a truck frame, a transverse member thereon, a machine receiving member tiltable and slidable on said member, and means for operatively connecting said elements.



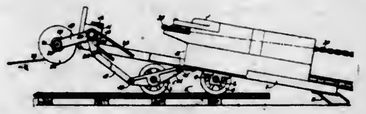
5. In combination, a truck frame, means forming a transverse knife edge bearing at the front end thereof, a tilting machine supporting member tiltable thereon during its tilting operation, and means for maintaining said elements in operative relation.

1,378,814. TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 11, 1918, Serial No. 266,318. Renewed Feb. 3, 1921. Serial No. 442,327. 14 Claims. (Cl. 105—161.)



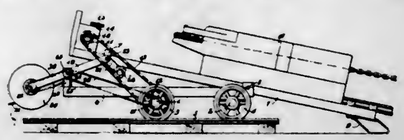
1. In a mining machine truck, a wheeled frame, a machine carrying body pivoted at the front end thereof and tiltable by a mining machine movable thereover, and counterbalancing means having a fixed pivotal connection with said frame and engaging said body for normally retaining the latter in an inclined position.

1,378,815. TRUCK. MORRIS P. HOLMES, Claremont N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 11, 1918, Serial No. 266,319. Renewed Feb. 3, 1921. Serial No. 442,328. 18 Claims. (Cl. 105—161.)



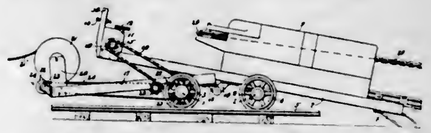
1. In a mining machine truck, a wheeled frame having front and rear wheels, a machine carrying body pivoted at the front end thereof and tiltable by a mining machine movable thereover, and friction means mounted on said frame and body for retaining said body in a tilted position.

1,378,816. TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 12, 1918. Serial No. 266,478. Renewed Feb. 3, 1921. Serial No. 442,329. 25 Claims. (Cl. 105—161.)



1. In a mining machine truck, a wheeled truck unit comprising a tiltable bed, truck driving mechanism on said bed, and a wheeled counterbalancing unit engaging said bed to normally hold the latter in an inclined position, said units being connected for angular lateral movement.

1,378,817. TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 11, 1918, Serial No. 266,316. Renewed Feb. 4, 1921. Serial No. 442,597. 30 Claims. (Cl. 105—161.)



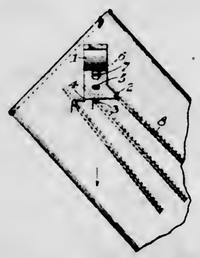
1. In a mining machine truck, a tiltable machine carrying frame, a supporting member therefor, and counterbalancing means mounted on said frame and engaging said member for retaining said frame in a tilted position.

1,378,818. TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 11, 1918, Serial No. 266,317. Renewed Feb. 4, 1921. Serial No. 442,598. 19 Claims. (Cl. 105—161.)

1. In a mining machine truck, a wheeled frame, a machine carrying body pivoted at the front end thereof and tiltable by a mining machine movable thereover, and counterbalancing means mounted on said frame for retaining said body in a tilted position.

1,378,819. TRUCK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 11, 1918, Serial No. 266,315. Renewed Feb. 5, 1921. Serial No. 442,888. 21 Claims. (Cl. 105—161.)

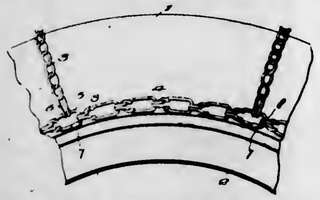
1. In a mining machine truck, a wheeled tiltable load carrying frame, a reel supporting counterbalancing member engaging said frame, and truck driving means mounted on said frame and adapted to be driven by a mining machine.



2. In a mining machine truck, a plurality of sets of wheels, a tiltable load carrying frame mounted on one set of wheels, a reel supporting counterbalancing member mounted on another set of wheels and engaging said frame, and truck driving means mounted on said frame and engaging one of said sets of wheels.

3. In a mining machine truck, a plurality of sets of wheels, a tiltable load carrying frame mounted on one set of wheels, a reel supporting counterbalancing member mounted on another set of wheels and engaging said frame, and truck driving means mounted on said frame and operatively connected with said last named set of wheels.

4. In a mining machine truck, a plurality of sets of wheels, a tiltable load carrying frame mounted on one set of wheels, a reel supporting counterbalancing member mounted on another set of wheels and engaging said frame, truck driving means mounted on said frame and including a flexible connection engaging said last named set of wheels, and means for maintaining a constant tension on said flexible connection.

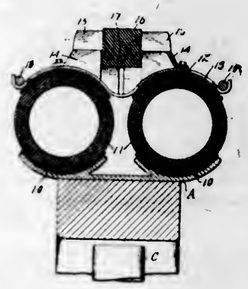


5. In a mining machine truck, a plurality of sets of wheels, a tiltable load carrying frame mounted on one set of wheels, a reel supporting counterbalancing member mounted on another set of wheels and engaging said frame, truck drivink means mounted on said frame and including a flexible connection engaging said last named set of wheels, and means for taking up the slack in said flexible connection.

1,378,820. GLOVE-POINTING MACHINE. WILLIAM HORN and JAMES HAGAN, Oneonta, N. Y., assignors to Quality Silk Mills, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 22, 1920. Serial No. 412,051. 4 Claims. (Cl. 112—151.)

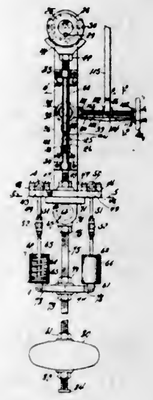
1. A presser foot for a glove pointing machine having a pointer projecting laterally from its needle plate, another pointer projecting forwardly from the central part of the front edge of its needle plate and another pointer at the front edge of the side of the needle plate opposite that from which the lateral pointer projects.

1,378,821. ANTISKID TIRE-CHAIN. ANDREW LANGSTAFF JOHNSTON, Jr., Richmond, Va., assignor to Percival R. Moses, New York, N. Y. Filed Apr. 28, 1920. Serial No. 377,192. 2 Claims. (Cl. 152—14.)



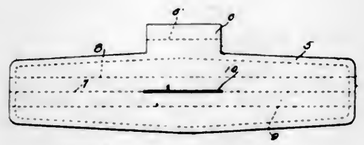
1. A non-skid tire chain of the character described, including a pair of side chains composed of links connected together in annular series, and a plurality of cross chains connecting said side chains and embodying hooks engaging with certain spaced links of said side chains, said hooks being provided with gaps therein of lesser width than the normal diameter of the links of the side chains with which they engage, said last mentioned links being provided with flattened portions on their inner sides adapted to permit the passage of the gaps in said hooks, the reduced portion of each of said reduced links being locked against registry with the gap in the corresponding hook by the adjacent link of the side chain, substantially as described.

1,378,822. TREATMENT OF LIXIVIATION-RESIDUE ZINC. RICHARD L. LLOYD, New York, N. Y., assignor to Dwight & Lloyd Metallurgical Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 10, 1919. Serial No. 329,864. 1 Claim. (Cl. 75—18.)



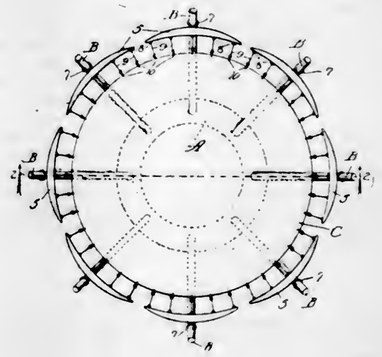
The herein described method for treating ore containing zinc sulfid and also other forms of zinc, it consisting in roasting the ore and forming soluble zinc bodies, subjecting the mass to the action of a solvent and dissolving out the soluble zinc component, then commingling with the solid residue a reducing agent and subjecting the mingled mass to the action of heat at a temperature below that at which zinc reduces and volatilizes, then again subjecting the mass to the action of a solvent and dissolving out the remainder of the zinc component.

1,378,823. VEHICLE-WHEEL. MICHAEL J. O'CONNOR, Bloomingdale, N. J. Filed Apr. 24, 1919, Serial No. 292,451. Renewed Mar. 6, 1920. Serial No. 363,665. 4 Claims. (Cl. 152—16.)



1. A pneumatic tire for wheels comprising an inner rim having parallel recesses, a plurality of pneumatic tubes mounted in said recesses, an outer rim having similar parallel recesses, pockets formed on the periphery of said outer rim, blocks located in said pockets, and a central circular tread located between said blocks, substantially as set forth.

1,378,824. AUTOMATICALLY-REGULATED PENDULUM. WALTER H. PARNELL, Jr., Brooklyn, N. Y. Filed May 31, 1918. Serial No. 237,670. 12 Claims. (Cl. 244—29.)

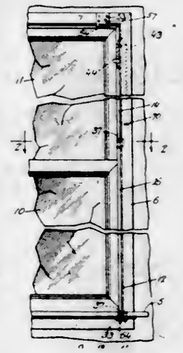


1. In a pendulum the combination of a pair of members, a bearing plate at the lower end of one of the members, a bearing cap at the accompanying end of the other member, said plate normally bearing on said cap and a brake to retard the movements of said pendulum when the members thereof are thrown out of alinement.

1,378,825. SHIRT-NECKBAND. CORNELIUS L. SHADER, Green Island, and JOHN E. FALLE, Troy, N. Y. Filed July 16, 1920. Serial No. 396,753. 3 Claims. (Cl. 2—41.)

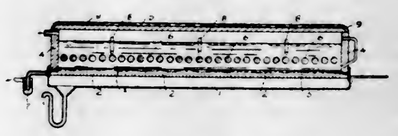
1. A neck-band for shirts including a blank folded longitudinally to afford a pair of plies for the reception of the neck of the shirt, the blank being provided with a longitudinal slot centrally of its ends, and a tongue carried by one edge of the blank and insertible through the slot to space the plies at one point.

1,378,826. DOILY-STRETCHER. SAMUEL A. SNELLING and BERT M. SANER, Chicago, Ill., assignors, by direct and mesne assignments, of one-half to said Bert M. Saner and one-half to Joseph A. Farina, Chicago, Ill. Filed July 19, 1920. Serial No. 397,266. 3 Claims. (Cl. 45—24.)



1. In a device of the class described, a base-support, a number of standards set therein at an inclined angle, a plurality of segments movably mounted on said standards, and means connected with said segments for grasping the border edge of an object, as a doily, and holding the same in an outstretched position.

1,378,827. [WITHDRAWN.]



1,378,828. WINDOW. PETER HORSLEV, Chicago, Ill. Filed Nov. 22, 1919. Serial No. 339,812. 5 Claims. (Cl. 20—12.)

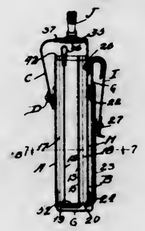
1. In a window frame, the combination of a jamb having a channel on the outer face adapted to engage the edge of the window sash, and a longitudinal opening in the jamb at the bottom of the channel, and of sufficient length to allow the sash to be moved edgewise therein, a movable jamb section closing the opening, a bracket on the frame at each end of the opening, and a spring mounted on each bracket and having spaced arms extending longitudinally in the opening at opposite sides of the section, and engaged with the section at a distance

from the ends so as to permit retraction of the section from the opening, and normally hold the section flush with the bottom of the channel.

1,378,829. APPARATUS FOR THE ELECTROLYSIS OF SOLUTIONS OF ALKALINE CHLORIDS. CLAUS NISSEN RIIBER, Trondhjem, Norway, assignor to Norsk Alkali A/S., Trondhjem, Norway. Filed Dec. 12, 1918. Serial No. 266,519. 13 Claims. (Cl. 204—58.)

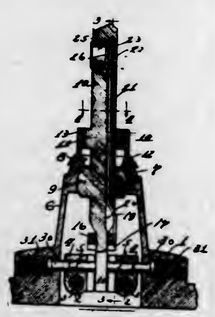
1. The method of making diaphragms for use in electrolyte chambers which consists in securing upon a metal netting a fibrous material in a substantially pulverulent condition without an agglutinent, from a liquid containing the material in suspension.

1,378,830. APPARATUS FOR MINING COAL. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Original application filed Apr. 7, 1915, Serial No. 19,746. Divided and this application filed Aug. 28, 1919, Serial No. 319,449. Renewed Mar. 3, 1921. Serial No. 449,502. 10 Claims. (Cl. 262—9.)



1. An apparatus for mining coal comprising a horizontally extending kerf cutter adapted to be moved either longitudinally or laterally to form a kerf at the base of a coal vein, means for breaking down the coal above said kerf, a conveyer in fixed relation with said kerf cutter

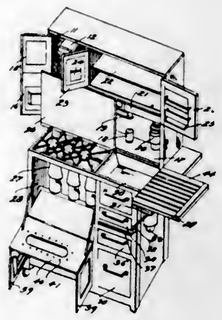
adapted to receive and remove said coal as it is broken down, and an auxiliary conveyer extending longitudinally of the coal face adjustable relative thereto, and adapted to receive the broken coal from said receiving conveyer.



REISSUES.

15,104. BRIEF AND OTHER CARRYING CASE. MAYER AXELMAN and HARRY W. AXELMAN, Chicago, Ill. Filed Mar. 31, 1921. Serial No. 457,492. Original No. 1,329,574, dated Feb. 3, 1920, Serial No. 307,244, filed June 27, 1919. 7 Claims. (Cl. 190—43.)

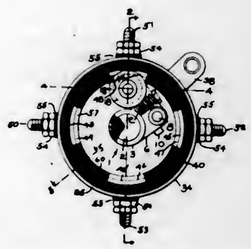
5. A brief case having walls defining the limits thereof, and means for adjusting said case comprising a member secured to one wall interiorly thereof and passing beneath the brief case and rising adjacent the other wall.



15,105. GEAR-SHIFT-LEVER LOCK. COLVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 4, 1920. Serial No. 428,418. Original No. 1,299,954, dated Apr. 8, 1919, Serial No. 146,336, filed Feb. 3, 1917. 9 Claims. (Cl. 70—126.)

8. In a gear shift lever lock of the class described, means movably mounted on the gear shift rods of an automobile, a gear shift lever, and a mechanism thereon adapted to engage said means to hold said lever locked against movement.

15,106. KITCHENOLA. JACOB H. PETERS, Evansville, Ind. Filed Sept. 29, 1920. Serial No. 413,629. Original No. 1,318,229, dated Oct. 7, 1919, Serial No. 263,168, filed Nov. 19, 1918. 3 Claims. (Cl. 45—16.)



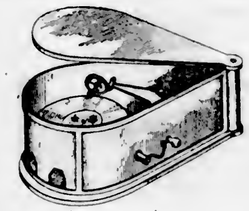
1. A compartmental kitchen cabinet having a plurality of compartments, a stove carried in one of said compartments, a sink carried in another of said compartments, a table portion covering the stove and sink compartments, the latter consisting of independently movable sections, that covering the stove compartment being hingedly mounted for forward swinging movement to form a shield in rear of the stove, that covering the sink compartment being mounted for lateral movement for inversion to form a drain board when thus inverted.

2. A compartmental kitchen cabinet having a plurality of compartments, a stove carried in one of said compartments, a sink carried in another of said compartments, a table portion covering the stove and sink compartments, the latter consisting of independently movable sections, that covering the stove compartment being hingedly mounted for rearward swinging movement to form a shield in rear of the stove, that covering the sink compartment being mounted for lateral movement for inversion to form a drain board when thus inverted, said sink covering section being provided with a hinged terminal leaf projecting laterally beyond the sink compartment and mounted for swinging movement in a direction at right angles to the movement of the sink covering portion proper.

3. A kitchen cabinet having a plurality of compartments, a stove carried in one of said compartments, a sink carried in another of said compartments, a table portion covering the stove and sink compartments, the latter consisting of independently movable sections, that covering the above compartment being adapted to serve as a shield in the rear of the stove, and that covering the sink being adapted to serve as a drain board.

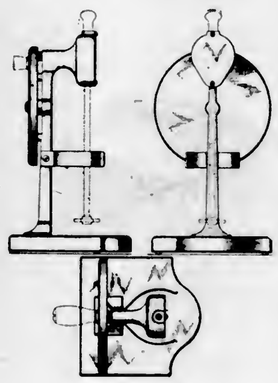
15,107. TIMER. ESTOL SENN RUSH, Los Angeles, Calif. Filed Oct. 12, 1920. Serial No. 416,553. Original No. 1,332,637, dated Mar. 2, 1920, Serial No. 294,921, filed May 5, 1919. 17 Claims. (Cl. 200—24.)

7. In a timer having an annular track composed of alternating sections of insulating and conducting material; the combination of members rotating inside and about the axis of said track; a roller carried on said members, said roller having a secondary contact face; a spring forcing said roller radially against said track; and a spring forcing said secondary contact axially against said track.



DESIGNS.

57,881. TIRE. OTTO BASTEN, Rutherford, N. J., assignor to Sterling Tire Corporation, Rutherford, N. J. Filed July 7, 1920. Serial No. 394,595. Term of patent 7 years.



The ornamental design for a tire, as shown.

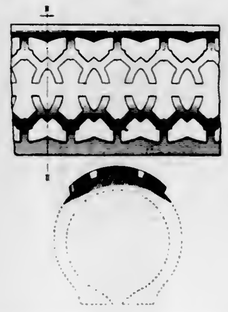
57,882. PHONOGRAPH-CABINET. PAUL A. BERGMAN, Portland, Oreg. Filed Feb. 8, 1921. Serial No. 443,475. Term of patent 7 years.

The ornamental design for the phonograph cabinet as shown.

57,883. MIXING AND STIRRING DEVICE. MATHEW BLACK, Brooklyn, N. Y., assignor to Harry Brudney, New York, N. Y. Filed Oct. 21, 1919. Serial No. 332,314. Term of patent 3½ years.

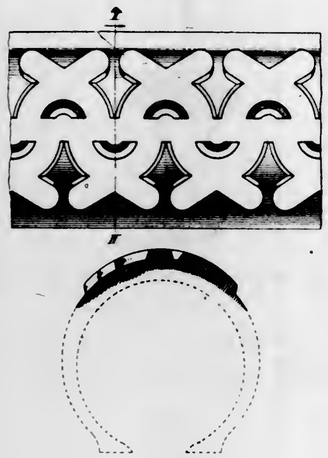
The ornamental design for a mixing and stirring device substantially as shown.

57,884. PORTABLE LAMP. WILLIAM R. BOISVERT, St. David, Quebec, Canada. Filed Jan. 22, 1920. Serial No. 353,335. Term of patent 3½ years.



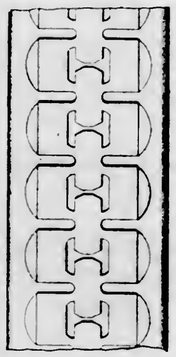
The ornamental design for a portable lamp, as shown.

57,885. PORTABLE LAMP. WILLIAM R. BOISVERT, St. David, Quebec, Canada. Filed Jan. 22, 1920. Serial No. 353,336. Term of patent 3½ years.



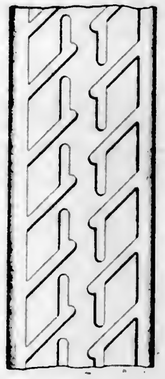
The ornamental design for a portable lamp, as shown.

57,886. TIRE-TREAD. ARTHUR L. BREITENSTEIN, Akron, Ohio, assignor to Hannibal Rubber Company, Hannibal, Ohio, a Corporation of Missouri. Filed Dec. 3, 1920. Serial No. 428,135. Term of patent 14 years.



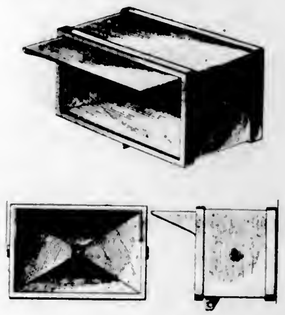
The ornamental design for a tire tread, as shown.

57,887. TIRE-TREAD. ARTHUR L. BREITENSTEIN, Akron, Ohio, assignor to Hannibal Rubber Company, Hannibal, Ohio, a Corporation of Missouri. Filed Dec. 3, 1920. Serial No. 428,136. Term of patent 14 years.



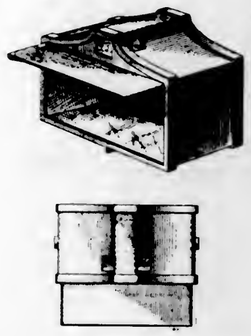
The ornamental design for a tire tread, as shown.

57,888. VEHICLE-TIRE. ROBERT BUTLER, Barberton, Ohio. Filed Feb. 20, 1920. Serial No. 360,163. Term of patent 3½ years.



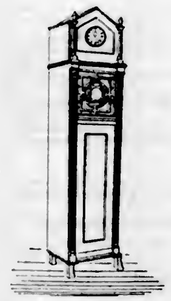
The ornamental design for a vehicle tire, as shown.

57,889. VEHICLE-TIRE. ROBERT BUTLER, Barberton, Ohio. Filed Feb. 20, 1920. Serial No. 360,164. Term of patent 3½ years.



The ornamental design for a vehicle tire, as shown.

57,890. HEADLIGHT. PAUL R. COLLIER, Philadelphia, Pa. Filed Oct. 19, 1920. Serial No. 418,108. Term of patent 7 years.

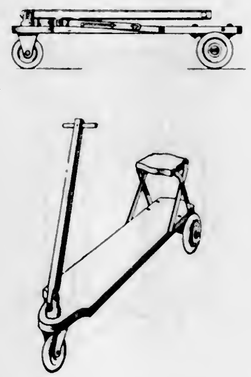


The ornamental design for a headlight as shown.

57,891. HEADLIGHT. PAUL R. COLLIER, Philadelphia, Pa. Filed Nov. 12, 1920. Serial No. 423,739. Term of patent 7 years.

The ornamental design for a headlight as shown.

57,892. COMBINED CLOCK AND PHONOGRAPH CABINET. SALVATORE CAIMI, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,327. Term of patent 7 years.

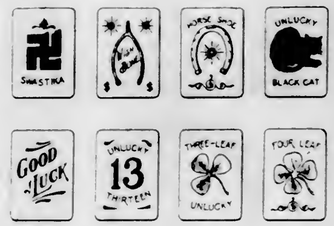


The ornamental design for a combined clock and phonograph cabinet, as shown.

57,893. TALCUM-POWDER BOX. FELIX EBERHART, Newark, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 16, 1920. Serial No. 403,958. Term of patent 14 years.

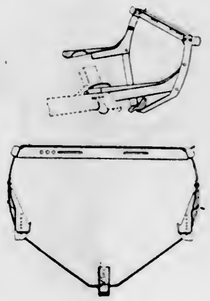
The ornamental design for a talcum powder box, as shown.

57,894. TOY VEHICLE. GEORG EKLUND, Winona, Minn. Filed Nov. 8, 1920. Serial No. 422,743. Term of patent 7 years



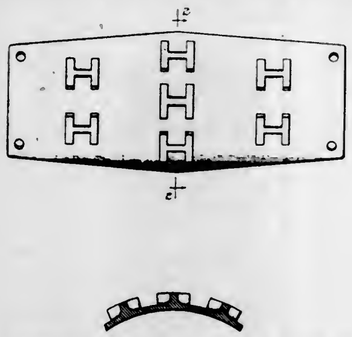
The ornamental design for a toy vehicle, as shown.

57,895. PHONOGRAPH-CABINET. CHARLES E. FERREIRA, San Francisco, Calif., assignor to Art Rattan Works, San Francisco, Calif., a Corporation of California. Filed Feb. 1, 1921. Serial No. 441,695. Term of patent 14 years.



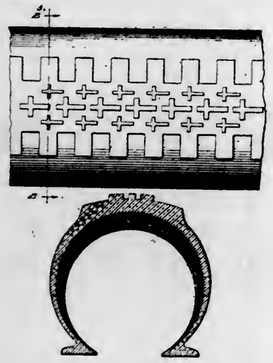
The ornamental design for a phonograph cabinet as shown.

57,896. SET OF PLAYING-CARDS. CARL K. FREDERICK, Detroit, Mich. Filed Nov. 29, 1920. Serial No. 427,239. Term of patent 14 years.



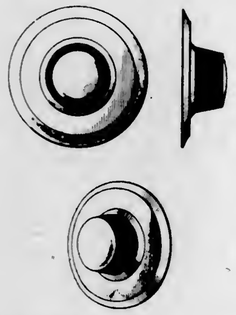
The ornamental design for a set of playing cards, as shown.

57,897. TIRE-CARRIER. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Highland Park, Mich., a Corporation of Delaware. Filed Dec. 9, 1920. Serial No. 429,601. Term of patent 14 years.



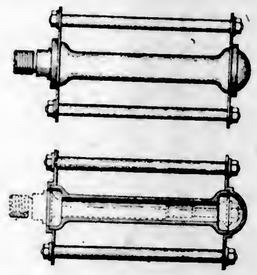
The ornamental design for a tire carrier, as shown.

57,898. NON-SKID PLATE FOR AUTOMOBILES. CHARLES B. GIBSON, Chicago, Ill. Filed Oct. 16, 1919. Serial No. 331,211. Term of patent 7 years.



The ornamental design for a non-skid plate for automobile tires substantially as shown.

57,899. TIRE-TREAD. JAMES GRAHAM, Detroit, Mich. Filed July 14, 1920. Serial No. 396,320. Term of patent 14 years.

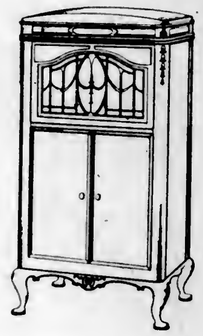


The ornamental design for a tire tread as shown.

57,900. CONTROL-HANDLE FOR REGULATING APPARATUS. ALFRED H. GREBE, Richmond Hill, N. Y., assignor to A. H. Grebe & Co., Inc., Richmond Hill, N. Y., a Corporation of New York. Filed May 12, 1920. Serial No. 380,924. Term of patent 7 years.

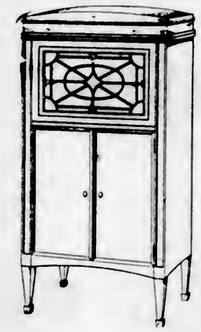
The ornamental design for a control handle for regulating apparatus as shown.

57,901. BICYCLE-PEDAL. ROSCOE S. HEISS, Middletown, Ohio, assignor to The Miami Cycle and Manufacturing Company, Middletown, Ohio, a Corporation of Ohio. Filed Mar. 31, 1920. Serial No. 370,348. Term of patent 14 years.



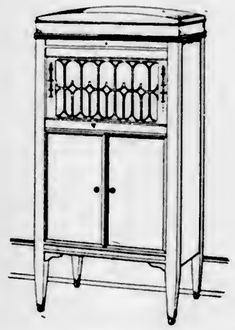
The ornamental design for a bicycle pedal, as shown.

57,902. BOX-COVER. EDWARD I. HEYMANN, New York, N. Y. Filed June 2, 1920. Serial No. 386,069. Term of patent 3½ years.



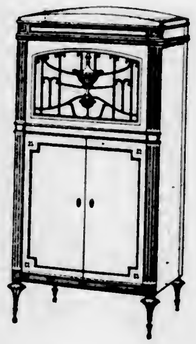
The ornamental design for a box cover, as shown.

57,903. PHONOGRAPH-CABINET. EDMOND C. HOWARD, Norfolk, Va. Filed Oct. 14, 1920. Serial No. 417,045. Term of patent 14 years.



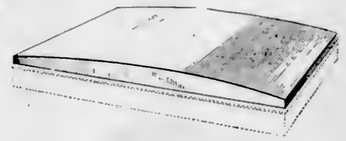
The ornamental design for a phonograph cabinet as shown.

57,904. PHONOGRAPH-CABINET. EDMOND C. HOWARD, Norfolk, Va. Filed Oct. 14, 1920. Serial No. 417,046. Term of patent 14 years.



The ornamental design for a phonograph cabinet as shown.

57,905. PHONOGRAPH-CABINET. EDMOND C. HOWARD, Norfolk, Va. Filed Oct. 14, 1920. Serial No. 417,047. Term of patent 14 years

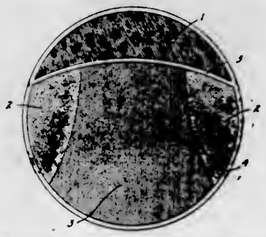


The ornamental design for a phonograph cabinet as shown.

57,906. PHONOGRAPH-CABINET. EDMOND C. HOWARD, Norfolk, Va. Filed Oct. 14, 1920. Serial No. 417,048. Term of patent 14 years.

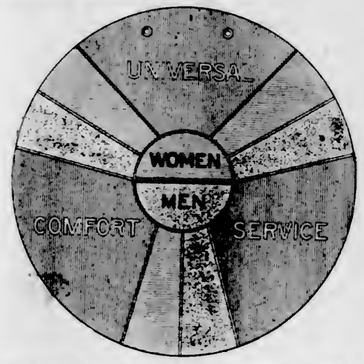
The ornamental design for a phonograph cabinet as shown.

57,907. PHONOGRAPH-CABINET TOP. EDMOND C. HOWARD, Norfolk, Va. Filed Oct. 14, 1920. Serial No. 417,049. Term of patent 14 years.



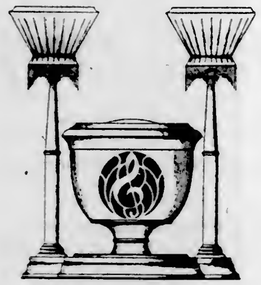
The ornamental design for a phonograph cabinet top as shown.

57,908. PHONOGRAPH-CABINET TOP. EDMOND C. HOWARD, Norfolk, Va. Filed Oct. 14, 1920. Serial No. 417,050. Term of patent 14 years.



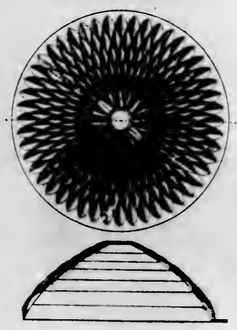
The ornamental design for a phonograph cabinet top, as shown.

57,909. LENS FOR HEADLIGHTS. JOHN H. HOWARD, Minneapolis, Minn., assignor to Ezra Garfield Stegner, James S. Ingalls, and John H. Howard, trustees. Filed Aug. 2, 1920. Serial No. 400,872. Term of patent 3½ years.



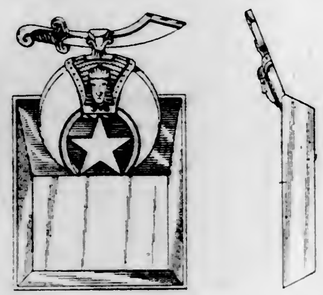
The ornamental design for a lens for headlights, as shown.

57,910. DIRECTION-INDICATOR. IVY DAPHENE HOWELL, Ballston Spa, N. Y. Filed Aug. 6, 1920. Serial No. 401,800. Term of patent 14 years.



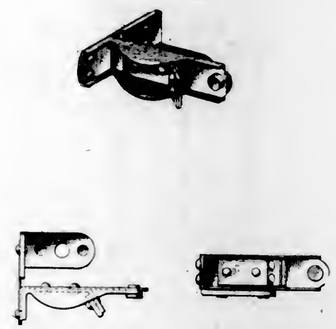
The ornamental design for a direction indicator substantially as shown and described.

57,911. COMBINED LAMP AND TALKING-MACHINE CASING. WASYL HUCAL, Chicago, Ill. Filed Jan. 31, 1921. Serial No. 441,489. Term of patent 14 years.



The ornamental design for a combined lamp and talking machine casing, as shown.

57,912. AUTOMOBILE-REFLECTOR. EMIL G. JOHANSON, Chicago, Ill. Filed Oct. 14, 1919. Serial No. 330,614. Term of patent 3½ years.



The ornamental design for an automobile reflector, as shown.

57,913. ASH-TRAY. LLOYD KELCH, Wabash, Ind., assignor of one-half to Ford Meter Box Company, Wabash, Ind. Filed Apr. 24, 1920. Serial No. 376,415. Term of patent 7 years.

The ornamental design for an ash tray, as shown.

57,914. IGNITION-CONTACTOR. ARTHUR ATWATER KENT, Ardmore, Pa. Filed Dec. 13, 1920. Serial No. 430,586. Term of patent 14 years.

The ornamental design for an ignition contactor, as shown.

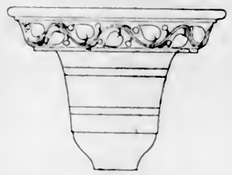
57,915. LIGHTING-FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,286. Term of patent 3½ years.

The ornamental design for a lighting fixture as shown.

57,916. LIGHTING-FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,287. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

57,917. LIGHTING-FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,289. Term of patent 3½ years.

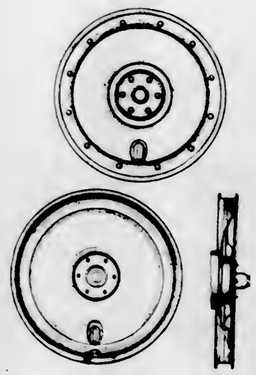


The ornamental design for a lighting fixture as shown.

57,918. BRACKET-BACK FOR LIGHTING-FIXTURES. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,292. Term of patent 3½ years.

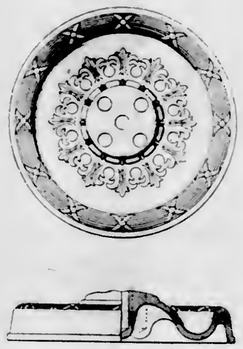
The ornamental design for a bracket-back for lighting fixtures as shown.

57,919. CANOPY. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York Filed Oct. 28, 1920. Serial No. 420,293. Term of patent 3½ years.



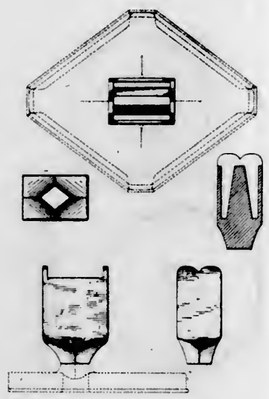
The ornamental design for a canopy, as shown.

57,920. CANDLE-HOLDER. LULU V. LAVELL, Minneapolis, Minn. Filed Oct. 4, 1920. Serial No. 414,683. Term of patent 14 years.



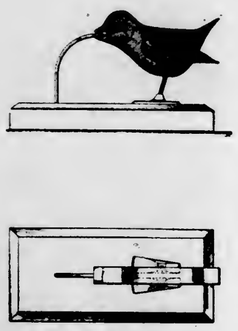
The ornamental design for a candle holder, as shown.

57,921. VEHICLE-WHEEL. VICTOR LOUGHEED, Santa Barbara, Calif., assignor to Duodisk Steel Wheel Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed Nov. 26, 1920. Serial No. 426,655. Term of patent 14 years.



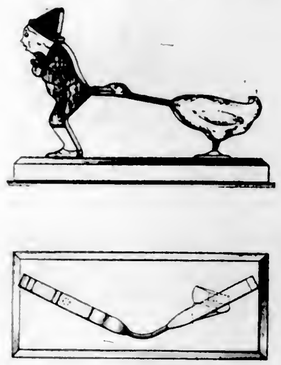
The ornamental design for a vehicle wheel as shown.

57,922. UMBRELLA-STAND. ANGUS S. MACDONALD, Great Neck, N. Y., assignor to Snead & Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 16, 1920. Serial No. 424,565. Term of patent 14 years.



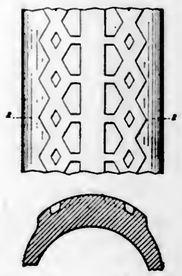
The ornamental design for an umbrella stand, as shown.

57,923. HOLDER FOR BOOK-MATCHES. EDWIN A. MERRITT, New York, N. Y., assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 1, 1919. Serial No. 335,192. Term of patent 14 years.



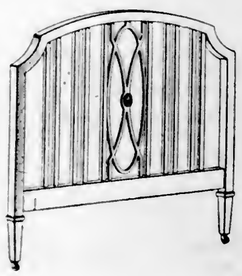
The ornamental design for a holder for book matches substantially as shown.

57,924. FIGURE TOY. PETER S. H. NEWELL, Leonia, N. J., assignor to The Diamond Toy Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 14, 1920. Serial No. 417,054. Term of patent 14 years.



The ornamental design for a figure toy, substantially as shown.

57,925. FIGURE TOY. PETER S. H. NEWELL, Leonia, N. J., assignor to The Diamond Toy Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 14, 1920. Serial No. 417,055. Term of patent 14 years.



The ornamental design for a figure toy, substantially as shown.

57,926. TIRE-CASING. GEORGE W. ODELL, South Bend, Ind., assignor to International India Rubber Corporation, South Bend, Ind., a Corporation of Delaware. Filed Apr. 3, 1920. Serial No. 371,168. Term of patent 3½ years.

The ornamental design for a tire casing as shown.

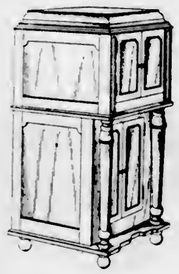
57,927. BEDSTEAD END. WALTER PAPOLL, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Oct. 9, 1920. Serial No. 415,912. Term of patent 14 years.

The ornamental design for a bedstead end, as shown and described.

57,928. KEY-RING. CHARLES H. PAYNE, Cincinnati, Ohio. Filed Sept. 16, 1920. Serial No. 410,770. Term of patent 3½ years.

The ornamental design for a key ring, as shown.

57,929. SHOE ORNAMENT. GEORGE HERMAN PULSIFER, Haverhill, Mass. Filed Nov. 11, 1920. Serial No. 423,489. Term of patent 3½ years.



The ornamental design for a shoe ornament as shown.

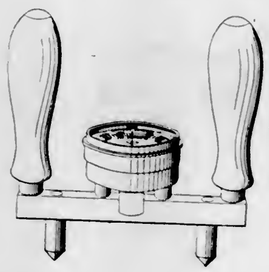
57,930. PLURAL LAMP-SOCKET. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Nov. 26, 1920. Serial No. 426,659. Term of patent 14 years.

The ornamental design for a plural lamp socket as shown.

57,931. PHONOGRAPH-CABINET. ALBERT W. J. SCHULER, East Concord, N. Y. Filed Jan. 15, 1921. Serial No. 437,594. Term of patent 7 years.

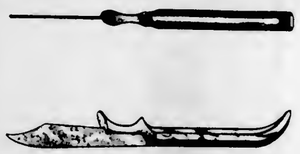
The ornamental design for a phonograph cabinet, as shown.

57,932. INSIDE MICROMETER. CRESTON W. SCOTT, Greenfield, Mass., assignor to Goodell-Pratt Company, Greenfield, Mass., a Corporation of Massachusetts. Filed Jan. 27, 1921. Serial No. 440,509. Term of patent 7 years.



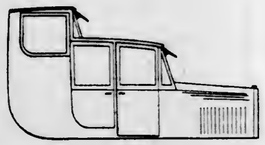
The ornamental design for an inside micrometer, as shown.

57,933. GOBLET OR SIMILAR ARTICLE OF GLASSWARE. ALBERT E. SEHLBACH, Chicago, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1920. Serial No. 403,947. Term of patent 7 years.



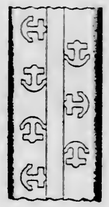
The ornamental design for a goblet or similar article of glassware as shown.

57,934. ELECTRICAL MEASURING INSTRUMENT. HARRY I. SHIRE, Detroit, Mich. Filed Jan. 12, 1921. Serial No. 436,838. Term of patent 14 years.



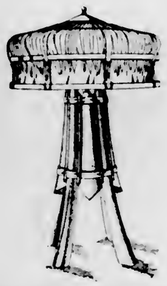
The ornamental design for an electrical measuring instrument as shown.

57,935. KNIFE-HANDLE. FRANK J. SHIVELY, Canton, Ohio. Filed Nov. 2, 1920. Serial No. 421,421. Term of patent 14 years.



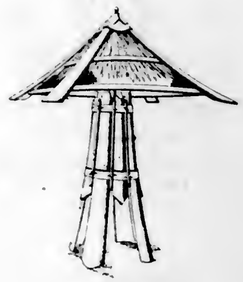
The ornamental design for a knife handle, as shown.

57,936. AUTOMOBILE-BODY. DE WANE B. SMITH, Utica, N. Y. Filed Nov. 20, 1920. Serial No. 425,570. Term of patent 7 years.



The ornamental design for an automobile body as shown.

57,937. TIRE OR SIMILAR ARTICLE. F. HASKELL SMITH, Bloomfield, N. J. Filed Jan. 16, 1920. Serial No. 351,949. Term of patent 14 years.

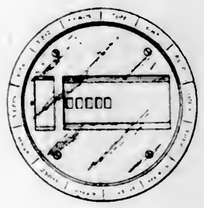


The ornamental design for a tire or a similar article as shown.

57,938. LAMP. JAMES SMITH, Tampa, Fla., assignor to The Palm Craft Company, Tampa, Fla., a Corporation of Florida. Filed Nov. 6, 1920. Serial No. 422,395. Term of patent 14 years.

The ornamental design for a lamp as shown.

57,939. LAMP. JAMES SMITH, Tampa, Fla., assignor to The Palm Craft Company, Tampa, Fla., a Corporation of Florida. Filed Nov. 6, 1920. Serial No. 422,396. Term of patent 14 years.

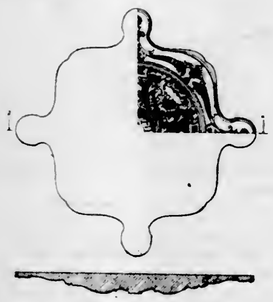


The ornamental design for a lamp as shown.

57,940. LAMP. JAMES SMITH, Tampa, Fla., assignor to The Palm Craft Company, Tampa, Fla., a Corporation of Florida. Filed Nov. 6, 1920. Serial No. 422,397. Term of patent 14 years.

The ornamental design for a lamp as shown.

57,941. FACE-PLATE FOR METERS OR SIMILAR MEASURING INSTRUMENTS. MARVIN SMITHEY, Lawrenceville, Va. Filed Nov. 21, 1916. Serial No. 132,705. Term of patent 14 years.



The ornamental design for a face plate for a meter or a similar measuring instrument, as shown and described.

57,942. ELECTRIC-BULB HOLDER. ADAM SPANIAK, Baltimore, Md., assignor of one-half to William I. Price, Baltimore, Md. Filed Oct. 8, 1920. Serial No. 415,702. Term of patent 7 years.

The ornamental design for an electric bulb holder as shown.

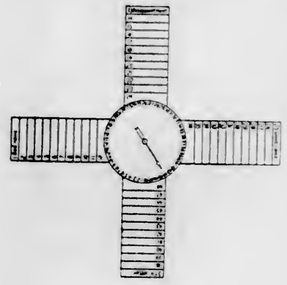
57,943. CEILING-PLATE FOR A LIGHTING-FIXTURE. GEORGE V. STRAHAN, Newark, N. J., and FREDERICK W. MATHIEU, New York, N. Y., assignors to Mitchell Vance Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 12, 1920. Serial No. 416,561. Term of patent 7 years.

The ornamental design for a ceiling plate for a lighting fixture, as shown.

57,944. CANOPY FOR A LIGHTING-FIXTURE. GEORGE V. STRAHAN, Newark, N. J., and FREDERICK W. MATHIEU, New York, N. Y., assignors to Mitchell Vance Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 12, 1920. Serial No. 416,562. Term of patent 7 years.

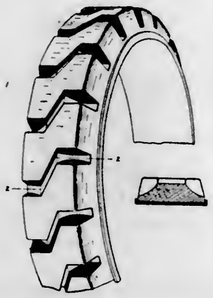
The ornamental design for a canopy for a lighting fixture, as shown.

57,945. SOCKET-COVER FOR A LIGHTING-FIXTURE. GEORGE V. STRAHAN, Newark, N. J., and FREDERICK W. MATHIEU, New York, N. Y., assignors to Mitchell Vance Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 12, 1920. Serial No. 416,563. Term of patent 7 years.



The ornamental design for a socket cover for a lighting fixture, as shown.

57,946. SOCKET-COVER FOR A LIGHTING-FIXTURE. GEORGE V. STRAHAN, Newark, N. J., and FREDERICK W. MATHIEU, New York, N. Y., assignors to Mitchell Vance Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 12, 1920. Serial No. 416,564. Term of patent 7 years.



The ornamental design for a socket cover for a lighting fixture, as shown.

Claims use since Nov. 19, 1920.

Ser. No. 141,456. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HARRY DALTON, Sr., Philadelphia, Pa. Filed Dec. 23, 1920.

BIG-3

Particular description of goods.—Combined Tank and Carbureter for Use with Internal-Combustion Engines.
Claims use since Nov. 1, 1920.

Ser. No. 141,471. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SHARP & DOHME, Baltimore, Md. Filed Dec. 23, 1920.

LA-JEL

Particular description of goods.—Antiseptic Lubricating Jelly.
Claims use since Nov. 20, 1920.

Ser. No. 141,476. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARY ZIELINSKI, Cicero, Ill. Filed Dec. 23, 1920.

RESTO

Particular description of goods.—Antiseptic Healing-Salve.
Claims use since Nov. 20, 1920.

Ser. No. 141,480. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CHEMICAL UTILITIES COMPANY, Cincinnati, Ohio. Filed Dec. 24, 1920.

"CLOGNO"

Particular description of goods.—A Detergent Consisting of a Cleanser for Removing Obstructions from Drains, Sewer and Waste Pipes, Sinks, Toilets, and Urinals of Every Description.
Claims use since May 14, 1920.

Ser. No. 141,495. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHNSON & SONS MANUFACTURING CHEMISTS LIMITED, London, England. Filed Dec. 24, 1920.

ACTIVOL

Particular description of goods.—Photographic Developers.
Claims use since 1919.

Ser. No. 141,511. (CLASS 39. CLOTHING.) A. V. VICTORIUS & COMPANY, INC., New York, N. Y. Filed Dec. 24, 1920.

FASCINATION

Particular description of goods.—Hosiery.
Claims use since Oct. 19, 1920.

Ser. No. 141,513. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN CAMPBELL & CO., New York, N. Y. Filed Dec. 27, 1920.

LAKON

Consisting of the word "Lakon."
Particular description of goods.—Coal-Tar Dyes.
Claims use since Dec. 20, 1920.

Ser. No. 141,514. (CLASS 12. CONSTRUCTION MATERIALS.) CHENEY & Co., New York, N. Y. Filed Dec. 27, 1920.

FIBERCOTE

Particular description of goods.—Stucco and Stucco Materials.
Claims use since Aug. 25, 1920.

Ser. No. 141,521. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) L. M. GARRITY & Co., INC., Boston, Mass. Filed Dec. 27, 1920.

EVERWAVE

Particular description of goods.—Hair-Waving Fluids.
Claims use since Sept. 20, 1920.

Ser. No. 141,534. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PETER SPENCE & SONS, LIMITED, Manchester, England. Filed Dec. 27, 1920.

TI-SUL

Particular description of goods.—Titanium Sulfate.
Claims use since May 3, 1920.

Ser. No. 141,538. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE TRACTOR APPLIANCE COMPANY, New Holstein, Wis. Filed Dec. 27, 1920.

TACO

Particular description of goods.—Governors, Tractor-Hitches, and Siphon Air-Washers for Internal-Combustion Engines.
Claims use since Feb. 10, 1920.

Ser. No. 141,636. (CLASS 39. CLOTHING.) SIDNEY KAUFMAN, New York, N. Y. Filed Dec. 29, 1920.

SIL KLAD

Particular description of goods.—Hosiery.
Claims use since July 18, 1920.

Ser. No. 141,637. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE LITCHFIELD MANUFACTURING COMPANY, Waterloo, Iowa. Filed Dec. 29, 1920.

THE Litchfield

Particular description of goods.—Manure-Spreaders, Straw-Spreaders, Feed-Grinders, and Manure-Loaders.
Claims use since on or about Jan. 1, 1879.

Ser. No. 141,653. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FREDERICK STEARNS & COMPANY, Detroit, Mich. Filed Dec. 29, 1920.

TUS-REX

Particular description of goods.—Medicine for Coughs, Colds, and Bronchial Affections.
Claims use since Dec. 10, 1920.

Ser. No. 141,706. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) VOGAN CANDY COMPANY, Portland, Oreg. Filed Dec. 30, 1920.

Vogan's Melloette

Particular description of goods.—Package-Candy.
Claims use since Nov. 10, 1920.

Ser. No. 141,897. (CLASS 39. CLOTHING.) BROOKLYN OVERALL COMPANY, Brooklyn, N. Y. Filed Jan. 6, 1921.

The lining on the drawing is for shading only. The words "Wears Like Samson's Hands" are hereby disclaimed apart from the mark shown on the drawing.

Particular description of goods.—Shaving-Cream Used as a Substitute for Shaving-Soap.
Claims use since Mar. 15, 1916.

142,882. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE LINDSBORG MILLING & ELEVATOR CO., Lindsborg, Kans. Filed Mar. 1, 1921. Serial No. 144,194.

Particular description of goods.—Kansas Hard-Wheat Flour.
Claims use since Aug. 7, 1907.

142,883. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) H. R. MALLINSON & CO., INC., New York, N. Y. Filed Feb. 2, 1921. Serial No. 143,099.

BLUE-EST

Particular description of goods.—Silk Piece Goods.
Claims use since December, 1919.

142,884. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) H. R. MALLINSON & CO., INC., New York, N. Y. Filed Feb. 2, 1921. Serial No. 143,100.

BLACK-EST

Particular description of goods.—Silk Piece Goods.
Claims use since August, 1919.

142,885. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. A. MIGEL, INC., New York, N. Y. Filed Apr. 2, 1920. Serial No. 130,545.

HINDU

Particular description of goods.—Tooth-Powder, Face-Cream, Hair-Tonic, Shaving-Cream, a Cold-Cream for Use After Shaving, Toilet Water, and Hand-Lotion.
Claims use since August, 1918.

142,886. (CLASS 39. CLOTHING.) J. A. MIGEL, INC., New York, N. Y. Filed Apr. 2, 1920. Serial No. 130,546.

HINDU

Particular description of goods.—Women's Dresses, Suits, Waists, Petticoats, Brassières, Corset-Covers, Corset-Waists, Union-Suits, Underwear, Combinations, Nightgowns, Bloomers, Chemises, and Trimmed Hats; Children's Hats, Dresses, Suits, Rompers, and Underwear, and Men's Silk Shirts, Pajamas, Nightgowns, and Underwear, and Men's and Women's Neckties and Scarfs, the Underwear and Union-Suits Referred to Being Made of Textile Fabrics.
Claims use since September, 1918.

142,887. (CLASS 41. CANES, PARASOLS, AND UMBRELLAS.) J. A. MIGEL, INC., New York, N. Y. Filed Feb. 13, 1920. Serial No. 128,356.

HINDU

Particular description of goods.—Parasols and Umbrellas.
Claims use since August, 1918.

142,888. (CLASS 37. PAPER AND STATIONERY.) MILLERS FALLS PAPER COMPANY, Millers Falls, Mass. Filed Dec. 8, 1920. Serial No. 140,798.

OLD DEERFIELD BOND

Particular description of goods.—Printing and Writing Papers.
Claims use since Aug. 30, 1905.

142,889. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE OZARK CIDER & VINEGAR COMPANY, Rogers, Ark. Filed Feb. 23, 1921. Serial No. 143,944.

OZARK

Particular description of goods.—Cider Vinegar.
Claims use since Feb. 19, 1912.

142,890. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PAPENDICK BAKERY CO., St. Louis, Mo. Filed Mar. 7, 1921. Serial No. 144,414.

DELICATESSEN

Particular description of goods.—Bread.
Claims use since Feb. 1, 1915.

142,891. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) F. A. PATRICK & CO., Duluth, Minn. Filed Jan. 5, 1921. Serial No. 141,877.

Mankato DULUTH

Particular description of goods.—Bureau-Scarfs, Table-Scarfs, Fabric Blankets, Textile Mats, and Piece Goods Made of Either or Both of the Following Materials, Namely: Cotton and Wool.
Claims use since Jan. 1, 1912.

142,892. (CLASS 17. TOBACCO PRODUCTS.) PIEDMONT TOBACCO CO. INC., Danville, Va. Filed Sept. 9, 1920. Serial No. 136,995.

Particular description of goods.—Smoking and Chewing Tobacco and Cigarettes.
Claims use since 1911.

142,893. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PORTABLE MACHINERY COMPANY INC., Clifton, N. J. Filed Feb. 19, 1921. Serial No. 143,833.

THE SCOOP

Particular description of goods.—Conveyer-Machines.
Claims use since Jan. 1, 1916.

142,894. (CLASS 37. PAPER AND STATIONERY.) POWERS PAPER COMPANY, Springfield, Mass. Filed Jan. 21, 1921. Serial No. 142,567.

SHETLAND

Particular description of goods.—Papeteries, Writing-Tablets, Mailing-Envelops, and Writing-Paper.
Claims use since 1906.

142,895. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROMAN MEAL COMPANY, North Tonawanda, N. Y. Filed Jan. 22, 1921. Serial No. 142,672.

Particular description of goods.—A Cereal Compound Intended to be Taken at Meals for Its Nutritive, Digestive, and Therapeutic Properties.
Claims use since the fall of 1913.

142,896. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE SAFETY FIRE EXTINGUISHER CO., New York, N. Y. Filed Aug. 6, 1920. Serial No. 135,867.

Particular description of goods.—Mechanical Fire-Extinguishers.
Claims use since April, 1910.

142,897. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SCHAFER BAKERY, INC., Savannah, Ga. Filed Feb. 26, 1921. Serial No. 144,107.

"The Bread Thats Way Ahead"

Particular description of goods.—Bread.
Claims use since Feb. 11, 1920.

142,898. (CLASS 39. CLOTHING.) SHAFT-PIERCE SHOE CO., Faribault, Minn. Filed Sept. 10, 1920. Serial No. 137,044.

DOUBLE WELT

Particular description of goods.—Fabric, Rubber, Rubber Composition, and Leather Shoes.
Claims use since March, 1917.

142,899. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THOMAS W. SIMMONS COMPANY, San Francisco, Calif. Filed Oct. 11, 1920. Serial No. 138,189.

SIMMONS

Particular description of goods.—Bichromate of Soda, Sulfid of Carbon, Chlorid of Lime, Zinc Oxid, Caustic Soda, Sal-Ammoniac, Borax, Sulfur, Potassium Bichromate, Soda-Ash, Ammonia, Potash, Silicate of Soda, Hypo Sulfite.
Claims use since Sept. 11, 1918.

142,900. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE H. D. SMITH & COMPANY, Plantsville, Conn. Filed Dec. 13, 1920. Serial No. 141,041.

"SharpenEzy"

Particular description of goods.—Cold-Chisels, Cape-Chisels, Nail-Sets, and Punches.
Claims use since January, 1910.

142,901. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) RENA WALKER THAYER, Adams, Mass. Filed Aug. 31, 1920. Serial No. 136,691.

LOCKS-EM-TITE

Particular description of goods.—Hair-Locking Attachments for Barrettes.
Claims use since August, 1919.

142,902. (CLASS 38. PRINTS AND PUBLICATIONS.) TOLMAN PRINT INC., Brockton, Mass. Filed July 14, 1920. Serial No. 134,989.

Tolman Advertising "MAKES GOOD"

Particular description of goods.—Advertising Literature—Namely, Post-Cards, Posters, Broadsides, Folders, Printed Signs, Completely-Printed Labels, Tags, and Cards, Novelty Died-Out Tickets, Booklets, Pamphlets, Catalogues.
Claims use since Apr. 1, 1912.

142,903. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE VITREOUS ENAMELING COMPANY, Cleveland, Ohio. Filed Apr. 14, 1920. Serial No. 131,137.

VITREOUS

Particular description of goods.—Metal Trays and Pans for Baking, Drying, and Culinary Purposes and for Use in Industrial Plants in the Manufacture of Commercial Products.
Claims use since Feb. 23, 1920.

142,904. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WENATCHEE MILLING CO., Wenatchee, Wash. Filed Sept. 16, 1920. Serial No. 137,277.

WENATCHEE'S BEST

Particular description of goods.—Wheat-Flour.
Claims use since 1907.

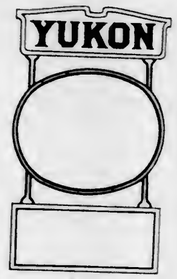
142,905. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) WHITE FLAME LIGHT CO., Grand Rapids, Mich. Filed Mar. 11, 1921. Serial No. 144,655.

WHITE FLAME

Particular description of goods.—Lamp-Burners.
Claims use since August, 1910.

142,906. (CLASS 39. CLOTHING.) PHILIP WHITE, Philadelphia, Pa. Filed Apr. 13, 1918. Serial No. 110,190.

GOODWEAR



Particular description of goods.—Sweaters.
Claims use since about March, 1918.

142,907. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE D. T. WILLIAMS VALVE COMPANY, Cincinnati, Ohio. Filed Dec. 27, 1920. Serial No. 141,544.

WILLIAMS

Particular description of goods.—Gate-Valves, Gage-Cocks, Globe-Valves, Angle-Valves, Cross-Valves, Check-Valves, Hydraulic Valves, Needle-Valves, Radiator-Valves, Hose-Valves, Generator-Valves, Whistle-Valves, Blow-Off Valves, Swing Check-Valves, Throttle-Valves; Stopcocks for Air, Steam, Gas, and Gasolene; Swivel-Cocks, Packed Plug-Cocks, Three-Way Cocks, Swivel-Couplings, Expansion-Joints, Unions, Elbows, T's, Crosses, Return-Bends, Flanges, Fusible Plugs, and Hose-Nipples.
Claims use since April, 1905.

142,908. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) YUKON MILL & GRAIN CO., Yukon, Okla. Filed Feb. 26, 1921. Serial No. 144,118.

Particular description of goods.—Pearl-Hominy, Pancake-Flour, Breakfast Food, Wheat-Nuts, Cream-Meal, Golden Cream-Meal, Hominy-Grits, Wheat-Bran, Whole-Wheat Flour, and Pure Wheat Graham, Sweets of Wheat.
Claims use since 1902.

LABELS

REGISTERED MAY 17, 1921.

22,890.—*Title:* "BLEHER CONCENTRATED LINIMENT." (For a Liniment Known as Bleher Concentrated Liniment.) BLEHER-MARMON MANUFACTURING CO., Lima, Ohio. Filed September 22, 1919.

22,891.—*Title:* "THE MARVELOUS EYE WASH." (For Eye-Wash.) R. M. LA ROCK, Rutland, Vt. Filed July 3, 1920.

22,892.—*Title:* "SWEETENED CONDENSED MILK JERSEY BRAND." (For Cans and Containers in Which Such Product is Sold.) LITTLE FALLS DAIRY CO. INC., Little Falls, N. Y. Filed August 18, 1920.

PRINTS

REGISTERED MAY 17, 1921.

5,595.—*Title:* "GOODYEAR BELTS GIVE GOOD WEAR." (For Advertising Purposes for Rubber Belting.) THE GOODYEAR TIRE & RUBBER CO., Akron, Ohio. Filed May 31, 1919.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

WHITE *v.* COTTRELL.

Decided February 7, 1921.

1. PATENTS—INTERFERENCE CLAIMS TO BE READ IN LIGHT OF APPLICATION FROM WHICH TAKEN.

So far as the issue claims in an interference proceeding are taken from one of the parties, they must be read in the light of his application.

2. SAME—"GRIPPER," AS USED IN INTERFERENCE CLAIMS, DEFINED.

A "gripper," as used in issue claims in an interference proceeding involving sheet-feeding mechanism for printing-presses, is a device which takes hold of or grips and indicates something capable of a clamping action, and a party who has nothing of this character is not entitled to the claims calling for grippers.

Mr. L. T. Greist and *Mr. W. N. Cromwell* for White.

Mr. W. F. Rogers for Cottrell.

SMYTH, *C. J.:*

White contends that he is entitled to priority over Cottrell in an interference relating to improvements in mechanism for feeding material in sheet form to a printing-press. The issue originally involved thirty-six claims, three of which were awarded by the Commissioner to White, and the remainder to Cottrell. White appeals as to the claims denied him. Claims 1, 2, 9 and 36 are illustrative of the others.

1. A sheet feeding mechanism for printing presses comprising endless means traveling in a partly circular and partly non-circular path for feeding the sheets to the press and devices carried by the sheet feeding means for bringing the sheets into both end and side register with respect to the printing form while they are in motion.

2. A sheet feeding mechanism for printing presses comprising endless means traveling in a partly circular and partly non-circular path for feeding the sheets to the press and devices carried by the sheet feeding means for bringing the sheets into both end and side register with respect to the printing form while they are in motion, and maintaining control of the sheets until they are brought under the control of the press.

9. A sheet feeding mechanism for printing presses comprising an endless carrier traveling in a partly circular and partly non-circular path having both a sheet stop for end registering the sheet and side grippers for engaging the side edges of the sheet.

36. In a sheet handling and registering mechanism, a preliminary feeding means traveling faster than the impression cylinder, moving front stops against which the sheet is registered by the preliminary feeding means, a second feeding means taking the sheet from the preliminary feeding means and traveling at the speed of the impression cylinder and means for moving the second feeding means sidewise to side register the sheet.

White's right to make the claims is the gravamen of the case, for there is no question as to his priority as to the subject-matter if he can make the claims. The Law Examiner held with White as to all the claims. The Examiner of Interferences agreed with him. The Examiners-in-Chief reversed the Examiner of Interferences as to claims 9 to 26, inclusive, and affirmed him as to the remainder. The First Assistant Commissioner affirmed the Examiners-in-Chief as to claims 9 to 26 and 33, 34 and 35, and reversed them as to the others.

The issue claims are largely taken from Cottrell, and so far as they are, must be read in the light of his application, (*Podlesak* v. *McInnerney*, 26 App. D. C., 399; *Sobey* v. *Holsclaw*, 28 App. D. C., 65.) Claims 9 to 26 inclusive call for grippers. A gripper is a device which takes hold of—grips. It indicates something capable of a clamping action. The Examiners-in-Chief analyze the testimony quite fully and point out that White has nothing which responds to this element. His gages, they say, are not grippers in a strict sense, or in the sense in which Cottrell employs that term in his application. We think they are right. We also agree with them in awarding to White claims 1 to 8 inclusive and 27 to 36 inclusive. These claims refer to "endless means" or—

> endless sheet carrier • • • for feeding the sheets to the press,

or devices carried thereby "for side registering the sheets" and—

> maintaining control of the sheets until they are brought under the control of the press,

or "laterally adjustable means" of such character. The Examiners-in-Chief held that White's intermediate mechanism may be termed a feeding means or carrier in the same sense as Cottrell's. Other reasons are adduced by them. We think their reasoning meets every point raised by Cottrell. We concur in it. Therefore the decision of the Commissioner of Patents is reversed as to claims 1 to 8 inclusive, 27 to 32 inclusive, and 36, and is affirmed as to the other claims of the issue.

Modified.

Nolan Act—Reciprocity of Swedish Laws Recognized.

(ORDER NO. 2,659.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 18, 1921.

Notice is hereby given that the laws of Sweden are recognized as affording to citizens of the United States privileges

substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently all the privileges specified in said act will be accorded to its subjects, subject to a limitation of the term under section 2 of the act, as construed in *ex parte Hackett*, (285 O. G., 795.)

THOMAS E. ROBERTSON,
Commissioner.

Notice Relating to Printed Specifications of Patents Granted Under the Nolan Act.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 18, 1921.

A portion of Order No. 2,657 is hereby published for the information of those concerned. The object of the order is to carry into the heading of the printed specifications of patents taking the benefits of the Nolan Act of March 3, 1921, a notice that they are granted in accordance with the provisions of said act, and directions to this effect have been given to the officer charged with the supervision of the printing of patent specifications.

THOMAS E. ROBERTSON,
Commissioner.

(ORDER No. 2,657.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 16, 1921.

In all cases which are allowable only by reason of their taking the benefits of the Nolan Act of March 3, 1921, and in the file-wrapper of which a statement has been placed signed by the Law Examiner according the applicant the benefits of the act, the Primary Examiner will place on the side of the file-wrapper where the printed words "Division of App., No. ———, filed ————————, 191—" occur, the following notation: (Granted under the provisions of the act of March 3, 1921, 41 Stat. L., 1313.)

THOMAS E. ROBERTSON,
Commissioner.

Disclaimer.

1,330,876.—*William H. Krug*, Fond du Lac, Wis. MEANS FOR SECURING ANTISKID-CHAINS TO VEHICLE-WHEELS. Patent dated February 17, 1920. Disclaimer filed May 16, 1921, by the patentee.

Hereby enters this disclaimer—

"To those parts of claims 6 and 10 of said patent which are in the following words: 'a bar having an edgewise offset end portion' except where the edgewise offset end portion provides a clearance-space between it and the felly of the wheel, to which said bar is secured, for the passage of a portion of an antiskid-chain; and further enters this disclaimer to those parts of claims 7 and 8 which are, respectively, in the following words: 'a bar having an end portion provided with an opening' and 'one end of said bar having an opening formed therein,' except where said opening is used for securing one end of an antiskid-chain."

International Arrangement for the Creation of a Central Patent Bureau.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 18, 1921.

The text of the International Arrangement for the Creation of a Central Patent Bureau, signed at Paris on November 15, 1920, together with the letter of the Ministry for Foreign Affairs of the French Republic transmitting a copy thereof to the American Embassy at Paris, is published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

[Inclosure No. 3 in despatch No. 2,115.]

FRENCH REPUBLIC. MINISTRY FOR FOREIGN AFFAIRS. DEPARTMENT OF ADMINISTRATIVE AND TECHNICAL AFFAIRS. SUBDIVISION OF ADMINISTRATIVE AFFAIRS AND INTERNATIONAL UNIONS.

PARIS, *January 26, 1921.*

Referring to a note dated October 27th last, the Ministry for Foreign Affairs has the honor to transmit herewith to the Embassy of the United States an authenticated copy of the international agreement signed at Paris on November 15, 1920, with a view to creating a central office of patent applications. As this agreement may be signed until May 31, 1921, it is probable that all the contracting States will have subscribed their signatures thereto by that date.

The French Government would see with the greatest interest the adherence of the Government of the United States to this agreement. There is no doubt but that the other contracting countries will share its views on this point. If the Government of the United States so desires, the Ministry for Foreign Affairs will be very glad to call forth on this subject the declarations of the Governments of all the signatory countries.

EMBASSY OF THE UNITED STATES AT PARIS.

[Inclosure No. 4 in despatch No. 2,115.]

INTERNATIONAL ARRANGEMENT FOR THE CREATION OF A CENTRAL PATENT BUREAU.

Concluded between Belgium, Brazil, the Republic of Cuba, Ecuador, France, Greece, the Republic of Haiti, Japan, the Republic of Liberia, the Republic of Nicaragua, the Republic of Panama, Peru, Poland, Portugal, Roumania, the Kingdom of the Serbs, Croats, and Slovenes, Siam, the Republic of Czechoslovakia, and Uruguay.

The undersigned plenipotentiaries of the countries enumerated above, having united in conference at Paris, have agreed upon the following provisions:

ARTICLE 1.

The contracting countries agree to establish at their joint expense an International Central Patent Bureau.

The seat of this office is fixed at Brussels.

ARTICLE 2.

The International Central Patent Bureau may undertake:

1. The international filing of applications for patents, that is to say, the receipt of applications and the international transmission of the same;

2. The examination of applications for patents.

The operations of the Central Bureau shall be governed by the provisions hereinafter.

TITLE I.

International filing of applications for patents.

ARTICLE 3.

The citizens or subjects of any of the contracting countries who have duly filed an application for a patent in one of these countries may demand the protection of the invention in all the other countries or in one or more of them by filing the application in the Central Bureau at Brussels through the administrative authorities of the country of origin of such application.

ARTICLE 4.

Persons who are citizens or subjects of countries which have not adhered to the present arrangement but who are domiciled in or have industrial or commercial establishments of a substantial character and in actual operation in the territory of one of the countries of the union formed by the present arrangement shall be treated as citizens or subjects of the contracting countries.

ARTICLE 5.

The Central Bureau shall immediately inscribe on a special register the applications filed according to article 3, making note of the description and drawings appended to each application.

It shall give notice of this inscription to the proper departments of all the contracting countries.

On and after the date of receipt of the application for international registration made by the administration of the country of origin the legal status of the applicant in each of the contracting countries mentioned in the application, or which may be mentioned not later than

twelve months after the filing of the application in the country of origin, shall be the same as if the application, description, and drawings had been directly filed there.

However, in countries whose internal legislation so requires, the application shall not be considered as validly made unless all the papers in the case have reached the administration of these countries within twelve months from the date of filing of the application in the country of origin.

ARTICLE 6.

The Central Bureau shall, if necessary, make a translation of the descriptions into the official language of the Bureau or into the languages of the various countries mentioned by the applicants, and reproduce the drawings in sufficient number to enable the applications and the documents appended thereto to be communicated to each of the administrations of the contracting countries for which international registration shall have been requested.

Each of the contracting countries shall have a right to require the production of a copy of the description written in the official language of the Bureau or of a translation of the description in that language, made, or verified and certified by the Central Bureau.

The remuneration due from the applicant to the Central Bureau for a translation or for the verification of a translation (which remuneration may vary according to the language) and the schedule of charges for the reproduction of drawings shall be fixed in the executory regulations.

Applications transmitted to the administrations of the contracting countries shall be subject in each country to the same conditions as applications which have been filed there directly, and such action shall be taken on them as is authorized by the legislation of the country.

ARTICLE 7.

The administration of the country of origin may fix at will and collect on its own behalf a fee from the applicant for a patent whose international registration is requested. In any case, there shall be collected for the benefit of the Central Bureau an international fee the amount of which shall be prescribed in the enforcement regulations.

In each country to which the application for a patent has been transmitted, the interested party shall be obliged, in order that action may be taken upon the application and in order to secure issuance of the patent and preserve all rights pertaining thereto, to pay within the period prescribed all fees provided for this purpose by the laws and regulations of the country.

The Central Bureau shall be authorized to undertake, on account of the interested parties, the payment of the fees in the contracting countries in consideration of a special fee according to the rates fixed in the executory regulations.

TITLE II.

Examination of applications for patents.

ARTICLE 8.

Any patent application filed in one of the contracting countries, either directly or through international registration, may or must, according to the provisions of the legislation of such country, be submitted to the examination of the Central Bureau for purposes of investigation and verification as to whether there exist any prior claims based either on patents already issued and published or on publications to be specified in the executory regulations.

ARTICLE 9.

When the investigations made by the Central Bureau do not result in the discovery of any prior claim which might be asserted against the claims of originality presented in the description accompanying the patent application, the Central Bureau shall deliver a "certificate of absence of prior claims."

When prior claims of this kind have been discovered, the Central Bureau shall deliver a "provisional statement of prior claims," enumerating the latter specifically.

The result of the examination made by the Central Bureau shall be transmitted, in the manner provided for above, in the language of the original application and in the official language of the Bureau, to the administration of the country of origin, and, with a view to the issuance of a patent applied for, to the administrations of the other contracting countries designated by the inventor or to such administrations as may have requested this transmission of the Bureau.

The administration of the country of origin shall attend to transmitting it to the inventor.

ARTICLE 10.

From the date of the communication of a "provisional statement of prior claims" by the administration of the country of origin to the inventor the latter shall be granted a period, to be determined in conformity with the enforcement regulations, within which to present his objections to the prior claims discovered and to propose, if there be occasion, modifications to the claims contained in said statement.

After examination and discussion, if there be occasion, of the objections and modifications suggested, the Central Bureau shall issue, as the case may be, either a certificate of absence of prior claims or a final statement of prior claims, enumerating the latter specifically.

When the inventor abstains from appealing, within the prescribed periods, against the "provisional statement of prior claims" and does not cancel his application for a patent, such provisional statement shall be considered as final.

The administrations of the contracting countries may take into consideration the opinion of the Central Bureau, according to the provisions of the domestic legislation of each country, and issue or refuse to issue the patent applied for.

The patent may mention the examination made by the Central Bureau and indicate the prior claims which, in the opinion of the Central Bureau, may be asserted against it.

In case the legislation of a contracting country should so authorize, the administration of such country may, after the issuance of a final statement of prior claims, still request the Central Bureau to indicate the modifications which should be made in the claims to originality embodied in the specifications in order that they may be introduced therein.

The Central Bureau shall then issue a new certificate, taking into account such modifications.

ARTICLE 11.

The administrations of the contracting countries may at any time request the Central Bureau, as a matter of general interest, to examine an application for a patent.

If so prescribed by the law of one of the contracting countries, patents delivered in that country may also be submitted to the examination of the Central Bureau, that is, unless corresponding patent application has already been examined by the Bureau.

The patentee may even be required, in certain cases determined by the domestic legislation of one of the countries, to cause such an examination to be made, and the certificate of each previous claim as well as the statements of previous claims issued after such examination may be mentioned in the official publications of the country which issued the patent, and the administration of such country may be authorized to furnish copies thereof on request.

ARTICLE 12.

Any examination made by the Central Bureau shall always be made without guarantee and without entailing any responsibility on its part.

ARTICLE 13.

Every request for the examination of a patent application shall involve the collection of an international fee in behalf of the Central Bureau.

In case of an appeal against a provisional statement of prior claims, a further fee shall be collected for the benefit of the Central Bureau.

The amount of the above fees and charges shall be fixed by the executory regulations.

The rates shall be doubled in case of examination of a patent previously issued.

TITLE III.

General provisions.

ARTICLE 14.

The Central Patent Bureau shall centralize documents and information relating to patents and to publications of every kind on the various industries.

It shall receive from all the administrative departments of the contracting countries the documents published by each of them, even those of a domestic nature, which might facilitate its task.

The Central Bureau shall always be at the disposal of the administrative departments of the contracting countries in order to furnish them from the International Patent Service the special information which they may require.

It may issue a periodical publication on questions concerning its functions.

This publication shall be in the French language and, if necessary, in the other languages which may be designated by the General Assembly.

ARTICLE 15.

Countries which become participants in the Central Patent Bureau shall have the privilege of declaring expressly that their administrative departments intend to avail themselves of its services also, either for both the international filing and the examination of patents or for only one of these services.

ARTICLE 16.

The contracting countries undertake to share the expenses of the general administration of the Central Bureau by paying a uniform annual contribution to be fixed by the General Assembly. This contribution shall in no case exceed the sum of 5,000 francs for each nation.

The annual receipts of the Bureau shall comprise, in addition to the proceeds from the contribution provided for in the preceding paragraph, the sums accruing from all international fees, taxes, and dues whatsoever collected in compensation for the operations connected with the in-

ternational filing of the examination of applications, in conformity with the rates fixed by the enforcement regulations.

ARTICLE 17.

The advances necessary for the operation of the Bureau shall be made by the Government of the country in which the Bureau has its seat.

The receipts and expenditures of the general administration of the Central Bureau of the International Filing Service and of the Examination Service shall be embodied in the annual account of the management of the Central Bureau under three distinct heads.

In case of a deficit in the receipts, the extra expenses shall be borne jointly by the adhering countries in accordance with the following determined basis.

For the expenses relating to matters of general administration the countries will be divided into six classes each contributing in the proportion of a certain number of units, viz:

	Units.
1st class	25
2d class	20
3d class	15
4th class	10
5th class	5
6th class	3

These coefficients shall be multiplied by the number of countries of each class, and the sum of the products thus obtained will furnish the number of units by which the total expenses are to be divided. The quotient gives the unit of expense.

The class in which each country is to be ranked shall be determined at the first meeting of the delegates of the adhering countries, account being taken both of the industrial importance and the population of each country.

The extra expenses incident to the International Filing Service on the one hand and to the Examination Service on the other shall be divided among the countries which have adhered to these services in the following proportion:

One-third of the excess in proportion to the quota attributed to each country according to the classification hereinabove provided for.

Two-thirds of the excess in proportion to the number of applications for international filing and to the number of the requests for examination submitted to the Bureau through the intermediation of each adhering country.

ARTICLE 18.

The International Central Bureau shall be administered under the authority of the League of Nations by a director, assisted by a Council of Administration composed of seven members, including a president; two vice-presidents and a secretary-general, elected every three years by the General Assembly of the delegates of each of the adhering countries.

The number of votes allowed to these delegates is fixed as follows according to the class in which the country is ranked:

	Number of votes.
1st class	6
2d class	5
3d class	4
4th class	3
5th class	2
6th class	1

The director shall be elected by secret ballot by the Council of Administration.

The *personnel* of the administration of the Central Bureau shall be chosen from the nationals of the adhering countries and appointed by the Council of Administration on the recommendation of the director. In appointing the staff of the Bureau, the importance of the operations performed by each adhering country shall be taken into account.

ARTICLE 19.

The Council of Administration shall draw up a budget of the expenses of original establishment of the Central Bureau, with the assistance of the delegates and technical experts designated by the Governments of the contracting countries.

The budget thus prepared shall be submitted for the approval of the General Assembly.

The expenses of original establishment shall be divided among the contracting countries in conformity with the schedule fixed for the contributive shares in article 17 hereinabove.

ARTICLE 20.

The General Assembly of the delegates of the adhering countries shall prepare the regulations necessary for the enforcement of the present arrangement, notably as regards the schedule of fees, dues, and compensation of any kind to be collected by the Central Bureau, as regards the internal working of the Bureau, and as regards the presentation of descriptions and claims of originality made in the descriptions of the patents submitted for international filing and for the examination of the Central Bureau.

ARTICLE 21.

The General Assembly of the delegates of the adhering countries shall meet whenever necessary and at least every three years in order to renew the powers of the Board of Directors, and, if necessary, to revise the executory regulations with a view to introducing therein such modifications as might improve the organization and the working of the Central Patent Bureau. It may also propose amendments to the present arrangement.

ARTICLE 22.

The adhering countries respectively reserve the right to conclude among themselves private agreements conferring special and reciprocal advantages for the benefit of their nationals in so far as the said arrangements in no way conflict with the provisions of the present arrangement.

ARTICLE 23.

The countries which have not taken part in the present arrangement may be permitted to adhere to it on their request presented to the Government at the seat of the Bureau, subject to the approval of at least a two-thirds majority of the votes assigned to the signatory countries of the present arrangement in conformity with article 18 above.

The subsequent adhesion of a non-signatory country shall be made contingent upon the payment by such country to the Central Bureau of a sum equal to the quota of the contracting countries in the expenses of original establishment according to article 19 hereinabove. After this payment has been made, notice of the adhesion shall be given by the Belgian Government to the other Governments, and the adhesion shall take effect one month after such notice is sent, unless a later date shall have been fixed by the adhering country.

ARTICLE 24.

The contracting countries shall have the right to adhere at any time to the present arrangement on behalf of their dominions, colonies, possessions, dependencies and protectorates, or for certain of them.

Nations, dominions, or self-governing colonies which have independent offices for the filing of applications for and the issuance of patents shall be considered as distinct adhering countries as regards the present arrangement.

ARTICLE 25.

The present arrangement shall come into force as soon as it shall have been ratified by two-thirds of the signatory countries. The ratifications shall be addressed to the French Government and shall remain on file in its archives.

Any country may denounce, either for itself or for its dominions, colonies, possessions, dependencies and protectorates, the present arrangement and withdraw from the union one year after the denunciation. By this act, however, it will abandon all its rights to the assets of the Central Bureau.

Done at Paris the 15th of November, 1920, in one copy only, which shall remain on file in the archives of the Government of the French Republic and authenticated copies of which shall be sent to each of the signatory countries.

The said copy, dated as above, may be signed until May 31, 1921, inclusive.

In witness whereof the plenipotentiaries hereafter, whose credentials have been recognized as being in good and due form, have signed the present convention:

For Belgium:
OCT. MAVAUT.
For Brazil:
RAUL FERNANDES.
For the Republic of Cuba:

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 286—No. 4. TUESDAY, MAY 24, 1921. Price—$5 per year.

[PUBLISHED JUNE 7, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference.

PATENT NO. 1,250,885.

On April 14, 1921, a decision was rendered that Carl Axel Wilhelm Huitman was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,250,885, subject, "Automatic telephone-exchange system," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,269,903.

On April 14, 1921, a decision was rendered that Leonard Charles Bygrave was not the first inventor of the subject-matter covered by claims 1, 2, and 10 of his Patent No. 1,269,903, subject, "Means for connecting electric lines," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,360,414.

On April 19, 1921, a decision was rendered that Cheng Chich Kuo was not the first inventor of the subject-matter covered by claims 2, 3, 4, and 6 of his Patent No. 1,360,414, subject, "Photographic apparatus," and no appeal having been taken within the time allowed such decision has become final.

Changes in Classification.

(ORDER NO. 2,658.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 17, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 1, Nailing and Stapling, (Division XI,) establish the following subclasses and definitions:

Machines—
Staple forming and setting—
2.1. Desk type—
2.2. Wire,
2.3. U-strip.

2.1. MACHINES, STAPLE FORMING AND SETTING, DESK TYPE. Machines adapted to be placed on a desk which cut and form a staple from a strip and set the same into the work.

2.2. MACHINES, STAPLE FORMING AND SETTING, DESK TYPE, WIRE. The strip is a wire.

2.3. MACHINES, STAPLE FORMING AND SETTING, DESK TYPE, U-STRIP. The strip is U-shaped in cross-section.

The patents contained in subclasses 2.1 and 2.3 above have been taken from class 1, Nailing and Stapling, subclasses 2, Machines, Staple forming and setting, and 48, Implements, Staple forming and setting, and those contained in subclass 2.2 have been taken from class 1, Nailing and Stapling, subclasses 2, Machines, Staple forming and setting, and 7, Machines, Book, Staple forming and setting.

THOMAS E. ROBERTSON,
Commissioner.

Notice of Cancelation.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., May 7, 1921.

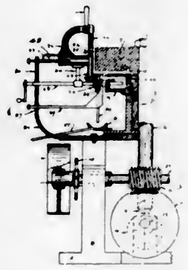
Monarch Motor Car Company, its assigns or legal representatives, take notice:

A cancelation proceeding has been instituted by this Office upon the application of Lorena W. Robinson, trading under the name of Texas Wheel & Body Company and doing business at 2500 Commerce street, Dallas, Tex., to effect the cancelation of the trade-mark registration of the Monarch Motor Car Company, 1528 Jefferson avenue, Detroit, Mich., No. 100,380, dated October 20, 1914, and the notice of such proceeding sent by registered mail to the said Monarch Motor Car Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Monarch Motor Car Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancelation will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

APPLICATIONS UNDER EXAMINATION.



Condition at Close of Business May 14, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders	Dec. 30	Dec. 21	624
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Sept. 8	Nov. 1	1,477
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Oct. 4	Sept. 29	687
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	June 24	Jan. 20	1,432
167	5. Book-Making; Books, Strips and Leaves; Harvesters: Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Sept. 1	Oct. 14	628
318	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Dec. 4	Feb. 19	791
312	7. Games and Toys; Optics; Photography; Velocipedes	Dec. 20	Jan. 26	1,288
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Feb. 18	Apr. 8	544
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Sept. 8	Mar. 29	680
235	10. Land-Vehicles; Land-Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Nov. 22	Feb. 24	953
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Feb. 7	Mar. 17	409
222	12. Machine Elements	Oct. 16	Feb. 4	981
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	July 14	Jan. 29	1,462
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Aug. 5	Apr. 1	837
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	June 28	Sept. 13	1,517
111	16. Radiant Energy; Telegraphy; Telephony	July 19	Oct. 14	1,410
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Nov. 15	Feb. 15	727
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Aug. 13	Dec. 3	1,450
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Aug. 24	Dec. 14	766
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Jan. 10	Jan. 18	989
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Oct. 20	Mar. 5	460
249	22. Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices	Jan. 10	Mar. 21	360
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Sept. 20	Feb. 18	756
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Oct. 20	Feb. 8	790
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Mar. 19	Mar. 29	250
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Oct. 21	Dec. 14	774
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Dec. 31	Mar. 2	938
225	28. Internal-Combustion Engines	Oct. 29	Jan. 24	1,114
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Oct. 1	Feb. 1	647
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 3	Apr. 1	902
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	July 16	Oct. 6	1,852
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Aug. 4	Feb. 3	1,097
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Nov. 17	Feb. 9	678
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	Apr. 4	Apr. 3	218
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	Apr. 1	Apr. 7	439
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Dec. 14	Dec. 20	1,431
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Nov. 22	Nov. 30	1,579
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Jan. 8	Dec. 2	908
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	June 28	June 17	1,578
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Oct. 26	Dec. 30	1,627
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Oct. 22	Jan. 6	813
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Sept. 4	Oct. 19	1,829
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	July 26	Aug. 23	1,218
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Oct. 8	Mar. 16	405
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Oct. 20	Jan. 26	967
332	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Nov. 8	Jan. 26	680
264	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	Sept. 25	Nov. 26	1,028
	Oldest new case, June 24; oldest amended, June 17.			
	Total number of applications awaiting action			44,990
163	TRADE-MARKS, DESIGNS, LABELS AND PRINTS:

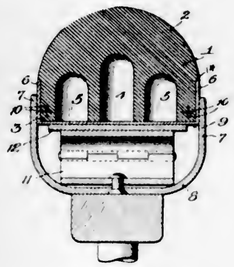
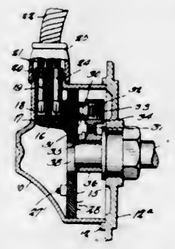
PATENTS



GRANTED MAY 24, 1921.

1,378,831. LENS-EDGE-GRINDING MACHINE. JOHN F. ASHTON, Worcester, and THOMAS N. ASHTON, Fall River, Mass. Filed Sept. 4, 1919. Serial No. 321,568. 6 Claims. (Cl. 51—51.)



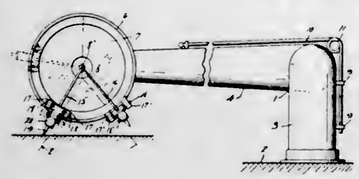
2. In a machine for grinding lens-edges, the combination of a vertically arranged grindstone shaft; means for revolving said grindstone shaft; a stationary table-base having a free bearing around said grindstone shaft, coaxial therewith, and having holes for drain-pipes; a supporting stool having a free bearing around said grindstone shaft, coaxial therewith, and secured to said table-base; a rotatable work-table having a circular basin adjacent to, around and under, said grindstone, said basin having a plurality of holes for drip-pipes, and said work-table having a cylindrical bearing-neck coaxial with said vertically arranged grindstone shaft, and said work-table having a plurality of radially disposed slots; lens-holding carriages slidably mounted in said slots in the work-table.

1,378,832. CUSHIONED TIRE. HENRY CLAY BABEL, Buffalo, N. Y. Filed July 11, 1918. Serial No. 244,459. 1 Claim. (Cl. 152—8.)

The combination of a rim substantially U-shaped in cross section, a tire having a solid tread portion and solid side portions forming continuations of the solid tread portion to provide a substantially solid arch, said tire being also provided with central and side rows of air cells extending from the base of the tire toward the solid tread thereof, the central row being extended outwardly beyond the side rows, a sealing sheet extending across the base of the tire and sealing the air cells and having outturned marginal portions extending beyond the edges of the sides of the rim, annular retaining members embedded in the solid side portions of the tire and located in the angles formed by the marginal portions of the sealing sheet, a resilient band located within the rim and being of a width to extend laterally beyond the said air cells to reinforce the sealing sheet and protect said sheet against excessive pressure in the cells incident to compression of the tire and yieldable means located wholly within the area of the air cells and mounted within the rim and exerting a constant outward pressure against said resilient band to hold the same firmly against said sealing sheet and forcing said band and said sheet and said tire normally away from the bottom of the rim.

1,378,833. TIMER FOR INTERNAL-COMBUSTION ENGINES. CHARLES H. BOKEMEYER, Baltimore, Md., assignor to The Alpha Timer and Accessories Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 10, 1919. Serial No. 343,709. 2 Claims. (Cl. 200—19.)

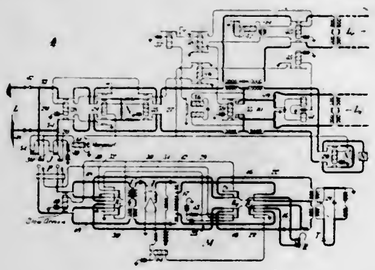
1. In a commutator, a shell, a disk of insulating material removably mounted in the shell, contact points embedded in the disk, and coöperating means on the shell and the disk for centering the latter in the former, said means comprising lugs on the wall of the shell, and notches in the periphery of the disk in which said lugs seat.



1,378,834. ELECTROLYTIC PROCESS FOR THE TREATMENT OF CARBON. ARTHUR R. BULLOCK, Lakewood, Ohio. Original application filed Oct. 2, 1914, Serial No. 864,643. Divided and this application filed Aug. 29, 1919. Serial No. 320,710. 7 Claims. (Cl. 204—1.

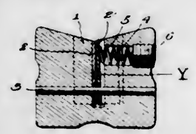
1. The process of treating carbon which consists in immersing a carbon anode electrode and a cathode electrode in an electrolytic bath consisting of sodium sulfate, passing an electric current from the anode to the cathode, regulating the amperage and voltage of said current so as to cause the carbon to be removed from the anode and to pass to the electrolyte.

1,378,835. SOUND-REPRODUCER. ROBERT W. CHARLTON, Pineville, La., assignor of one-half to Harry H. Jordan, Rapides parish, La. Filed Jan. 10, 1920. Serial No. 350,587. 7 Claims. (Cl. 274—24.)



1. In combination, a reproducer arm, a sound-box comprising a diaphragm supported thereon, and a plurality of angularly related stylus-holding means carried by said sound-box for playing sound records differing in type as regards direction of undulation of the grooves therein, said sound-box being adjustable to bring any stylus-hold-

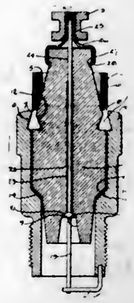
ing means into operative relation to the type of record which it is desired to play without substantially changing the angular relation of the diaphragm to the plane of the



record, said stylus-holding means being so related that any stylus may play without interference from a stylus in the other holding means.

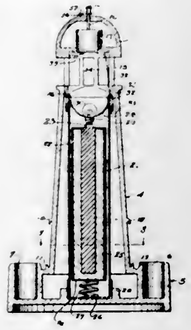
1,378,836. BALANCING EQUIPMENT FOR FOUR-WIRE CIRCUITS. ALVA B. CLARK and CHARLES S. DEMAREST, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 29, 1919. Serial No. 273,804. 11 Claims. (Cl. 179—170.)

10. A transmission circuit including lines interconnected by repeater apparatus, means to balance said lines, an operator's listening set, means for connecting said listening set with one of said lines, and a high impedance transformer in said connection to prevent appreciable unbalance of said line.



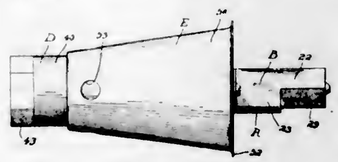
1,378,837. SHUTTLE. WILLIAM F. COMISKY, Middletown, Conn. Filed Sept. 7, 1920. Serial No. 408,413. 6 Claims. (Cl. 139—46.)

2. In a shuttle, a pair of independent thread tensioning members having approximately vertical confronting faces between which the thread passes, means to loosely mount one member, and means to effect tilting of said member relative to the other member to cause the top of the first member to engage the top of the other member.



1,378,838. SPARK-PLUG. ARTHUR T. CRANE, Waterbury, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Feb. 25, 1920. Serial No. 361,175. 4 Claims. (Cl. 123—169.)

1. In a spark-plug, the combination with a shell and core formed with an annular locking-recess which expands inwardly from its entrance, of a multiple locking-ring composed of a plurality of soft metal parts which

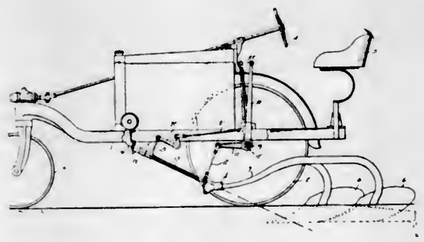


are forced under pressure into the said recess to form a locking-ring of wedge-shaped cross-section.

1,378,839. SIGNAL FOR DINING-TABLES. NATHANIEL B. CREGIER, Los Angeles, Calif. Filed July 11, 1916, Serial No. 108,552. Renewed July 30, 1917. Serial No. 183,646. 1 Claim. (Cl. 240—8.5.)

A device for the purposes described, comprising in combination an upstanding hollow structure provided with a supporting base of greater diameter than the structure, a cap detachably mounted on said structure and spaced therefrom to form openings for light visible at every angle therefrom, a battery disposed in said structure, an electric lamp mounted and confined therein adjacent said openings and a switch means mounted on the cap for controlling and signaling with said light.

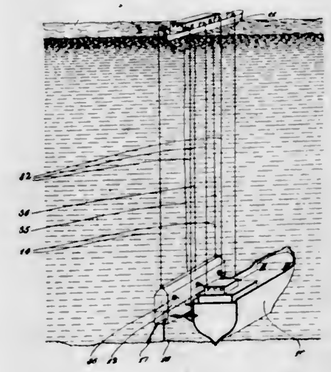
1,378,840. EXHAUST-WHISTLE FOR MOTOR-VEHICLES. EDGAR L. CRUISE, Keystone, W. Va. Filed Feb. 3, 1921. Serial No. 442,141. 7 Claims. (Cl. 116—138.)



1. A whistle comprising a hollow body having a plurality of different length chambers formed therein, fluid escape ports formed in the body communicating with each one of the chambers, and a reed including a plurality of flexible tongues arranged in the body with one tongue in each chamber, the terminals of the tongues ending adjacent to the inner wall of said ports.

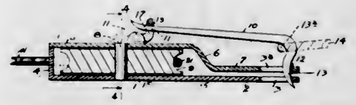
1,378,841. ADJUSTABLE FRICTION-GRAB FOR FISHING-TOOLS. LAWRENCE E. DICKSON, Strawn, Tex. Filed July 10, 1920. Serial No. 395,307. 4 Claims. (Cl. 294—115.)

1. In a fishing tool provided with adjustable jars, the lower jar having a base provided with a transverse slot therein, friction grabs pivotally connected to said base in said slot and provided with lateral flanges, a driving and spreading plate having vertical slots to receive said flanges, and a pin rigid with said plate and projecting through said base to be actuated by said upper jar.



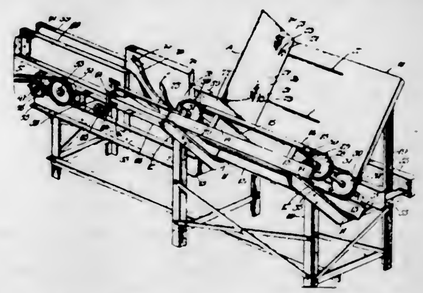
1,378,842. TRACTOR-PLOW. JOHN C. DITTBRENNER, Indianapolis, Ind., assignor to Holton Tractor Company, Dover, Del., a Corporation of Delaware. Filed Dec. 4, 1919. Serial No. 342,488. 11 Claims. (Cl. 97—60.)

1. In an agricultural implement of the class described, the combination with a draft frame and traction wheels therefor, of tilling means suspended adjacent one end from the center of the wheels, and from the frame in advance of such wheel center.



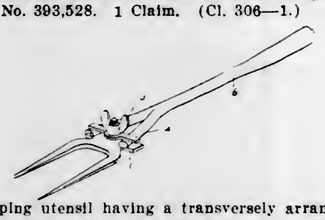
1,378,843. SHIP-SALVAGING APPARATUS. CHARLES E. DRAKE, New York, N. Y. Filed Sept. 14, 1920. Serial No. 410,197. 3 Claims. (Cl. 61—69.)

1. In a device for the purpose described, in combination with a drill bar, of means for rotating and advancing said bars, said means permitting disconnection, a triangular support frame for said bar adapted to maintain the same substantially horizontal, a haulage cable passing through the upper member of said frame adjacent its base



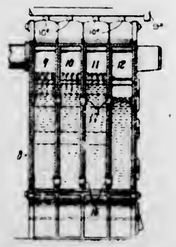
attached to said bar, and a gravity operated latch pivoted in said bar adjacent the drill end thereof.

1,378,844. SHEAVE-BLOCK. EARNEST E. EDSTROM, Whitefish, Mont. Filed Mar. 12, 1920. Serial No. 365,298. 10 Claims. (Cl. 254—194.)



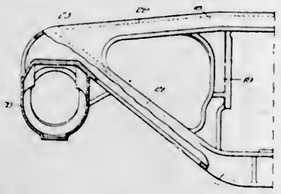
1. In a device of the class described, the combination of a bottom plate, a shaft carried by said bottom plate, a pulley on said shaft, a removable top plate, a lever for holding said top plate in an assembled position with said bottom plate, and means for locking the lever.

1,378,845. FEED MECHANISM FOR WOOD-REWORKING MACHINES. WILLIAM JOHN ELDER, Oswego, N. Y. Filed June 21, 1918, Serial No. 241,114. Renewed Oct. 29, 1920. Serial No. 420,579. 7 Claims. (Cl. 144—245.)



1. In feed mechanism for wood reworking machines, the combination of means for supporting a stack of timber lengths, means for removing the lengths successively from the stack, a spring pressure element arranged in the path of the succeeding progressing lengths and constructed to exert a lateral lifting pressure thereagainst and thus dispose them vertically on their lower longitudinal edges, and means for delivering such lengths thus positioned to the reworking machine.

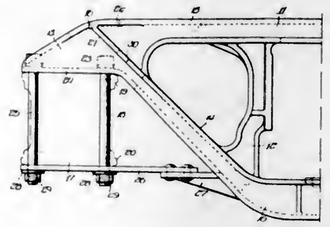
1,378,846. CAMPING UTENSIL. WILLIAM J. FELDKAMP, Brantford, Ontario, Canada. Filed July 2, 1920. Serial No. 393,528. 1 Claim. (Cl. 306—1.)



A camping utensil having a transversely arranged bar portion rigid therewith, a bolt rigidly secured in the center of said bar portion, a clamping bar loosely mounted on said bolt and extending over the bar portion of the utensil, and a nut on said bolt adapted to secure a temporary handle between the clamping bar and transverse portion of the utensil.

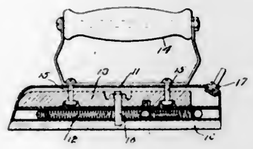
1,378,847. BOILER. JAMES T. FENNELL, Philadelphia, Pa. Filed July 21, 1919. Serial No. 312,157. 2 Claims. (Cl. 122—225.)

1. A steam boiler of the character described including a plurality of hollow water sections; and means providing passageways forming communication between the sections and arranged at different levels whereby if a pressure is established in any of the sections sufficient to back the water therefrom through the lower passageway, the water backed out will be replaced by water from an adjacent section flowing through the upper passageway; substantially as described.



1,378,848. TRUCK SIDE FRAME. GEORGE G. FLOYD, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Mar. 4, 1920. Serial No. 363,118. 3 Claims. (Cl. 105—205.)

3. A truck side frame including tension and compression members and entire journal boxes all cast in a single piece, said tension and compression members being directly connected to each other over the journal box to prevent tendency of said journal box to revolve.

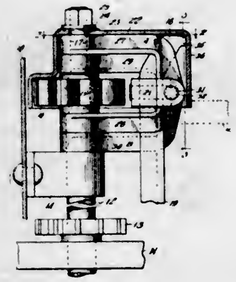


1,378,849. SIDE-FRAME CONSTRUCTION. GEORGE G. FLOYD, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 8, 1920. Serial No. 372,221. 4 Claims. (Cl. 105—205.)

1. In combination, a truck side frame including tension and compression members and a journal box receiving flange all cast in a single piece, the tension and compression members being of channel section with the webs thereof at the upper side of each of said members, respectively, and being joined directly to each other at the journal box receiving portions, a journal box, and inner

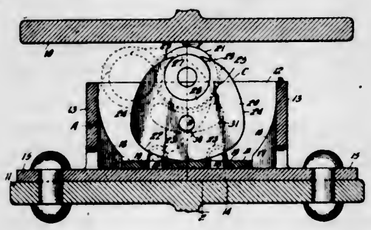
and outer bolts for securing said journal box to the side frame, said webs having openings large enough to permit the passage of the bolt head of the inner bolt whereby the inner bolt head may rest upon the journal box receiving flange.

1,378,850. ELECTRICALLY-HEATED APPLIANCE. LINDOL FRENCH, East Pepperell, Mass. Filed July 17, 1919. Serial No. 311,439. 5 Claims. (Cl. 219—25.)



1. An electric flat iron comprising a heating element in a main circuit and in juxtaposition to the operative surface of said iron, a shunt circuit associated with said main circuit and having circuit closing means therein responsive to an abnormal degree of heat in the iron and located within the iron relatively close to the operative surface thereof, and a circuit breaker in said main circuit responsive to energization of said shunt circuit.

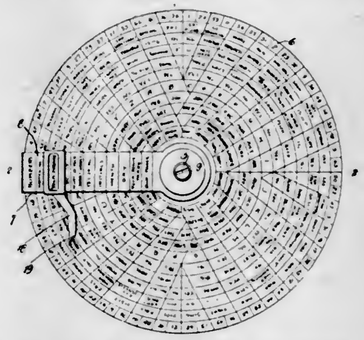
1,378,851. SHARPENING DEVICE FOR RAZOR-BLADES. FRANZ A. FULLER, Newark, N. J. Filed May 28, 1919. Serial No. 300,397. 3 Claims. (Cl. 51—72.)



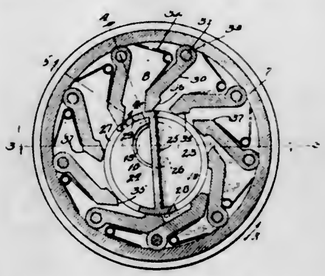
1. A device for sharpening razor blades, comprising a frame made from a single piece of suitable material, the lower portion of said frame being provided with integral means for securing said device to a frame carrying a razor blade holder, the upper portion of said frame being provinded with integral brackets for supporting a roller, a sharpening roller rotatably mounted in said said supporting brackets, a handle journaled in one of the roller supporting brackets, means carried by the handle and roller for transmitting rotary movement to said sharpening roller, and means to press a blade in said holder against said roller.

1,378,852. HAND-BRAKE FOR RAILWAY-CARS. WILLIAM A. GEIGER, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Feb. 4, 1920. Serial No. 356,258. 5 Claims. (Cl. 74—115.)

1. In a brake of the vertical staff type for railway cars, the combination with a vertical staff having a ratchet wheel rotatable in unison therewith, of a pawl coöperable with said ratchet wheel, and means for supporting said pawl to permit its bodily oscillation in a horizontal plane with respect to said staff, said means including two elements each independently journaled on said staff, and a support for said pawl carried by said two elements.



1,378,853. SIDE BEARING. WILLIAM A. GEIGER, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed July 12, 1920. Serial No. 395,428. 4 Claims. (Cl. 64—65.)



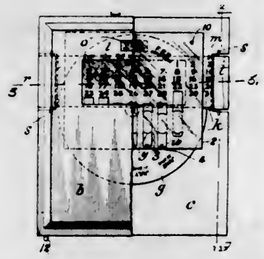
1. In a side bearing of the character described, the combination with a hollow retaining member adapted to be secured to a bolster and provided with means at its ends to limit the movement of an anti-friction element, associated therewith; of a gravity self-centering roller element coöperable with said member, said element having an active bearing surface movable with respect to the remainder of said element and adapted to be presented to an opposed bolster bearing surface.

1,378,854. GAME. CONRAD E. GIDLOF, Elizabeth, N. J., assignor to American Ocarina and Toy Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed June 7, 1920. Serial No. 387,106. 2 Claims. (Cl. 46—41.)

1. A game comprising a base plate provided with a standard, a rotatable disk adapted to spin on the standard, a yoke provided with upper and lower arms embracing the disk and having its ends attached to the said standard, a series of inscriptions circumferentially spaced on the disk and a series of inscriptions on the upper member of the said yoke, and an indicator member mounted on the said upper portion of the yoke to indicate any of the inscriptions thereon and provided with a pointer to indicate any of the corresponding inscriptions on the surface of the plate.

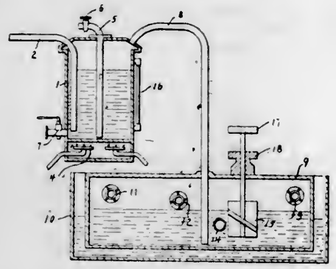
1,378,855. ROTARY POWER DEVICE. ELLICK H. GOLLINGS, Chicago, Ill. Filed Mar. 10, 1919. Serial No. 281,892. 8 Claims. (Cl. 121—53.)

1. In a device of the class described, the combination of a relatively rotatable casing and member, the latter being arranged eccentrically in the casing to afford an eccentric space therebetween and a plurality of partitions pivotally mounted on the casing and having the free ends thereof held under a resilient tension against the outer face of said member, the member having inlet and outlet ports extending peripherally therearound, each port being longer than the distance between the free ends of adjacent pairs of partitions.



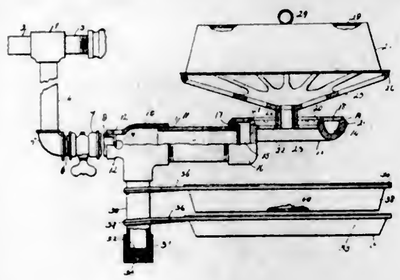
1,378,856. ROTARY POWER DEVICE. ELLICK H. GOLLINGS, Chicago, Ill. Filed Aug. 11, 1919. Serial No. 316,910. 3 Claims. (Cl. 121—53.)

1. In a device of the class described the combination of a hollow rotary member having internally projecting



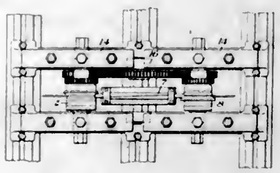
teeth, the surfaces of said teeth being at an acute angle to the circumference of the hollow member, a rotor mounted eccentrically therein and having teeth adapted for engagement with the teeth of the rotary member to provide expansible inlet compartments at one side of the device and contactible outlet compartments at the opposite side of the device, a stationary hollow cylinder arranged axially of the rotor having a transverse partition therein, a hollow shaft secured to each side of the cylinder, a clamping bearing for supporting the outer end of each shaft, a sleeve around each shaft secured to and rotating with the hollow rotary member, and a bearing for external engagement with each sleeve.

1,378,857. CALENDAR. HENRY LAWRENCE GULLINE, Bordeaux, Quebec, Canada. Filed Aug. 19, 1918. Serial No. 250,624. 4 Claims. (Cl. 40—113.)



1. In a perpetual calendar, a movable member bearing ordinal numbers divided in series, any contiguous seven of which series include thirty-one days, a front for concealing a portion of said movable member and having an opening for exposing such contiguous series, of means for concealing one or more of the ordinal numbers finishing the month, said means consisting of a series of individually adjustable screens supported in position to be adjusted over the said ordinal numbers finishing the month, for the purpose set forth.

1,378,858. METHOD OF MAKING MOTOR-FUEL. ALBERT HAYES, New York, N. Y., assignor, by mesne assignments, to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed July 14, 1919, Serial No. 310,536. Renewed Oct. 16, 1920. Serial No. 417,480. 3 Claims. (Cl. 44—9.)

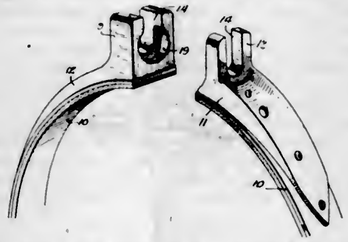


1. The herein described method of combining alcohol with kerosene to form a stable, non-stratifying compound adapted for use as a motor fuel which consists in adding ether to the kerosene, then adding benzol to the kerosene and ether, and finally adding the alcohol slowly to the mixture of kerosene, ether and benzol.

1,378,859. COMBINATION HEATING AND COOKING STOVE. SAMUEL HEATH, Philadelphia, Pa. Filed Apr. 16, 1919. Serial No. 290,518. 2 Claims. (Cl. 126—249.)

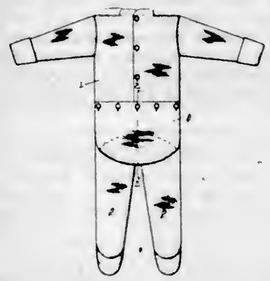
1. A heating and cooking stove comprising in combination a burner, cross ribs carried by said burner, a base supported by said cross ribs, a dish shaped spider provided with a hub, the latter adapted to rest upon the aforementioned base, a rim on said spider at a higher level than the hub, and a deflector supported on said rim.

1,378,860. METHOD AND APPARATUS FOR MAKING SPECIALLY-SHAPED BARS. ALBERT W. HEINLE, Crafton, Pa., assignor of one-half to Charles D. Russell and one-half to Edward B. Swygart, St. Paul, Minn. Filed Mar. 19, 1920. Serial No. 367,240. 17 Claims. (Cl. 80—63.)



2. The method of forming specially shaped bars, which consists in providing a blank having a polygonal form in cross section, exerting a shaping action upon two opposite faces of said blank with the blank in a position in which its transverse axis is oblique with respect to a horizontal plane, twisting the blank about its longitudinal axis, subjecting it to a shaping action upon two other faces thereof with the blank in another position in which its transverse axis is oblique with respect to a horizontal plane, the different shaping actions and the twisting being carried on simultaneously at different portions of the blank, and moving the blank continuously forward to the action of the shaping and twisting means, substantially as described.

1,378,861. MANUFACTURE OF STEEL. ALBERT H. HENDERSON, Towson, Md. Filed July 9, 1919. Serial No. 309,656. 3 Claims. (Cl. 75—49.)



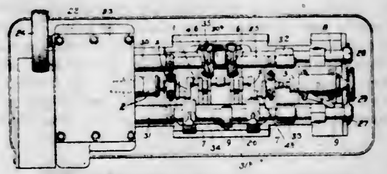
1. In the production of steel for molding into ingots or castings, adding to the charge during the fusing anhydrous borax in the proportion of about four pounds to each ton of metal.

1,378,862. TRANSMISSION-BAND. JOSEPH HENRY, Philadelphia, Pa. Filed June 3, 1920. Serial No. 386,233. 3 Claims. (Cl. 188—249.)

3. In a device of the class described, a substantially circular band provided upon each end thereof with a lug embodying an upstanding portion provided with a slot, an operating shaft extending through said slots, a spring disposed about said operating shaft intermediate said upstanding portions, and means embodied in one of said lugs for engaging said spring and forcing the same into engagement with said operating shaft, whereby said operating shaft is held firmly seated in the bottom of the slot of said last named lug.

1,378,863. GARMENT. WARREN S. HERRON, Centerville, Mich., and FRANK W. THOMAS, Toledo, Ohio, assignors to Dr. Denton Sleeping Garment Mills, Centerville, Mich., a Corporation of Michigan. Filed Jan. 10, 1921. Serial No. 436,051. 4 Claims. (Cl. 2—144.)

2. A garment having above its crotch a seat-flap with an upper convex edge, and a drop-flap provided with a lower convex edge attached to the convex edge of the seat-flap to provide fullness.

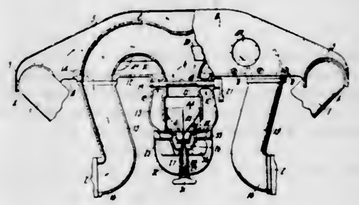


1,378,864. HEEL. JULIUS E. HETTINGER, Chicago, Ill. Filed Mar. 15, 1920. Serial No. 365,941. 4 Claims. (Cl. 36—72.)

1. A heel covering comprising a base adapted to be worn under the heel of a shoe, a side piece extending upwardly from said base, said side piece being attached to said base, a second side piece extending around and above said first mentioned side piece and being attached thereto, means fixed to the inner surface of said second side piece to prevent slipping of said second side piece on the heel, and means for tightening said second side piece around said heel.

1,378,865. MILLING-MACHINE. ROBERT L. HIBBARD, Pittsburgh, Pa. Filed Dec. 2, 1919. Serial No. 341,851. 19 Claims. (Cl. 90—15.)

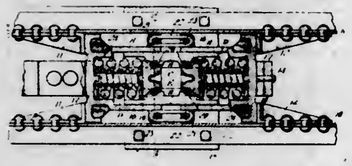
1. In combination in a milling machine, a spindle for rotating the work to be machined, a pivoted rocker arm mounted for movement transversely of the work, a cylindrical milling cutter with its cutting surface upon its cylindrical periphery carried by the arm with its axis of rotation parallel to that of the spindle, a cam for swinging the rocker arm about its point of pivotal support to cause the cutter to approach the work, and means for rotating the work, cutter and cam.



1,378,866. MAIN-WHEEL UNIT FOR TIMEPIECES. ERNEST H. HORN, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed Aug. 18, 1920. Serial No. 404,313. 1 Claim. (Cl. 58—139.)

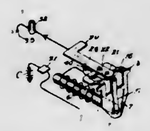
A main-wheel unit for timepieces, comprising a main-wheel having a flat-sided assembling-opening, an arbor having an integral, flat-sided assembling-shoulder conforming in shape to the said opening, and a collet driven upon the said arbor and brought to a bearing upon the said wheel, to hold the same in place upon the said shoulder, the said arbor being also formed with an integral hook for the attachment of the main-spring.

1,378,867. CARBURETER. CHESTER F. JOHNSON, Detroit, Mich. Filed June 26, 1915. Serial No. 36,435. 28 Claims. (Cl. 123—122.)



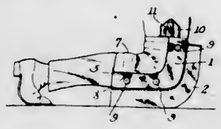
1. In combination with spaced exhaust pipes of an internal combustion engine, a conduit for heated air extending across between the exhaust pipes and having intake openings adjacent thereto, a fuel feeding device supported by the air conduit, said fuel feeding device comprising a fuel reservoir, a nozzle and a mixing chamber, a fuel-mixture conduit leading from the mixing chamber to the engine, said fuel-mixture conduit being arranged in such manner with respect to the air conduit as to be heated by warm air as it passes through the latter and before said warm air reaches the fuel mixture conduit.

1,378,868. FRICTION SHOCK-ABSORBING MECHANISM. GEORGE A. JOHNSON, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Feb. 19, 1919. Serial No. 277,965. 1 Claim. (Cl. 213—64.)



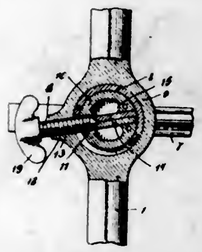
In a friction shock absorbing mechanism, the combination with a pair of opposed, relatively longitudinally mov-

able friction shells each having an interior friction surface extending parallel to the line of relative longitudinal movement, the friction surface of one shell being in alinement with the friction surface of the other shell, said shells being normally separated an amount equal to the permissible stroke of the mechanism; of a set of friction shoes common to both shells, each shoe of the set having an outer surface extending parallel to the said line of relative movement and coöperable with the friction surfaces of both shells, each shoe having also a pair of longitudinally separated wedge faces on its inner side; a



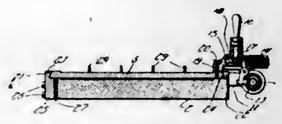
wedge associated with each end set of wedge faces of the shoes; a spring interposed between each wedge and the remote end of the corresponding friction shell; and limiting shoulders on the interior of each shell coöperable with the respective adjacent ends of the shoes to limit the inward movements of the latter with respect to both shells, the distance between one set of shoe ends and corresponding shell shoulders being less than the permissible stroke of the mechanism whereby movement of the shoes with respect to both shells is insured during a complete stroke of the mechanism.

1,378,869. CIRCUIT-BREAKER RELAY. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Original application filed June 6, 1917, Serial No. 173,084. Divided and this application filed Sept. 19, 1917. Serial No. 192,050. 17 Claims. (Cl. 200—87.)



17. A relay structure of the character described including a heel iron, ears provided for said heel iron, an armature having members adapted to coöperate with said ears to pivotally support the armature in position, and a spring for maintaining said armature in position.

1,378,870. KNEE-PAD. EDWIN N. KAUFFMAN, Mahaffey, Pa. Filed Dec. 3, 1920. Serial No. 427,968. 2 Claims. (Cl. 2—130.)



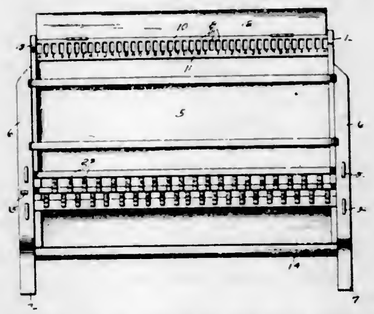
2. A knee pad comprising a main strip of sufficient length to encircle the leg, a plurality of longitudinally extending pockets, elastic straps secured at their inner ends to and freely extensible in said pockets, metal eyes on the ends of said straps, buttons on the outer portion of the pad positioned to be engaged by the strap eyes when the device is applied, a pocket on the inner side of the main strip and extending transversely thereof, said pocket having its opening spaced from the edge of the strip, and a cushion pad removably contained within said pocket.

1,378,871. WINDSHIELD. JACOB S. KERN, Fleetwood, Pa. Filed Apr. 27, 1920. Serial No. 376,923. 1 Claim. (Cl. 296—92.)

In a device of the character specified, the combination with a standard of the supporting frame, said standard provided with a hollow cylindrical enlargement, of a wind shield frame provided at one end with a transversely split clamping sleeve working in said enlargement, a resilient expanding ring with spaced apart ends arranged in the clamping sleeve, said expanding ring provided with an interiorly threaded opening, a pair of flat expanding plates arranged with their outer edges fitting between the spaced ends of the expanding ring and an adjusting screw working through the enlargement and interiorly threaded opening of the expanding ring and formed with a cone shaped inner end adapted to engage corresponding registering recesses formed in the inner edges of the expanding plates.

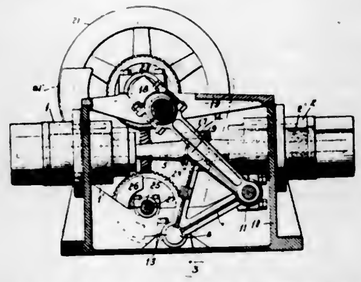
1,378,872. MEAT-SLICING MACHINE. WILLIS E. KIDNEY, Cleveland, Ohio, assignor to The Cleveland Electric and Machine Mfg. Co., Cleveland, Ohio. Filed Mar. 10, 1920. Serial No. 364,851. 2 Claims. (Cl. 17—24.)

1. A device of the character described comprising a reciprocating traveling table, a meat carrying plate slidably mounted on said table, said meat carrying plate and said table having coöperating guides inclined upwardly and inwardly, a worm, a housing, a tooth piece carried by said housing engaging said worm, and means for maintaining a snug sliding fit between said meat carrying plate and said table, said means comprising an undercut guide for said meat carrying plate detachably mounted on said table, means for clamping said guide to said table, and means to adjust said guide insertible between said guide and table.



1,378,873. OSCILLATING IGNITION-MAGNETO. ARTHUR C. KLECKNER, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Oct. 20, 1919. Serial No. 332,092. 5 Claims. (Cl. 123—149.)

1. An oscillating ignition equipment consisting in combination with a magneto comprising a rotor, stator, and

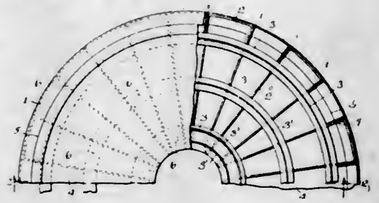


primary and secondary windings, spring means normally holding the rotor in a certain position with respect to the stator, a trip device connected with the rotor adapted to be engaged by an engine driven actuator, moved against the tension of said spring means and released, together with interrupter contacts in circuit with said primary winding, means coöperating with said interrupter contacts arranged to insure that the circuit including the primary winding is open for at least a significant period of time before the trip device is released by the engine driven actuator as aforesaid, and means for actuating the interrupter contacts to open the circuit including the primary winding when on its recoil movement the rotor is at substantially the position where the peak of the current wave created in said primary winding is attained.

1,378,874. CHILD'S EDUCATIONAL AND AMUSEMENT DEVICE. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Jan. 28, 1921. Serial No. 440,749. 6 Claims. (Cl. 35—9.)

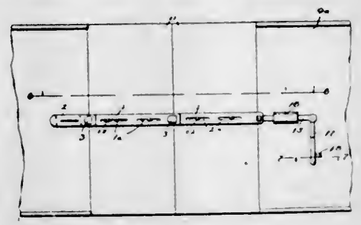
1. A device of the character described comprising a body portion having a plurality of vertically disposed tubes formed therethrough, letter blocks adapted to fit in and be guided by said tubes, said tubes being correspondingly designated by letters of the alphabet, keys adapted to eject the letter blocks from the bottoms of said tubes, said keys being likewise correspondingly designated by letters of the alphabet, a pair of shields and means for securing the same inwardly and outwardly of said keys to thereby prevent movement of said keys.

1,378,875. ENGINE. SAMUEL L. GAISWOLD KNOX, San Francisco, Calif. Filed Nov. 2, 1916. Serial No. 129,064. 7 Claims. (Cl. 121—120.)



2. An engine comprising two sets of opposed cylinders and pistons, piston rods connecting the pistons of each opposing pair, a substantially pyramidal-shaped rocker journaled on one lateral edge in spaced bearings, spaced journals at the opposite lateral edge of said rocker connected to the piston rods, a connecting rod journaled at the apex of the rocker and a crank shaft operatively connected with the other end of said connecting rod.

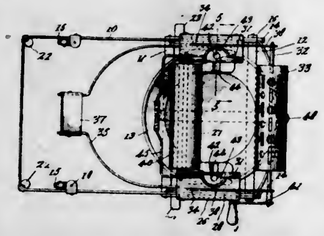
1,378,876. METAL WHEEL. LAURENCE S. LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed June 3, 1919. Serial No. 301,458. 3 Claims. (Cl. 301—63.)



1. In a wheel of the character described, the combination of a pair of side disks or plates provided with offsets or ledges at their circumferential edges, a rim seated upon the edges and a reinforcement of hollow cylindrical form seated upon said edges and having a radially projecting continuous rib engaging the inner surface of the rim.

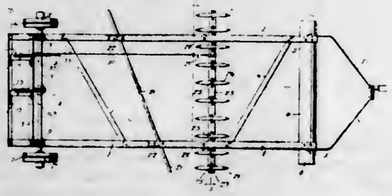
1,378,877. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Aug. 19, 1918. Serial No. 250,428. 9 Claims. (Cl. 301—63.)

1. A metal wheel the spoke portion of which consists of a sheet metal plate having a free edge of the sheet metal presented to the side of the wheel combined with a sheet metal side plate circumferentially continuous between the hub and rim and welded by its inner surface to the free edge of the sheet metal plate of which the spoke portion consists.



1,378,878. ATTACHMENT FOR EXTENSION-TABLES. JOHN O. LARSON, Litchfield, Minn. Filed Sept. 7, 1920. Serial No. 408,718. 1 Claim. (Cl. 45—9.)

The combination with a table having extension leaves, of plates slidably secured to said leaves and having their

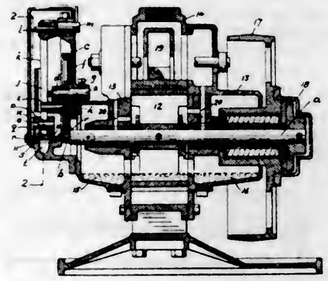


terminal portions extended beyond the edges of the leaves, one end of each plate being formed with a tongue and the other end being formed with a transverse slot, a second plate secured to the table and having a slot adapted for the reception of the adjacent tongues, and a locking device having a hooked portion passed through the slots in one of said plates, said locking device being carried by said table.

1,378,879. MOP-WRINGER. SIMEON C. LAWLOR, Chicago, Ill. Filed Feb. 17, 1919. Serial No. 277,474. 6 Claims. (Cl. 15—12.)

6. In a wringer, the combination of side plates, each having an offset portion and a flange upstanding from the offset portion adapted to be positioned above a receptacle, wringing rollers adapted, while in engagement with the upstanding flanges, to coöperate for wringing an article above the receptacle, and fluid-collecting means for the offset portions for directing fluid dripping from portions of the rollers into the receptacle.

1,378,880. ROAD-SURFACING MACHINE. JOSEPH W. LEE, Chicago, Ill., assignor, by mesne assignments, to American Road Plane, Incorporated, Wilmington, Del., a Corporation of Delaware. Filed May 5, 1919. Serial No. 294,779. 4 Claims. (Cl. 37—7.)



1. In a road-surfacing machine, the combination of a longitudinal frame having a wheeled support at one end and a shoe at the other end comprising a transverse plate adapted to slide over the surface of the ground, a scraper blade arranged intermediate of the frame supports diagonally of the frame, a scarifying device arrranged ahead of the scraper blade and comprising a plurality of prongs adapted to engage and tear the surface of the ground, and means for adjusting the scraper blade and scarifying device to and from the surface of the ground.

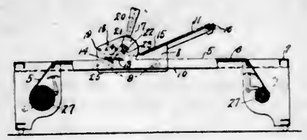
1,378,881. MASTER-PULSATOR FOR MILKING-MACHINES. MEREDITH LEITCH, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 26, 1920. Serial No. 361,609. 16 Claims. (Cl. 31—99.)

1. In a master pulsator, the combination of a driving shaft, a pinion thereon, a gear in driving engagement with the pinion, a slotted pendulum, a crank on the gear engaging the slot of the pendulum, a ported valve seat, and a valve reciprocable on said seat and operable by the pendulum.

4. In a master pulsator for milking machines, the combination of a valve seat, having a pulsation port and a vacuum port, a reciprocatory valve slidable on the valve seat and having a cavity adapted in one position to connect the pulsation port with the atmosphere and in another position to connect the pulsation port with the vacuum port, pendulum carrying the valve, and means to oscillate the pendulum.

7. In a master pneumatic pulsator, the combination with a driven shaft adapted to carry any one of several sizes of pinion, and a geared crank drivable by said pinion, of a crank bearing securely adjustable to cause proper meshing of the gear with the desired size of pinion.

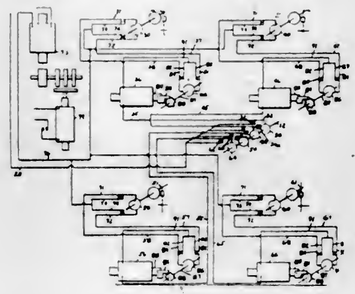
9. In a master pulsator for milking machines, the combination of a valve seat having a pulsation port and a vacuum port, a reciprocatory valve slidable on the valve seat and having a cavity adapted in one position to connect the pulsation port with the atmosphere and in another position to connect the pulsation port with the vacuum port, a pivoted pendulum carrying the valve, means to oscillate the pendulum, and means to adjust the pivot of the pendulum to vary the relative lengths of time during which the pulsation port is connected with the atmosphere and the vacuum port respectively.



12. In a master pulsator, the combination of a driving shaft, a pinion thereon, a gear meshing with the pinion, a ported valve seat, a valve reciprocable thereon, an oscillatable pendulum carrying the valve, means to oscillate the pendulum from the gear, an adjustable eccentric bearing on which the gear is turnable and an adjustable eccentric pivot on which the pendulum is oscillatable.

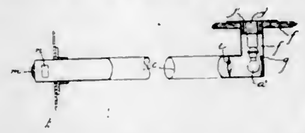
1,378,882. PROCESS OF PRODUCING TUNGSTEN LAKES. ARTHUR LINZ, New York, N. Y., assignor to The Chemical Foundation Incorporated. Filed Jan. 19, 1921. Serial No. 438,449. 13 Claims. (Cl. 8—6.)

2. The process of producing a color-lake which comprises precipitating a coloring matter by means of a soluble compound of tungsten, a soluble compound of phosphorus and a suitable acid which will form a double salt of tungsten in the presence of a coloring matter without destroying the latter.



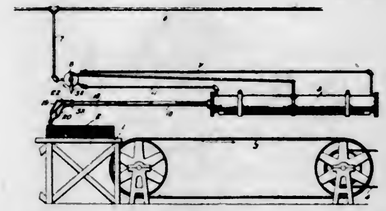
1,378,883. APPARATUS FOR DUPLICATING TYPEWRITTEN MATTER. HANS K. LORENTZEN, New York, N. Y. Filed Sept. 17, 1917. Serial No. 191,710. 8 Claims. (Cl. 101—133.)

1. Duplicating apparatus comprising an impression member, a carriage traversing the same, means for side registering a sheet on the carriage, a slidable front register on the carriage, a presser member on the carriage, means for lowering and raising said presser member and means coacting with said front register and the presser member for sliding the said register out of or into reg-



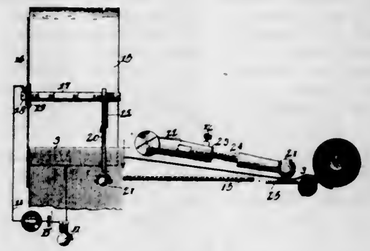
istering position according to the lowering and raising of said presser member.

1,378,884. COINCIDENT MAXIMUM-DEMAND RELAY. ERVING A. LUEKY and ROY N. HOUGHTON, Detroit, Mich. Filed Apr. 7, 1920. Serial No. 372,051. 12 Claims. (Cl. 234—5.5.)



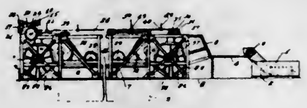
3. In an electrical totalizing and recording mechanism, in combination with a plurality of individual circuits, a timing member with which each circuit is adapted to be operatively connected, a solenoid member interposed between each individual circuit and the point of contact between its terminal and the spindle of said timing member, and means appurtenant to each of said solenoids whereby a current from its corresponding individual circuit may be selectively directed into one or the other of equivalent energizing paths about the solenoid, and means on the timing member for successively making and breaking the contacts of the circuits leading theretoward from the individual circuits and the solenoids, whereby the possible registration of their several impulses is according to a variant time unit from that prevailing in the individual circuits.

1,378,885. LIGHTING SYSTEM OF VEHICLES. DONALD MACDONALD, Melbourne, Victoria, Australia. Filed Sept. 14, 1920. Serial No. 410,276. 3 Claims. (Cl. 240—8.)



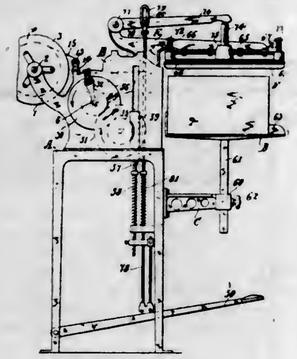
1. In a vehicle lighting system, a tube having at one end an opaque side wall and transparent closures at the opposite side wall and at its end, means for projecting light rays into the other end of the tube, and a reflector arranged between said transparent end and oblique side wall whereby to reflect certain of the light rays laterally through said transparent portion in the opposite side wall for effecting the projection of light rays from the end and one side of said tube.

1,378,886. METAL-SHEET-PACK-SEPARATING DEVICE. DANIEL L. MAINERI, Canton, Ohio, assignor to The Berger Manufacturing Company, Canton, Ohio. Filed Dec. 16, 1920. Serial No. 431,225. 3 Claims. (Cl. 271—54.)



1. In a sheet separating device, a cylinder, a reciprocating rod within said cylinder and projecting therefrom, a pair of tongs carried by said reciprocating rod, means whereby the said reciprocating rod can be projected from the said cylinder or withdrawn therein and means for causing the said tongs carried by the said rod to open as the said rod is projected and to close as the said rod is withdrawn.

1,378,887. PAPER-FEED ALARM FOR ADDING-MACHINES. THOMAS PUGH MARTIN, Jr., Oklahoma, Okla. Filed May 20, 1918. Serial No. 235,529. 4 Claims. (Cl. 200—52.)

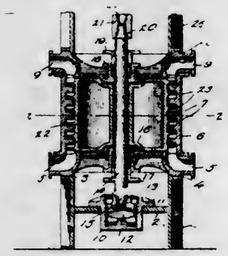


1. A circuit closer adapted to be used in a paper feed alarm, comprising a metallic paper-supporting member, paper contacting means including a ball having a swinging supporting arm reaching over the paper; an insulating mounting for said arm on said paper supporting member, means assisting the gravitation of the ball into engagement with the paper, and means operatively associated with the swinging arm and mounting, enabling the extension of the ball over the paper to dispose the ball over a different point of contact.

1,378,888. GALVANIZING-MACHINE. CONSTANTINE G. MILLER, Chicago, Ill., assignor to Meaker Galvanizing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1920. Serial No. 367,082. 14 Claims. (Cl. 204—5.)

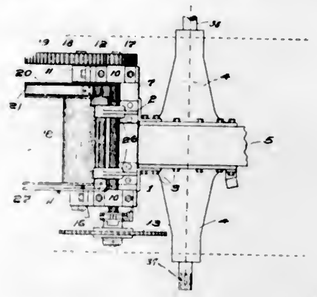
1. In a galvanizing machine, a tank of electrolytic solution, an endless conveyer thereabove, hook members carried thereby, a rotatable hub member, and spring controlled means hingedly connected to said rotatable hub member for automatically feeding articles to said hook members to permit the conveyer to carry the articles through the electrolytic solution.

1,378,889. AUTOMATIC SEALING-MACHINE. CHARLES GRENOUGH MORTIMER, East Orange, N. J., assignor to National Binding Machine Company, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1913, Serial No. 808,943. Renewed Aug. 3, 1917. Serial No. 184,357. 2 Claims. (Cl. 216—25.)



1. In a sealing machine the combination of means for presenting strips of moistened adhesive tape of various lengths in position for application to a package, a package support adjacent said strip-presenting means and in advance thereof and in the direction of movement of the strip, a presser movable toward and away from the package on said support for applying the strip thereto, and a treadle for operating both said strip-presenting means and said presser upon its down stroke, said treadle having a lost-motion connection with said presser of sufficient amplitude to permit the full operation of the strip-presenting means before the presser engages the package.

1,378,890. CLOTHESPIN. JOHN MUCK, Milwaukee, Wis. Filed Dec. 2, 1919. Serial No. 341,844. 5 Claims. (Cl. 24—139.)



1. A clothes pin comprising elongated loops, rounded ends at the extremities of each loop, a cap therefor, said cap having a draining hole in the outer portion thereof.

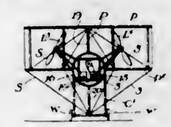
1,378,891. ROTARY PUMP. PAUL H. MUSSWITZ, Vallejo, Calif. Filed Mar. 1, 1920. Serial No. 362,373.. 4 Claims. (Cl. 253—182.)

3. A rotary pump comprising a stator having an inlet and an outlet opening, a rotor mounted in the stator, means for driving the rotor, blades formed on the exterior of the rotor, said blades being arranged in staggered relation and inclined with the ends of the adjacent blades overlapping, one end of each blade being beveled on the lower face and the opposite end beveled on the upper face.

1,378,892. TRACTOR. CHARLES W. MYERS, Franklin, Pa. Filed June 28, 1920. Serial No. 392,358. 4 Claims. (Cl. 254—166.)

1. In a tractor of the farm type having an automotive organization which includes a motor, propelling wheels, transmission gearing, also a differential gear, transmitting power from said motor to said wheels, a winding drum carried by the housing of the differential gear of said gearing, and gearing other than said transmission gearing, arranged to transmit power from the motor to said drum.

1,378,893. EDUCATIONAL TOY. PETER S. H. NEWELL, Leonia, N. J. assignor to The Diamond Toy Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 14, 1920. Serial No. 416,838. 4 Claims. (Cl. 35—9.)



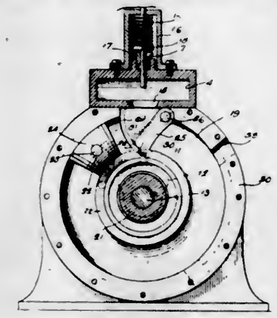
1. An educational toy comprising a suitable casing having at least two-spaced apart sight openings therein, and an element mounted within said casing for movement in a continuous path, said element having on its face a row of figures or subjects and a corresponding row of names for the respective figures or subjects, the two rows being so coördinated that as the said element is advanced the letters of a name are progressively presented to one opening and the correspondingly named figure or subject is presented to the other opening of the casing.

1,378,894. PACKING-RING. EDWARD R. NORMAN, Chicago, Ill. Filed Nov. 28, 1917. Serial No. 204,312. 1 Claim. (Cl. 74—109.)

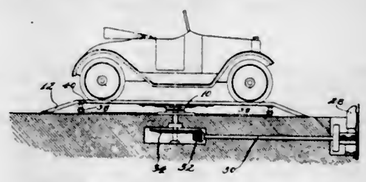
A one-piece packing ring of uniform radial thickness throughout and having a joint formed by its meeting ends and an eccentric channel in its outer surface terminating short of the meeting ends and being deeper near the joint than in the other portions of ring and providing the concentric ring with an outer oil groove and with the equal radial pressure of the eccentric type of ring.

1,378,895. AEROPLANE. JOHN ELLIS PEARSON, Mimosa, N. C. Filed Feb. 13, 1920. Serial No. 358,512. 4 Claims. (Cl. 244—14.)

1. An aeroplane comprising, a fuselage, a vertical plane comprising an upper section and a lower section arranged at diametrically opposite points on said fuselage and coextensive in length therewith, a horizontal plane comprising sections disposed at diametrically opposite points of the fuselage and coextensive in length therewith, and a second horizontal plane disposed above the first horizontal plane and the fuselage.



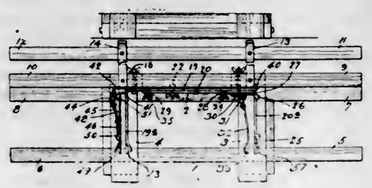
1,378,896. MANUFACTURE OF SERUMS FROM ANIMALS, EXCLUDING MAN. WILLIAM JAMES PENFOLD, Brunswick, Victoria, Australia. Filed Sept. 14, 1920. Serial No. 410,204. 3 Claims. (Cl. 167—7.)



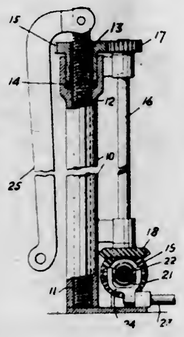
3. An improved method of serum production consisting of receiving the blood from the animal (excluding man) into vessels containing an anti-clotting agent (such as oxalate solution) allowing the blood to stand until the red cells sediment, separating the supernatant plasma, adding a clotting agent (such as a lime salt) to the plasma, separating the serum from the plasma, filtering the red cells and returning the red cells to the blood vessels of the animal substantially as described.

1,378,897. ROTARY ENGINE. OLEF E. PETERSON, Idaho Falls, Idaho. Filed Oct. 7, 1918. Serial No. 257,155. 6 Claims. (Cl. 123—15.)

1. In a rotary engine, a stator having a circular bore therein, a rotor including a piston for travel in said bore, a movable abutment, normally extending across said bore and adapted to be forced out of the bore to allow a complete revolution of the rotor, laterally extending guide lugs formed upon said abutment, said stator provided with guideways receiving said guide lugs, and springs positioned in the inner end of said guideways to cushion the inward movement of said abutment.

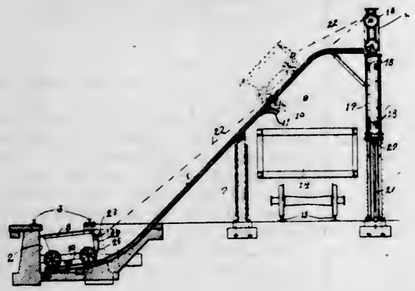


1,378,898. AUTOMOBILE-TURNTABLE. GEORGE C. POTTS, Chicago, Ill. Filed Feb. 10, 1921. Serial No. 443,786. 6 Claims. (Cl. 104—36.)



1. In a device of the class described, the combination of a pair of channel shaped tracks, each track having its ends downwardly inclined and its middle horizontal portion elevated, said tracks being connected together and rotatably mounted by means of a connecting plate, a bearing member for supporting the plate including a pin projecting therefrom, a plate fixed to said pin and having a circular groove therein adapted for the insertion of ball bearings and with which a similar circular plate coöperates, the latter plate being rotatably mounted on said pin, a series of gears connected to the pin, and a driving means for the gears.

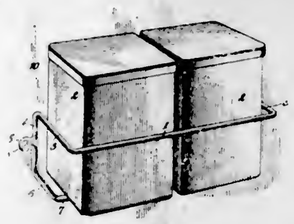
1,378,899. BOX-MAKING BENCH. WILLIAM G. PRICE, Yakima, Wash. Filed Apr. 12, 1920. Serial No. 373,239. 2 Claims. (Cl. 144—291.)



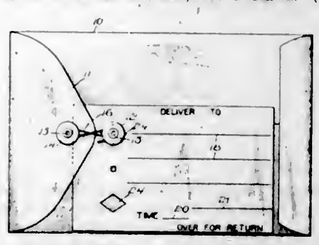
1. In a box making bench, the combination with a suitable frame of two oppositely disposed rigid box-end supports, a yielding clamping member arranged on the inside of one of said box-end supports, a yielding clamping member on the outside of the other rigid box-end support, said last-named clamping member comprising a swinging plate, and an oscillating plate hinged thereto.

1,378,900. LIFTING DEVICE. WILLIAM J. QUINN, Westgrove, Pa. Filed July 31, 1920. Serial No. 400,343. 2. Claims. (Cl. 254—103.)

1. A load lifting device comprising a screw, a lifting device pivoted to the lifting screw at one end, means for connecting the other end of the load lifting device to lift the load and to restrain the screw against rotation by the load to be lifted, a nut for raising the screw, a driving shaft parallel with the shaft, gearing connecting the shaft to the nut, and power actuated means arranged to be connected and disconnected with said shaft.



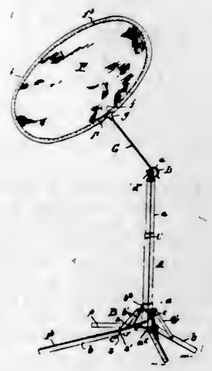
1,378,901. CONVEYER. WILLIAM ROBERTSON, Chicago, Ill. Filed July 3, 1917. Serial No. 178,488. 1 Claim. (Cl. 187—12.)



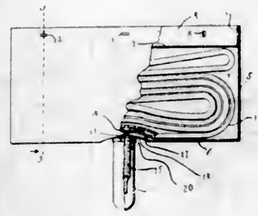
In a conveyer, a vertical cylinder, a piston in said cylinder, a hollow rod supporting said piston, an inlet from the interior of said rod into said cylinder just below said piston, a packing box in the lower end of said cylinder through which said rod passes, guides on the exterior of said cylinder and stationary vertical guideways coöperating therewith, sheaves supported on the upper end of said cylinder, and coöperating sheaves supported above the first named sheaves by said guideways, and a cable working over said sheaves whereby on admission of fluid under pressure into said hollow rod, the cylinder will descend and a pull be exerted on said cable.

1,378,902. SPICE-CAN HOLDER. EMIL WILLIAM ROEHL, Spokane, Wash. Filed Jan. 12, 1921. Serial No. 436,754. 2 Claims. (Cl. 248—20.)

2. A rack or holder composed of a single length of wire bent to form an upper longitudinal guard rail, terminating at its ends in right-angularly bent end rails of equal length, each joined to downwardly directed posts or attaching portions, having outwardly extending screw eyes formed therein, the lower ends of said posts being connected to outwardly directed lower connecting arms parallel to and directly beneath the said end rails and substantially one-half the length thereof, the lower arms having their terminals directed inwardly toward each other and secured together to form a supporting bar or rail for cans.

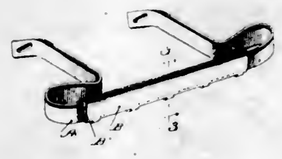


1,378,903. DELIVERY AND RETURN SLIP FOR ENVELOPS. ALBERT R. SCHOREK, Chicago, Ill. Filed Feb. 2, 1920. Serial No. 355,575. 1 Claim. (Cl. 40—5.)



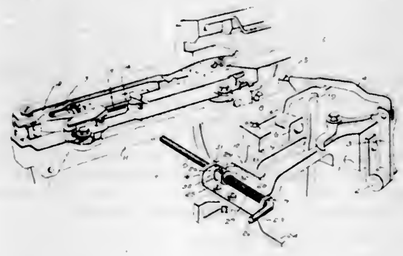
A slip, for the purpose set forth, provided with indicia on one side indicating the space for the name of the addressee, and indicia on the reverse side indicating the space for the return address, said slip being also provided near its margin with a plurality of apertures of varying contour, whereby the slip is adapted to be attached to and securely held, during the cycle of travel, by receptacle closure devices of varying constructions.

1,378,904. PHOTOGRAPHER'S HEAD-SCREEN. JULIUS JOE SCHUERMANN, Clinton, Iowa. Filed Sept. 2, 1920. Serial No. 407,666. 11 Claims. (Cl. 95—82.)



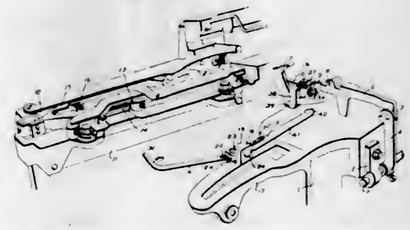
1. A photographer's head screen comprising an annular frame and a fabric cover having an edge portion turned over toward the middle of the screen and inclosing the annular frame.

1,378,905. TIRE-TUBE CONTAINER. WILL SCHULDT, Arlington township, Woodbury county, Iowa. Filed Dec. 19, 1919. Serial No. 346,109. 2 Claims. (Cl. 206—1.)



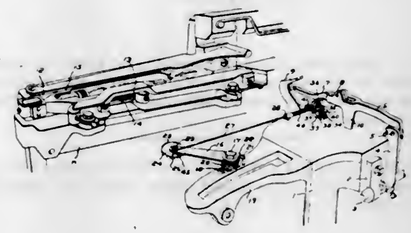
1. A container for pneumatic tire-tubes having valve-tubes, including a walled inclosure having an opening through which a tire-tube may be introduced into the inclosure, a closure for the opening, a wall of said inclosure having an opening through which the valve-tube may be extended, whereby the tube may be inflated from the exterior of the inclosure, opposite walls of the inclosure being provided with registering apertures above the closure, and cross pins removably-inserted in the apertures to prevent displacement of the closure when the tire-tube is inflated.

1,378,906. AUTOMOBILE-BUMPER. JOHN W. SIMMONS, Cleveland, Ohio. Filed Jan. 4, 1921. Serial No. 434,882. 5 Claims. (Cl. 293—55.)



1. An automobile bumper having a sheet metal cover applied to the front member thereof to impart a finish thereto.

1,378,907. FEELER-MOTION FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 9, 1919. Serial No. 309,596. 3 Claims. (Cl. 139—85.)

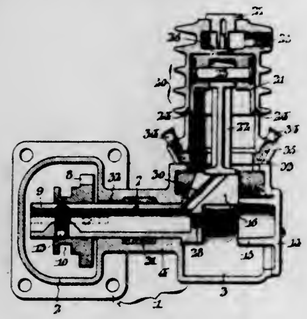


1. In a feeler motion for looms, the combination of a feeler stand having front and rear bearings, a feeler mounted in said bearings for rotative and longitudinal movements, a spring normally tending to rotate the feeler and hold it in rearward position, a feeler setting arm extending laterally from the feeler in front of the front bearing, a setting cam extending frontward from the feeler stand, a collar adjustably connected to the feeler between the two bearings and independent of the setting arm, and a replenishing finger secured to the adjustable collar.

1,378,908. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 10, 1919. Serial No. 343,721. 13 Claims. (Cl. 139—85.)

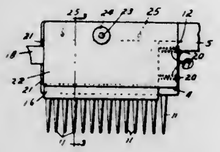
1. In a feeler mechanism for looms, the combination of a feeler having a rearwardly extending and rigidly connected filling engaging end, a fixed pivot for the feeler with respect to which it is swung and also moved in a direction longitudinally of the shuttle by the push of the filling on each detecting beat until substantial exhaustion thereof, and means controlled by the feeler for effecting replenishment of filling when the feeler fails to be moved longitudinally of the shuttle on a detecting beat.

1,378,909. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 10, 1919. Serial No. 343,722. 14 Claims. (Cl. 139—85.)



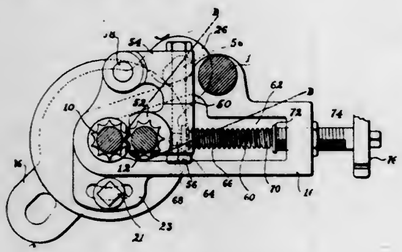
1. In a feeler mechanism for looms, the combination of a feeler carrier pivotally supported by the loom frame for swinging movement toward and from the front of the loom, a wheel mounted on the swinging end of the feeler carrier and provided with teeth which engage the filling and cause the wheel to be turned relative to the feeler carrier on a detecting beat until the filling is substantially exhausted, and means connected to the toothed wheel for effecting replenishment of filling when the wheel fails to be turned relative to the feeler carrier on a detecting beat.

1,378,910. AIR-PUMP. JOHN W. SMITH, Philadelphia, Pa. Filed May 8, 1920. Serial No. 379,782. 4 Claims. (Cl. 230—27.)



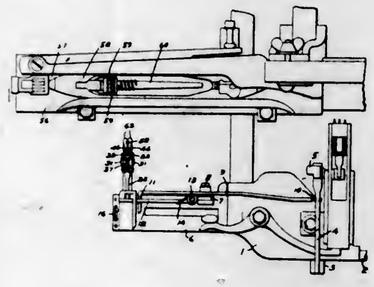
1. In an automobile tire-pump, the combination of a crank and gear casing adapted to be secured to the automobile gear case and having a gear chamber receiving lubricant from said gear case and a separate crank chamber; and a crank shaft for the pump extending from said gear chamber to said crank chamber and having a crank and a crank-pin, with means of passage via the shaft from said

gear chamber to the bearing surface of the crank-pin; so that lubricant may be supplied therethrough from the



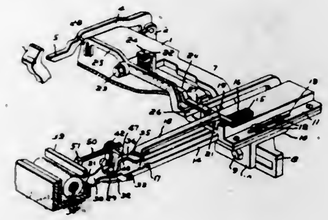
automobile gear case to lubricate the crank-pin of the pump without access of such lubricant to the air space of the pump to contaminate the air.

1,378,911. HAIR-CUTTING DEVICE. WILBERT H. STAHR, Elgin, Ill., assignor of one-half to Albert D. Smith, Elgin, Ill. Filed May 14, 1920. Serial No. 381,262. 7 Claims. (Cl. 30—12.)



1. A hair-cutting device comprising a body; a blade mounted for movement on the body; and teeth mounted for movement transversely with respect to the cutting edge of the blade.

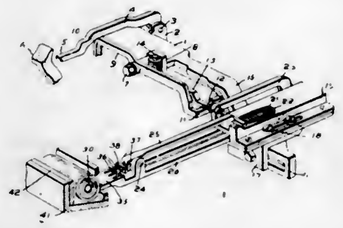
1,378,912. TEXTILE-MACHINE. HARRY STEPHENSON, Andover, Mass. Filed Nov. 5, 1919. Serial No. 335,851. 16 Claims. (Cl. 19—24.)



14. A device for drawing-off wool having, in combination, a supporting frame, a stationary roll carried thereby, a coöperating movable roll, and bearing blocks for the respective ends of said movable roll, each comprising two parts for respectively carrying the roll and pivotally mounting the blocks on the supporting frame about coincident axes extending parallel to said stationary roll, said parts being pivotally connected together about parallel axes lying in planes extending normal to said movable roll.

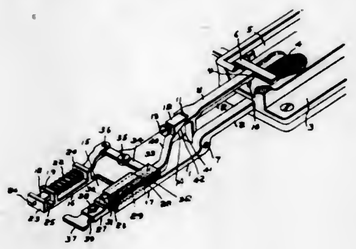
1,378,913. FEELER MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 30, 1920. Serial No. 355,066. 14 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler carrier, a feeler support mounted on the feeler carrier for lateral movement relative thereto, two feelers pivotally mounted upon the feeler support, a projection carried by the shuttle to coöperate with the feelers, and yielding means acting to hold the feeler support in normal position and permit the feeler support to be moved laterally relative to its carrier by said projection.



1,378,914. FEELER MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 4, 1920. Serial No. 363,175. 7 Claims. (Cl. 139—85.)

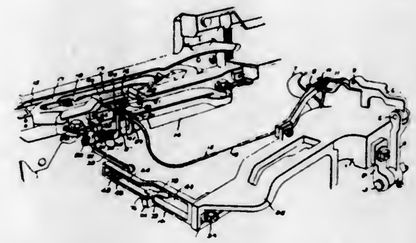
1. In a feeler mechanism for looms, the combination of a feeler carrier, a feeler mounted on the feeler carrier for movement in a direction longitudinally of the shuttle and having a filling engaging end with a central portion extending rearwardly beyond the side portions, yielding means normally acting to center the feeler relative to the feeler carrier to cause the central portion of the engaging end of the feeler to engage the filling and yieldable to permit the feeler to be moved in a direction longitudinally of the shuttle by the frontward pressure of a bunch of filling on the filling carrier, a lock which prevents responsive movement of the feeler to the push of the bunch until the bunch itself is nearly exhausted, and means for freeing the feeler from the lock only when the bunch has been depleted to a predetermined amount.



1,378,915. FEELER MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 4, 1920. Serial No. 363,176. 9 Claims. (Cl. 139—85.)

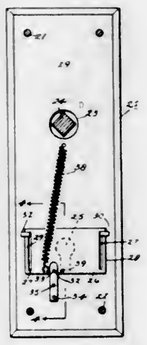
4. In a feeler mechanism for looms, the combination of a feeler carrier mounted for movement toward and from the front of the loom and having a stepped rear portion adapted to engage and to be moved frontwardly by the filling on a detecting beat until substantial exhaustion thereof, and to then engage stepped portions of the bobbin, a plurality of feelers, one feeler being associated with each stepped portion of the feeler carrier, each

being independently movable on the carrier, and an actuator which is rendered effective to replenish the filling when all of the feelers fail to be moved frontwardly by the stepped portions of the bobbin on a detecting beat.



1,378,916. FEELER MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 19, 1920. Serial No. 367,038. 14 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler carrier mounted for movement toward and from the front of the loom and having rearwardly extending legs or supports, a penetrating feeler member mounted on one of the legs or supports and provided with a cap or contact portion having a rearwardly extending penetrating point, an impinging feeler mounted on another of the legs or supports and having an impinging rear end, a lever pivotally mounted on the feeler carrier and connected to the two feelers to cause rearward movement of the impinging feeler by frontward movement of the penetrating feeler when the filling is substantially exhausted on a detecting beat, an actuator on the feeler carrier, and a cam between the actuator and impinging feeler to operatively position the actuator for effecting replenishment of filling when the impinging feeler is moved rearwardly by frontward movement of the penetrating feeler on a detecting beat.

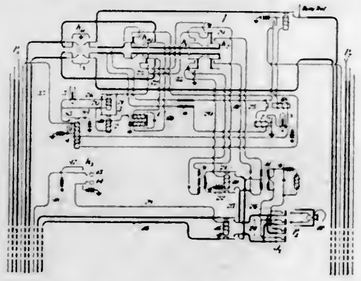


1,378,917. FEELER MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 27, 1920. Serial No. 384,612. 22 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, a feeler mounted on the lay, a controlling arm also mounted on the lay, yielding connections between the feeler and controlling arm tending to move the feeler into the shuttle-box, a stop between the arm and feeler which prevents movement of the feeler into the shuttle-box until the arm is moved in a substantially vertical plane, a guide mounted in a fixed position, a projection on the arm which moves along the guide as the lay beats up, and a cam for moving the arm in a vertical plane in one direction as the lay

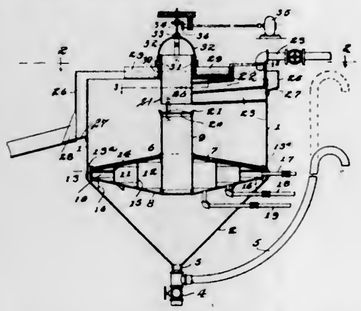
moves frontwardly and in the opposite direction as the lay moves rearwardly, said cam constructed and arranged to move the arm more rapidly in one direction than in the other.

1,378,918. KEYHOLE-GUARD. JOHN TOMASZEWSKI, Taunton, Mass. Filed June 18, 1920. Serial No. 389,804. 2 Claims. (Cl. 70—8.)



1. A key-hole guard of the character described comprising a plate adapted to be secured to a door over a lock in spaced relation to said door and having a key-hole, a sliding locking plate on the rear face of said first named plate provided with a plurality of perforations, means for guiding said locking plate during its operation, a leaf spring secured to said plate, a pin on said spring adapted to engage in one of the perforations of said locking plate, means for interrupting the engagement between said pin and said locking plate, and means for returning said locking plate into its locking position after each operation of the lock.

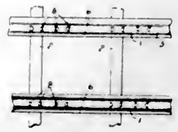
1,378,919. PORTABLE REPEATER APPARATUS. JOHN F. TOOMEY, New York, N. Y., and CHARLES G. SPENCER, East Orange, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 22, 1919. Serial No. 284,286. 4 Claims. (Cl. 179—170.)



2. In a telephone system, a cord circuit for interconnecting transmission lines, supervisory signaling apparatus associated therewith, a repeater set associated with the terminal arrangements of said cord circuit, switching means whereby said repeater set may be connected to said

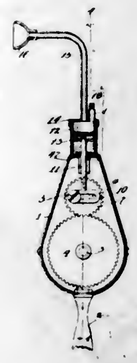
terminal arrangements in place of said cord circuit, means in said repeater set responsive to signaling currents when

said repeater set is connected to said terminal arrangements for connecting said cord circuit to said terminals in place of said repeater set.



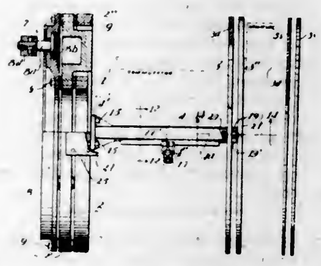
1,378,920. PROCESS OF AND APPARATUS FOR SEPARATING ORE MATERIALS FROM EACH OTHER. ROBERT SAFFORD TOWNE, New York, N. Y., and FREDERICK B. FLINN, Orange, N. J., assignors, by mesne assignments, to Pneumatic Process Flotation Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1914, Serial No. 861,433. Renewed Jan. 5, 1920. Serial No. 349,639. 13 Claims. (Cl. 83—85.)

1. In an apparatus for separating the metalliferous from the non-metalliferous ingredients of an ore mass, the combination of a pulp receptacle having a conical bottom with a discharge opening therein, a porous plate mounted in the lower part of the receptacle with its periphery spaced slightly from the walls of the receptacle, means for supplying air under pressure below the said porous plate and forcing it therethrough to form relatively large substantially uniformly distributed air bubbles, throughout the area of the receptacle and means for supplying ore pulp to the receptacle above the said porous plate, the said pulp being acted upon by the said bubbles to remove the metalliferous ingredients therefrom flowing downward and outward over the periphery of the plate and into the space below it.



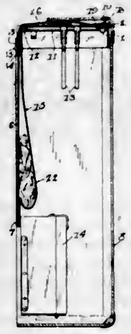
1,378,921. FOUNDATION FOR SPRING STRUCTURES. DESIRE H. VAN HOVE, Jackson, Mich., assignor to The Jackson Cushion Spring Company, Jackson, Mich., a Corporation of Delaware. Filed Aug. 13, 1920. Serial No. 403,297. 3 Claims. (Cl. 5—29.)

1. A foundation for spring structures including channel strips or members composed of intermediate channel portions and flat side portions, and intersecting or connecting strips or members fitted against the flat side portions of the channel members and provided at intervals with bent portions extending into and fitting the channels of the channel portions to interlock the said strips or members, and tongues formed integral with the channel strips or



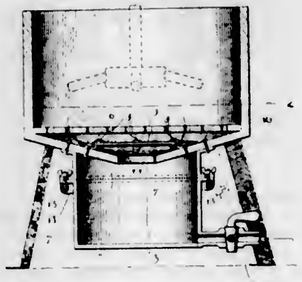
members and extending into the channels thereof and engaging the connecting strips or members to secure the said strips or members in their interlocked relation.

1,378,922. INTERMITTENT-VACUUM MASSAGE-MACHINE. GEORGE A. WARD, Chicago, Ill. Filed May 31, 1919. Serial No. 300,827. 4 Claims. (Cl. 128—40.)



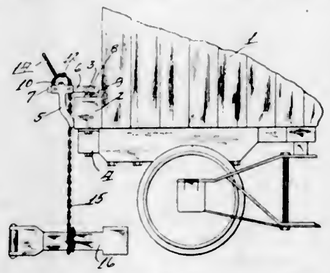
2. The combination with a device adapted to rapidly produce and release a pressure, of a pad applicator connected therewith and having a chamber therein, and a plurality of cells formed on the applicator and each provided with an opening communicating with said chamber.

1,378,923. SUPPORT FOR BRUSH-HOLDERS. WALTER J. WARDER, Jr., Chicago, Ill. Filed Jan. 17, 1918. Serial No. 212,221. 20 Claims. (Cl. 171—324.)



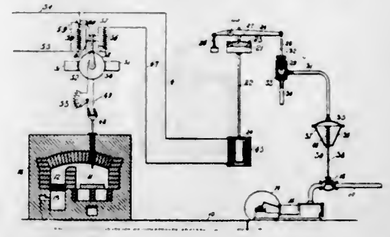
10. Brush holder supporting means for dynamo-electric machines comprising an even numbered series of studs adapted to receive the brush holders, a compound yoke ring whereon said studs are mounted, and a pair of equalizing rings secured to said studs opposite from said yoke ring, each group of alternate studs being in electrical contact both with one of the yoke ring members and with one of the equalizing rings respectively.

1,378,924. TRUNK LAUNDRY-BAG AND COVER. GEORGE HENRY WHEARY, Racine, Wis. Filed Jan. 31, 1918. Serial No. 214,564. 6 Claims. (Cl. 190—13.)



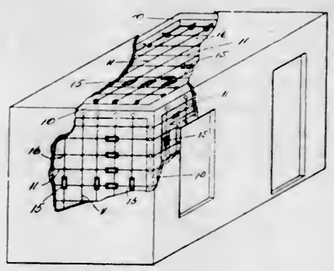
1. The combination with a trunk wardrobe section having an open top and front, and a garment hanger track and hangers mounted thereon, of a laundry bag and cover therefor, comprising a material covering the open top and open front portion, said portion covering the open front being in the form of a bag having a front opening, and means connecting the upper and lower edge portions of the material to trunk section portions.

1,378,925. WASHING-MACHINE. HARRY WAYNE WHITE, Emporia, Kans. Filed Mar. 18, 1920. Serial No. 366,771. 2 Claims. (Cl. 68—15.)



2. A washing machine comprising a receptacle having a funnel shaped bottom provided with a discharge opening, a baffle extending over said opening in spaced relation to said bottom, and a sediment receiving and trapping receptacle arranged beneath said opening and having its upper end closed by said funnel shaped bottom.

1,378,926. DRAWBAR-MOUNTING MACHINE. HERBERT W. WIENKE, Michigan City, Ind. Filed Feb. 9, 1920. Serial No. 357,160. 2 Claims. (Cl. 254—186.)

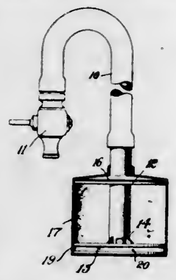


1. The combination with a freight car and the deadhead and deadhead bolts thereof, of a rod adapted to be mounted on said deadhead behind said bolts, and a drawbar mounting machine adapted to removably engage said rod and contact said deadhead to afford a means for raising a drawbar into a position for attachment to said freight car.

1,378,927. TEMPERATURE-REGULATOR. GEORGE S. WITHAM, Jr., Hudson Falls, N. Y. Filed Aug. 1, 1916. Serial No. 112,481. 2 Claims. (Cl. 236—69.)

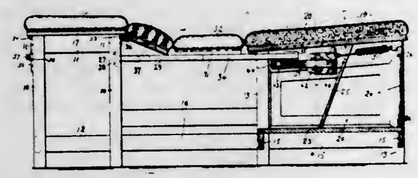
1. Apparatus for regulating the temperature of the combustion chamber of a furnace comprising, in combination, means for producing a draft through said combustion chamber, means for actuating said draft-producing means, means within the furnace for producing electromotive forces proportional to the temperatures therein, a bulb containing vapor, a capsule connected to said bulb, means for producing changes of vapor pressure in said capsule in response to changes in electromotive force produced by said means within the furnace, a controlled air line, a valve in said line adapted to be actuated by the capsule, and means responsive to variations of pressure in said controlled air line for controlling the means for actuating the draft-producing means.

1,378,928. BUILDING CONSTRUCTION. JOSEPH R. WITZEL, Tacony, Pa. Filed June 22, 1920. Serial No. 390,739. 1 Claim. (Cl. 72—1.)



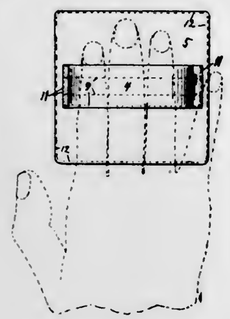
In a building construction, the combination of a supporting structure, means as nails secured to said structure so as to leave a projected part of each nail, vertically and horizontally disposed tensile mediums as wires secured to said nails by windings, said wires being extended across said structure to form a net work, an adjustable device interposed between the secured ends of each and every tensile medium for regulating the tension thereof and a covering of cementitious material applied to said net work of wires.

1,378,929. SIPHON-FILTER. JOSEPH WURSCHER, St. Paul, Minn. Filed Mar. 11, 1920. Serial No. 364,987. 3 Claims. (Cl. 210—94.)



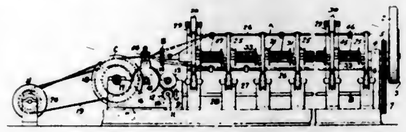
1. A siphon head consisting of an axial tube having thereon a pair of spaced circular disks with one of which one closed end of the tube is integral, said tube having a series of apertures through its wall adjacent to the inner surface of the last mentioned disk forming com-

municating passageways between its bore and the space between the disks, and having its opposite end projecting beyond the outer surface of the other disk to form a connecting nipple, and a straining member of bag-like form



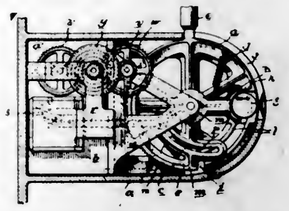
extending around the two disks and having a neck portion secured around the projecting end of the stem and a portion extending between the disks and forming an annular wall for the said space between the disks.

1,378,930. OPERATING-TABLE. FRANK ZAMECNIK, Washington, D. C. Filed Oct. 20, 1920. Serial No. 418,204. 3 Claims. (Cl. 128—72.)



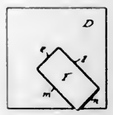
1. A table device of the class described comprising a forward body support, a rear body support, a forward intermediate body support, a rear intermediate body support, means for yieldably supporting said intermediate body support, and means whereby the depression of the intermediate body supports causes the elevation of the rear body support.

1,378,931. WINDSHIELD-CLEANING COMPOSITION. FRANK H. ADLER, Minneapolis, Minn. Filed June 17, 1919. Serial No. 304,935. 1 Claim. (Cl. 87—5.)



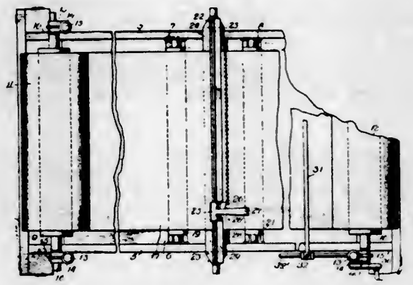
A mixture for the purposes set forth, said mixture being in the form of a powder and composed of the following ingredients in about the following proportions: one pound machine oil, two pounds turpentine, sixteen pounds tobacco, sixteen pounds bran and one hundred and forty-four pounds of wood ashes.

1,378,932. MACHINE FOR MAKING WIRE ROPE. ALBIN E. ANDERSON, Oakmont, Pa., assignor to Pittsburgh Wire Rope Company, Verona, Pa., a Corporation of Pennsylvania. Filed Feb. 25, 1920. Serial No. 361,165. 4 Claims. (Cl. 28—21.)



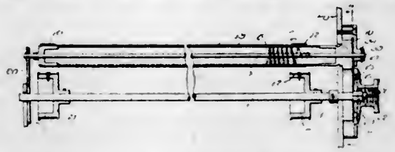
4. In a machine for making wire rope the combination of a rotatable frame comprising a plurality of circular spiders, a plurality of standards, anti-friction rollers carried by the said standards and supporting the said spiders, anti-friction rollers engaging above certain of the said spiders, longitudinal rods connecting the said spiders, bearings carried by the said spiders, shafts having squared ends received in the said bearings, slidable keys adjacent to the said bearings for holding the said shafts in place, and spring-pressed means for positioning the said keys.

1,378,933. COIN-CONTROLLED ELECTRIC SWITCH. JOHN GILBERT BASSETTE, Groton, N. Y., assignor to Groton Electrical Devices Inc., Groton, N. Y., a Corporation of New York. Filed Oct. 28, 1918. Serial No. 260,004. 8 Claims. (Cl. 194—84.)



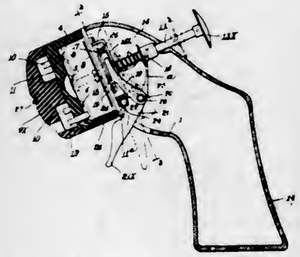
1. In an apparatus of the class set forth, an electric switch, a pair of members adapted to be interlocked by a coin, one of said members being manually operable and the other coin-operated, a spring, means adapted to tension this spring when the coin-connected members are operated, said means serving through the action of the spring to return the coin-operated member to normal position after delivery of the coin, devices for closing the switch by the manual stroke of the coin-operated member upon delivery of the coin and maintaining it closed during the return of the coin-operated member to normal position.

1,378,934. DISPLAY DEVICE. RICHARD C. BEATTY, Chicago, Ill. Filed May 13, 1920. Serial No. 381,046. 2 Claims. (Cl. 211—24.)



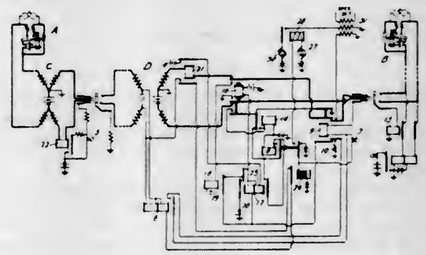
1. A display for cartons consisting of an unstable holding element adapted to rest in an upright position upon a plane support on one or more points along its supporting edge, an opening in the holding element adapted to receive a carton laterally inclined angularly with respect to the bottom edge of the holding element, so the said edge of the holding element in combination with the lowermost edge of the inclined carton will form a stable base for the structure.

1,378,935. CUTTING-MACHINE. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 18, 1919. Serial No. 318,190. 7 Claims. (Cl. 164—73.)



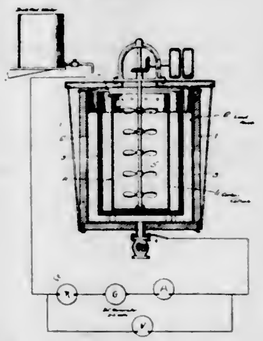
1. The combination of a frame, means for supporting a roll of stock thereon, a continuous carrier, means for moving the carrier through the machine to carry the stock from the roll through and beyond a cutting position, and means for separating the carrier from the stock at cutting position.

1,378,936. SHUTTER MECHANISM FOR CAMERAS. FREDERICK G. BROCKETT, Chicago, Ill. Filed Dec. 22, 1919. Serial No. 346,460. 3 Claims. (Cl. 95—57.)



1. A camera shutter comprising two curtain sections arranged end to end, rollers to which the remote ends of said sections are attached; tapes fastened to the free end of one section, passing around guides on the free end of the other section and extending back lengthwise over the first section; a roller to which the other ends of the tapes are fastened; and gearing between the tape roller and the roller to which is attached the curtain section to which the ends of the tapes are fastened; the parts being so proportioned and arranged that the tapes are wound up and unwound more slowly than the curtain section attached to the roller to which the tape roller is geared so as to increase the size of the shutter opening during the opening movement of the shutter.

1,378,937. TROUBLE-FINDER FOR INTERNAL-COMBUSTION ENGINES. GUILLERMO PÉREZ CASTRO, New York, N. Y. Filed June 22, 1920. Serial No. 390,782. 5 Claims. (Cl. 175—183.)



1. In a device of the character described, a series of contacts adapted to be electrically connected to the spark plugs of a multi-cylinder engine, a plate adapted to be grounded, a shaft carrying the said plate, and means for rotating and reciprocating the shaft to move the plate into and out of engagement with specific contacts.

1,378,938. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 25, 1916. Serial No. 122,011. 5 Claims. (Cl. 179—49.)

1. A telephone exchange system comprising a trunk circuit extending from a first to a second central office, a cord circuit at the first central office connected with the trunk circuit, a signaling device in the trunk circuit and located at the second central office, telephone lines terminating at the second central office, a supervisory relay in the trunk circuit energized upon connection thereof with a busy line over a circuit including the contacts of the switchhook, and apparatus controlled by the supervisory relay for causing the intermittent operation of the signaling device.

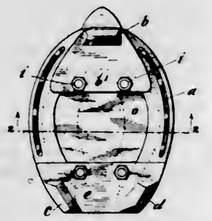
1,378,939. PROCESS OF MAKING THYMOL FROM NITROCYMENE. ROBERT M. COLE, Sandusky, Ohio. Filed Dec. 3, 1919. Serial No. 342,290. 7 Claims. (Cl. 204—9.)

1. The process of making thymol which consists in the electrolytic reduction of nitro-cymene and the diazotization and reduction of the resulting 1 methyl 2 amino 4 isopropyl 5 hydroxy benzol.

1,378,940. AMPLIFIER FOR TELEPHONIC TRANSMITTERS. HARRY T. DALE, New York, N. Y. Filed Mar. 31, 1919. Serial No. 286,274. 1 Claim. (Cl. 179—182.)

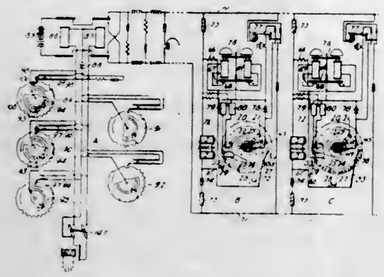
As an article of manufacture, a removable slip cover for a telephonic transmitter, said cover having a relatively thick annular wall and a top, the center whereof is pierced to form a single contracted opening, said top hav-

ing an annular rigid portion adjacent and integral with said annular wall; and a thin vibrant portion integrally



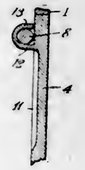
formed with said annular portion adjacent the said opening for forming a sensitive vibrant member for amplifying the acoustic vibration under said top.

1,378,941. APPARATUS FOR HIGH-TEMPERATURE USES. FRANK A. FAHRENWALD, Cleveland Heights, Ohio. Filed Aug. 25, 1919, Serial No. 319,755. Renewed Oct. 4, 1920. Serial No. 414,617. 5 Claims. (Cl. 75—1.)



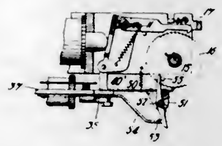
1. Apparatus for high temperature uses made from an alloy comprising a large preponderance of iron together with about 10% to 20% of chromium and about 2% to 6% of silicon, combined with smaller amounts of carbon and manganese.

1,378,942. HORSESHOE. MICHAEL L. FARAY, Boston, Mass. Filed May 22, 1920. Serial No. 383,347. 5 Claims. (Cl. 168—31.)



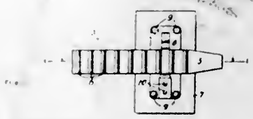
1. A horseshoe having removable calks, locking members adapted to fit the side of the shoe, and means for locking the calks to the locking members.

1,378,943. SELECTIVE SIGNALING SYSTEM. JOSEPH C. FIELD, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed May 18, 1916. Serial No. 98,384. Divided and this application filed Apr. 24, 1917. Serial No. 164,247. 10 Claims. (Cl. 177—343.)



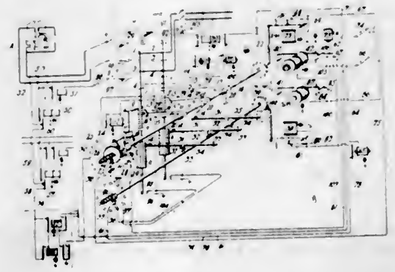
1. In a selective signaling system, line wires joining a sending and a plurality of way stations, a plurality of sets of signaling devices, the signaling devices of each set being at different way stations, a selector at each way station controlling in different signaling positions the signaling devices thereat, a polarized electromagnet for each selector connected in bridge of the line wires and responsive to constant sized groups of current impulses of opposite polarity, to advance the selectors into the different signaling positions, a source of current, and means at the sending station for transmitting over the line wires each of the several constant sized groups of current impulses of opposite polarity in subgroups of predetermined size for selectively operating the signaling devices.

1,378,944. HINGE FOR DOOR-PLATES AND OTHER STRUCTURES. ARTHUR C. GAYNOR, Stratford, Conn. Filed Feb. 9, 1920. Serial No. 357,474. 12 Claims. (Cl. 16—106.)



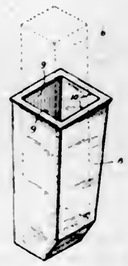
7. As an article of manufacture, a piece of metal having a shaving curved to form a loop or eye, one end of said shaving being integral with said piece of metal, the other end free and lying substantially in the plane of the surface of the said piece of metal.

1,378,945. STEP-BY-STEP CIRCUIT-CLOSING DEVICE. ALBERT F. F. GILSON, Closter, N. J., and OSCAR A. SHANN, Brooklyn, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 12, 1917. Serial No. 180,161. 7 Claims. (Cl. 200—105.)



3. In a step-by-step circuit controlling device, a step-by-step element, a stepping magnet for controlling the advancement of said step-by-step element, a holding pawl for maintaining said step-by-step element in advanced position, a releasing magnet, means operable upon one change in magnetism of said releasing magnet to put said holding pawl into operable relation with said releasing magnet, and operable upon a second change in magnetization, to withdraw said pawl from engagement with said step-by-step element.

1,378,946. FASTENING DEVICE. ALBERT F. F. GILSON, Closter, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1918. Serial No. 265,246. 4 Claims. (Cl. 24—206.)



1. A fastener comprising a strap member having a plurality of resilient corrugations thereon, and a spring member adapted to coöperate therewith, said spring member having a tongue portion perpendicular to the strap member and fitting between adjacent corrugations to hold said members in locked engagement.

1,378,947. MACHINE-SWITCHING TELEPHONE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1917. Serial No. 180,647. 16 Claims. (Cl. 174—27.5.)

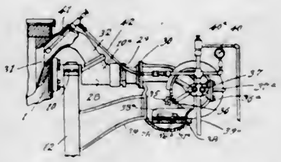
4. In a telephone system, the combination of a plurality of contact banks, a movable shaft for each bank, a driving mechanism common to said shafts, means for operating said mechanism step-by-step to drive said shafts in one direction, means for operating said mechanism step-by-step to drive said shafts in a second direction, and brushes carried by said shafts arranged to coöperate with the contact banks.

1,378,948. REMOVABLE FENCEPOST. ROBERT R. HAGE, Minneapolis, Minn. Filed Oct. 30, 1919. Serial No. 334,605. 1 Claim. (Cl. 189—28.)

A post socket member having contibuous flat plumb walls and an oblique flat wall opposite each plumb wall, the angles of the lower end portions of the oblique walls being materially increased to afford post-engaging surfaces to force a post against the plumb walls, and wedges coöperating with said oblique walls for holding the post against the plumb walls.

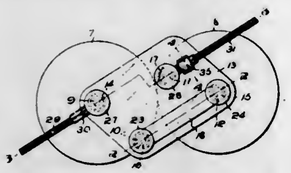
1,378,949. DEEP-WELL PUMP. JOHN HAHN, Los Angeles, Calif. Filed Apr. 1, 1919. Serial No. 286,681. 53 Claims. (Cl. 103—80.)

1. In a pump, the combination of pump tubing, a tubular seat member at the lower end of the pump tubing, a liquid-tight sealing barrel inserted in the seat member, a plunger slidably fitting in the sealing barrel, said plunger being provided intermediate its ends with a cylindrical valve cage having a valve, a discharge valve cage secured to the upper end of the plunger and provided with a valve, a tubular member connected at its upper end to the seat member and provided adjacent its lower end with a second member, a third seat member fitting in the second seat member, a working barrel connected at its lower end to the first tubular member, a standing valve cage mounted in the working barrel above the third seat member and connected thereto and provided with a valve, and a conduit connected with the standing valve cage, the plunger being provided adjacent its lower end with a tubular member of less internal diameter than the plunger and fitting the conduit.



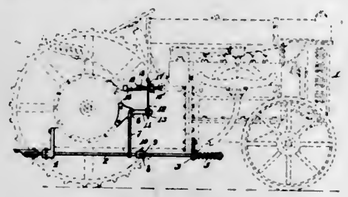
1,378,950. RECORDING-KEY. AUGUSTUS D. HARGAN, Bayonne, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1918. Serial No. 265,227. 2 Claims. (Cl. 179—177.)

1. A key set comprising a frame, a plurality of depressible keys mounted thereon, contact springs for each of said keys, a stem for each of said keys, a pivoted latch plate having apertures therein, means carried by each of said keys and engaged by said latch plate upon depression of its respective key to lock such key in depressed position, and a lug mounted on each of said keys permanently positioned within one of said apertures serving to limit the downward and upward movement of its respective key.



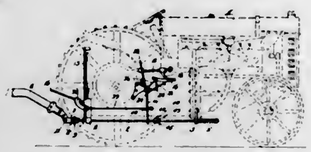
1,378,951. BURNER FOR FURNACES. JOSEPH E. HAUSFELD, Cincinnati, Ohio. Original application filed Dec. 26, 1917, Serial No. 208,776. Divided and this application filed Apr. 3, 1920. Serial No. 371,092. 3 Claims. (Cl. 158—36.)

1. The combination with a furnace having a fuel inlet, of a blower, and means for operating same to furnish a



forced draft through said inlet, an oil pump operatively connected to said blower, and separate gas and oil conduits to said fuel inlet whereby either gaseous or liquid fuel may be utilized.

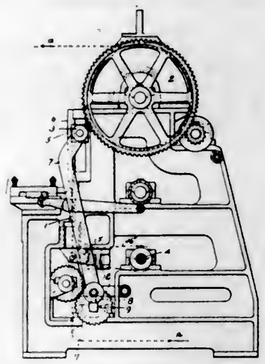
1,378,952. ELECTRICAL CONNECTION. ELLSWORTH A. HAWTHORNE, Bridgeport, Conn. Filed Apr. 4, 1918. Serial No. 226,579. 11 Claims. (Cl. 204—29.)



1. The combination of two batteries, each provided with a pair of terminals, and a battery-connecting insulating plate having four sides and four corners and provided with four terminal-receiving perforations one adjacent each of said corners.

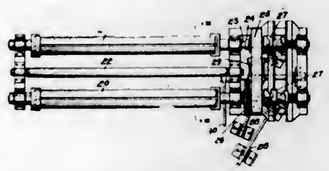
1,378,953. MOTOR-CLUTCH THROW-OUT. EDWARD M. HEYLMAN, South Bend, Ind.; Citizen's Trust & Savings Bank, South Bend, Ind., administrator of said Edward M. Heylman, deceased. Filed Jan. 4, 1919. Serial No. 269,667. 10 Claims. (Cl. 180—14.)

1. An overload throw-out for clutches, comprising a member movable under the overload, and a clutch operating element actuated by said member to release the clutch, such clutch being freed from the influence of such element through further movement of the clutch operating element in the release direction.



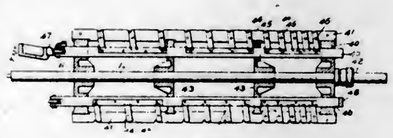
1,378,954. AUTOMATIC CLUTCH THROW-OUT FOR TRACTORS. EDWARD M. HEYLMAN, South Bend, Ind.; Citizen's Trust & Savings Bank, South Bend, Ind., administrator of said Edward M. Heylman, deceased. Filed Jan. 29, 1919. Serial No. 273,818. 12 Claims. (Cl. 180—82.)

3. The combination with a tractor having clutch operating mechanism, of means movable by a backward tilting movement of the tractor operating to actuate said mechanism to release the clutch.



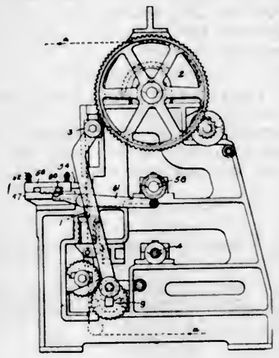
1,378,955. WIRE-FENCE MACHINE. JOHN A. HOLMQUIST, Woodlawn, Pa. Filed Mar. 22, 1920. Serial No. 367,704. 7 Claims. (Cl. 140—13.)

1. In a wire-fence machine, the combination of a plurality of parallel coilers, a take-up roller arranged transversely of said coilers and beyond the delivery ends thereof, and reciprocable in the direction of the longitudinal



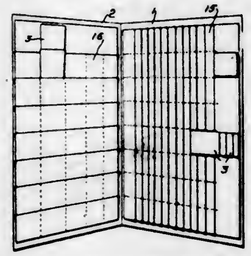
extent of said coilers, and means for drawing strand wires through said coilers and over said roller, substantially as described.

1,378,956. TAKE-UP REEL FOR WIRE-FENCE MACHINES. JOHN A. HOLMQUIST, Woodlawn, Pa. Filed Mar. 22, 1920. Serial No. 367,705. 3 Claims. (Cl. 140—13.)



1. In a wire-fence machine, in combination with machine parts delivering a web of completed fence in continuous length, a reel including a plurality of rotatable cores, removable each from the reel, a source of power, rotation-imparting connection from said source of power to each of said cores, and means for interrupting and making continuous again at will the connection to either of the said cores, substantially as described.

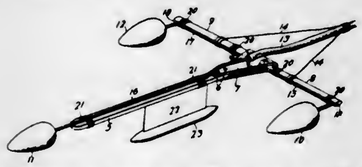
1,378,957. CRIMPING-DRUM FOR WIRE-FENCE MACHINES. JOHN A. HOLMQUIST, Woodlawn, Pa. Filed Mar. 22, 1920. Serial No. 367,706. 2 Claims. (Cl. 140—13.)



1. In a wire-fence machine, a rotary crimping drum including a pair of beams extending longitudinally of the drum and arranged in parallelism, and provided with a succession of alined notches, and a corresponding succession of doubly bifurcated crimping members pivoted to said beams adjacent said notches with fingers overlying each of said beams on either side, and means for swinging said crimping members in predetermined synchronism with the rotation of said drum, substantially as described.

1,378,958. WIRE-FENCE MACHINE. JOHN A. HOLMQUIST, Woodlawn, Pa. Filed Mar. 22, 1920. Serial No. 367,707. 12 Claims. (Cl. 140—13.)

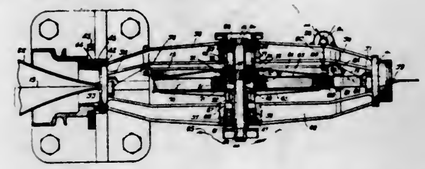
2. In a wire-fence machine, in combination with staywire feeding mechanism, a tipping slide, a knife borne by said slide, means for reciprocating said slide, and means coördinated with said reciprocating means for tipping said slide, substantially as described.



1,378,959. TABULAR SUBFILING FOLDER. MARX HOLT, Chicago, Ill. Filed May 9, 1919. Serial No. 296,033. 3 Claims. (Cl. 129—16.7.)

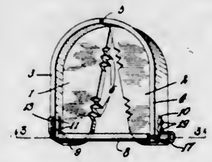
1. A device of the character described comprising a paper filing folder for vertical filing, and plats of pockets secured to the inner faces of both of the leaves of the folder, said plats being formed of thin tough paper plaited and stitched transversely to the plaits.

3. A plat of pockets made out of a single sheet of flexible material folded into plaits and having oppositely projecting tabs at intervals folded around the edges of the plaited sheet and having their free ends secured by pasting, whereby there is formed a series of pockets closed at the ends by said tabs.



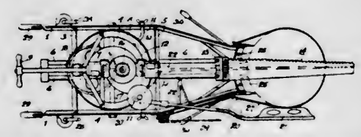
1,378,960. METHOD OF AND APPARATUS FOR DETECTING UNDER-WATER VIBRATIONS. JOSEPH WARREN HORTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,491. 10 Claims. (Cl. 181—0.5.)

1. A method of determining the location of a source of under-water vibrations which consists in towing a plurality of vibration-detecting devices through the water, maintaining such devices in fixed space-relation on intersecting base line and obtaining a binaural balance between the response of said devices whereby the location of said source may be determined.



3. In apparatus for determining the location of a source of under-water vibrations, the combination with a plurality of detecting devices, of means for flexibly supporting said devices in fixed space-relation on intersecting base lines and means for towing said devices through the water.

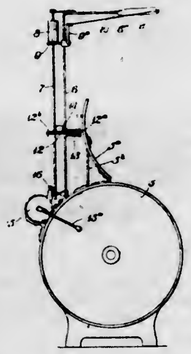
1,378,961. APPARATUS FOR COVERING CORES. JOHN JANICKI, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1917. Serial No. 208,837. 4 Claims. (Cl. 28—6.)



1. In a mechanism for covering wire with tape, a tape roll, a rotatable flier in which said tape roll is rotatably mounted, a wire to be served with tape from said roll, a pressure controlled brake for said tape roll, a centrally pivoted arm operatively connected with said brake, and pulleys upon the ends of said centrally pivoted arm over which said tape passes in opposite directions to control the application and release of the brake pressure upon said tape roll in accordance with the tension upon said tape.

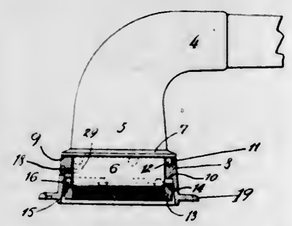
1,378,962. ANTISLIPPING DEVICE. GEORGE KABACIJ and ANDREW BARTUS, Wyatt, W. Va. Filed Aug. 24, 1920. Serial No. 405,612. 5 Claims. (Cl. 36—64.)

1. An anti-slipping device comprising a pair of plate sections hinged together at one end and provided with spikes, means on said plate sections adapted to grip the sides of a heel, a bar hinged at one end to the free end of one section, a member on the other end of the bar adapted to engage the other section to cause the device to grip a heel, and a spring pressing said member against the said other section.



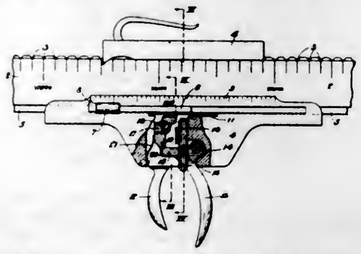
1,378,963. PORTABLE MOTOR-SAW FOR FELLING TREES, CUTTING LOGS, AND SAWING WOOD. KNUT ROBERT JOHAN LAGUS, Åbo, Finland. Filed Sept. 28, 1917. Serial No. 193,629. 3 Claims. (Cl. 143—68.)

1. In a motor saw, the combination of a portable frame, a horizontal ring, disk or the like, mounted in said frame for rotary and horizontally tilting movements, a motor



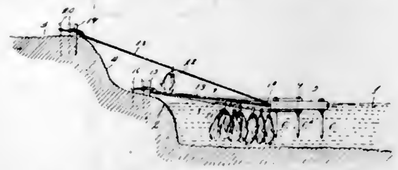
carried by said ring, a rod slidingly mounted on said ring, means for fixing a saw-blade to said rod in either a vertical or horizontal position, arms fixed to said frame, and rollers journaled on said arms for supporting said ring during the tree felling operation, said arms being movable to clear the ring and permit the vertical tilting of said ring.

1,378,964. MEANS FOR EXTINGUISHING FIRES IN VESSELS. FREDERICK H. LANG, Columbus, Ohio. Filed July 6, 1920. Serial No. 394,111. 5 Claims. (Cl. 220—89.)



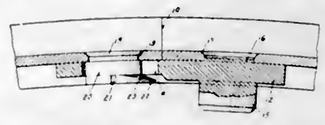
1. Means for closing the cover of a chamber such as described comprising, in combination, a weight, thermally controlled means for supporting the weight, a spring actuated pusher to act on the cover if in opened position, and a latch to hold said pusher under tension in operative position, said latch located to be released by the weight when the latter falls.

1,378,965. TONE-ARM BEARING FOR TALKING-MACHINES. HENRY LUBÉ, College Point, N. Y. Filed Jan. 3, 1920. Serial No. 349,190. 1 Claim. (Cl. 64—49.)



The combination of an outer relatively fixed tubular member and an inner relatively movable tubular member adapted to fit and rotate within said outer member, which latter is provided with an upper flat surface and an upper interior straight wall adjacent the said flat surface, a plurality of sockets formed in said outer tubular member, antifriction balls in said sockets arranged to project from the latter upwardly above the said flat surface and inwardly beyond the said straight wall, a lateral shoulder formed in said inner tubular member and adapted to rest upon the said balls, said inner tubular member being further provided with a vertical portion adapted to contact with the said antifriction balls on the sides thereof, an annular flat shoulder formed on said outer tubular member below the said interior straight wall, said outer tubular member being further formed with a tapering inside wall below the said annular flat shoulder, a threaded portion at the lower end of said inner tubular member, a ring screwed thereon, a plurality of sockets formed in the said ring, antifriction balls in said sockets in the said ring, the last mentioned antifriction balls being arranged to contact with the said annular flat surface and the said tapering inside wall to form a lower ball bearing between the said two members.

1,378,966. SAFETY-LATCH FOR RECORDING SCALE-BEAMS. EDWARD MCGARVEY, Beaver Falls, Pa., assignor to Standard Scale & Supply Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Jan. 26, 1920. Serial No. 354,018. 6 Claims. (Cl. 265—6.)

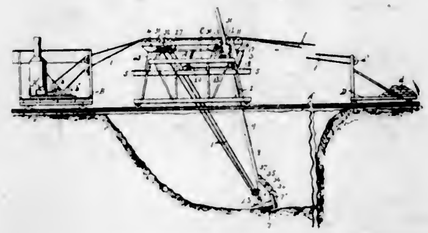


1. In a recording scale beam having a printing platen and a card receiving cavity; means for actuating the platen and a device mounted in operative relation to such cavity for locking and unlocking the platen actuating means.

1,378,967. STREAM-DEFLECTOR. JAMES M. MAHER, Fremont, Nebr. Filed Sept. 18, 1920. Serial No. 411,093. 3 Claims. (Cl. 61—3.)

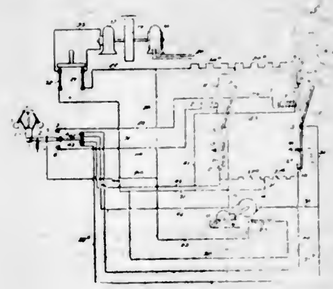
1. A stream deflector comprising a float having downwardly projecting piling, metallic bars having their inner ends anchored at spaced points to the stream bank and their outer ends pivoted centrally of the float, cables extending from the float to the stream bank, said cables and metallic bars forming means for guiding bunches of brush to a point adjacent the float for causing said float to sink and for causing the bank to build up incident to the shifting of sand and sediment.

1,378,968. DEMOUNTABLE RIM. FRANK K. MALLISON, Akron, Ohio, assignor, by mesne assignments, to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 9, 1915. Serial No. 65,871. 2 Claims. (Cl. 301—30.)



1. In a demountable split rim, a fastening device comprising a plate secured to one end of the rim and overlapping the split and provided with a slot, a turn button having an overhanging portion relatively mounted on the other end of said rim adapted to pass through the slot in one position and to lock the rim in another position, and a wedge surface on the under side of said overhanging portion.

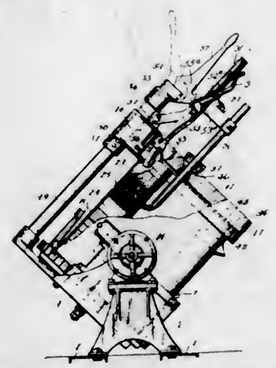
1,378,969. METHOD OF MANUFACTURING INDUCTANCE-COILS. IVAN L. MILTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1920. Serial No. 367,896. 3 Claims. (Cl. 178—46.)



1. The process of manufacturing a magnet core which comprises baking said core, demagnetizing said core and subsequently subjecting said core to a second baking.

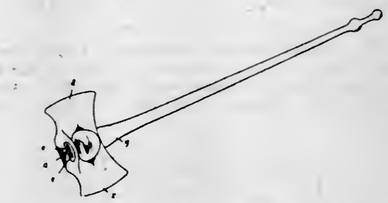
1,378,970. TRENCHING APPARATUS. THOMAS F. MOORE, Dover, N. J. Filed Feb. 18, 1919. Serial No. 277,797. 11 Claims. (Cl. 214—131.)

1. Trenching apparatus comprising in combination with a track along the trench line, a power device and an anchorage both stationed some distance apart, said anchorage having a sheave thereon, a car movable along the track between said power device and anchorage, a cable-supporting sheave on the front end of the car, a dipper having a supporting beam movable about an axis near the rear end of the car and having an independent endwise movement, a fall block attached to said dipper, and a cable passing around the sheaves and fall-block and attached to the power device.



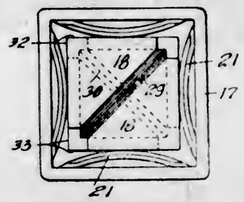
1,378,971. ELECTRIC REGULATOR. WILLIAM E. MOORE, Pittsburgh, Pa. Filed Nov. 16, 1918. Serial No. 262,805. 22 Claims. (Cl. 171—312.)

1. A regulator, comprising a governor having a movable element, a source of current, a motor, means controlled by the governor for connecting the motor with the source of current, and electro-magnetic means comprising two independent oppositely acting portions connected with said motor for exerting a reactive force on said governor element.



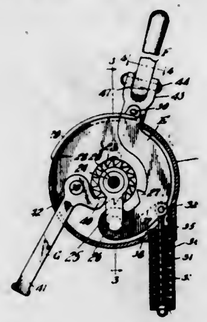
1,378,972. ELECTRIC FURNACE. WILLIAM E. MOORE, Milwaukee, Wis. Filed July 18, 1919. Serial No. 311,802. 34 Claims. (Cl. 204—64.)

14. In an electric furnace, having a crucible of cylindrical shape or circular section, provided with conductive walls, the combination with a roof, and electrodes entering through the roof, of means for varying the inclination of said electrodes to the plane of the roof, so that the arc may be struck between the electrodes themselves or between one or more of the electrodes and the conductive



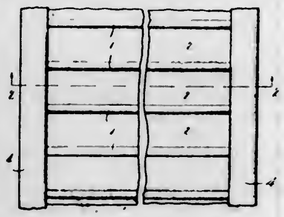
wall of the furnace, means for rotating said cylindrical crucible about its axis, and means for varying the inclination of such axis.

1,378,973. AX. WILLIAM R. MUNZER, Emetta, Minn. Filed Dec. 20, 1920. Serial No. 431,971. 3 Claims. (Cl. 145—2.)



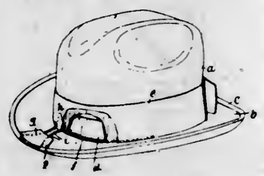
2. The combination with a double bitted ax of the character described having the usual handle socket therein, of a third scoop-like bit extending forwardly of the front edge of the ax and formed integral therewith, said third bit socket, having a straight flat under bearing surface disposed at an angle to the axial line of the handle, and a shoulder longitudinally of said third bit terminating the lower portion of the handle socket, substantially as described.

1,378,974. SHOCK-ABSORBER. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 6, 1919. Serial No. 302,250. 9 Claims. (Cl. 267—9.)



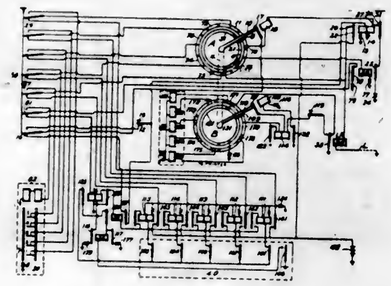
1. In a shock absorbing mechanism for vehicles having a body element, the combination with an axle, of a semi-elliptic main spring, and an auxiliary friction shock absorbing mechanism interposed between said main spring and the axle at the center of the spring, the spring being directly supported on one part of the mechanism and another part of the mechanism being directly supported on the axle.

1,378,975. HAND-BRAKE FOR RAILWAY BOX-CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Feb. 4, 1920. Serial No. 356,346. 4 Claims. (Cl. 74—114.)



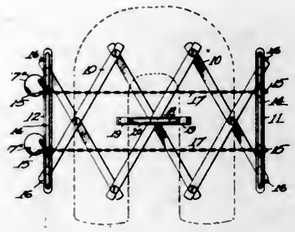
1. In a hand brake mechanism adapted for use at the top of box cars, the combination with a housing, of a member rotatably mounted therein having a ratchet wheel rigid therewith, a locking dog coöperable with said ratchet wheel, a pawl-operating lever extending through the housing upwardly, spring means normally holding said pawl-operating lever in inoperative retracted position, and a handle pivotally attached to the outer end of said lever, said lever oscillating in a plane parallel to the end wall of the car and the handle being pivotally movable on the lever in planes perpendicular to the end wall of the car.

1,378,976. SHEET-METAL CURTAIN. ENOCH OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed June 27, 1919. Serial No. 307,169. 7 Claims. (Cl. 189—56.)



1. A flexible metal curtain comprising an integral sheet of metal bent to form a plurality of parallel, transversely extending, spaced ribs, with substantially flat panel sections between the ribs.

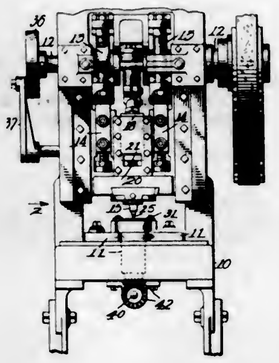
1,378,977. HAT-BRIM STIFFENER. JOHN PARMLEY, Paterson, N. J. Filed Oct. 12, 1920. Serial No. 416,418. 4 Claims. (Cl. 2—108.



1. A hat-brim stiffening device including a body part adapted to be secured to and having a piercing portion adapted to penetrate the crown portion of a hat and a brim-stiffening part proper rigidly projecting from the body part.

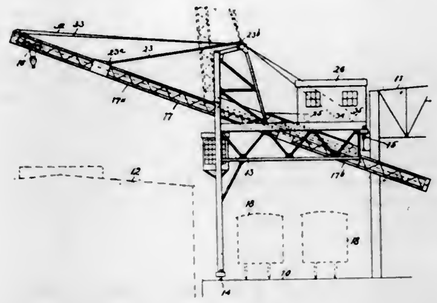
1,378,978. TELEGRAPH SYSTEM. PAUL M. RAINEY, Glen Ridge, and ANDREW D. DOWD, Hoboken, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 22, 1917. Serial No. 176,390. 16 Claims. (Cl. 178—33.)

16. In a printing telegraph system, a line circuit, a source of current normally included therein, a distributer mechanism comprising conducting segments, a plurality of local circuits connected to said segments, circuit-closing mechanism for selectively connecting current to said local circuits, and means controlled by said circuit-closing mechanism for initially opening the line circuit and for initiating the operation of said distributer mechanism.



1,378,979. ARTICLE-HOLDER. HARRY E. ROBINSON and DANA L. ORDWAY, Marlboro, Mass. Filed July 21, 1919. Serial No. 312,211. 2 Claims. (Cl. 220—6.)

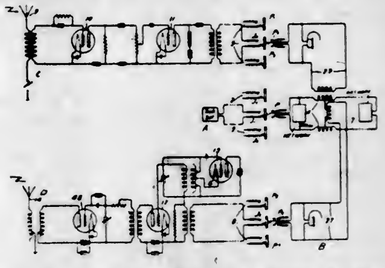
1. An article holding device comprising two opposed rigid raised sides, a plurality of bottom members forming an expansible connection between said opposed sides, the other two sides of the device being open and unobstructed, flexible binding means secured at one end to one of said rigid sides, clamping means on the opposite side for detachably securing said binding means to said opposite side at any point in its length, and spring take-up and storage devices for said binding means.



1,378,980. APPARATUS FOR MAKING NUTS. GEORGE I. ROCKWOOD and HJALMAR G. CARLSON, Worcester, Mass.; said Carlson assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1917. Serial No. 145,124. 9 Claims. (Cl. 101—76.)

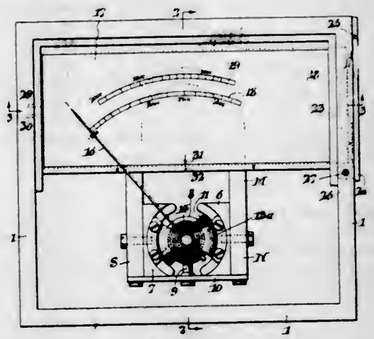
1. In a machine for making nuts, the combination of a plunger having non-cutting screw threads thereon, a single female drawing die coöperating therewith and located in position for the plunger to force the blank into it, said female die having die surfaces for forcing the metal of the blank into the screw thread on the plunger

to produce a nut, and means for unscrewing the nut while the plunger is completing its stroke, coming to rest, and starting back.



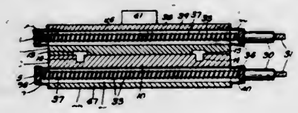
1,378,981. DOCK-CRANE. FORD L. SABIN, Cleveland Heights, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1919. Serial No. 332,967. 7 Claims. (Cl. 212—15.)

1. A dock crane comprising a crane structure having a boom for a trolley, the boom being composed of relatively movable sections along both of which the trolley is adapted to travel, one section mounted for end wise movement in the crane structure.



1,378,982. SIGNALING SYSTEM. HERBERT E. SHREEVE, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1918. Serial No. 254,480. 22 Claims. (Cl. 250—6.)

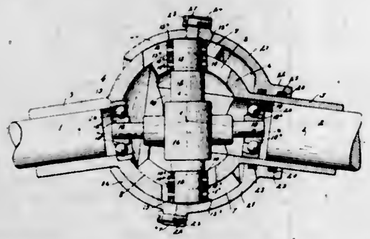
1. In combination, means for receiving radio signal waves and for detecting said waves, a central station, an asymmetric receiving channel connected to said detecting means and terminating at said central station, independent means for transmitting radio signal waves modified in accordance with signals, an asymmetric transmitting channel connected to said independent means and terminating at said central station, a two-way signal line ter-



minating at said central station and means at said central station for connecting said signal line to said transmitting channel and said receiving channel at will.

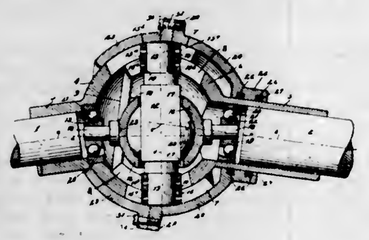
1,378,983. ELECTRICAL MEASURING APPARATUS. IRVING B. SMITH, Ambler, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 25, 1918. Serial No. 230,617. 7 Claims. (Cl. 88—14.)

1. Measuring apparatus comprising a galvanometer having a deflecting pointer carried by its movable member and a scale holder over which said pointer deflects, means having a characteristic variable in accord with the unknown quantity to be measured, variation of said characteristic being accompanied by deflection of said pointer to correspond with said unknown quantity, said unknown quantity being other than electrical in nature, a scale for said galvanometer adapted to be held by said scale holder and reading directly in units of said quantity to be measured, the markings of said scale being dependent upon the characteristics of said galvanometer and the particular said means, and means for relating said scale to said holder in such position that a deflection of said pointer indicates a scale reading of said unknown quantity.



1,378,984. METHOD OF AND APPARATUS FOR MAKING DIE-CASTINGS. JOSEPH SOSS, New York, N. Y. Filed Jan. 21, 1920. Serial No. 353,038. 12 Claims. (Cl. 22—74.)

1. The herein described method of making die-castings which consists in providing a suitable die and heating said



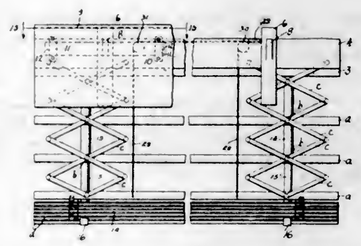
die by an electrical heating element which is independent and movable toward and from said die and adapted to operate in connection therewith, passing the molten metal through said element to said die and cooling that portion of the heating element through which the molten metal passes.

1,378,985. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to The Paragon Machine Tool & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 1, 1920. Serial No. 385,486. 6 Claims. (Cl. 64—91.)

1. The combination, with a driving shaft and a driven shaft arranged angularly with respect thereto, of coupling members carried by the proximate ends of said shafts, respectively, a driver, a rocking connection between each end of said driver and said members, pins projecting in opposite directions from said driver and movably mounted thereon, and means carried by the driving shaft and the driven shaft and coöperating with said pins thereby to force the driver to follow a predetermined path during the rotation of said shafts.

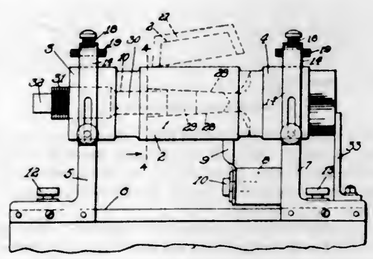
1,378,986. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to The Paragon Machine Tool & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 1, 1920. Serial No. 385,487. 5 Claims. (Cl. 64—91.)

1. The combination, with a drive shaft and a driven shaft arranged angularly with respect thereto, of coupling members carried by the proximate ends of said shafts, respectively, a driver, a rocking connection between each end of said driver and said members, a hub mounted on said driver and movable with respect thereto in the direction of rotation of said driver, and means coöperating with said hub and adapted to engage opposite sides of said driver thereby to compel the latter to follow a predetermined path during its rotation.



1,378,987. DEVICE FOR CLEANING BUTTONS OR THE LIKE. EDWARD WESSELY, New York, N. Y. Filed Nov. 19, 1920. Serial No. 425,093. 2 Claims. (Cl. 51—171.)

1. A device of the character described, consisting of a box having a central longitudinal slot in its bottom and a cross-slot in one of its side walls, a lid hinged to the opposite side wall of said box and having flanges on three sides, of which two embrace the corresponding walls of the box, and of which the front flange is extended, and



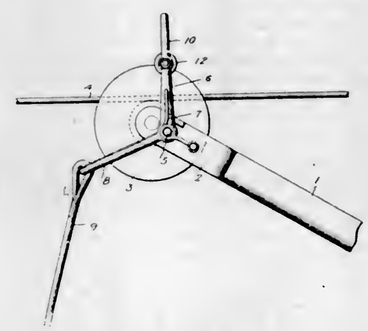
adapted to bear on the bottom of said box when the lid is closed and to engage said cross slot, a spindle rotatively borne in said lid, and a polishing disk having means for its engagement with said spindle.

1,378,988. SAFETY-GUARD FOR AUTOMOBILES. JOHN WILHELM, St. Louis, Mo. Filed Mar. 7, 1921. Serial No. 450,339. 7 Claims. (Cl. 293—34.)

1. In combination with an automobile frame, a safety guard supported on the front of said frame, said guard comprising a supporting plate, an extensible apron consisting of a vertical and horizontal section, said vertical section being suspended from the plate and the horizontal section being hinged to the vertical section, the vertical section being composed of a series of bars pivotally connected to lazy-tongs devices, and the horizontal section being composed of a series of grid units hinged together, and means for supporting the apron sections in their extended positions.

1,378,989. SUPPORT FOR EXPANDING REAMERS. GEORGE L. WOOD, Worcester, Mass. Filed Aug. 17, 1920. Serial No. 404,218. 3 Claims. (Cl. 51—225.)

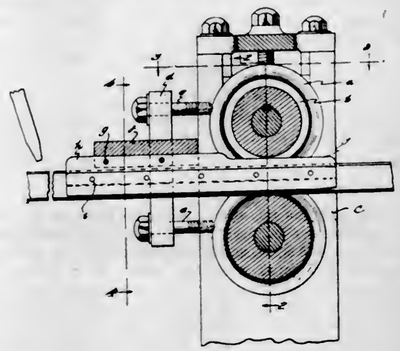
1. A support for a reamer of the class described, during the operation of grinding, comprising a pair of V-shaped



supports spaced apart and adjustably supported in alinement with each other, a slotted clamping bar attached to each of said V-shaped supports and vertically adjustable, and a screw threaded forked clamp held in said slotted bar, carrying a check nut to prevent its upward movement.

1,378,990. SIGNALING DEVICE. JAMES A. WOTTON, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1918. Serial No. 239,762. 3 Claims. (Cl. 177—329.)

1. In a visual signal device, a face member provided with a circular aperture, a conoidal target member normally adapted to partially protrude through the aperture of said face member, and electromagnetic means to withdraw said target member from said aperture.

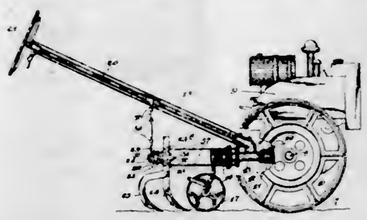


1,378,991. TROLLEY-POLE HEAD. GEORGE TRAFFORD BELL, Boston, Mass., assignor, by mesne assignments, to J. F. C. McCarthy, Boston, Mass. Filed Aug. 9, 1919. Serial No. 316,377. Renewed Mar. 30, 1921. Serial No. 457,027. 2 Claims. (Cl. 191—78.)

1. The combination with a trolley pole of a contact wheel carried thereby, guard arms fixed against lateral movement at opposite sides of said wheel, resilient means maintaining said arms in upstanding position, said arms having fixed inwardly-extending upper end portions disposed above said wheel, said end portions being normally out of contact with the trolley wire and separated by a gap sufficiently wide to permit said wire to pass therethrough, and inwardly-extending lateral portions arranged in close proximity to said wheel at the periphery thereof, means for pivotally connecting said arms at their lower ends to opposite sides of the trolley pole and a member joining said arms together, said member being arranged for the connection of a manipulating cable.

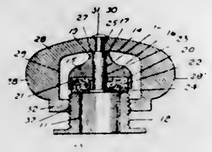
1,378,992. GUIDE FOR TUBE-MAKING MACHINES. RICHARD O. BERG, Detroit, Mich., assignor to Michigan Steel Tube Products Company, Detroit, Mich., a Corporation of Michigan. Filed June 3, 1920. Serial No. 386,403. 8 Claims. (Cl. 153—32.)

1. A guiding device for a tube making machine, having in combination, a pair of feed rolls, a guiding fin, and a mandrel supported adjacent the feed rolls with both the



guiding fin and the mandrel running between the feed rolls.

1,378,993. SLIDE-RULE. ERICH BÖHNKE, Brooklyn, N. Y. Filed Mar. 19, 1919. Serial No. 283,523. 2 Claims. (Cl. 235—70.)

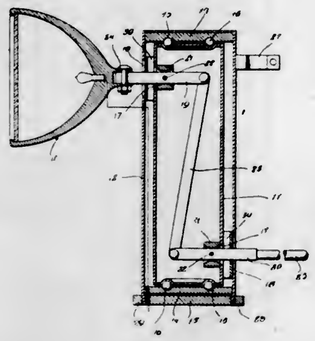


1. An apparatus for calculating the working time of an employee consisting of a "clock" scale divided into units of equal length representing the hours of the day, a "regular time" scale divided into units representing hours and equal to the units of said clock scale, and an "overtime" scale divided into equal units representing hours, the ratio between the length of the units of said overtime scale and said clock scale being dependent on the amount of time per hour with which the employee is credited for hours or fractions thereof worked after the close of the working day and the units of said regular time scale and said overtime being adapted to register with the units of said clock scale.

1,378,994. CULTIVATOR ATTACHMENT FOR TRACTORS. ORAN K. BROWN, Evanston, Ill. Filed May 23, 1919. Serial No. 299,363. 3 Claims. (Cl. 97—42.)

1. In combination with a wheeled frame a single rearwardly projecting handle bar support, rigidly connected to the frame so that the same will be steered by lateral movements thereof, of a single handle bar mounted in said support for oscillatory movements therein, but movable laterally therewith to steer the frame, a single tool-equipped tool-supporting bar, approximately parallel links supporting said bar for movement transversely of said frame, and a connection between said handle bar and said tool-supporting bar for moving the same transversely of the frame.

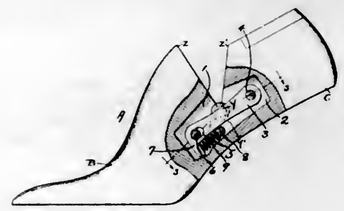
1,378,995. STOPPER FOR CONTAINERS. CHARLES A. BUNKER, Kansas City, Mo. Filed Mar. 18, 1920. Serial No. 366,799. 2 Claims. (Cl. 215—43.)



1. The combination with a container having an externally screw-threaded neck and an internally screw-threaded collar on said neck, and a thumbpiece having downward extensions connected with the collar, of a hollow cap adapted to receive the neck of the bottle, said cap having a central or axial opening and a pin in said opening pivotally connected with said thumb piece at its upper end and a disk on its lower end, adapted to nearly close the entrance to the neck of the bottle in a downward movement of the cap, and a packing in said hollow cap adapted to be compressed upon the upper edge of the neck of the bottle within the hollow cap in a sealing movement of the bottle within the packing.

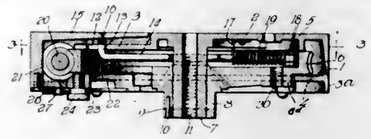
1,378,996. ALLOY. FREDERIC E. CARTER, Newark, N. J., assignor to Baker & Company, Inc., a Corporation of New Jersey. Filed July 17, 1920. Serial No. 396,930. 1 Claim. (Cl. 75—1.)

An alloy containing substantially ½%–5% palladium, 5%–15% gold and the rest platinum.



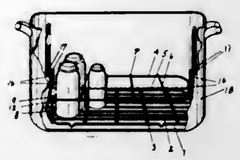
1,378,997. SPOTLIGHT. OHIO COLUMBUS BARBER CLARK, Akron, Ohio. Filed Mar. 20, 1920. Serial No. 367,361. 4 Claims. (Cl. 240—7.)

1. A device of the class described comprising a support, a casing rotatably mounted thereon, parallel arms pivoted within the casing and projecting therefrom at opposite sides, a link connecting the corresponding extremities of said arms, a lamp carried by one arm, and a handle carried by the other arm controlling the pivotal movement of the lamp for vertical adjustment, and the partial rotation of the casing for the purpose specified.



1,378,998. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Aug. 16, 1919. Serial No. 317,911. 6 Claims. (Cl. 12—136.)

1. A last having a toe part and a heel part provided with a transverse bearing member frictionally held in place therein, a link connecting said toe and heel parts and means coöperating with said link and mounted in one



of said parts for maintaining the same in extended position and in broken position and for preventing accidental dislodgment of the transverse bearing.

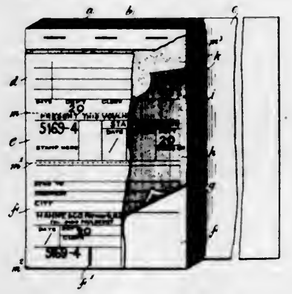
1,378,999. TURNTABLE-SUPPORT FOR CAMERAS. ERNEST W. DAVIS, Chicago, Ill., assignor to Burke & James, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 24, 1919. Serial No. 299,529. 4 Claims. (Cl. 248—45.)

1. In a rotatable tripod head, a casing having a central stem, a worm-wheel housed therein having flexible spokes, an internal surface on the casing adapted to bear on the rim of the worm-wheel, and an adjustable element on said stem carrying said worm-wheel and adapted to force the same against the said surface of the casing against the spring of said spokes.

1,379,000. CANNING-RACK. BROCKWAY DICKIE, Albion, Mich., assignor to The Union Steel Products Company, Ltd., Albion, Mich., a Corporation of Michigan. Filed May 8, 1920. Serial No. 379,928. 2 Claims. (Cl. 53—1.)

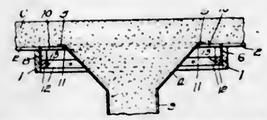
1. In a canning rack, the combination of a base, a retaining frame comprising a border member and cross rods, bail-like supporting links for said retaining frame having eyes at the ends of their arms engaging said base, their bight ends being looped over said retaining frame border member with their cross portions within the ends of said base, locking members pivoted on said cross portions of said supporting links, one of said locking members being provided with a loop engaging one end of the base and the other with a hook detachably engageable with the other end whereby said retaining frame is held in its erected position when said hook is engaged.

1,379,001. DOOR AND WINDOW SCREEN. VERNON L. DIVEN, Ogden, Utah. Filed Mar. 2, 1920. Serial No. 362,840. 7 Claims. (Cl. 156—14.)



7. The combination with a frame, and a screen fabric therefor; of upper and lower metal plates surrounding

the opening in the frame and whereof each has an arched body portion and a flat flange projecting from the inner edge of said portion, the flanges being provided with registering holes, the lower flange with openings at intervals, and the upper flange with spurs adapted to be passed

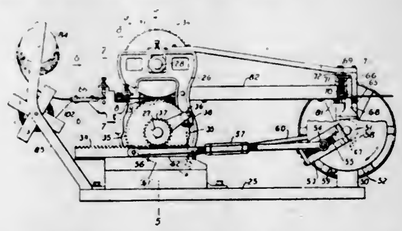


through the fabric and openings and upset, the outer edge of the body of the upper plate having an inturned lip forming with said body a channel in which the outer edge of the body of the lower plate is hingedly mounted, and fastening devices passing through the registering holes and the interposed fabric and into the frame.

1,379,002. STORE-SERVICE CHECK. HARRY A. DORR, Newark, N. J., assignor to Hahne & Company, Newark, N. J., a Corporation of New Jersey. Filed Apr. 26, 1920. Serial No. 376,518. 2 Claims. (Cl. 282—9.)

1. A store service check comprising in separable portions appropriately designated and each identified by a check number and arranged in the order named, first, at the free end an item slip for the customer, with a weakened line between it and the other portions of the check to permit to to be separated therefrom at the time of sale, a stamp voucher slip normally continuous with the item slip with a weakened line between it and the item slip and between it and the other portions of the check, an address slip adapted to be attached to the package containing the goods normally continuous with the stamp voucher slip, and a carbon duplicate portion folded to underlie said item slip, stamp voucher slip and address slip and adapted to receive a duplicate of the entries thereon, the address slip and carbon duplicate portion being normally continuous to permit them to be forwarded without separation with the goods to be packed for delivery.

1,379,003. REMOVABLE FLOOR-FORM SECTION FOR USE IN CONNECTION WITH COLUMN-FORMS USED IN SLAB CONSTRUCTION. HERMAN J. EBERLE, St. Louis, Mo. Filed Aug. 4, 1919. Serial No. 315,225. 5 Claims. (Cl. 25—131.5.)



1. In combination with a floor form having an opening and the head of a column form, a removable form comprising two units positioned in the floor form opening to close the opening between the side walls of the floor form opening and the head of the column form, and means removably fixed to the floor joist for positioning the removable form section at any desired elevation within the floor form opening.

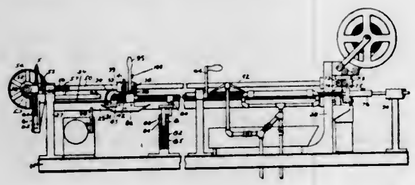
1,379,004. GREASE AND OIL GUN. ERICH EDELMANN, Chicago, Ill. Filed July 2, 1919. Serial No. 308,236. 5 Claims. (Cl. 221—79.)

1. In a device of the class described, the combination of a barrel having a longitudinal opening in the wall thereof and an outlet at one end, a plunger adapted to reciprocate in the barrel so as to force the contents through the outlet, a cap on the end of the barrel having an aperture in alinement with the longitudinal opening, a panel slidably mounted in the longitudinal opening and operable through the aperture of the cap, and means engaging the inner face of the panel at the inner side of the end cap for holding the panel in alinement with said aperture.

1,379,005. MACHINE FOR AUTOMATICALLY EDGING, PERFORATING, AND CUTTING OFF STRIPS OF METAL. CHARLES A. ELIGH, Detroit, Mich., assignor to Long Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 5, 1916. Serial No. 135,102. 5 Claims. (Cl. 113—1.)

1. A machine for punching and forming sheet metal, comprising a pair of rotary work advancing die members, one of said members being studded with punches and the other correspondingly apertured for engagement by said punches, means for intermittently driving said rotary members in accurately timed relation, a shearing blade, and means for actuating the same during the intermissions of rest of said die members.

2. A machine for forming and punching sheet metal, comprising a pair of rotary work-advancing die members, one of said members being studded with punches and the other correspondingly apertured for engagement by said punches, means for driving said rotary members in accurately timed relation, edge-forming means engageable with the work in advance of said rotary members, and means for cutting the work into predetermined lengths.

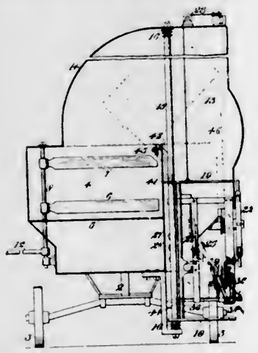


3. A machine for punching and forming sheet metal, comprising a pair of rotary work advancing die members, one of said members being studded with punches and the other correspondingly apertured for engagement by said punches, means for driving said rotary members intermittently and in accurately timed relation, and means for varying the intermittent angular advance of the rotary members.

4. A machine for punching and forming sheet metal, comprising a pair of rotary work-advancing die members, one of said members being studded with punches and the other correspondingly apertured for engagement by said

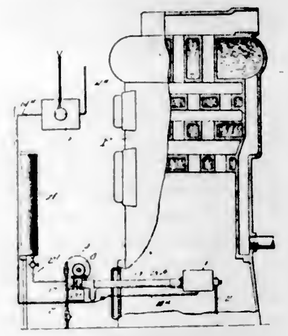
punches, a rack and pinion drive mechanism for said rotary members, means for reciprocating said rack and means for varying the stroke of the rack, pawl and ratchet means for driving the rotary members intermittently in a constant direction from said rack and pinion mechanism, and means for shearing the work during the intermissions of rest of said rotary members.

5. A machine for punching and forming sheet metal, comprising a pair of rotary work advancing die members, one of said members being studded with punches and the other correspondingly apertured for engagement by said punches, a step by step drive mechanism for intermittently rotating the work advancing members in a constant direction, means for varying the rotative feed of said members and means for shearing the work during the intermissions of rest of said members.



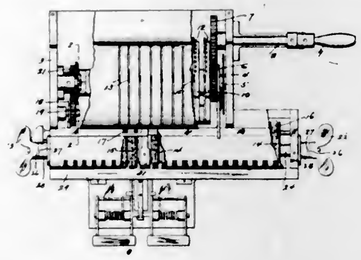
1,379,006. METHOD AND MACHINE FOR MAKING RADIATOR-TUBES. CHARLES A. ELIGH, Detroit, Mich., assignor to Long Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 28, 1915, Serial No. 36,651. Renewed Apr. 1, 1920. Serial No. 370,539. 21 Claims. (Cl. 113—33.)

1. A machine for making radiator tubes, comprising means for supporting and rotating a tube at various velocities, means for winding a fin thereon, means for applying flux and solder, a flame to heat the parts and fuse the solder, and excess solder removing means adjacent to the flame, comprising means for directing a jet of air upon the rotating tube and fin while the solder is fluid.



16. The method of making radiator tubes comprising the driving of a tube section to spirally wind a fin thereon, securing the fin to the tube during the winding operation, coupling another tube section to that being driven to drive the same thereby before the completion of the winding on the first section and continuing the winding across the junction of the two sections, subsequently severing the fin at the junction, removing the first section and continuing to drive the second section by the wound portion thereof.

1,379,007. REFUSE-COLLECTION VEHICLE. ATAULFO FERNÁNDEZ, San Francisco, Calif. Filed Jan. 12, 1920. Serial No. 350,817. 12 Claims. (Cl. 214—67.)



1. A refuse collection vehicle, comprising a body, an elevator associated with said body, a can carrier mounted on said elevator, and a plurality of dogs adapted to engage the upper edge of a can on the carrier, arranged on the carrier at vertically spaced points.

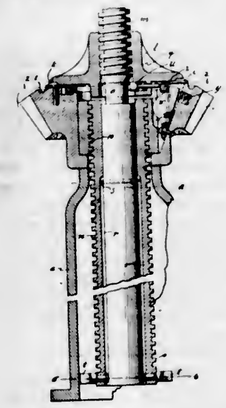
1,379,008. TEMPERATURE-PRODUCING MECHANISM AND CONTROLLING MEANS THEREFOR. ALBERT B. FRENIER, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,463. 24 Claims. (Cl. 158—28.)

1. In combination, a heating device including a fire-box, a liquid fuel burning combustion chamber mounted within said fire-box and independent thereof, a liquid fuel atomizer for spraying liquid fuel into said combustion chamber, and means for igniting said fuel, said combustion chamber operating to substantially confine said flame within said chamber and to prevent same from impinging against the walls of said fire-box.

1,379,009. CALCULATING-MACHINE. CARL M. F. FRIDEN, Piedmont, Calif., assignor to Marchant Calculating Machine Company, Oakland, Calif., a Corporation of California. Filed Nov. 11, 1919. Serial No. 337,156. 10 Claims. (Cl. 235—63.)

1. In a calculating machine, a plurality of adjustable tooth wheels, means for rotating said wheels, a plurality of figure disks coöperating with said wheels, a zero setting mechanis massociated with said disks, a shaft operatively connected with and rotatable with said wheels, and a longitudinally movable pin associated with said zero setting mechanism adapted to engage said shaft and prevent rotation thereof when the zero setting mechanism is out of neutral position.

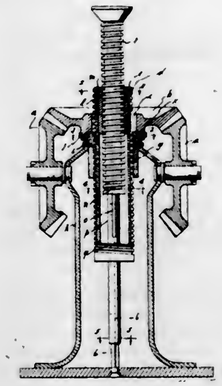
6. In a calculating machine, a plurality of adjustable tooth wheels, means for rotating said wheels, a plurality of figure disks coöperating with said wheels, a plurality of figure disks coöperating with said rotating means, a zero setting mechanism associated with each plurality of disks and means operative when either zero setting mechanism is out of neutral position for locking said wheels against rotation.



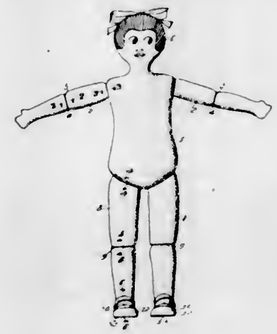
9. In a calculating machine, a setting mechanism, a registering mechanism, a zero settting mechanism including a shaft extending through the registering mechanism, and a pin engaging the shaft and disposed radially with respect to the axis of the shaft, and adapted to be moved by rotation thereof into engagement with said setting mechanism.

1,379,010. BOTTLE-CRATE. JOHN M. GAYNER, Salem, N. J., assignor to Gayner Glass Works, Salem, N. J., a Corporation of New Jersey. Filed Mar. 1, 1920. Serial No. 362,535. 1 Claim. (Cl. 217—49.)

A crate having a body of upright wooden slats, and circumferential wooden hoops, the terminals of the latter overlapping, and metallic plates on the outer faces of said terminals adjacent to the exposed edges thereof adapted to reinforce said terminals and form guards on said edges, said slats, the overlapping terminals of said hoops and said plates being secured together.



1,379,011. JACK. HENRY T. GIBBARD, Highland Park, Mich. Filed Feb. 27, 1920. Serial No. 361,794. 12 Claims. (Cl. 254—102.)



1. In a jack, the combination of a standard, a pair of telescoping screw lifting members in the standard, a pair of nuts one for actuating each screw, a gear for actuating the nuts one at a time, and means for coupling up the gear to the nuts selectably so that when one screw has reached the limit of its movement the other nut is connected with the gear to actuate the other screw.

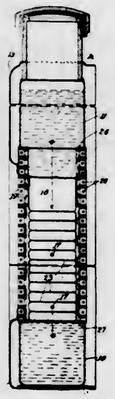
1,379,012. JACK. HENRY T. GIBBARD, Highland Park, Mich. Filed Mar. 24, 1920. Serial No. 368,229. 7 Claims. (Cl. 254—102.)

1. In a jack, the combination of a standard, a nut stationarily supported in the standard, a screw having threads engaging in said nut, means held from traveling up or down for rotating the said screw, a nut rigidly secured in said screw and having threads running in the opposite direction to the threads on the exterior of said screw, a second screw provided with opposite threads engaging in the threads of said rotating nut, and means independent of the load upon the jack for holding said screw against rotation whereby when the said outer screw is rotated both screws will rise and fall together.

1,379,013. JOINTED RAG DOLL. GLADYS GOSS, Nevada, Mo. Filed Oct. 23, 1920. Serial No. 419,020. 2 Claims. (Cl. 46—40.)

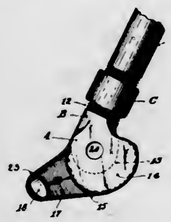
2. A doll comprising a body, arms and legs joined by stitching to appropriate portions of said body, and swingable with relation thereto, said arms and legs being formed in sections jointed at the elbow and knee portions of each by single rows of stitching arranged adjacent certain of the sides of each of the corresponding ends whereby to permit of swinging motion of the free portions of said arms and legs in but one direction, said corresponding ends of the sectional arms and legs being relatively flat, and feet formed on the lower ends of the free portions of said legs being enlarged with respect to said body and flattened whereby to support the latter in a vertical position.

1,379,014. COVER FOR WASHING-MACHINE TUBS. DAVID D. GREEN, Milwaukee, Wis. Filed Mar. 22, 1920. Serial No. 367,657. 4 Claims. (Cl. 220—42.)



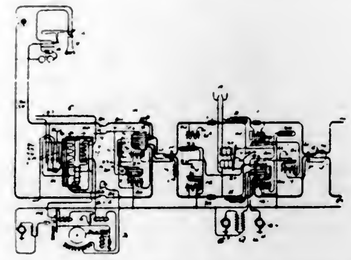
1. The combination with a receptacle having an opening bounded by plane edge faces, the opposing faces being parallel, certain of said faces being inclined obliquely and a removable cover member having end faces engageable

with the edge faces of the receptacle opening and having certain of its faces inclined obliquely to correspond to the



inclination of the inclined faces of the receptacle opening, and means for securing said cover member with its outer surface flush with the outer surface of the receptacle.

1,379,015. RADIATOR. RAYMOND L. HAWKINS, Detroit, Mich., assignor to Long Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 28, 1917, Serial No. 165,071. Renewed Nov. 21, 1918. Serial No. 263,635. 8 Claims. (Cl. 257—130.)



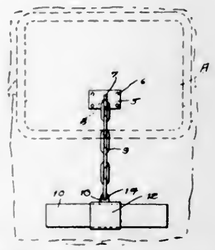
1. A radiator core comprising a series of flat vertical tubes, semi-hexagonally corrugated at each edge thereof only, a series of intermediate spacing members semi-hexagonally corrugated at each edge thereof only, said tubes and spacing members being so disposed relatively to one another as to form a series of hexagonal apertures at each face of the core.

1,379,016. COMBINED HAND AND STATIONARY CONDUIT-BENDER. ROBERT HALSEY HENDERSON, East Orange, N. J. Filed June 5, 1919. Serial No. 302,038. 4 Claims. (Cl. 153—40.)

1. A pipe bender, comprising a curved element terminating in a shank adapted to receive a handle, said element having integral parallel side flanges providing with said element a peripheral groove substantially conforming in width to the diameter of the pipe to be bent and which where the bending operation occurs is deeper than the radius of said pipe whereby tendency of the latter to expand laterally under bending strains causes the same to be gripped between said side flanges to thereby prevent kinking or collapsing thereof, and one of said flanges having an extension provided with a transverse abutment post spaced outwardly from the forward end of said groove to provide an entrance gap between the former and the latter.

1,379,017. SEMI-AUTOMATIC TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., and HARRY E. HERSHEY, Whitewater, Kans., assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1916. Serial No. 79,662. 38 Claims. (Cl. 179—27.)

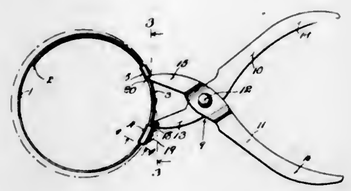
36. In a telephone system, calling and called lines, a plurality of automatic switches having access to called lines, manual equipment for controlling one of said switches to find said called line, a signal for said calling line and a signal in said equipment, means for releasing said switch when the called line is busy, and a relay in said equipment operated when the switch is released to operate said signals.



1,379,018. SURFACE-COATING COMPOSITION. ALBERT C. HOLZAPFEL, New York, N. Y. Filed May 25, 1920. Serial No. 384,174. 9 Claims. (Cl. 134—51.)

1. A surface coating composition consisting of approximately from 30 to 40 parts by weight of pitch derived from the treatment of oils and fats and from 60 to 70 parts by weight of a hydrocarbon solvent.

1,379,019. SURFACE-COATING COMPOSITION. ALBERT C. HOLZAPFEL, New York, N. Y. Filed Nov. 29, 1920. Serial No. 427,184. 8 Claims. (Cl. 134—51.)



2. A surface coating composition containing approximately from 30 to 40 parts by weight of pitch derived from the treatment of oils and fats, 60 to 70 parts by weight of a hydrocarbon solvent, and not more than 25 parts of titanium oxid.

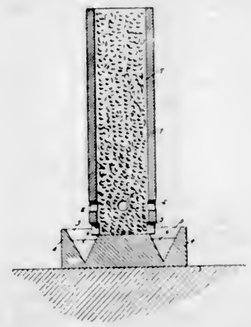
1,379,020. HANDLE. WALLACE J. HOTCHKISS, Alpena, S. D. Filed Feb. 21, 1921. Serial No. 446,678. 1 Claim. (Cl. 16—10.)

A handle of the character described comprising a supporting plate, a lug projecting from one face of the supporting plate, a chain having one end connected to the lug, a connecting member having a lug projecting from one face and adapted to be connected to the opposite end of the chain, a hand grip disposed in said connecting member, said hand grip extending beyond each end of the connecting member, one face of said connecting member extending beyond the adjacent face of the hand grip, to prevent contact of the hand grip with the support of the supporting plate.

1,379,021. PISTON-RING EXPANDER AND CONTRACTOR. ORVEY JOHNSON, Madison, Wis., assignor to The Johnson Specialty Company, Madison, Wis. Filed Dec. 3, 1919. Serial No. 342,108. 3 Claims. (Cl. 29—86.4.)

1. A device of the class described comprising an expansile and contractile collar having its ends adapted to be overlapped, one end portion having a plurality of openings arranged longitudinally of the collar, a pair of expanding and contracting handles, one being hinged and pivoted to one end portion of the collar, and a finger on the other handle for selective coöperation with any of said openings.

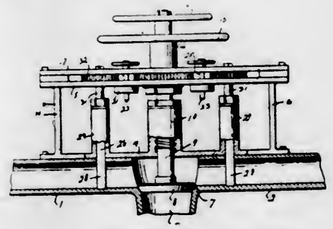
1,379,022. PROCESS OF PRODUCING FERROSILICON. JOHN TYLER JONES, Pittsburgh, Pa., assignor to Thomas J. Howells, Pittsburgh, Pa. Filed Oct. 26, 1917. Serial No. 198,673. 2 Claims. (Cl. 75—17.)



1. The herein described process of producing ferrosilicon, which consists in crushing the ore to a fineness approximating twenty to one hundred mesh, crushing bituminous coal to substantially the same fineness, mixing an excess of the coal with the ore, heating the mixture substantially out of the presence of air, to coke the coal and to bring the metal portions of the ore into a metallic state, and subsequently burning out the coke and melting the metal into the alloy.

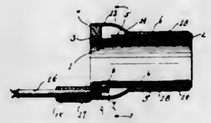
1,379,023. METALLURGICAL PROCESS. JOHN TYLER JONES, Pittsburgh, Pa., assignor to Thomas J. Howells, Pittsburgh, Pa. Filed Oct. 26, 1917. Serial No. 198,674. 2 Claims. (Cl. 75—17.)

1. The herein described process of treating metalliferous ores, which consists in crushing the ore to a fineness approximating twenty to one hundred mesh, mixing with the crushed ore an excess of crushed coal having substantially the same fineness, heating the mixed ore and coal together, substantially out of the presence of air, to a temperature sufficient to coke the coal and to produce an agglomerated mass resembling coke, and subsequently separating the metals from the coke.



1,379,024. PROCESS OF REDUCING IRON FROM THE ORE. JOHN TYLER JONES, Pittsburgh, Pa., assignor to Thomas J. Howells, Pittsburgh, Pa. Filed Dec. 20, 1917. Serial No. 208,088. 5 Claims. (Cl. 75—14.)

1. The herein described process of reducing iron from its ore, which consists in mixing the ore with coal, heating the mixture out of the presence of a flux and substantially out of the presence of air to coke the coal, and



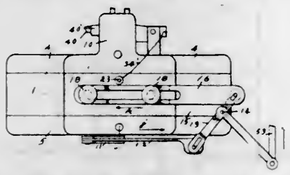
to reduce the iron to the metallic state, crushing the coked mass and separating the iron from the coke magnetically.

1,379,025. VALVE. LAWRENCE JONES and ISAIAH JONES, Granger, Utah. Filed May 17, 1920. Serial No. 381,863. 7 Claims. (Cl. 277—50.)

1. A body containing a plurality of valves, an operating member for one of said valves, a second operating member, and an operative connection between said second operating member and each of the remaining valves, each of the operative connections between the second operating member and one of the remaining valves being independently movable into or out of working position.

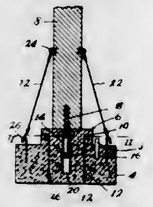
1,379,026. HAIR-WAVING HEATER. FRANK LANTIERI and GABRIEL LANTIERI, Newark, N. J. Filed Nov. 26, 1919. Serial No. 340,896. 4 Claims. (Cl. 219—24.)

1. In a device of the character described, the combination with a hollow cylinder having flanged ends, of a collar of insulating material mounted upon the said cylinder and seated against one of the said flanges, layers of insulating material surrounding the said cylinder, a coil of resistance wire arranged between said layers of insulation, conductors passing through the said collar and connected with the said resistance wire, a cupped shell having its larger end encircling and in contact with the said collar, the said shell surrounding the said cylinder and layers of insulation and extending from the said col-



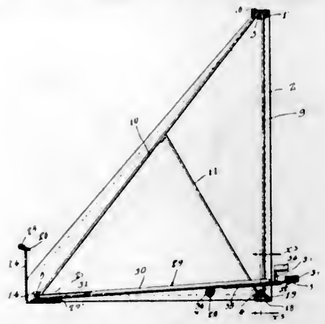
lar for a part of the length of the cylinder, and asbestos twine binding encircling the said cylinder and insulating layers between the end of the shell and the other flanged end of the cylinder whereby the insulation, coil, shell and the said collar are secured in place.

1,379,027. HAIR-WAVING TUBE. FRANK LANTIERI and GABRIEL LANTIERI, Newark, N. J. Filed Dec. 6, 1919. Serial No. 343,000. 2 Claims. (Cl. 132—36.)



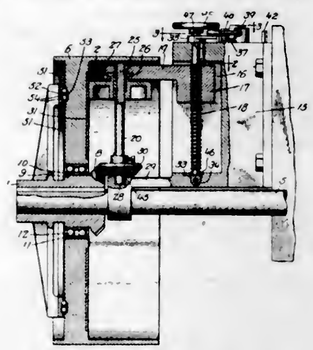
1. A device of the class described, comprising a tubular member having a strip of fabric fastened to the exterior and interior surfaces of said tubular member forming a folded portion adjacent the end of said tubular member, and means located in the folded portion of said strip of fabric adapted to draw said folded portion together, thereby contracting the end of said tubular member so as to close the latter.

1,379,028. ROTARY ENGINE. FRANCIS LEROY HORSPOOL, Salt Lake City, Utah. Filed May 27, 1919. Serial No. 300,097. 10 Claims. (Cl. 123—14.)



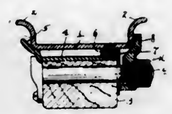
1. In an internal combustion rotary engine the combination of a casing provided with a front and back wall and a water cooling space, an explosive chamber located within said casing between said front and back wall, a reversing valve in said explosive chamber for reversing the travel of the engine, a shaft for said reversing valve, one end of said shaft being journaled in the inner face of said front wall and the other end passing out through said back wall, a lever attached to the end of said shaft that passes out through sid back wall, a bell crnk lever, o connecting rod attached to said lever and connecting with the bell crank lever, said bell crank lever fulcrumed to a bracket secured to said casing, said lever connecting rod and bell crank lever for operating said reversing valve, sliding abutments, a sliding bar connected to said bell crank lever for raising and lowering the sliding abutments, and a rod attached to said bell crank lever for operating same.

1,379,029. COMBINATION WOOD AND CEMENT POST. WILLIAM B. MCDONALD, Lawrence, Kans. Filed Mar. 1, 1920. Serial No. 362,212. 1 Claim. (Cl. 72—84.)



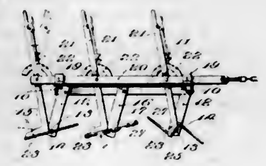
In a device of the character described, a concrete base provided at its upper side with a square projection, a threaded member embedded in said base, means to reinforce said base, a post to fit upon the projection on the base, a threaded member secured to the post and adapted to engage the threaded member on the base and secure the post in position, hooks embedded in the base, and braces connected to said hooks and the post to secure the latter upon the former.

1,379,030. RECORD-FILE. TAYLOR MCDOUGALL, Pasadena, and SULLY RUSSO, Los Angeles, Calif.; said McDougall assignor to said Russo. Filed Apr. 2, 1918. Serial No. 226,138. 5 Claims. (Cl. 211—16.)



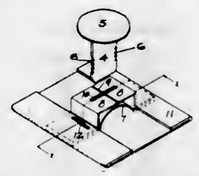
2. In a record file, the combination of end members, upper and lower rods fastened at their ends to the end members, another rod fastened to the end members rearward of the lower rod, wires extending from the rear rod aslant upward and forward over the upper rod, thence downward under the lower rod, thence aslant upward and rearward to the respective wires and fastened thereto, and means on the rods to prevent the wires from slipping along the rods.

1,379,031. POWER-TRANSMITTING DEVICE. ARTHUR D. MCPHERSON, Chicago, Ill. Filed Oct. 23, 1919. Serial No. 332,768. 3 Claims. (Cl. 74—26.)



1. A power transmitting device comprising a drive shaft, a pulley having an overhanging rim rotatably mounted thereon, a gear wheel rotated by said drive shaft, a driven shaft, a gear thereon meshing with the gear on said drive shaft, a friction wheel slidably moundted upon and rotated by said drive shaft and adapted to engage a radial surface of said pulley, said gear wheels, driven shaft and friction wheel within the driven pulley, a bracket, an arm slidably mounted on said bracket and carrying said wheel to vary the position thereof relative to the axis of said drive shaft and said pulley, and a screw for moving said arm.

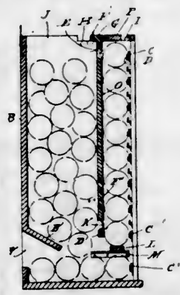
1,379,032. VEHICLE-WHEEL WITH DEMOUNTABLE RIM. JOHN C. MANTERNACH, Lakewood, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 26, 1918. Serial No. 246,880. 3 Claims. (Cl. 301—19.)



1. The combination with a wheel body having similarly inclined, transversely beveled surfaces adjacent its respective edges; of a demountable rim adapted to be directly wedged onto said wheel body, said rim being formed to engage one such beveled surface substantially around its entire circumference and to engage the other such surface at circumferentially spaced points only; and surfaces on said wheel body and rim adapted to be brought into interengagement by the flattening of the arcs of said rim between such points, substantially as and for the purpose described.

1,379,033. LAND-DRAG. CHARLES A. MATHENY, Kingston, Tenn. Filed Apr. 10, 1919. Serial No. 289,082. 2 Claims. (Cl. 55—23.)

2. In a land drag, a frame, depending bearing brackets carried by the ends of the frame, a ground treating element mounted in the brackets for rotatable adjustment and having upper and lower flat faces, a vertical lever pivotally supported on the frame and arranged to be set in different angular positions and having an angular foot on its lower end for alternate engagement with the flat faces of the said element to hold the element at different angles with respect to the ground.

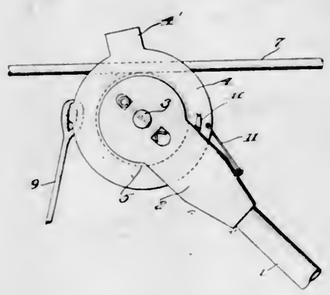


1,379,034. TIE-FASTENER. WILLEVE T. MERRIMAN, Jackson, Mich. Filed Mar. 15, 1920. Serial No. 366,026. 3 Claims. (Cl. 24—64.)

1. A tie fastener comprising a headed stud; a tie; and a flexible securing member attached to said tie and releasably engaging said stud, said securing member being arranged and adapted to automatically engage said stud and release it by flexing produced by compression of said securing member, substantially as described.

1,379,035. DISPLAY-CABINET. ALBERT C. MICHEL, Granite City, Ill. Filed Aug. 9, 1920. Serial No. 402,204. 4 Claims. (Cl. 211—9.)

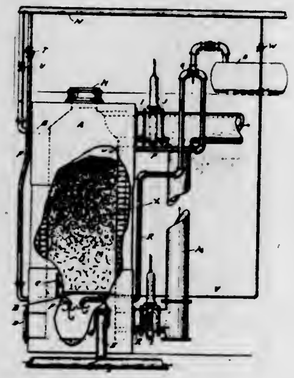
3. A display cabinet comprising a box having an open front, a partition mounted parallel to said front forming a display compartment for globular fruits, and cross bars adjustably mounted in said front and adapted to be spaced



a variable distance apart and less than the diameter of said contained fruits.

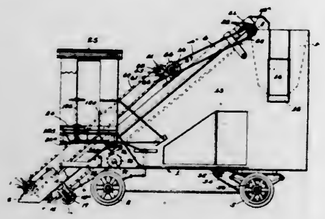
1,379,036. PROCESS OF SECURING METALLIC MEMBERS TOGETHER. OTIS B. MOORHEAD, San Francisco, Calif. Filed Mar. 10, 1919. Serial No. 281,883. 4 Claims. (Cl. 29—148.)

1. The process of securing together a thin hard metallic element and a larger and softer metallic element, which consists in arranging the elements in superposed relation and subjecting the elements so arranged to a suitable number of blows to press the hard element in the softer element and cause a flow of the metal of the softer element.



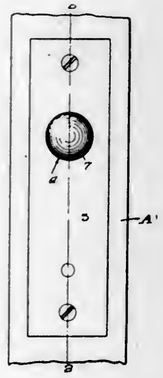
1,379,037. TROLLEY-POLE HEAD. HOWARD F. NORMAN, Newtonville, Mass. Filed Apr. 16, 1920, Serial No. 374,440. Renewed Mar. 30, 1921. Serial No. 457,025. 5 Claims. (Cl. 191—79.)

1. The combination with a trolley pole having a harp at its upper end of a guard rotatably mounted in said harp, said guard comprising two side members provided with fixed upwardly-extending fingers having inwardly-disposed end portions normally out of contact with the trolley wire and separated by a gap sufficiently wide to permit said wire to pass therethrough, a member rigidly connecting said side members and arranged for the connection of a manipulating cable, means resiliently connecting said guard to the trolley pole and maintaining



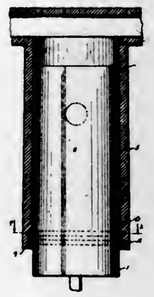
said fingers in upright position, and a contact wheel mounted for rotation in said harp and having its sides in close contact with the inner sides of said guard.

1,379,038. PROCESS OF MANUFACTURING WATER-GAS. WILLIAM WALLACE ODELL, Urbana, Ill. Filed Nov. 7, 1918. Serial No. 261,567. 1 Claim. (Cl. 48—208.)



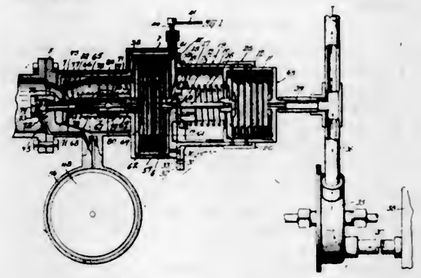
A process for the manufacture of combustible gas by an intermittent method, using bituminous coal or other solid fuel containing volatile combustible matter, consisting in first heating a bed of ignited fuel in a generator by blasting it with air, using an up blast only, from beneath the fuel bed, and using simultaneously with this air blast a relatively small amount of steam also injected from beneath the fuel bed during the fore part of the blast period only, for the prevention of smoke, prolonging said blast, so as to better heat the upper zones in the fuel bed, shutting off said air, as well as the steam used therewith, and making up-and-down runs, a small quantity of air being injected with the steam, during each of said runs, for the purpose of prolonging the period of said runs, and making at least two up runs to every down run for the purpose set forth.

1,379,039. MOTOR LOADING-MACHINE. FREDERICK PLATTO, Brewerton, N. Y. Filed June 6, 1919. Serial No. 302,277. 8 Claims. (Cl. 37—25.)



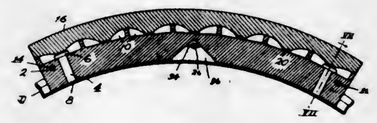
1. In a motor loading machine, the combination of a truck, a conveyer mounted on the truck including a frame including downwardly and forwardly and terminating in a scoop at its lower end located in front of the truck, and a conveyer belt carried by said frame, a power plant mounted on the truck beneath the rear portion of the conveyer, connections between the power plant and the conveyer belt, a platform carried by the truck above the front portion of the conveyer, and means for controlling the operation of said connections including levers located on said platform, substantially as and for the purpose specified.

1,379,040. CATCH FOR SCREEN-DOORS AND THE LIKE. LEWIS MARION PRATT, Eldorado, Kans., assignor of one-half to Roy Austin Medlin, Eldorado, Kans. Filed May 1, 1920. Serial No. 378,265. 1 Claim. (Cl. 292—73.)



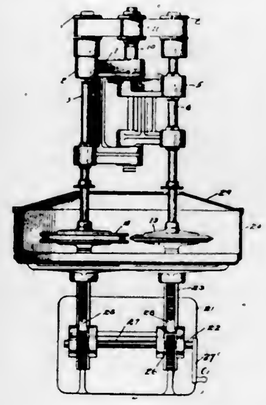
The combination with a strike plate having an elongated opening therein, there being a recess back of the strike plate, of a door having a recess extending longitudinally within one edge thereof, a face plate extending across the recess and having a circular opening therein, said opening, when the door is closed, being in register with a portion of the elongated opening in the strike plate, an elongated spring strip within the recess and secured at one end to the face plate, said spring having a circular opening in the free end portion thereof, and a ball of a diameter greater than the diameters of the openings in the face plate and in the spring, said ball being normally clamped between the face plate and the spring and with a portion thereof projected through the opening in the face plate for engagement in the opening in the strike plate, said ball having a rolling contact with the strike plate during the movement of the door to open or closed position, the spring being extended longitudinally along lines extending across the plane of rotation of the door during such rolling contact.

1,379,041. CYLINDER AND PISTON CONSTRUCTION. OSWALD S. PULLIAM, New York, N. Y. Filed Feb. 27, 1920. Serial No. 361,738. 5 Claims. (Cl. 74—108.)



1. A cylinder and piston construction comprising a cylinder having a longitudinal taper, a piston having a corresponding longitudinal taper, and means for forming a tight joint between said piston and the walls of said cylinder.

1,379,042. ENGINE-SPEED-REGULATING CARBURETER. CHARLES L. RAYFIELD, Chicago, Ill. Filed Sept. 8, 1917. Serial No. 190,326. 3 Claims. (Cl. 137—143.)



1. A carbureter having a fuel nozzle; a valve, operable by suction effect of the engine for controlling the nozzle; a sub-atmospheric motor responsive to the suction effect of the engine controlling said valve; another valve to vary the effect of the engine upon said motor and a speed variable means controlling the latter valve.

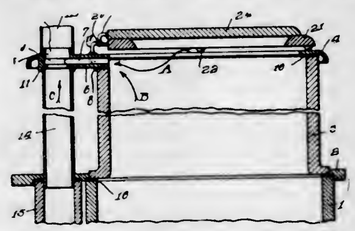
1,379,043. TIRE. THEODORE J. REED, Kansas City, Mo. Filed June 26, 1919, Serial No. 306,849. Renewed Apr. 2, 1921. Serial No. 458,083. 3 Claims. (Cl. 152—9.)

1. A tire consisting of a ring comprising a plurality of relatively nonresilient segments having air pockets therein, and a resilient tread extending around said ring and consisting of sections secured to the ring segments and provided with protuberances that project into the air pockets, substantially as described.

1,379,044. MACHINE FOR GROOVING AGATES AND SIMILAR STONES. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 13, 1917. Serial No. 196,429. 21 Claims. (Cl. 125—30.)

1. In a machine of the character described, a rotatable member adapted to carry the material to be grooved, a member having a cutting edge, and means for automatically holding the cutting edge in engagement with the material when desired.

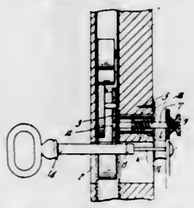
1,379,045. PROCESS FOR REDUCING ACIDITY OF OILS. FRANK OLIN RITTER, Edgemoor, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 17, 1918. Serial No. 250,335. 8 Claims. (Cl. 87—12.)



1. The process which comprises treating an oil containing a free fatty acid with a solution of an alkaline substance to form an emulsion, salting out the oil and soap, the said oil and soap separating together as an emulsion, and then washing out the soap thus formed.

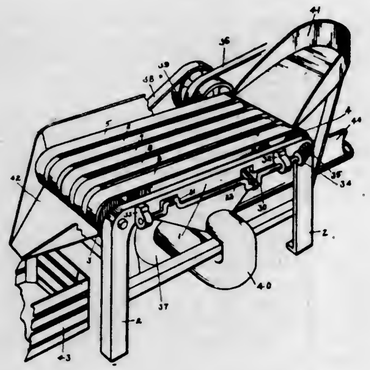
1,379,046. DENTIFRICE. WILLIAM S. ROGERS, New York, N. Y. Filed Sept. 23, 1919. Serial No. 325,667. 2 Claims. (Cl. 167—9.)

1. A dentifrice including in its composition sulfur and an alkaline material substantially as described.



2. A dentifrice compounded with sulfur lotum and perborate of soda.

1,379,047. SEWAGE-DISPOSAL SYSTEM. CORNEALIUS WELKER RUSSELL, Burlington, Iowa. Filed Apr. 20, 1920. Serial No. 375,325. 1 Claim. (Cl. 4—21.)

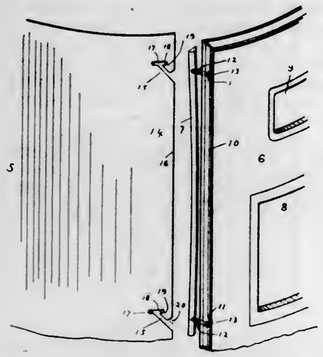


In a device of the class described, a tubular body; a ring supported on the body and having a lateral extension provided with an approximately vertical bore and with an approximately horizontal passage establishing communication between the interior of the body and the bore; vent pipe sections coöperating with the upper and lower surfaces of the extension and forming continuations of the bore; standards secured to the lateral extension of the ring and located on opposite sides of the passage; a seat; a lid; means for supporting the lid and the seat for swinging movement on the standards; and means for spacing the seat from the ring, to permit an inward draft of external air into the bore by way of the body and the passage.

1,379,048. SAFETY DEVICE FOR LOCKS. PAUL SCHOLL, Berlin, Germany, assignor to Ernst Ahlert, South Pasadena, Calif. Filed Nov. 10, 1920. Serial No. 423,178. 8 Claims. (Cl. 70—14.)

1. In combination with a door lock, having a perforated latch, a bolt extending from the inner side of the door and adapted to enter an aperture in said latch, and means secured to the key for withdrawing the bolt from the latch and means for preventing access to said bolt by said key secured means.

1,379,049. ONION-TOPPING MACHINE. FRANK J. SCHROEDER, Rochester, N. Y. Filed Oct. 21, 1920. Serial No. 418,558. 8 Claims. (Cl. 146—7.)



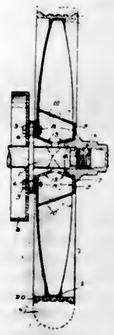
1. In an onion topping machine, the combination of a casing having longitudinal slots therein, means for creating a partial vacuum in said casing, means for conveying onions on either side of the slots in said casing and parallel thereto, and means for clipping off the tops of the onions pulled into the slots of the casing by the partial vacuum created in said casing.

1,379,050. NICKEL-PLATING SOLUTION. LOUIS SCHULTE, Pittsburgh, Pa., assignor to E. I. DU PONT DE NEMOURS & COMPANY, Wilmington, Del., a Corporation of Delaware. Filed July 24, 1918. Serial No. 246,531. 12 Claims. (Cl. 204—5.)

1. A nickel plating solution containing sulfate of sodium and single and double nickel salts.

1,379,051. HEATER-CASING CONSTRUCTION. JACOB J. SEEMANN, Utica, N. Y., assignor to Utica Heater Company, Utica, N. Y., a Corporation. Filed Feb. 24, 1919. Serial No. 278,760. 2 Claims. (Cl. 126—114.)

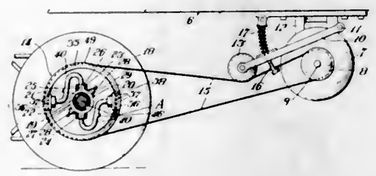
1. In a heater casing construction the combination of a panel front having its side edges provided at intervals with bolt-receiving apertures, a rod at the rear of each side edge of said panel front, bolts extending loosely through said apertures in the panel front and in adjustable engagement with said rods and a casing having its opposite ends over-lapping the side edges of the panel front, said ends of the casing being provided with a plurality of slots extending in from the edge of said ends in a slanting direction and terminating with an enlargement substantially at right angles with said end edges, the ends of the casing being located between the side edges of the panel front and said rods with the bolts extending through said enlargements.



1,379,052. PLASTIC COMPOSITION. ELIEL L. SHARPNECK, Bakersfield, Calif. Filed Aug. 12, 1920. Serial No. 402,993. 2 Claims. (Cl. 106—31.)

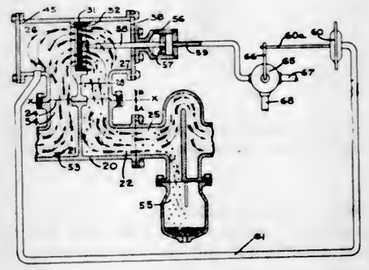
1. A plastic composition comprising approximately 73 to 86 per cent. of a finely divided filler, 8 to 20 per cent. of mineral asphaltum, 1 to 2½ per cent. of pulverized borax and 5 per cent. of Portland cement.

1,379,053. PLASTIC COMPOSITION. ELIEL L. SHARPNECK, Bakersfield, Calif. Filed Aug. 12, 1920. Serial No. 402,994. 2 Claims. (Cl. 106—31.)



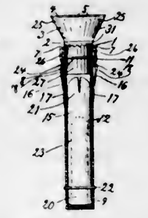
1. A plastic composition comprising approximately 73 to 86 per cent. of a finely divided filler, 8 to 20 per cent. of mineral asphaltum, 1 to 2½ per cent. of magnesium chlorid and 5 per cent. of Portland cement.

1,379,054. WHEEL. ALVIN H. SHOEMAKER, Seattle, Wash., assignor to Knappen Finance Company, Seattle, Wash., a Corporation of Washington. Filed July 8, 1918. Serial No. 243,963. 4 Claims. (Cl. 301—64.)



1. In a wheel, a rim, a sheet steel web connecting the hub and rim of the wheel, formed with radial convolutions which are of greater depth adjacent the hub and tapering to shallower depths at its periphery and means for radially expanding said web.

1,379,055. AXLE TRANSMISSION FOR RAILWAY-CARS. EUGENE G. SMITH, Chicago, Ill. Filed Dec. 31, 1920. Serial No. 434,201. 6 Claims. (Cl. 105—105.)

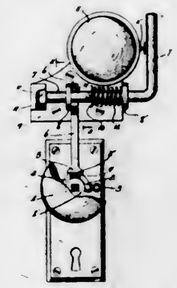


6. In mechanism of the class described, the combination with a driven member and a driving member in power transmission relation to each other, the driving member including a car axle, a demountable hub rigidly fixed to the axle, a plurality of fellies, felly-plates formed with journal bearings fixed to the contiguous ends of the fellies, and a plurality of spokes journaled at their inner ends in said hub, and journaled at their outer ends in the bearings carried by said felly-plates, and a belt-tightening device.

1,379,056. PURIFICATION OF GAS. HARRY F. SMITH, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 29, 1917. Serial No. 145,314. 11 Claims. (Cl. 183—44.)

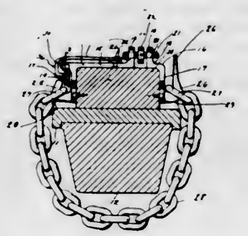
1. A method of purifying gases which consists in passing the gas through a pervious diaphragm, and varying the density of such diaphragm to keep substantially constant the differential pressure on opposite sides thereof.

1,379,057. FOUNTAIN-PEN. THOMAS C. SPELLING, New York, N. Y. Filed Nov. 6, 1918. Serial No. 261,420. 9 Claims. (Cl. 120—1.)



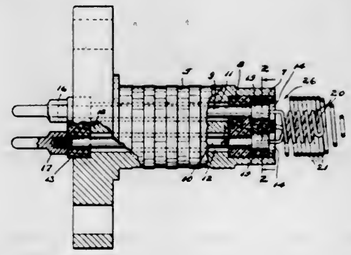
4. In a writing implement comprising a tube, a cap, a shield, carrying member, and a stopper, means for binding and impacting the tube and cap oppositely on an encircling exterior shoulder of the stopper, the means consisting of oppositely positioned resilient arms securely attached to the tube, the arms having detachable engagements in notches in the neck of the cap.

9. In a writing implement comprising a tube, a cap, a shield carrying member and a stopper, means for increasing the top area of the cap, in detached use, the means consisting of flat arms pivoted in and on the top of the cap and converged to interlocked relation, centrally, one of the interlocking arms formed of resilient material.



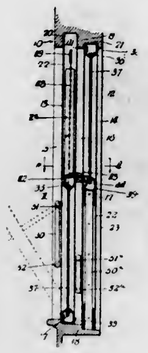
1,379,058. BURGLAR-ALARM. JOHN S. SPIREWKA, Jr., Milwaukee, Wis., assignor of one-third to Daniel C. O'Connell and one-third to James E. O'Connell, Milwaukee, Wis. Filed Feb. 28, 1921. Serial No. 448,441. 2 Claims. (Cl. 116—92.)

1. In a door having a rotary knob shank; the combination of an alarm mechanism associated therewith comprising a bracket having alined apertured ears and an explosive cap lug, a plunger rotatably and slidably mounted in the apertures, the plunger having a resetting arm extending from one end, a collar secured to the plunger, a coil spring surrounding the plunger between the collar and one of the bracket ears, a key extending from said plunger, a reciprocative lock and release finger having a looped head through which the plunger extends, the looped head being provided with a key way which is normally offset from the line of travel of the plunger key,



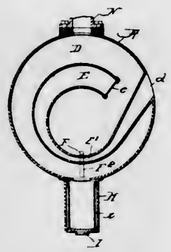
and an actuating cam for the lock and release finger, the same being detachably secured to the shank of the knob.

1,379,059. ANTISKID DEVICE. GEORGE STAPLES, Oshkosh, Wis., assignor to Staples and Seefeld, Milwaukee, Wis., a Milwaukee Partnership. Filed Aug. 11, 1919. Serial No. 316,844. 4 Claims. (Cl. 152—2.)



3. An attaching device for non-skid tread members comprising a bracket member engageable with a vehicle wheel, a hook carried thereby for detachably receiving a tread member terminal link, and means for closing the throat of said hook to releasably secure the tread member terminal link therein including a spring member movable into the throat of said hook and having a projection adapted to project a slight distance into the throat of the hook to insure a positive locking of the tread member terminal link therein.

1,379,060. IGNITER. HENRY W. SUMNER, Seattle, Wash. Filed July 14, 1919. Serial No. 310,821. 6 Claims. (Cl. 123—145.)



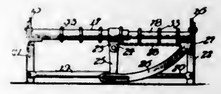
3. Ignition devices including an electrically heated ignition coil and a shield formed of a coil of wire surrounding said ignition coil.

1,379,061. WINDOW CONSTRUCTION. JOSEPH SYLVAN, Chicago, Ill. Filed July 19, 1920. Serial No. 397,390. 6 Claims. (Cl. 20—49.)

1. A window construction comprising, in combination with a window frame having upright side grooves, runners slidable in said grooves, a window sash pivoted at one end to said runners, and capable of a swinging opening movement with respect thereto, window weight cords connected to said runners, and means limiting the swinging opening movement of the sash with respect to said runners, said means acting to lock said runners against the action of the window weight cords as the window sash swings into its open position.

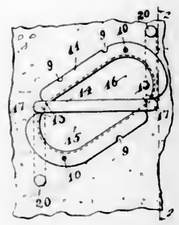
1,379,062. AIR-WASHER FOR INTERNAL-COMBUSTION ENGINES. PERCIVAL S. TICE, Chicago, Ill. Filed Aug. 25, 1919. Serial No. 319,602. 5 Claims. (Cl. 261—115.)

2. An air washing and moistening device for internal combustion engines comprising a water supply chamber, a washing chamber; an air conduit within the washing chamber, opening at one end for air discharge at a relatively high point therein, and at the other end for air inlet from without said washing chamber; a conduit for water from the water supply chamber, having its intake at a relatively low level in said water supply chamber, discharging into the air conduit at a point near the lowest part of the course of said conduit; the water conduit being constructed for being closed air-tight, except as to water discharge through said conduit.



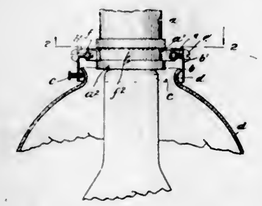
1,379,063. DENTAL SHELL. GEORGE L. VAN ALLEN, Prince Bay, N. Y., assignor to Baker & Company, Inc., a Corporation of New Jersey. Filed Sept. 21, 1918. Serial No. 255,068. 4 Claims. (Cl. 29—182.)

1. A dental shell having one end closed and side portions with an outer layer and an inner layer for the entire circumference the outer layer being harder than the inner layer and the inner layer being soft enough so that the



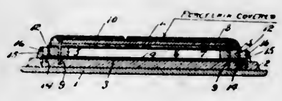
stock is more malleable than it would be if like the outer layer for its entire thickness.

1,379,064. COLLAPSIBLE BED. GEORGE S. WELCH, Chicago, Ill. Original application filed Mar. 11, 1914, Serial No. 823,882. Divided and this application filed Apr. 20, 1917. Serial No. 163,337. 1 Claim. (Cl. 5—8.)



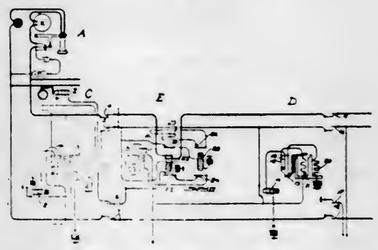
An adjustable folding bed structure of the character described comprising two opposing side members, foot members adapted to be folded against said side members, telescopically operable means connecting said side members, mattress supporting means extending between said connecting means, telescopically operable means connecting said foot members, an auxiliary foot for said bed intermediate said side members, and means operable by the telescopic closing of the bed structure to move said auxiliary foot out of its operative position.

1,379,065. ANCHORING DEVICE. KURT O. WETZEL, Los Angeles, Calif., assignor to K. O. Wetzel Co., Los Angeles, Calif. Filed June 7, 1920. Serial No. 387,079. 3 Claims. (Cl. 72—105.)



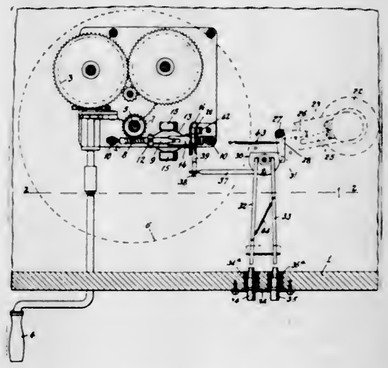
1. In a device of the class described, a body member having an elongated recess in its face, the edges of the body having cut-outs provided in the front face at points diagonally to the elongated recess, the body member being curved away from the edges around the entire periphery of the recess, and an anchor member disposed through such cut-outs in front of the body-recess so as to bring the anchor member flush with the front face of the body and diagonally over the recess in the body.

1,379,066. SHADE-HOLDER. ERNEST CANTELO WHITE, New York, N. Y., assignor to Electric Outlet Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1920. Serial No. 351,476. 14 Claims. (Cl. 240—114.)



1. A shade holder comprising a carrier, a relatively flexible ring supported within the carrier, and a means to elongate the ring for engagement along its minor axis with the shell socket.

1,379,067. REFRIGERATOR-DOOR CONSTRUCTION. WALTER H. WHITTIER, Grand Rapids, Mich., assignor to Grand Rapids Refrigerator Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Apr. 22, 1919. Serial No. 291,984. 6 Claims. (Cl. 20—35.)

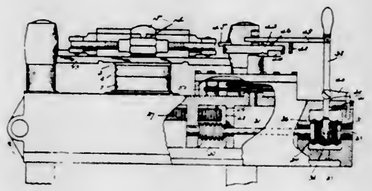


1. In a construction of the character described a door, a metal facing or lining for the door at the rear side thereof having porcelain baked on its outer side, said facing being of pan-like form having squared corners and provided with out turned flanges at the sides thereof terminating a short distance from said corners and adapted to lie against the rear side of the door, and means engaged with said flanges for securing the facing permanently to the door, substantially as described.

1,379,068. MEASURED-SERVICE TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 12, 1919. Serial No. 276,463. 10 Claims. (Cl. 179—9.)

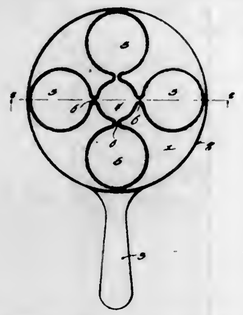
1. In a telephone system, a meter, a circuit therefor, a meter controlling relay, means for operating said meter controlling relay to close one point of said circuit, and auxiliary controlling means for delaying the operation of said meter by holding said circuit open at another point.

1,379,069. STARTING AND STOPPING MECHANISM FOR TALKING-MACHINES. MARMADUKE MOORE WILLS, Fitchburg, Mass., assignor to The Regina Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 8, 1919. Serial No. 288,526. 10 Claims. (Cl. 192—116.)



1. In a talking machine, the combination of driving mechanism, a governor controlling said mechanism, means coöperating directly with said governor to start and stop said driving mechanism and a plurality of manually operated devices whereby said means is actuated.

1,379,070. METHOD OF MAKING DRILLS. CHARLES P. WINEMAN, Detroit, Mich., assignor to Detroit Twist Drill Company, Detroit, Mich., a Corporation of Michigan. Filed June 21, 1919. Serial No. 305,798. 4 Claims. (Cl. 76—108.)

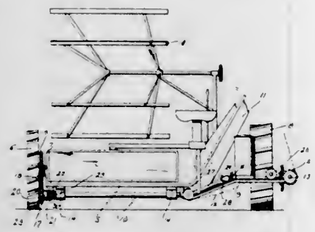


1. In the method of forming a drill, the form-rolling of a polygonal blank to form the fluted portion of the drill.

1,379,071. TWISTING-MACHINE. CHARLES P. WINEMAN, Detroit, Mich., assignor to Detroit Twist Drill Company, Detroit, Mich., a Corporation of Michigan. Original application filed Mar. 7, 1918, Serial No. 220,913. Divided and this application filed July 3, 1919. Serial No. 308,579. 9 Claims. (Cl. 153—78.)

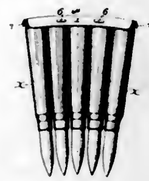
1. In a machine for forming drills or the like, the combination with a plurality of members for non-rotatively engaging different portions of the blank, of means for successively rotating said members through their respective adjacent members, and means for automatically controlling the rotation of said members.

1,379,072. COOKING UTENSIL. FRED G. WINKELMAN, Manitowoc, Wis. Filed Sept. 19, 1919. Serial No. 324,752. 1 Claim. (Cl. 53—7.)



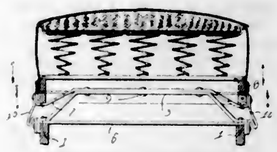
A utensil of the class described comprising a receptacle having a central reservoir for grease or the like, and a plurality of pockets adapted to receive material to be cooked, said pockets being radially disposed about said reservoir and annularly spaced, the bottom of the reservoir being lower than the bottoms of the pockets and connected therewith by chanels, each channel forming with the bottom of the corresponding pocket a drain of constant slope into said reservoir whereby surplus grease placed in the pockets will drain into the central reservoir.

1,379,073. PROCESS OF MAKING PROPELLENT POWDER. RICHARD GEORGE WOODBRIDGE, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 8, 1919. Serial No. 316,030. 17 Claims. (Cl. 52—22.)



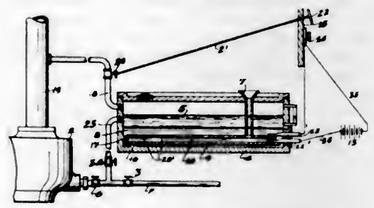
1. The process which comprises impregnating the surface of an explosive grain insoluble in water with a deterrent material, all of the deterrent material used having a melting point above 100° C. and being substantially insoluble in water, by subjecting the grain, while intimately mixed with said deterrent material, to treatment with hot water.

1,379,074. SIDE-DRAFT ELIMINATOR. HALSEY CAMERON ABERN and FELIX J. BAIVIER, Racine, Wis. Filed Mar. 13, 1920. Serial No. 365,673. 1 Claim. (Cl. 56—321.)



A side draft eliminator for harvesting and binding machines and the like comprising a harvester frame, a main bull wheel supporting one end thereof, a side wheel supporting the other end thereof, a shaft transversely journaled in the frame and having one end thereof terminating adjacent said side wheel, a second shaft journaled in the frame substantially parallel with the other shaft and on a higher plane, an inclined shaft, universal joint means connecting the ends of said inclined shaft with the inner ends of said parallel shafts, and means drivingly connecting the outer ends of said shafts with said wheels.

1,379,075. CARTRIDGE-CLIP. WILLIAM D. ASHWORTH, Philadelphia, Pa. Filed Oct. 23, 1918. Serial No. 259,423. 6 Claims. (Cl. 42—88.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

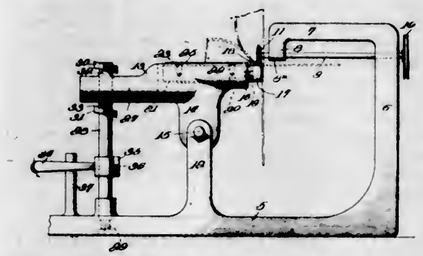


1. In a cartridge clip a case and a normally straight spring having parallel edges and formed to bear against head of cartridge substantially at edge of cartridge head.

1,379,076. SEAT FOR VEHICLES OR THE LIKE. GAYLORD V. BARNES, Alameda, Calif. Filed Mar. 9, 1920. Serial No. 364,418. 1 Claim. (Cl. 155—9.)

In a seat construction for vehicles, a supporting frame disposed transversely of the vehicle body, and means for mounting the seat on said frame whereby it may absorb and overcome horizontal shocks, said means including a plurality of transversely spaced apart arched members supported at their front and rear ends on said frame, and flexible straps secured upon and extending beyond the arched portions of said members and secured at their free ends to the bottom of the seat at its front and rear.

1,379,077. PROCESS AND APPARATUS FOR GENERATING EXPLOSIVE GASES. HENRY BLUMENBERG, Jr., Daggett, Calif. Filed June 11, 1920. Serial No. 388,180. 3 Claims. (Cl. 204—1.)

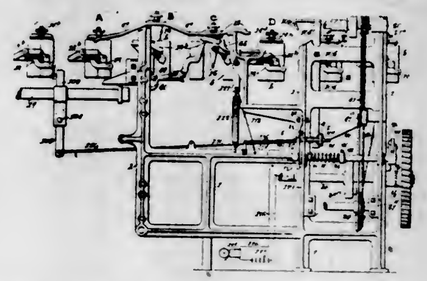


1. A process of producing a gaseous fuel mixture, comprising treating heavy hydrocarbons with hydrogen by passing a mixture of hydrogen and oxygen electrolytically generated through the body of the heavy hydrocarbons.

1,379,078. HAT-TRIMMING MACHINE. LOUIS ORRILL BOUCHARD, Philadelphia, Pa. Filed Jan. 31, 1918. Serial No. 214,775. 8 Claims. (Cl. 164—60.)

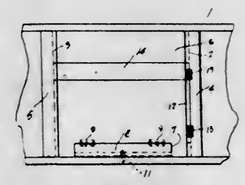
1. In a hat trimming machine, the combination with a frame comprising a base, a post fixed to said base, a standard spaced from said post and supported by said base, and an overhanging arm disposed in a plane above said post and projecting from the upper end of said

standard toward said post, and terminating at a point intermediate said post and standard, of a horizontally disposed shaft supported by said standard and having one end projecting toward said post and beyond the end of the overhanging arm, a circular trimming knife fixed to said projecting end of the shaft, a horizontally disposed shaft carried by said post and disposed in a plane below said first mentioned shaft, a work supporting roller carried by said second mentioned shaft and disposed under said trimming knife, one of said shafts being pivotally supported, and manually controlled means for swinging said pivoted shaft to form a clearance between the trimming knife and the work supporting roller.



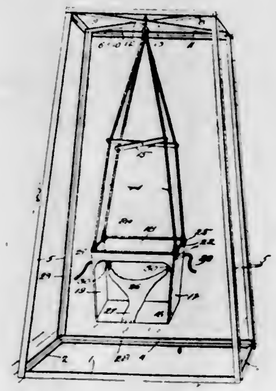
1,379,079. AUTOMOBILE-WHEEL CONSTRUCTION. GEORGE W. BROWNYARD, Los Angeles, Calif. Filed Jan. 18, 1921. Serial No. 438,189. 4 Claims. (Cl. 301—37.)

1. The combination with an automobile wheel having the usual hub, spokes, felly and rim, of metal disks arranged on the side faces of said wheel, the inner edges of which disks are arranged between the hub flanges and the inner portions of the spokes, and the outer edges of said disks being arranged between the felly and rim thereupon.



1,379,080. STOP MECHANISM FOR PASTRY-MAKING MACHINES. FREDERICK A. BRUCKMAN, Portland, Oreg. Filed Oct. 25, 1920. Serial No. 419,462. 10 Claims. (Cl. 107—58.)

1. In a pastry making machine wherein is provided relatively movable baking mold units and relatively stationary operating cams therefor, a mold charging mechanism and a shaft from which the mold parts are driven; a stop mechanism comprising a control shaft, means holding said control shaft to the "run" position and



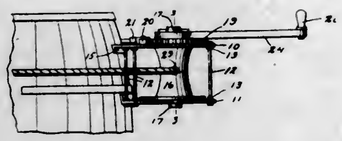
means operative by a disorganized part of the machine for releasing said holding means and moving said control shaft to the "stop" position.

1,379,081. GRAIN-DOOR. TORQUIL CAMPBELL, Vancouver, British Columbia, Canada. Filed Jan. 21, 1920. Serial No. 353,055. 1 Claim. (Cl. 20—27.)

The combination with a car having a door opening, of grooved posts on each side of the opening, a door adapted to fit said grooves and held against inadvertent displacement when seated therein, said door having a discharge opening in its lower edge and a closure member for said opening, and a normally secured hinged member forming the side wall of one of said grooves the lower edge of which is above the lower edge of the door, said hinged member being capable of opening to permit the removal of the door when the latter is raised into alinement with the lower edge thereof.

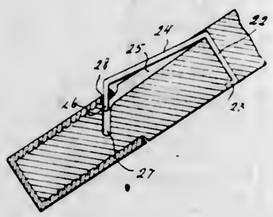
1,379,082. BABY-SWING. CLARENCE W. CAVANAUGH, Gloucester, Mass. Filed Sept. 16, 1919. Serial No. 324,204. 3 Claims. (Cl. 155—58.)

1. A baby swing having a seat including in its construction a seat bottom; a back wall extending upwardly



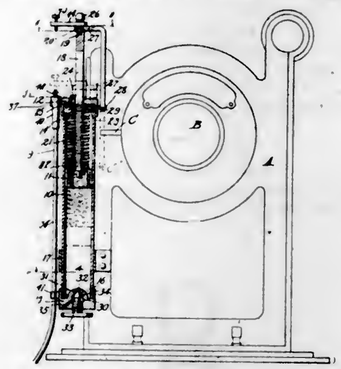
from said seat bottom formed near each side with an aperture; a belt made near its middle with a laterally and downwardly projecting extension secured near its lower end to said seat bottom near the front thereof, said belt being provided at its ends with flexible terminals, extending through the apertures of the back wall and adapted to be fastened together at the rear of said back wall.

1,379,083. APPARATUS FOR TREATING ORES OR THE LIKE. GALEN H. CLEVENGER, Washington, D. C., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1919. Serial No. 289,061. 20 Claims. (Cl. 263—32.)



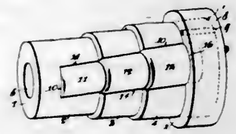
1. A furnace having a reaction zone through which material to be heated is moved progressively, means for passing a combustible gas through said zone and means for progressively burning said gas.

1,379,084. WINDLASS. DAVID B. CONCLIN, Newport, Ky. Filed Sept. 11, 1918. Serial No. 253,597. 1 Claim. (Cl. 147—4.)



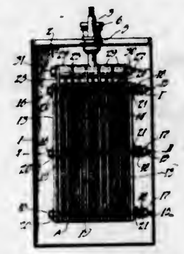
In combination with a flexible tension element to be passed around a cooperage article for drawing the staves together, a frame having laterally extended faces to bear on segmental parts of said article at opposite sides of the plane of the passed-around tension element, a drum rotatably mounted in said frame, said tension element being connected to said drum for winding thereon to contract said element around said article, an operating handle having a sweep in a plane substantially parallel with said plane of said passed-around tension element, and a ratchet mechanism operatively connecting said operating handle to said drum.

1,379,085. RETAINING-LATCH FOR HANDLES. FRANK C. DAVIS, Tucson, Ariz. Filed Nov. 10, 1919. Serial No. 336,839. 1 Claim. (Cl. 306—28.)



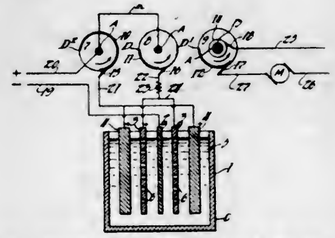
An implement head provided with an internally threaded socket, the marginal edge of which having latch receiving notches, a handle engaging and threaded in said socket, said handle adjacent the socket having an elongated channel extending in a direction longitudinally of the handle and from the socket and terminating at one end in an aperture positioned in a direction angularly of the handle and at its other end in an aperture through the handle and having a grooved extension, a latch comprising a single length of spring wire having one end bent angularly and depressibly engaging the angular extension of the channel with its bent portion overlying the marginal edge of the socket to engage any one of said notches in the socket, thereby holding the head in different positions rotatably relatively to the handle and preventing the handle from disengaging the socket, the other end of the latch passing through the aperture which is formed through the handle, said other end of the latch terminating in a lateral lug extending in a direction to engage the grooved extension, thereby preventing rotatable displacement of the latch.

1,379,086. CAMERA ATTACHMENT. WILLIAM L. DAVIS and HOWARD ENSMINGER, Portland, Oreg. Filed Aug. 9, 1916. Serial No. 114,025. Renewed Sept. 28, 1920. Serial No. 413,406. 2 Claims. (Cl. 161—26.)



1. In a camera shutter operating mechanism, the combination of a cylinder, an air compressing piston in said cylinder, a piston rod having a cylindrical portion adjacent the piston, a square portion beyond and a cylindrical portion beyond the square portion, a square opening in the head of said cylinder to guide the piston rod and prevent rotation thereof, a spring for actuating said piston to compress air in the cylinder and to give partial rotation to the piston rod, a valve for permitting gradual escape of compressed air from the cylinder, a lateral projecting pin on the piston rod for maintaining the piston in a retracted position and adapted to pass through a slot in the piston head, and a trip arm connected to and movable with said piston rod to operate the shutter trigger.

1,379,087. MULTIPLE EXPANDER. THOMAS J. DIXON, Madison, Wis. Filed May 22, 1920. Serial No. 383,338. 4 Claims. (Cl. 153—28.)

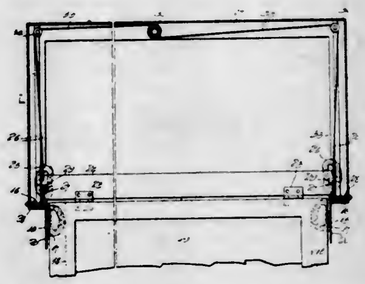


1. A tube expander comprising a shell having an axial bore, said shell being formed of a plurality of diameters to provide "steps," each of said steps having a radial roller receiving pocket, the inner portion of which pocket registers with the bore of the shell, rollers in said pockets, the pockets of the steps of lesser diameter having lips at their outer edges to restrain the rollers, the rollers in the respective pockets alining with each other, whereby the smaller diameter rollers may be inserted via the largest roller pocket into their respective smaller pockets, means for retaining the largest roller in place, and a mandrel for forcing the rollers radially.

1,379,088. STORAGE BATTERY. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J. Filed Sept. 16, 1919. Serial No. 324,058. 12 Claims. (Cl. 204—29.)

1. A battery pile comprising a series of superposed thin conductive sheets separated by thin pieces of flexible insulating material, thin layers of active material respectively disposed between and in engagement with both surfaces of each of the sheets and the adjacent surfaces of the pieces of insulating material, and means for securing all of said elements together whereby the active material is constantly and adjustably held under pressure firmly in substantially uninterrupted surface contact with said sheets, substantially as described.

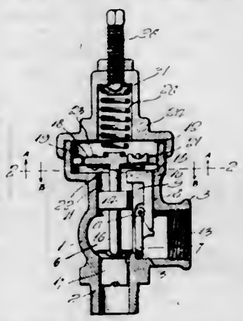
1,379,089. PRODUCTION OF THIN METALLIC SHEETS OR FOILS. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J. Filed Oct. 4, 1919. Serial No. 328,378. 26 Claims. (Cl. 204—13.)



1. The process of electro-plating alternate layers of two different metals in an electrolytic cell comprising a bath containing solutions of a salt of each of such metals, and two anodes respectively formed of such metals and a cathode disposed in said bath, which consists in passing a current through the cell in a path including one of said anodes, the electrolyte and the cathode, which current has a density less than that which will deposit metal of which the other anode is composed, then breaking the circuit of said current and passing a current of comparatively high density through the cell in a path including said other anode, the electrolyte and the cathode, substantially as described.

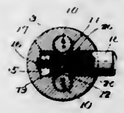
1,379,090. COMBINATION SHIP-BEVEL, MITER-SQUARE, CALIPERS, AND RULE. LOUIS J. ENGLUND, Oakland, Calif. Filed June 3, 1920. Serial No. 386,300. 3 Claims. (Cl. 33—106.)

1. In a measuring instrument, major sections pivotally united with their flat side faces adjacent each other, said pivoted ends having protecting plates, means passing through the protecting ends of the major sections and provided with means for drawing the two sections tightly and frictionally together, tongues or auxiliary sections pivotally and frictionally connected to the other ends of the major sections and adapted to be disposed in alinement toward each other, whereby the instrument may be used as outside calipers, or disposed toward and intersecting each other, whereby the instrument may be used as inside calipers, the major sections having elongated slots in which the tongues or auxiliary sections are adapted to fold, whereby they may be protected.



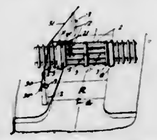
1,379,091. BOOKCASE. JAMES C. FARQUHAR, Zanesville, Ohio. Filed Aug. 30, 1920. Serial No. 406,805. 8 Claims. (Cl. 45—78.)

1. The combination with a case of the character described having a forwardly swinging door; of plates pivoted to said case at opposite ends of said door and slidably supporting the latter to permit it to move into the case when swung to a horizontal position, a projectable and retractable shelf mounted in said case, and means connecting said shelf with said plates for projecting the former when the latter are swung forwardly by said door.



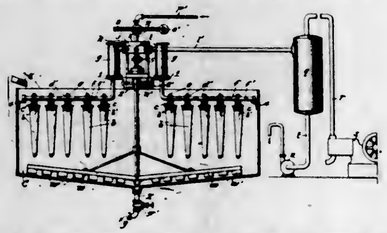
1,379,092. SAFETY-VALVE. FRANK FRACCASCIA and JOHN ERCOLANI, Philadelphia, Pa., assignors of one-third to Adam Cwik, Camden, N. J. Filed June 23, 1920. Serial No. 391,131. 6 Claims. (Cl. 137—53.)

4. A valve comprising a housing having a water chamber provided with an inlet and an outlet, a check valve



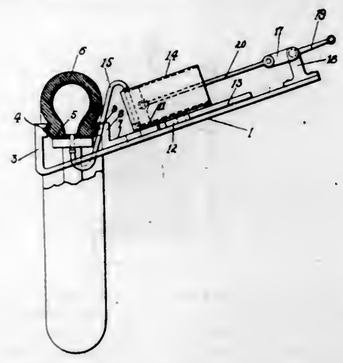
for the inlet, a gate valve for the outlet, a latch for releasably holding the gate against movement to an open position, a piston slidably mounted and having engagement with the check valve and adapted to engage the latch to move the same to an inoperative position, a spring for yieldably holding the piston against sliding movement, and means for regulating the tension of the spring.

1,379,093. DROP-LIGHT ADJUSTER. JOHN FREEBERG, Brooklyn, N. Y. Filed Nov. 17, 1920. Serial No. 424,717. 4 Claims. (Cl. 24—115.)



1. A cord adjuster consisting of a block having transverse parallel wire receiving passages therethrough, and a transverse passage at right angles to and between the parallel passages, a plunger in the last-named passage having transverse recesses in its opposite sides, and resilient means normally urging the plunger in position to bind the walls of its recesses against the wires, said plunger being movable to register its recesses with the parallel passages to permit the wires to slide therethrough.

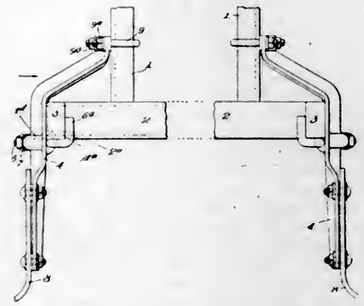
1,379,094. GATE. WILLIAM F. GATEWOOD, Pierce City, Mo., assignor to George L. Middleton, Venice, Calif. Filed Feb. 25, 1920. Serial No. 361,343. 2 Claims. (Cl. 39—36.)



1. The combination with a pair of posts, of a gate hinged to one of the posts, a pair of coöperating latches on the opposite post, a latch lever fulcrumed on the gate one end of which lever is adapted to be engaged by the latches, a horizontally disposed lever fulcrumed on the top of the post to which the gate is hinged, a transversely disposed member mounted for rocking movement on the top of the gate and to which the inner end of the fulcrumed lever is connected, rods depending from the ends of said rocking member, the lower ends of which rods engage beneath the inner end of the latch lever, guides on the gate for said rods, and operating rods connected to the outer ends of the fulcrumed lever and extending substantial distances away from the gate in both directions.

1,379,095. CONTINUOUS THICKENING PROCESS. ALBERT LEGRAND GENTEA, Salt Lake City, Utah, assignor of one-half to General Engineering Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 3, 1919, Serial No. 280,299. Renewed Mar. 22, 1921. Serial No. 454,414. 11 Claims. (Cl. 210—196.)

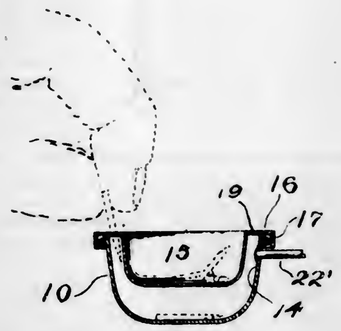
1. A continuous thickening process consisting, essentially, in submerging a series of hollow filter elements in the mixture being thickened in a common reservoir, continuously removing filtrate from any desired portion of said series of filtering elements, and simultaneously with the removing of said filtrate producing a cleansing action on any other desired portion of said series of filtering elements.



1,379,096. PNEUMATIC-TIRE PUMP. JOHN C. GILBERT, Grafton, Mass. Filed June 9, 1920. Serial No. 387,632. 5 Claims. (Cl. 230—27.)

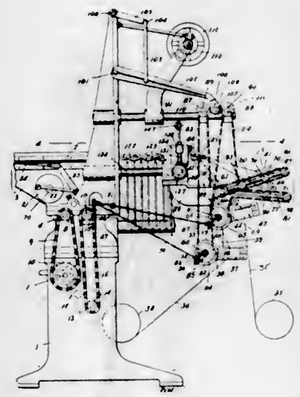
1. The combination in a pneumatic tire pump, of a piston equipped pumping cylinder, a support for said cylinder, and means for clamping said cylinder support to a wheel at an oblique angle to the plane of the wheel.

4. In a pneumatic tire pump, the combination of a piston equipped cylinder, a support for said cylinder, a fixed clamping jaw for engaging one side of a wheel rim, a movable jaw for engaging the opposite side of the wheel rim, and means for forcing said movable jaw toward the fixed jaw.



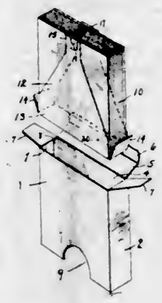
1,379,097. AUTOMOBILE-BUMPER. OSCAR H. GOETZ, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 13, 1920. Serial No. 403,220. 2 Claims. (Cl. 293—55.)

2. In combination with an automobile frame having longitudinal side bars and a cross bar which joins them and which has at the end and under side an edge sloping up outwardly and a member which crosses the end of the bar above the same, making an upwardly and inwardly opening angle therewith; a longitudinally extending bracket arm secured to the side bar and extending thence past the edge of the cross bar and having an inwardly-projecting lug which abuts and fits substantially against said sloping edge, and an L-hook bolt having its hook engaging said angle and its stem extending through the bracket arm in



a direction transverse to said slope, and attaching means on the end of the bolt, the transverse bar of the frame being a flanged bar, and a vertical flange thereon having the sloped edge, the lug being rabbeted at its edge abutting on said slope to form a lip which engages at the opposite side of said flange of the cross bar from that past which the bolt stem extends.

1,379,098. CONTAINER FOR NEW AND DISCARDED ARTICLES. PETER R. GONSKY, Chicago, Ill. Filed Mar. 3, 1920. Serial No. 362,949. 1 Claim. (Cl. 206—1.)



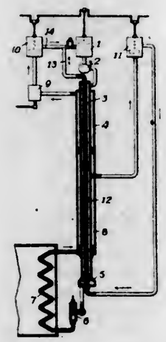
As an improved article of manufacture, a sheet metal cover element for phonograph needle cups, the cover having a peripheral down-turned flange to fit around a cup and having a receptacle part pressed centrally therein, and being formed also with a needle receiving slot therethrough immediately without and adjacent the receptacle part for the purposes described.

1,379,099. METALLIC HEDDLE MECHANISM FOR TEXTILE-MACHINES. EDGAR F. HATHAWAY and CHARLES M. MARS, Dorchester, Mass., assignors, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed July 10, 1916. Serial No. 108,387. 21 Claims. (Cl. 139—94.)

1. Textile mechanism comprising in combination, thread selecting mechanism, means to support drop wires, pattern controlled releasing means for the drop wires, feeding means for the drop wires, and means to impart continuous movement to said feeding means.

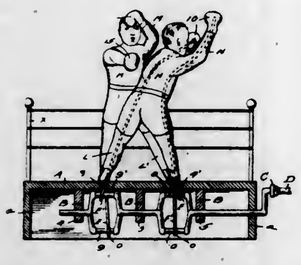
1,379,100. BOX. EDWARD A. HAYNES, Port Huron, Mich. Filed Aug. 27, 1920. Serial No. 406,359. 2 Claims. (Cl. 229—11.)

1. A box consisting of a rectangular cover and a holder, the cover having an open end and a flap hinged at the opposite end of the cover to one of its sides and adapted to close the adjacent end of the cover, said holder comprising an end and two leaves connected thereto between which the contents of the box are placed, said holder and the contents thereof being slidable into said cover, and a metal fastener attached to the end of one of said leaves and comprising a tongue adapted to engage the adjacent edge of one side of the cover and said flap of the cover to secure the holder in position.



1,379,101. ABDOMINAL SUPPORTER. JOSEPHINE L. HOLT, Portland, Oreg. Filed Oct. 26, 1917. Serial No. 198,684. 1 Claim. (Cl. 2—188.)

As a new article of manufacture an abdomen supporter comprising an abdomen supporting band curved throughout its length and also throughout its width to conform to the shape of the wearer's abdomen, said supporting band being longitudinally yieldable and having its upper and lower edges provided with reinforcing strips also longitudinally yieldable, a transversely extending vertical reinforcing non-elastic strip secured to each end of said supporting band, and extending from top to bottom thereof, a connector shaped to conform to the contour of the back of the wearer and being of substantially twice the width of said supporting band and provided with transversely extending vertical reinforcing non-elastic bands at the respective ends thereof, said ends being of substantially twice the width of the band ends and extending



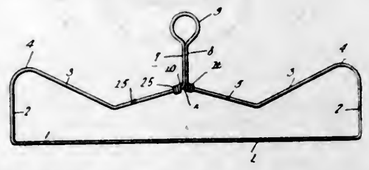
from top to bottom of the connector, a series of lacings connecting said supporting bands to said connector to project above the upper end of the supporting band, and means for detachably connecting the opposite end of the supporting band to said connector.

1,379,102. REFRIGERATING APPARATUS. EBENEZER A. W. JEFFERIES, Worcester, Mass., assignor to Jefferies-Norton Corporation, Worcester, Mass., a Corporation of Delaware. Original application filed Jan. 26, 1915, Serial No. 4,536. Divided and this application filed Jan. 21, 1918. Serial No. 212,862. 9 Claims. (Cl. 62—122.)

1. The combination with means for liquefying a working fluid which is gaseous in its free state, of means for sustaining the pressure on the evaporate from said liquid, means for circulating said evaporate in heat exchanging relation to the gaseous fluid about to undergo liquefaction, and means for thereafter expanding said evaporate, to furnish power.

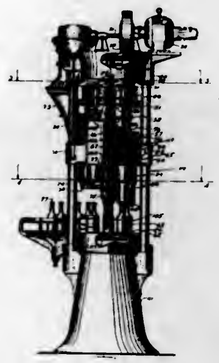
1,379,103. MECHANICAL TOY. CARL E. JENSEN, Chicago, Ill. Filed Mar. 3, 1920. Serial No. 363,043. 3 Claims. (Cl. 46—40.)

1. A mechanical toy comprising a base, a pair of flexible figures representing boxers arranged on the base and having their feet fixed thereto, a pair of reciprocable rods, extending longitudinally through each of the figures and attached to the hands of the latter, and operating means connected with the lower ends of the rods to reciprocate the same to impart life like movements to the figures.



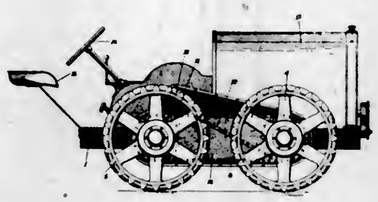
1,379,104. WINDSHIELD ATTACHMENT. FRANK KAMROWSKI, Stevens Point, Wis. Filed Sept. 23, 1920. Serial No. 412,332. 5 Claims. (Cl. 296—84.)

1. A device of the class described comprising a clamp composed of two adjustably connected members, each member including a channel portion to fit the edge of the glass



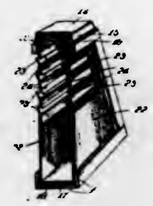
and spaced arms to extend on opposite sides of the glass sections.

1,379,105. COAT-HANGER. HARRIET E. KELLEY, Denver, Colo. Filed Mar. 17, 1921. Serial No. 453,071. 1 Claim. (Cl. 211—13.)



A coat hanger comprising a base having upstanding end members merging into arms which slant toward the base to define prominent projections at the points where the end members join the arms, the arms merging into top members which slant away from the base, one top member being bent upon itself to define an angle and to form first and second suspension members, one top member being lodged in said angle and being engaged around the other top member, the second suspension member being engaged around the first specified top member.

1,379,106. BOTTLE-CROWNING MACHINE. JOSEPH H. KONEFES, Chicago, Ill. Filed Mar. 31, 1919. Serial No. 286,465. 9 Claims. (Cl. 226—84.)



1. In a rotary machine for sealing containers, in combination with suitable means of support, guidance and actuation, means for holding containers; vertically movable sealing heads above the holding means; brackets on the sealing heads horizontally journaled near one end, and carrying horizontal pins on their free ends; rollers on the pins; vertical rods slidably projecting through the brackets, into the sealing heads; locking members, adapted to automatically lock the sealing heads to the vertical rods, on downward movement of the rods, when the free ends of the brackets are allowed to drop; automatic means for pushing the vertical rods a fixed distance downward on passing the sealing station; automatic means for moving the vertical rods upward after the sealing station has been passed; and a circular cam surrounding the sealing heads, so shaped as to support the rollers, and through them the brackets and sealing heads, during the greater part of the circuit of the machine, but to gradually bring the sealing heads to rest on the containers as the sealing station is approached, then at the sealing station not to support the rollers at all, and after the sealing station is passed, to re-engage the rollers and to lift them and, through them, the brackets and sealing heads.

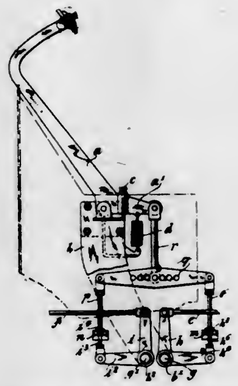
1,379,107. TRACTOR. JOHN MINOR KROYER, Stockton, Calif. Filed Nov. 28, 1919. Serial No. 340,985. 2 Claims. (Cl. 180—70.)

1. A driving means for a four wheel driven tractor including a means for applying the power of the tractor to the front wheels thereof at a constant point relative to the axis of rotation, the front and rear wheels being connected in driving relation with each other.

1,379,108. REFRIGERANT-HOLDING RECEPTACLE. ALBERT P. KRUSE, Chicago, Ill. Filed June 23, 1919. Serial No. 306,232. 1 Claim. (Cl. 62—69.)

A receptacle of the class described, formed of sheet metal and rectangular in cross section having bottom, side and end walls, with the vertical and longitudinal dimensions of the receptacle being greater than the transverse dimensions thereof, said receptacle being provided with a plurality of horizontally disposed air passages adjacent the upper part of the receptacle, a side wall of the receptacle being provided with moisture-deflecting projections disposed lengthwise above said air passages, an outer casing about the bottom, ends and portions of the sides of the receptacle with intervening layers of insulating material therebetween, and a removable top.

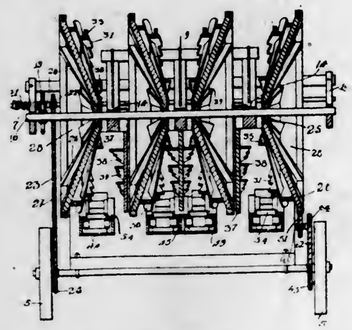
1,379,109. ART OF MANUFACTURING PRINTERS' ROLLERS. SOLOMON KUTNER, Chicago, Ill., assignor, by mesne assignments, to Rapid Roller Co., Chicago, Ill., a Corporation of Illinois. Filed July 26, 1919. Serial No. 313,639. 4 Claims. (Cl. 18—29.)



1. The hereindescribed method of making an inking roller for a printing press which consists in preparing a self-vulcanizing compound in semi-liquid form for the production of a roll core, filling a suitable mold with the semi-liquid, allowing sufficient time for the liquid to become solidified by self-vulcanization, removing the solidified core from the mold and covering the outer surface of the core with a non-vulcanized coating of resilient material, as and for the purpose specified.

1,379,110. SAFETY-CATCH. MOAD H. LE MARR, Los Angeles, Calif. Filed July 2, 1919. Serial No. 308,241. 2 Claims. (Cl. 24—162.)

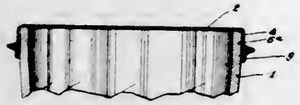
2. In a safety catch for brooch pins and the like a base, a spring hook mounted upon the base adapted to spring outwardly therefrom, a latch member slidably mounted upon the base and in a slot in the hook, means for retaining the latch member from being moved out of the slot in the hook, a lip upon an upper edge of the latch member positioned to operate under the hook, a concavity in the top of the latch member back of the lip, the lip being disposed at such a height relative to the hook that in passing under a pin member seated in the hook it will spring the hook upwardly and snap past the pin member whereby the pin member will become seated in the concavity behind the lip.



1,379,111. FOUR-WHEEL-BRAKE EQUALIZER. ALEXANDER LUCAND, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 10, 1920. Serial No. 364,809. 4 Claims. (Cl. 188—46.)

1. Brake operating devices for four wheels, comprising brake rods, independent bell crank levers to which the

rods are attached, respectively, a bar for each two bell crank levers having a universal connection therewith, an independent bar for a universal connection with said first named bars adjacent the mid-sections thereof, and means connected pivotally to the last named bar adjacent its mid-section for applying the braking efforts.

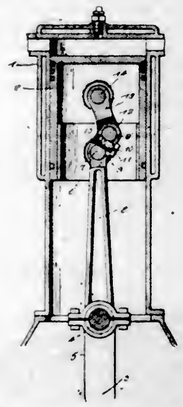


1,379,112. THRESHING-MACHINE. GUSTAV PAUL LUEDKE, Springfield, Ill. Filed Sept. 24, 1919. Serial No. 325,856. 16 Claims. (Cl. 56—126.)

1. A threshing machine including a revoluble threshing element, another threshing element at one side thereof, said elements having their coöperating faces converging toward the axis of rotation of the revoluble element.

2. A threshing machine including a revoluble threshing element, a stationary threshing element coöperating therewith, the coöperating faces of said elements converging toward the axis of rotation of the revoluble element.

1,379,113. ARTICLE AND METHOD FOR HERMETICALLY SEALING PACKING VESSELS. GEORGE W. LUHRMANN, Jersey City, N. J., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 8, 1920. Serial No. 350,240. 10 Claims. (Cl. 215—40.)

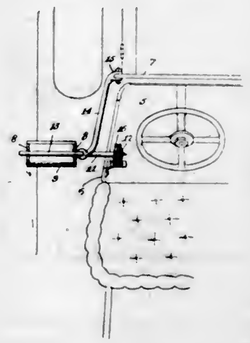


1. As an article of manufacture, a closure for packing vessels including a portion forming a cover for the mouth of the vessel and a portion disposed to encompass the side wall of the vessel, said last mentioned portion having a collapsible concave ductile part, and a sealing charge of cohesive and adhesive plastic material disposed in contact with the concave wall of the ductile part and extrudable therefrom upon re-formation of said ductile part.

1,379,114. INCLOSED FUSE. CLARENCE T. MCDONALD, Chicago, Ill., assignor to Chicago Fuse Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 21, 1918. Serial No. 263,472. 7 Claims. (Cl. 200—135.)

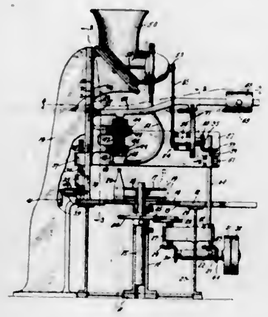
1. An inclosed fuse comprising a casing, a fusible element in the form of a flat strip of fusible metal of uniform width and cross-section throughout its middle portion, so that its current carrying capacity is substantially the same at all points throughout such middle portion, means for mounting the ends of said element in the ends of said casing, and a coating of paint applied to and surrounding a section of said element and spaced inwardly from the ends of said element and from the means for mounting said element to leave exposed the intermediate portions of the element between said coating and said mounting means.

1,379,115. INTERNAL-COMBUSTION ENGINE. MARION MALLORY, Wichita, Kans. Filed June 19, 1919. Serial No. 305,383. 1 Claim. (Cl. 123—197.)



An internal combustion engine comprising a cylinder, a crank shaft at the inner end of said cylinder, a hollow piston within said cylinder having an open end facing said crank shaft, a sleeve slidable within the open end of said piston, a gudgeon pin extending across said sleeve, a connecting rod between said gudgeon pin and said crank shaft, the outer end of said connecting rod having an opening snugly receiving the center of said gudgeon pin, said connecting rod extending outwardly from said gudgeon pin at an obtuse angle to the length of said connecting rod, a second gudgeon pin extending across the hollow piston, a link mounted at its outer end on said second gudgeon pin, the inner end of said link being forked and straddling said extended end of the connecting rod, a third pin extending through the forked end of said link and extended end of the connecting rod, the latter being split between said third pin and said first named pin, and a screw passing through said extended end of the connecting rod between said first and third pins for clamping them tightly in place.

1,379,116. PIN-CALIPER. JOHN D. MALLOY, Hartford, Conn. Filed June 17, 1920. Serial No. 389,571. 6 Claims. (Cl. 33—163.)

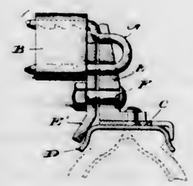


1. A caliper comprising a beam formed of a single length of wire bent to U shape, a head with a calipering pin and transverse openings fitted upon and secured to the free ends of the two wires of the beam, a head with a calipering pin and transverse openings fitted upon and slidable along the two wires of the beam, separable means in the head for clamping said latter head to the beam wires, an adjusting member with transverse openings fitted and slidable along the beam wires, means for clamping the adjusting member to the beam wires, a thumb nut carried by the adjusting member, and a feed screw extending from the slidable head through the adjusting member and nut.

1,379,117. VEHICLE DIRECTION-SIGNAL. GUS W. MARKOS, Columbus, Ohio. Filed Aug. 23, 1920. Serial No. 405,305. 4 Claims. (Cl. 116—47.)

1. A vehicle direction signal, comprising a signal box having signals on its respective sides, an open frame for supporting said signal box and in which it is mounted to rotate, supporting arms for said frame having short ends and fastening means for attaching them to the frame of the windshield and formed with a long arm arranged substantially at right-angle to said short ends and adapted to extend backwardly therefrom to support the signal box and its frame at a point outside of and adjacent the seat of the car, and operating means for rotating said signal box.

1,379,118. BOTTLE-CROWNING MACHINE. MELCHOR MARSA, New York, N. Y., assignor to International Cork Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 29, 1920. Serial No. 369,522. 3 Claims. (Cl. 226—84.)

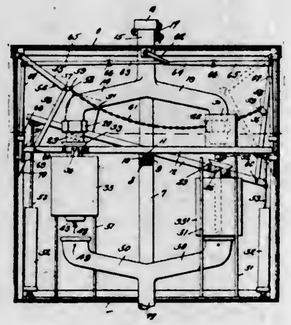


1. In a machine for applying metallic closures to fragile receptacles, the combination with a receptacle support, of a closure applying device reciprocably mounted in relation thereto, a weighted mechanism in continuous engagement with said applying device, a spring for moving said closure applying device away from said support, and means for intermittently opposing the gravitation of said weighted mechanism, thereby allowing said spring to move said applying device away from said support and then permitting said weighted mechanism to act on said applying device by its weight, whereby said applying device is caused to move toward said support.

1,379,119. WELL-PLUG. GEORGE W. MAUZEY, near Edgerton, Mo. Filed Oct. 30, 1920. Serial No. 420,748. 1 Claim. (Cl. 166—13.)

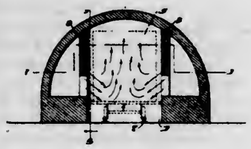
A fragile cast metal plug body of cylindrical form, said body being adapted to receive and to hold a filling substance therein for adding weight to said body; a plurality of legs formed integrally with said body on the marginal portion of its bottom, said legs being inclined downward and toward each other for holding a plastic substance therebetween; a packing on the top of said plug body; and securing means whereby said packing is held in place.

1,379,120. SHACKLE FOR PADLOCKS. GEORGE M. MILLER, Lancaster, Pa., assignor, by mesne assignments, to Fraim-Slaymaker Hardware Company, Inc., Lancaster, Pa., a Corporation of Pennsylvania. Filed July 15, 1920. Serial No. 396,425. 3 Claims. (Cl. 70—108.)



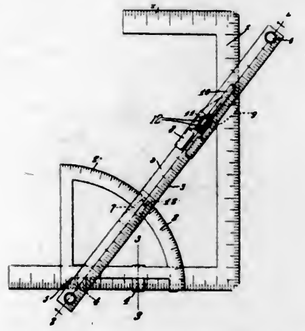
2. In combination, a lock case having openings therethrough and means therein for automatic locking engagement with a notched arm or arms of a shackle inserted in said openings, and a shackle having one of its arms bent abruptly outwardly away from the other arm substantially at right angles thereto at a point intermediate its length and then forwardly, so as to bring it out of the line of its head portion but substantially parallel therewith and with the other arm, the latter being straight, whereby the two arms are made to extend near together in substantially parallel planes from the head portion thereof to said intermediate point and wide apart from said point to their free ends, substantially as and for the purpose described.

1,379,121. CAR-WHEEL. EUGENE G. MITCHELL, Red Level, Ala. Filed Oct. 28, 1920. Serial No. 420,173. 4 Claims. (Cl. 295—33.)



1. A car wheel comprising a hub, a rim, a pair of guard flanges formed on the rim, and side wheels arranged on opposite sides of the first mentioned wheel.

1,379,122. FLUID-MEASURING DEVICE. JULIUS CLINTON MOORE, Raleigh, N. C. Filed Dec. 1, 1919. Serial No. 341,597. 5 Claims. (Cl. 249—27.)

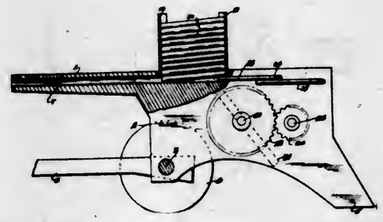


1. In a liquid dispensing apparatus, a casing, discharge pipes and feed pipes within the casing, a pair of pivoted arms within the casing and operating between the pipes, a container supported on one end of each arm, a funnel carried by each of the arms for directing fluid to the containers, means for guiding the containers in their movements, means actuated by the containers for discharging fluid into the containers, means for automatically discharging fluid from the containers, and means carried by the respective arms for overbalancing the empty containers to cause the same to move upwardly.

1,379,123. BAFFLE FOR COMBUSTION-CHAMBERS OF TUNNEL-KILNS. JOHN B. OWENS, Metuchen, N. J. Filed May 28, 1918. Serial No. 237,166. 5 Claims. (Cl. 25—142.)

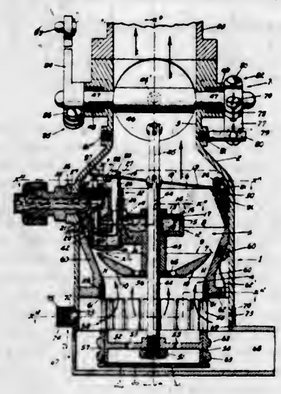
1. A tunnel kiln having a combustion chamber at its side, a baffle for the upper part of the combustion chamber where the latter faces the interior of the tunnel, and piers supporting said baffle, said piers being separated by discharge ports or passages through which the heat and products of combustion pass from the combustion chamber to the interior of the tunnel.

1,379,124. DRAWING INSTRUMENT. HORACE L. READ, Quincy, W. Va.; Anna L. Read administratrix of said Horace L. Read, deceased. Filed Feb. 8, 1919. Serial No. 275,831. 1 Claim. (Cl. 33—97.)



In a drawing instrument the combination with a graduated square, of a graduated arc slidably mounted on one of the arms of the square, an indicator carried thereby for designating any one of the graduations upon said arm, a graduated member movably mounted on the arc and extending across one face of the square, a guide slidably mounted on said graduated member, a lip projecting from the guide and lapping the other face of the square, a cam lever carried by the guide and frictionally engaging the graduated member to bind the lip against the square and to hold the graduated member against movement relative to the square and to hold the guide against movement on the graduated member, means carried by the graduated member for embracing the arc to hold the graduated member and arc properly assembled, and adjusting knobs extending from the end portions of the graduated member.

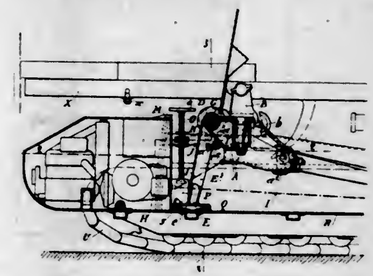
1,379,125. HANDLE ATTACHMENT FOR SCREW-DRIVERS. PETER REINHALTER, Wilkes-Barre, Pa., assignor to Peter Reinhalter Co., Wilkes-Barre, Pa. Filed Sept. 15, 1920. Serial No. 410,375. 2 Claims. (Cl. 279—102.)



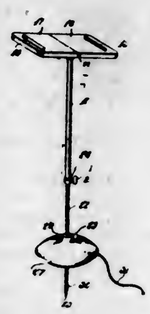
2. In a tool, a handle having an opening in one end thereof, a tubular member positioned within the handle, said tubular member having a lateral opening, a shank having a tang at one end thereof, said tang adapted to be cammed through the opening in the tubular member, where the same embeds itself within the handle portion, and said tang adapted to move a portion of the tubular member laterally.

1,379,126. TOY MACHINE-GUN. SEVER C. REPPE, Los Angeles, Calif. Filed Sept. 3, 1920. Serial No. 407,981. 2 Claims. (Cl. 124—13.)

1. A toy comprising a block having a bore at one end and a slot in said block communicating with said bore, a spring secured at one end in said block and extending outwardly from one side of said block with the opposite end of the spring received in said slot and projecting through said block, and a shaft journaled in said block and adapted to engage the projecting end of said spring so as to alternately retract and release the same.



1,379,127. CARBURETER. FRANK J. RICHARDS, Los Angeles, Calif. Filed May 31, 1916. Serial No. 100,988. 1 Claim. (Cl. 261—51.)

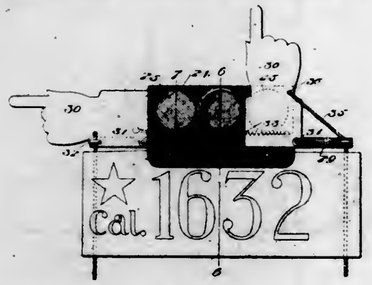


In a carbureter, the combination with a mixing chamber of a plate hinged to one side of the chamber and adapted to allow the mixture to escape from said chamber, and adapted to be operated by said mixture; a valve to admit liquid fuel to said chamber; a tubular guide and a yoke having a stem working in the tubular guide and operable by the plate; said yoke being also provided with a finger extending into the valve seat to lift the valve when the plate is lifted, and a spring to normally seat the valve.

1,379,128. COMBINED FIELD-GUN AND SELF-PROPELLING VEHICLE. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed July 21, 1920. Serial No. 397,952. 13 Claims. (Cl. 89—40.)

1. The combination of a transport vehicle, a saddle carrying a gun, means detachably supporting the saddle on the chassis of the vehicle, rails extending longitudinally of the chassis and movably mounted thereon, and means for raising the forward ends of the rails to engage the saddle to lift the same from the chassis, said rails forming ways for the movement thereon of the lifted saddle and its load to the rear of the vehicle.

1,379,129. FOLDING AND EXTENSION STOOL OR CHAIR. RICHARD SEJNOHA, Wolsey, S. D. Filed July 3, 1920. Serial No. 393,910. 1 Claim. (Cl. 155—135.)

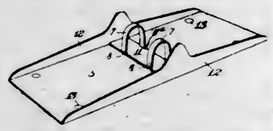


In an article of the class described, a seat having two sections hingedly connected, a disk screwed to the upper end of a sleeve, bolts formed with a loop and engaging said hinges and said disk, said seat sections being horizontally supported flatwise on said disk, a rod within said sleeve, said rod extending outwardly and downwardly thereof, means to hold the sleeve firmly on said rod, a disk slidably mounted on the exteriorly projecting part of said rod, means whereby the second-named disk may be securely fastened to said rod, said rod being pointed and formed with a laterally projecting lug to prevent said disk from sliding off the rod.

1,379,130. DIRECTION-INDICATING APPARATUS FOR AUTOMOBILES. LEON WILLIAM SIMMONS, Los Angeles, Calif. Filed June 18, 1919. Serial No. 304,993. 4 Claims. (Cl. 116—45.)

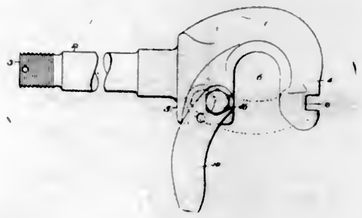
1. In apparatus of the character described, casings secured to the ends of an automobile, each casing having a flat face provided with a center opening and outer openings arranged upon the opposite sides of the inner opening, a collar surrounding the center opening and secured to the flat face and projecting outwardly beyond the same, a lens in the collar, sections of glass spanning the outer openings, a supporting element secured to the casing and projecting beyond the ends thereof, indicating elements pivotally connected with the supporting element and normally adapted to assume substantially vertical positions to cover the outer openings, a shock absorbing

band carried by the collar to engage with the indicating elements, a spring connecting the indicating elements,



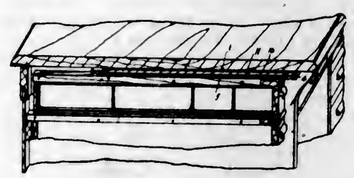
combined stops and guides carried by the supporting element and arranged in the path of travel of the indicating elements, and means for operating the indicating elements.

1,379,131. WIRE CHAIN. FRIEND W. SMITH, Bridgeport, Conn., assignor to American Chain Company, a Corporation of New York. Filed Nov. 7, 1919. Serial No. 336,440. 6 Claims. (Cl. 59—92.)



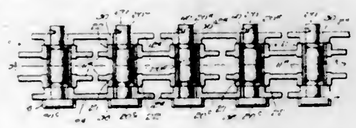
6. A chain link formed from a single section of wire bent centrally on itself to form a loop, the side strand of said loop being continued to form eye portions and thence continuing each to the opposite side of the link and anchored to said opposite side.

1,379,132. PAD-SUPPORTING STAND. GEORGE W. SMITH, Chicago, Ill. Filed May 28, 1918. Serial No. 237,128. 1 Claim. (Cl. 40—120.)



A device of the character described comprising a base plate having a transverse recess at the opposite longitudinal edges of which are inturned lugs, a pair of laterally spaced looped resilient strips extending upwardly from the base and detachably connected thereto at their free ends, said ends extending into the aforesaid recess to seat against the opposite longitudinal edges thereof, and having apertures into which the aforesaid lugs extend, and a spreader plate seating on the base plate over the recess and positioned between the apertured ends of the looped strips for holdign the same spread and impaled on the lugs.

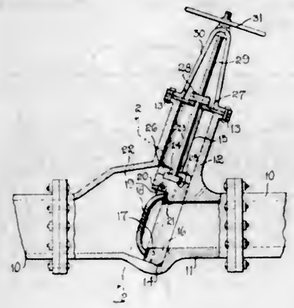
1,379,133. COUPLING. RUSSELL W. SPEECE, Hondo, Tex. Filed Apr. 7, 1921. Serial No. 459,445. 7 Claims. (Cl. 213—67.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A coupling comprising a head formed with a pair of opposing members spaced to produce a ring-receiving recess, a locking element pivoted to one member and operable to a position embracing the other, and co-acting means between said members and locking plate to permit longitudinal actuation of the latter and establish an interlocked relation between said plate and embraced member.

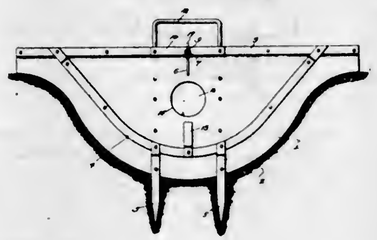
1,379,134. DESK. CALVIN B. STEDDOM, Los Angeles, Calif. Filed Sept. 9, 1919. Serial No. 322,736. 1 Claim. (Cl. 45—6.)

The combination with a desk of a shelf arranged to slide horizontally beneath the top of the desk, said shelf comprising a frame that is composed of side rails and a front rail, there being grooves formed in the lower portions of the inner faces of said front and side rails, which grooves occupy the same horizontal plane, a panel having its front and side edges seated in said grooves, there being channels formed in the inner faces of the side rails of the frame above said panel, a glass panel having its side edges mounted for sliding movement in said channels, said glass panel being spaced apart from the first mentioned panel, the top surface of said glass panel occupying the same horizontal plane with the top surfaces of the rails of the frame and there being a finger receiving recess formed in the inner upper edge of said frame.



1,379,135. GRATE-CHAIN. LOYD R. STOWE, Maplewood, Mo. Filed May 24, 1919. Serial No. 299,661. 18 Claims. (Cl. 110—40.)

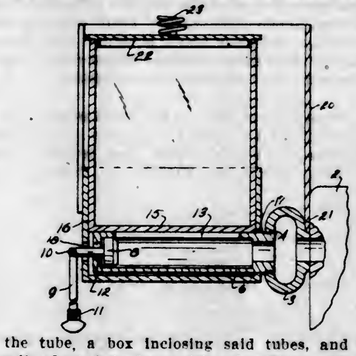
1. The combination in a grate chain, of a series of links, and means for connecting said links to permit relative adjustment thereof.



9. The combination in a grate chain, of a series of inner links, two series of outer links arranged on opposite sides of and overlapping said inner links, bushings engaging said inner links, and pins fixed with respect to said outer links and engaging said bushings.

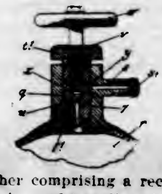
1,379,136. VALVE. JOHN H. SUMMERS and EDWARD S. KIRK, Taft, Calif. Substitute for application Serial No. 290,607, filed Apr. 16, 1919. This application filed Mar. 28, 1921. Serial No. 456,225. 3 Claims. (Cl. 251—51.)

1. A valve casing having a longitudinally extending bore, and a bonnet rectangular in cross section extending from the casing, a valve body having a sliding fit in the bonnet and movable into or out of said bonnet and into or out of a position across the bore of the valve casing and having an opening alining with the bore, a check valve mounted upon the body, and means extending through said bonnet for manually shifting the body into or out of operative position, said means including a screw-threaded shaft operatively engaging the bonnet and the valve body.



1,379,137. DAM OR CHECK. CLARENCE L. SYES and SAMUEL MITCHELL, Ault, Colo. Filed July 17, 1920. Serial No. 396,973. 3 Claims. (Cl. 61—29.)

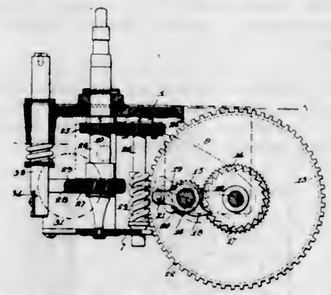
1. A head gate comprising a body plate having an opening, a gate for said opening, a reinforcing strip extending along the upper edge portion of said body plate, a strap arranged at one side of said reinforcing strip, a bail having its ends flattened and arranged between said reinforcing strip and said strap, rivets extending through and connecting said plate, said reinforcing strip, the ends of said bail, and said strap, a loop connected to said strap, and an anchoring link connected to said loop.



1,379,138. GAS-ENGINE STOVE. JOHN O. TERRELL, San Bernardino, Calif. Filed Jan. 26, 1920. Serial No. 354,197. 2 Claims. (Cl. 126—20.)

1. The combination with a gas engine and its manifold, of a plurality of tubes having their inner ends seated in said manifold, the outer ends of said tubes being provided with threaded openings, there being longitudinally disposed slots formed in said tubes, a piston arranged for movement within each tube, a piston rod connected to each piston, the outer portion of which piston rod is threaded for engagement with the threaded opening in the outer end

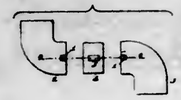
of the tube, a box inclosing said tubes, and a cooking utensil adapted to be positioned within said box above said tubes.



1,379,139. FIRE-EXTINGUISHING DEVICE. CLAUDE TESTE, Jr., Lyon, France. Filed Jan. 7, 1918. Serial No. 210,678. 2 Claims. (Cl. 169—31.)

1. A fire extinguisher comprising a receptacle having a head provided with a bore of two diameters, a screw plug valve in said head having an axial bore of two diameters, a screw needle valve arranged in the larger bore in the plug valve, and a lateral duct in the head through which the compressed air is admitted and the extinguishing liquid is expelled when the apparatus is in use, the screw plug valve being provided with lateral conduits communicating with said duct.

2. A fire extinguisher as in claim 1 wherein the screw needle valve comprises a point adapted to rotate independently of the main rod of the valve.



1,379,140. SPRING-MOTOR. ANTHONY VASSELLI, Newark, N. J., assignor, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Filed June 17, 1918. Serial No. 240,368. 8 Claims. (Cl. 185—37.)

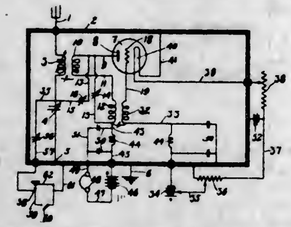
8. A spring motor comprising a frame having depending lugs, a spring shaft, a spring barrel on said shaft, a winding shaft, the said shafts being geared together, a ratchet on the spring shaft, a pawl carried by the winding shaft and adapted to engage the ratchet, a worm wheel on the spring shaft, a counter shaft carrying a worm adapted to engage the worm wheel on the spring shaft, a

spur gear on said counter shaft, a turn-table shaft having a spur gear and a worm wheel, said spur gear meshing with the spur gear on the counter shaft, a governor shaft, a worm on said shaft engaging the worm wheel on the turn-table shaft, a governor and a governor disk, an adjustable stop for regulating the speed of the motor, and a brake for arresting the unwinding of the spring.

1,379,141. TUBULAR JOINT. ANTHONY VASSELLI, Newark, N. J., assignor, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Filed May 5, 1919. Serial No. 294,707. 4 Claims. (Cl. 285—197.)

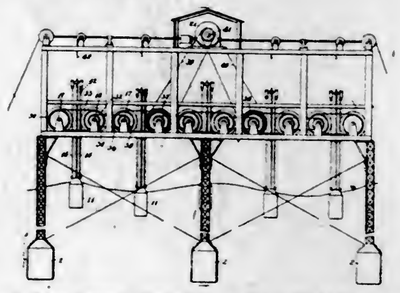
1. A tubular joint, comprising two tubular members having notches in their opposing ends, and a section of tubing of slightly less diameter than said tubular members and adapted to be fitted in the opposed ends of said notched members and provided with a projection adapted to enter and engage the sides and ends of the notches in said members, and serving to limit the movement of and position said tubular members upon said section of tubing in assembling the parts.

1,379,142. CAP. LEON WALLACE, New York, N. Y. Filed Jan. 3, 1920. Serial No. 349,160. 5 Claims. (Cl. 2—107.)



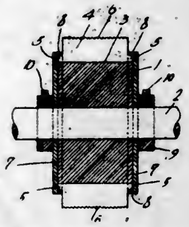
1. A cap having a flap adapted to cover the ears of the wearer, and a valance attached to the free edge of the flap and forming a depending skirt portion, said valance being made of a material having greater elasticity than the material of the flap.

1,379,143. INSULATING MATERIAL. JOHN J. WANGENSTEIN and HAROLD FEGRAEUS, Duluth, Minn. Filed Sept. 11, 1920. Serial No. 409,678. 3 Claims. (Cl. 106—18.)



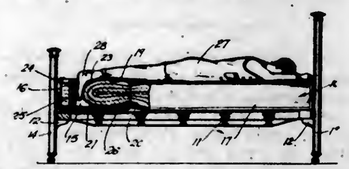
1. An insulating material composed wholly of peat and moss.

1,379,144. CUT-IN SYSTEM OF RADIOTELEGRAPHY. PAUL WARE, New York, N. Y., assignor to Ware Radio, Inc., a Corporation of Delaware. Filed Feb. 8, 1918. Serial No. 215,996. 17 Claims. (Cl. 250—9.)



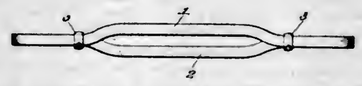
8. In a space radiotelegraph system, two stations each having means for producing, radiating and receiving oscillations of such difference in frequency as to simultaneously produce an audible beat note at each station, and a key at each station for varying both beat notes.

1,379,145. WAVE-MOTOR. AARON W. H. WARSCHAVSKY, Brooklyn, N. Y. Filed Dec. 13, 1918, Serial No. 266,546. Renewed Aug. 14, 1920. Serial No. 403,510. 6 Claims. (Cl. 253—10.)



1. A wave motor comprising: a supporting structure including pairs of spaced horizontally disposed beams, guides in vertical alinement carried by said beams, a vertically reciprocating floating member responsive to wave motion, slide members secured thereto and extending upwardly through said guides, a power translating device, and means for utilizing the action of the floating member to actuate the power translating device.

1,379,146. ROTARY RASP. WALTER P. WEST, Napa, and JAY HARLEY SMITH, San Francisco, Calif. Filed Aug. 7, 1919. Serial No. 315,984. 1 Claim. (Cl. 29—105.)



A rotary rasp for rubber tires including a cylindrical head having longitudinal grooves in its periphery, radially extending blades seated in the grooves and having toothed outer edges, ears extending from the ends of each blade at the inner edge of the blade, the outer ends of the ears being flush with the ends of the head, one edge of each ear being flush with the periphery of the head, disks detachably connected to the opposed ends or faces of the head, and inwardly extending annular flanges upon the disks and engaging the periphery of the head and those edges of the ears flush with the periphery, the outer ends of the ears abutting against the disks and the end edges of the blades abutting against the flanges.

1,379,147. MATTRESS. WILLIAM-HENRY WHITE, Los Angeles, Calif. Filed Oct. 11, 1920. Serial No. 415,984. 3 Claims. (Cl. 5—13.)

3. A mattress transversely recessed intermediate its longitudinal sides and adjacent one end, the side of the recess nearest the end being reinforced and the opposite side being soft and rounded, and a flap foldable over the recess.

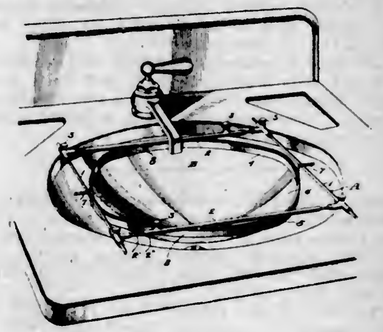
1,379,148. AUTOMOBILE-BUMPER. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 2, 1920. Serial No. 414,299. 1 Claim. (Cl. 293—55.)

An automobile bumper comprising an impact member consisting of a flat bar having its ends reflexed rearward and inward to form inwardly open resilient loops, and its middle portion deflected edgewise to offset the said middle portion vertically from the end portions, and a supplemental bar having the middle portion of its length similarly offset edgewise from the end portions, said supplemental bar having its end portions lapped behind the portions of the main bar situated just beyond the opposite ends of the deflected portion of said main bar; supporting arms for the impact member having their forward ends bent to project transversely and present vertical faces directly forward, and clamps encompassing said transversely projecting end portions and the lapped ends of the supporting bar, on the main bar of the impact member.

1,379,149. PROCESS OF MAKING RUBBER-LIKE MATERIAL AND RESULTING PRODUCT. JOHN C. WICHMANN, Los Angeles, Calif. Filed Sept. 3, 1920. Serial No. 407,893. 4 Claims. (Cl. 106—23.)

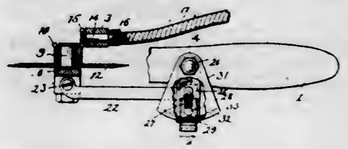
1. A process of making a rubber-like substance, comprising macerating the fleshy parts of members of the cactus family, heating the same, extracting the juice therefrom, adding a catalyzer containing a mineral acid radical, concentrating the juice, adding a solution of Pará rubber, linseed oil, and a mixture of asphaltum and sulfur to the concentrated juice, boiling the same, and drying and oxidizing the resulting mass.

1,379,150. PROCESS OF MAKING RUBBER-LIKE MATERIAL. JOHN C. WICHMANN, Los Angeles, Calif., assignor of one-half to Louis J. Maescher, Los Angeles, Calif. Filed Dec. 22, 1920. Serial No. 432,601. 3 Claims. (Cl. 106—23.)



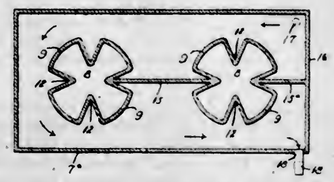
1. A process of making a rubber-like substance, comprising macerating the fleshy parts of the yucca plant, heating the same above the boiling point of water, extracting the juice therefrom, adding a catalyzer consisting of a mixture of sodium tungstate, concentrating the juice, adding a solution of Pará rubber, linseed oil, and a molten solution of asphaltum and sulfur to the concentrated juice, boiling the same under agitation, and drying and oxidizing the resulting mass.

1,379,151. NON-SKID DEVICE. HARRY S. WILLIAMS, La Mesa, Calif., assignor of one-half to Otto A. Keller, San Diego, Calif., and one-fourth to Elgin O. Kotchmann, Mason, Tex. Filed Dec. 5, 1919. Serial No. 342,771. 2 Claims. (Cl. 152—14.)



2. The combination with a vehicle wheel and tire of anti-skid chains connected with one side of the wheel and extending transversely of the tire and releasably connected with the opposite side of the wheel when in an operative position, the chains extending radially of the wheel toward the hub thereof when in an inoperative position, and an expansible ring for engagement by the inner end portions of the chains when extending radially of the wheel in the inoperative position.

1,379,152. SANITARY BASIN FOR LAVATORIES. CHARLES H. WINDSOR, Palmyra, N. J. Filed Aug. 25, 1917. Serial No. 188,146. 8 Claims. (Cl. 4—1.)



1. A sanitary basin for use with the usual lavatory comprising a supporting frame bodily movable to and from a position to rest on the lavatory, a basin member pivotally supported by and in non-tilting engagement with the frame, said basin being shiftable on the frame from its pivotal and non-tilting position to permit its contents to be emptied into the lavatory without removing it from the frame or the frame from the lavatory.

1,379,153. SKINNING-TOOL. CHARLES W. YOUNG, Cleveland, Ohio. Filed Mar. 6, 1920. Serial No. 363,860. 6 Claims. (Cl. 17—13.)

1. A skinning tool comprising a handle having an extension, a forked bracket pivotally mounted upon said extension, a cutting disk mounted between the forks of said bracket and means for driving the cutting disk.

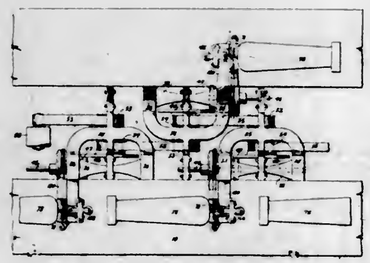
1,379,154. WATER-HEATING TOP FOR GAS-STOVES. HARRY YOUNG, Philadelphia, Pa. Filed Mar. 23, 1920. Serial No. 368,060. 2 Claims. (Cl. 126—53.)

1. A stove top consisting of a water jacket including top and bottom spaced apart and having continuous portions extending therebetween and providing burner holes spaced apart, said continuous portions having hollow extensions integral with said top and bottom and communi-

cating directly with the water space between said top and bottom; a partition for said space extending between said continuous portions and between one of said portions and a side of said jacket, the opposite side of said jacket being spaced from the other of said portions to provide a water passage; a water inlet communicating with said space at one side of said partition; and a water outlet communicating with said space at the opposite side of said partition; substantially as described.

1,379,155. METHOD OF PREPARING GRAPHITIZED VULCANIZED FIBER. EDWARD GOODRICH ACHESON, Jr., Niagara Falls, N. Y. Filed Dec. 14, 1920. Serial No. 430,711. 7 Claims. (Cl. 8—20.)

3. A method of preparing graphitized fiber or vulcanite, which consists in beating the fibers with finely divided graphite, forming the mixture into a web, treating the web with a gelatinizing agent, and afterward washing and seasoning the web.

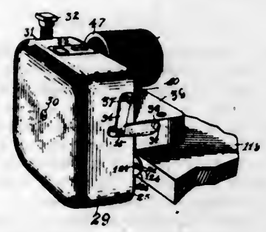


1,379,156. METHOD OF PREPARING GRAPHITIZED VULCANIZED FIBER. EDWARD GOODRICH ACHESON, Jr., Niagara Falls, N. Y. Original application filed Dec. 14, 1920, Serial No. 430,711. Divided and this application filed Jan. 31, 1921. Serial No. 441,166. 4 Claims. (Cl. 8—20.)

1. The step in the preparation of graphitized fiber, which consists in treating a formed paper web with graphite in colloidal form.

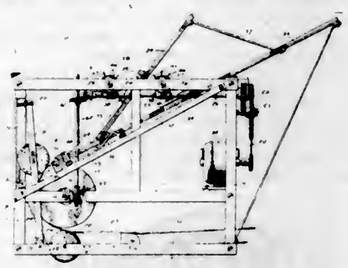
1,379,157. ART OF TREATING CALCIUM CARBONATE. WILLIAM H. ALTON, New York, N. Y. Filed May 8, 1920. Serial No. 379,823. 13 Claims. (Cl. 23—13.)

1. The herein described method which consists in suddenly subjecting calcium carbonate to an intense heat to effect a disruption of the same into minute particles, and subjecting the particles thus formed to heat for a sufficient time to effect a change of a portion of the mass from calcium carbonate to calcium oxid leaving the remainder of the mass in the form of calcium carbonate.



1,379,158. COMBINATION TABLE AND SHAFT SUPPORT. MEYER AXILROD, Reading, Pa. Filed Feb. 28, 1920. Serial No. 362,099. 18 Claims. (Cl. 45—27.)

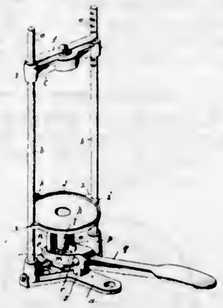
1. In a combination table and shaft support, the combination of legs, a top rail having adjustable connection with said legs, said rail being provided with a pair of arms projecting laterally in opposite directions from points intermediate its ends, the outer end portions of said arms extending outwardly toward one edge of the table and in spaced relation to the adjacent portion of said rail, and a shaft support having connection with said arms.



16. In combination, a plurality of combination table and shaft supports, the said supports being arranged at intervals in substantially parallel relation with respect to each other, and each support comprising a top rail having a bracket depending from an intermediate portion thereof, said bracket being provided with a shaft bearing, the axis of which extends transversely of the said table and each top rail being also provided with a pair of arms projecting laterally in opposite directions from an intermediate portion thereof, the outer ends of said arms extending outwardly and in substantially parallel relation to the said top rail, a shaft supporting member having adjustable connection with the outer ends of said arms, said member having depending projections provided at their lower ends with shaft bearings extending in a direction substantially at right angles to the first named bearing, a shaft revolubly supported in the first named bearing and having a friction plate secured thereto, a shaft revolubly supported in the second named bearings and provided with a friction disk the periphery of which is adapted to engage the face of said friction plate, and means for connecting the successive shafts mounted in the first named brackets whereby when one of said shafts is driven the others may likewise be driven for driving the respective friction disks, substantially as described.

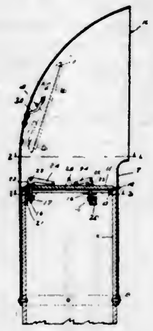
1,379,159. MEASURING-MACHINE. CHARLES ERNEST BALDWIN, Jamestown, N. Y., assignor to Registrometer Company, Buffalo, N. Y. Filed July 19, 1918, Serial No. 245,662. Renewed Apr. 12, 1921. Serial No. 460,656. 19 Claims. (Cl. 33—129.)

1. A measuring machine comprising registering mechanism, measuring actuating means, means so connecting said actuating means to said registering mechanism as to register a measurement thereon, and means for temporarily disconnecting said actuating means from said registering mechanism to prevent derangement thereof when not in use.



1,379,160. METHOD AND APPARATUS FOR SPACING TILES AND PASTING SAME TO PAPER. BRADLEY L. BENSON, San Francisco, Calif. Filed May 24, 1920. Serial No. 383,978. 19 Claims. (Cl. 41—1.)

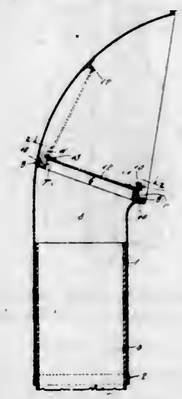
7. The method of pasting tiles in spaced relation to each other to a binder, such as paper, consisting of passing the tiles to be pasted over an arcuate surface in contacting relation, in such a manner that the surfaces to be pasted will be spaced apart, and pasting the said tiles to a sheet while on said arcuate surface.



8. A mechanism for assembling loose tiles and the like in patterns comprising a main chute, provided with means for passing thereover in processions a plurality of courses of tile of one color, means for momentarily interrupting said processions, and means for dropping into said processions tiles of different colors during said momentary interruption.

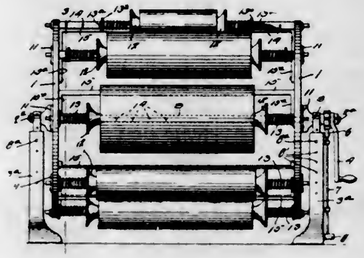
1,379,161. BOTTLE-CAPPING MACHINE. HERBERT L. BROWN, Petersburg, Va. Filed Sept. 17, 1920. Serial No. 410,829. 2 Claims. (Cl. 226—84.)

2. In a bottle-capping machine, a base, upstanding rods on the base, a cross-head carried at the upper ends of the rods, a bottle-support slidably engaging the rods and provided with a pair of depending wings on its under side, a central guide-post for said bottle-rest, and a lever pivotally mounted on the base and having a forked inner end engaging under the lower edges of said wings.



1,379,162. SHIP'S VENTILATOR-COVER. THEOPHILUS M. BROWN, Seattle, Wash., assignor of one-third to Howell P. Parker and one-third to Robert J. Howland, Seattle, Wash. Filed Jan. 19, 1920. Serial No. 352,611. 5 Claims. (Cl. 114—211.)

1. The combination with a ship's ventilator pipe, of a cover arranged to rest upon the top end of said ventilator pipe, brackets within said ventilator pipe, bolts projecting downwardly through said cover and provided with means for engaging said brackets, and cam levers for exerting a tension on said bolts.

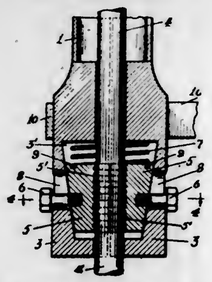


1,379,163. SHIP'S VENTILATING-COWL. THEOPHILUS M. BROWN, Seattle, Wash. Filed Mar. 17, 1920. Serial No. 366,519. 1 Claim. (Cl. 114—212.)

In a ship's ventilator pipe, a collar having a flange riveted to the interior of the pipe, and a second flange inset from said first-named flange forming a circular trough, the forward portion of said collar being set in the throat of said pipe approximately level with the lower edge of the pipe opening, the rear edge of said collar being

set above said forward edge to provide drainage for said trough, a cover plate hingedly connected at its rim to said collar, and latch devices to secure said cover plate in open and in closed positions.

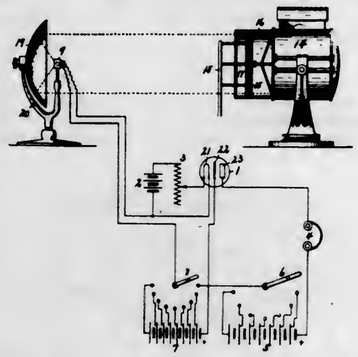
1,379,164. DISPLAY-RACK AND HOLDING MEANS. ELBERN ELMER BULLIS, Rouse Point, N. Y. Filed Feb. 26, 1920. Serial No. 361,522. 5 Claims. (Cl. 211—18.)



1. A dispensing device comprising spaced disks having registering perforations adjacent their peripheries, bars extending between the disks and mounted in the perforations, conical holders slidable upon the bars, springs positioned to move the conical keepers toward each other and means to vary the position and tensions of the springs.

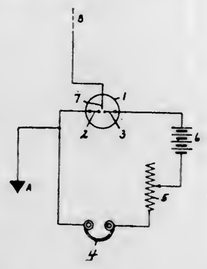
5. A dispensing device comprising spaced disks having apertures formed in their peripheries, bars inserted in the apertures, keepers pivoted to the disks and adapted to retain the bars in engagement, conical holders slidable upon the bars with their apexes directed toward each other and yielding members adjustably slidable in the rear of said conical holders.

1,379,165. SUCKER-ROD ATTACHMENT TO PREVENT SANDING-UP OF WELL-PUMPS. ROBERT LEE BURNS and FRED FREAMOND WINGER, Taft, Calif. Filed July 12, 1920. Serial No. 395,568. 3 Claims. (Cl. 287—58.)



1. A sucker-rod attachment for the described purpose comprising a stock adapted for suspension from a source of reciprocative motion, said stock having a split foot; a smooth rod fitted through said foot for relative linear movement therein and adapted for connection with the sucker-rod; a wedge slip housed within said foot and

adapted to positively engage the smooth rod on the upward stroke of the stock and to slip it in the reverse

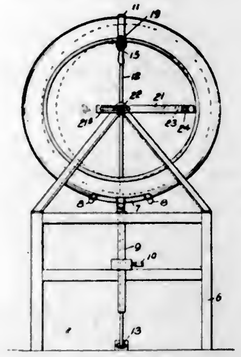


direction; and a regulatable clamp embracing said foot whereby the smooth rod may be adjusted therein.

1,379,166. RADIANT-ENERGY SIGNALING SYSTEM. THEODORE WILLARD CASE, Scipio, N. Y. Filed Jan. 22, 1918. Serial No. 213,225. 28 Claims. (Cl. 250—8.)

25. In an apparatus of the class described, means for producing an audible note, and means responsive to light rays for causing changes in the pitch of said note.

1,379,167. WIRELESS RECEIVER. THEODORE WILLARD CASE, Scipio, N. Y. Filed Feb. 20, 1918. Serial No. 218,309. 3 Claims. (Cl. 250—8.)



1. A wireless receiver comprising a bulb containing a pair of spaced electrodes and a gas of low di-electric constant, a local circuit connecting the terminals of said electrodes and containing a source of potential, and a translating device, and a third electrode in said bulb, and an aerial directly connected with said electrode.

1,379,168. DEVICE FOR BENDING TUBES. PLINY CATUCCI and LOUIS D. NADEL, Newark, N. J., assignors, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Filed Nov. 20, 1918. Serial No. 263,301. 7 Claims. (Cl. 153—36.)

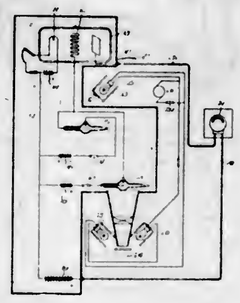
1. An apparatus for bending tubes, which comprises a cylinder, a piston therein, means carried by the piston for engaging a tube and pushing the same into a die, a second cylinder, a piston coöperating with said second cylinder, and means carried by the second piston for pushing a series of balls through the tube at a higher rate of speed.

1,379,169. MACHINE AND METHOD FOR INTRODUCING TUBES INTO TIRE-CASES. NORMAN D. CHELLIS, Erie, Pa. Filed Feb. 13, 1920. Serial No. 358,367. 7 Claims. (Cl. 154—9.)

1. A machine for inserting inner tubes or air bags into cases of pneumatic tires, comprising a support for a tire case, means for subjecting the case on the support to a distorting pressure to spread the beads of the case apart, a spreader for carrying the inner tubes or air bag into the case and for engaging the spread beads, and means for engaging the valve stem of the tube or bag and for drawing the length of the tube or bag into the case through the opening between the spread beads.

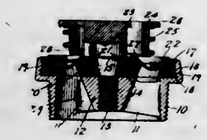
1,379,170. SAMPLE-TAKING DEVICE. WALTON G. CHRISTIAN, Houston, Tex. Filed May 19, 1919. Serial No. 298,061. 2 Claims. (Cl. 255—72.)

1. A device of the character described, including a hollow drill stem, a drill bit attached to the lower end



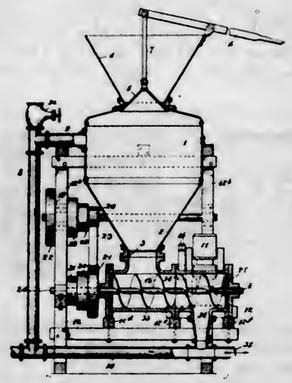
thereof and provided with a central opening, a barrel whose lower end is attached to the upper end of said bit, in alinement with said opening, said barrel extending up into the stem, a valve seat carried by the upper end of said barrel, an upwardly flared nipple threaded into said seat, and a ball valve within said nipple, and coöperating with said seat.

1,379,171. BOTTLE-CAP EXTRACTOR. JOHN W. COLE, Stratford, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Oct. 10, 1919. Serial No. 329,723. 4 Claims. (Cl. 65—47.)



4. A bottle cap extractor comprising a strip of metal curved centrally of itself to form two arms, the portion constituting the bend being resilient, said arms being extended outwardly near their ends, and the extensions so formed being provided with outwardly and downwardly projecting prongs.

1,379,172. PHOTOMETRIC DEVICE. VIRGIL C. CAITES, Chicago, Ill. Filed Jan. 9, 1920. Serial No. 350,406. 16 Claims. (Cl. 179—171.)

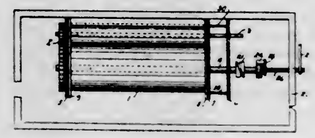


1. A system of the character described comprising an electron discharge tube, a photo-electric cell connected to said tube whereby the variations of current in said cell are amplified by said tube, and a further photo-electric cell to control the residual electric condition of said tube.

1,379,173. PUMP-VALVE. DAVID A. DECROW, Buffalo, N. Y., assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed Apr. 3, 1918. Serial No. 226,508. 4 Claims. (Cl. 251—144.)

1. An automatic or pressure operated pump valve structure, comprising a resilient seat and a light plate valve seating thereon.

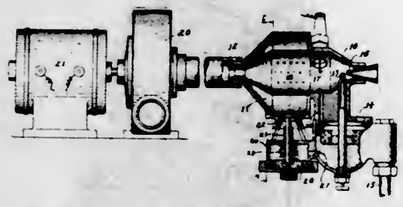
1,379,174. CONCRETE MIXING AND DISTRIBUTING APPARATUS. LEWIS H. EICHELBERGER, Plainfield, N. J., assignor to Ransome Concrete Machinery Company, New York, N. Y., a Corporation of New York. Filed Sept. 15, 1916. Serial No. 120,221. 7 Claims. (Cl. 83—75.)



1. The combination of a retort adapted to contain cement and loose material to be mixed and provided with inlet and outlet openings, means for closing the inlet opening, a conduit for compressed air communicating with said retort, mechanical means for moving the materials from said retort and regulating the rate of their movement therefrom, a delivery conduit to which the materials are conveyed from said retort by said mechanical means and a conduit communicating between said compressed air conduit and said delivery conduit, whereby fluid pressure is exerted on said materials in the retort and compressed air in motion simultaneously projected into the materials discharging therefrom, and said mechanical moving and regulating means being interposed between the two points at which compressed air is supplied.

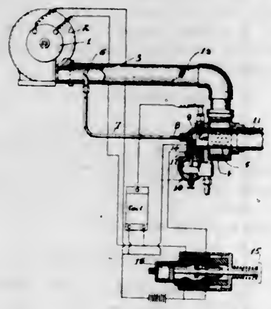
1,379,175. SOLVENT FOR DYESTUFFS. HERBERT A. FOLSOM, Providence, R. I. Filed Feb. 25, 1921. Serial No. 447,834. 2 Claims. (Cl. 8—5.)

2. A process of dissolving vat colors and sulfur colors consisting in mixing the color to be dissolved with water, an alkali, and a sulfite waste liquor.



1,379,176. OIL-SEPARATOR. JOHN FOSTER, Calgary, Alberta, Canada. Filed Jan. 24, 1921. Serial No. 439,617. 1 Claim. (Cl. 210—51.)

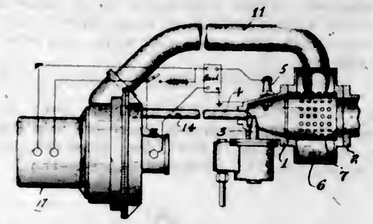
In an oil separator, the combination of smooth faced metallic rollers their surfaces in close rolling contact, mounted for rotation in stationary brackets and being geared together, leather cut-offs, engaging the ends of the rollers and mounted upon the interior face of a bracket carrying the metallic rollers, a bracket loosely mounted upon the roller shafts and having a leather face plate kept in contact with the ends of the rollers by means of tension springs between the loose bracket and the rigidly mounted bracket, water cut off engaging one side of the small



roller to exclude water, a skimming plate coacting upon the large roller and delivering the oil skimmed therefrom to a receiver and means of removing the said oil from the container to an oil tank all substantially as described.

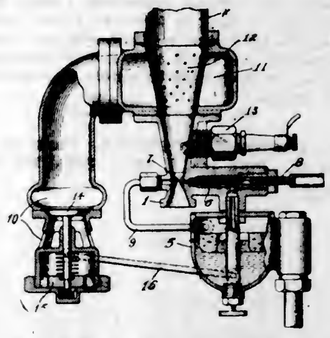
1,379,177. COMBUSTION APPARATUS. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed June 28, 1917, Serial No. 177,443. Renewed June 24, 1920. Serial No. 391,520. 15 Claims. (Cl. 158—28.)

1. The method of starting combustion of liquid fuel in a confined combustion space which consists in momentarily supplying said space with liquid fuel at an abnormally high rate of delivery adapted to produce a rich and readily ignitible mixture flow of fuel and air therein igniting said mixture flow and while it is burning reducing said fuel rate and thereby establishing the proportions suited for normal combustion.



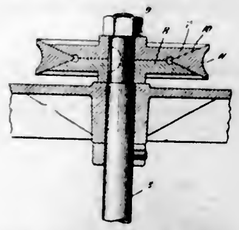
1,379,178. INCLOSED COMBUSTION APPARATUS AND METHOD OF IGNITION. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 18, 1917. Serial No. 186,882. 28 Claims. (Cl. 158—28.)

1. The method of igniting burners of the kind having fuel and air entrances adapted for mixing and burning fuel liquid with combustion-supporting air without vaporization of the fuel previous to such mixture, which consists in applying heat to vaporize the fuel liquid, mixing the resulting vapor with air, igniting the mixture and thereafter continuing the supply of fuel in liquid form.



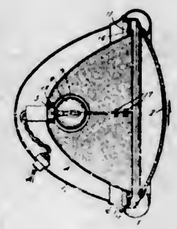
1,379,179. INCLOSED COMBUSTION APPARATUS. JOHN GOOD. Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 28, 1917. Serial No. 188,583. 8 Claims. (Cl. 158—28.)

1. In inclosed combustion apparatus, a closed flame passage in which liquid fuel is sprayed by an air nozzle in atomizing relation to a fuel orifice and ignited by an electric igniter intercepting the spray and supported in combustion by air introduced into contact with said spray without making an explosive mixture therewith in the region of the spark, in combination with said electric igniter located in said passage, an electric motor, a rotary fan-type air-current-creating mechanism driven thereby



and supplying the air to said flame passage for spraying the fuel and completing the combustion thereof, and means for coincidently energizing said motor and igniter.

1,379,180. LIQUID-FUEL BURNER. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed May 2, 1918. Serial No. 232,036. 14 Claims. (Cl. 158—28.)

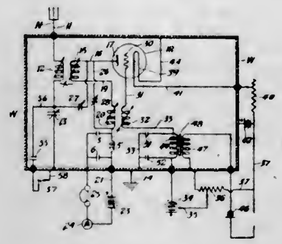


9. An inclosed liquid fuel burner comprising a Venturi-tube having a fuel inlet at its throat region and adapted to produce a mixture of liquid fuel and air, a closed flame passage intervening between said inlet and the exhaust outlet of the burner, means for supplying air and fuel to form said mixture of proportions adapted for complete combustion within said passage, a spark plug, and means for initially increasing the proportion of fuel in said mixture to facilitate ignition thereof by the spark plug.

1,379,181. WIRE-DRAWING MACHINE. THOMAS GORE, Brooklyn, N. Y. Filed Jan. 22, 1920. Serial No. 353,143. 3 Claims. (Cl. 205—14.)

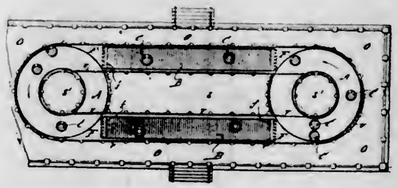
1. A continuous wire drawing machine comprising: a plurality of dies and a series of drawing and forwarding drums, means for driving, at increased speed, each successive drum of the series, and a floating ring on the surface of each drum to compensate automatically for differences between the surface speed of the drum and the speed of travel of the wire passing over said drum.

1,379,182. HEADLIGHT. HARRY F. HAMMOND, South Shaftsbury, Vt., assignor to Nicholas A. Siraco, Whitehall, N. Y. Filed Jan. 16, 1920. Serial No. 351,835. 3 Claims. (Cl. 240—48.2.)



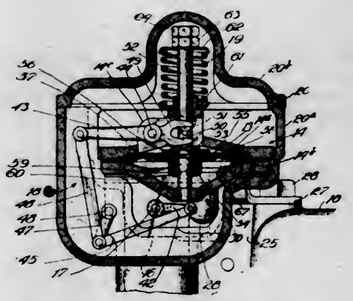
1. The combination with a headlight, a parabolic reflector in the head light, a lamp socket at the focal center of the reflector, and a lamp in the socket, of a horizontal opaque dull surfaced partition fitting the reflector and located centrally thereof, said partition having a recess therein conforming to the shape of the lamp, a fixed ring positioned transversely of the partition and fitting around the lamp socket, and integral outwardly and rearwardly projecting lugs at each side of the forward edge of said partition locking said partition in position.

1,379,183. WAVE-MOTOR. REX HARRIS, Ocean Beach, Calif. Filed May 17, 1920. Serial No. 381,864. 4 Claims. (Cl. 253—12.)



1. A wave motor, including a pair of inclined, supporting rails, an intermediate T rail intermediate said supporting rails, a car provided with longitudinal beams extending downwardly between said tracks, a plurality of vertically and horizontally disposed rollers positioned on said beams adapted to engage the upper flange of said T rail and the web portion of said T rail for holding said car in a certain position relatively to said T rail.

1,379,184. SHIELDING RADIO APPARATUS. LOUIS ALAN HAZELTINE, Hoboken, N. J., assignor, by mesne assignments, to Ware Radio, Inc., a Corporation of Delaware. Filed Nov. 1, 1917. Serial No. 199,742. 22 Claims. (Cl. 250—6.)

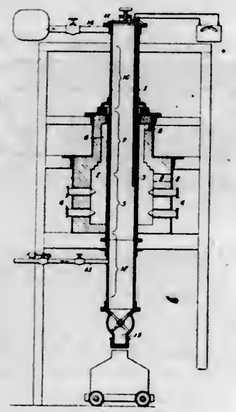


20. Apparatus for radio-telephone voice receiving comprising a receiving circuit oscillating at a substantially constant frequency in synchronism with the incoming signal, an electrostatic screen inclosing said oscillating circuit, a telephone receiver outside said screen and connected within the screen to said oscillating receiving circuit, and connections confining radio frequency current within the screen.

1,379,185. AMUSEMENT APPARATUS. JAMES A. HEALY, Brooklyn, N. Y. Filed Feb. 10, 1921. Serial No. 443,871. 10 Claims. (Cl. 104—53.)

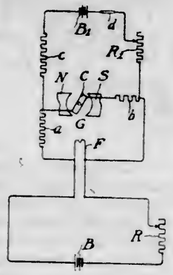
1. In amusement apparatus of the character designated, the combination of a plurality of rotatable platforms, intermediate traveling platforms arranged to convey and transfer a passenger car from one rotatable platform to another, and said passenger car unattached and supported loosely on the movable surfaces of said platforms, for the purpose described.

1,379,186. METHOD OF AND MEANS FOR GOVERNING EXPLOSIVE-ENGINES. JARVIS S. JENNINGS, Jr., Detroit, Mich. Filed Feb. 24, 1920. Serial No. 360,943. 38 Claims. (Cl. 137—153.)



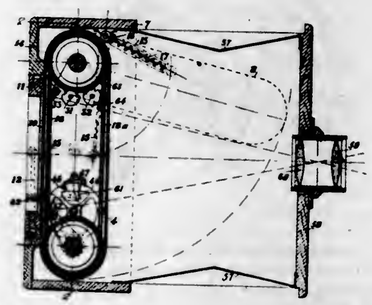
24. The method of controlling internal combustion engines which consists in subjecting a spring-controlled suction-responsive member to the suction of the engine and disproportionately varying the effective opening through the intake passage of the engine so as to control the degree of suction whereby the force exerted by the suction upon the suction responsive member to move it in one direction will under varying loads exactly balance at a given speed the force exerted by the spring upon the suction-responsive member to move it in the other direction.

1,379,187. APPARATUS FOR FORMING NITROGEN COMPOUNDS. ALPONSE KAUFMAN, New York, N. Y., assignor, by mesne assignments, to Air Reduction Company, Incorporated, a Corporation of New York. Filed May 2, 1917. Serial No. 165,860. 6 Claims. (Cl. 23—13.)



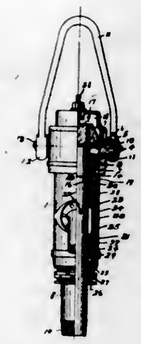
1. In apparatus for the production of alkali metal cyanid, in combination, an elongated retort constructed

and arranged to receive material to be treated at one end and to discharge the treated material at the other end, a heating chamber about an intermediate portion of said retort constructed and arranged to insure a reaction temperature about a zone of said retort adjacent but distinct from the zone theerof from which the treated material is discharged and to insure a lower preheating temperature about a zone of said retort adjacent but distinct from the zone thereof to which new material to



be treated is admitted, the latter zone being unheated, and means for regulating the passage of heating gases about the preheating zone.

1,379,188. OPTICAL PYROMETRY. EARL A. KEELER, Norristown, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1919. Serial No. 334,496. 18 Claims. (Cl. 88—14.)



1. The method of measuring temperature, which consists in passing current through an incandescent body, varying said current to bring said body to a predetermined temperature ,subjecting a galvanometer to the effect of said current to produce a deflection, reducing the potential difference impressed upon said galvanometer while maintaining said current, and thereafter varying the current through said body to bring it to a brightness to match the brightness of the body whose temperature is to be measured, and determining the temperature from the resultant deflection of the galvanometer.

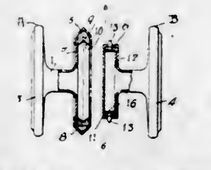
1,379,189. CAMERA. GRAHAM KING, South Orange, N. J. Filed Apr. 22, 1918. Serial No. 229,969. 14 Claims. (Cl. 95—31.)

1. A camera comprising a casing in combination with an inwardly swinging holder carrying the film and shutter.

1,379,190. HYDRAULIC SWIVEL. WALTER E. KING, Houston, Tex. Filed July 16, 1920. Serial No. 396,681. 2 Claims. (Cl. 255—25.)

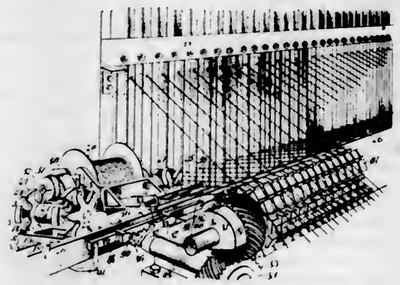
1. A hydraulic swivel including a casing having a side opening, a hose connection secured to the side of the casing, and in alinement with said opening, a swivel stem whose upper end is closed rotatably mounted within the casing and perforated opposite said opening, bearings sustaining said stem within said casing, glands fitted within the lower end of the casing around said stem, and packing rings surrounding the stem within the casing, above and below said perforations, said rings being held in position by said glands.

1,379,191. SHOCK-ABSORBER. JAMES S. LANG, Boston, Mass. Filed Jan. 25, 1919. Serial No. 273,136. 13 Claims. (Cl. 188—129.)



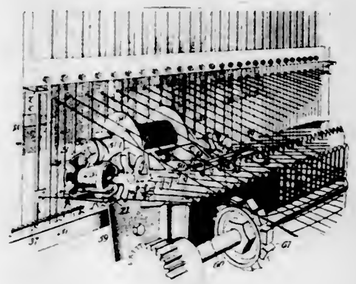
1. In a shock absorber, the combination comprising a friction blade, a friction shoe engaging said blade, said blade and shoe presenting contacting surfaces inclined with relation to a line of force acting to compress them

whereby the blade may have lateral displacement upon the application of such force, a part with which the



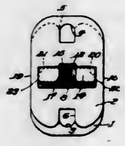
blade is moved into engagement when displaced laterally as aforesaid, and means for applying pressure to compress said blade and shoe.

1,379,192. SEPARABLE CUFF-BUTTON. WARREN R. LARTER, Newark, N. J., assignor to Larter & Sons, Newark, N. J., a Firm composed of Frederick H. Larter, Harry C. Larter, Halsey M. Larter, and Warren R. Larter. Filed Sept. 3, 1920. Serial No. 407,997. 12 Claims. (Cl. 24—102.)



11. In a separable cuff button, the combination of a pair of members having coöperating connecting elements, one of said elements comprising a disk-like head and the other of said elements comprising a socket to telescopically receive said head, one of said elements having an annular inclined bearing surface therein, and radially movable fastening members mounted in the other of said elements to engage said inclined surface, engagement of said fastening members with said inclined surface automatically drawing said elements into tight engagement with each other to connect said pair of members.

1,379,193. WEAVING MECHANISM. ALEXIS LE BLANC, New York, N. Y., assignor to The Composite Metal Lath Company, New York, N. Y., a Corporation of New York. Filed July 9, 1915, Serial No. 38,918. Renewed Oct. 12, 1920. Serial No. 416,515. 12 Claims. (Cl. 139—39.)

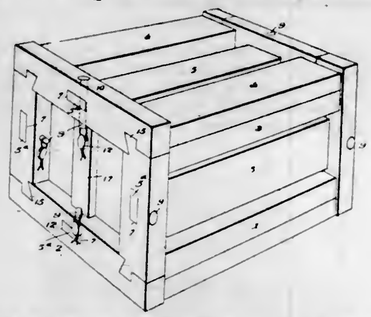


12. In a loom, the combination with means for taking the two outer warp strands at a single point, of a shuttle having cupped wheels traveling across the warp strands and means for holding the outer warp strands apart at the point of passage of the cupped wheels.

1,379,194. LOOM. ALEXIS LE BLANC, New York, N. Y., assignor to Composite Metal Lath Company, New York, N. Y., a Corporation of New York. Filed Mar. 24, 1915, Serial No. 16,625. Renewed Apr. 14, 1921. Serial No. 461,367. 18 Claims. (Cl. 139—18.)

1. In a loom, the combination of a shuttle, a shuttle-carrier and wheels carried by and supporting the shuttle and having members projecting between strands of the lower rank, the shuttle and the wheels traveling on one side of the lower rank of warp strands, the shuttle-carrier traveling on the other side.

1,379,195. FUSIBLE LINK AND STRUT. LEROY M. LEWIS, Philadelphia, Pa., assignor to Owen B. Lewis, Baltimore, Md. Filed Mar. 26, 1920. Serial No. 368,888. 11 Claims. (Cl. 169—42.)

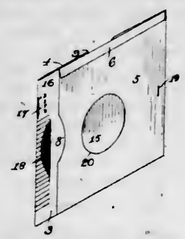


3. In a fusible link or strut, the combination of a pair of adjacently located plates provided with laterally deflected socket portions and a strain member fitting within said socket portions, said strain member provided with an integrally formed laterally extending indicating projection extending through and beyond an aperture provided in one of said socket portions, said projection being out of contact with said plates and fusible material between said plates for binding said plates together and for holding said plates and said strain member in fixed relative position until said material is fused by heat.

1,379,196. KNOCKDOWN SHIPPING BOX OR CRATE. DANIEL LOWENHAUPT and CHARLES D. ROWE, Mount Vernon, Ind. Filed Aug. 10, 1920. Serial No. 402,531. 2 Claims. (Cl. 217—12.)

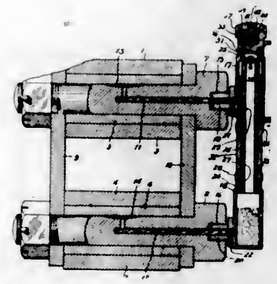
1. A knock-down box or crate comprising sides each having a corner strip and a brace, the corner strips having slidably detachable connecting means whereby one

side is connected to another side, the braces having projecting ends, and ends for the box or crate which have



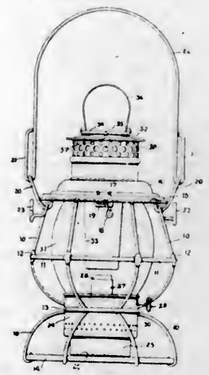
openings detachably receiving the projecting ends of the braces.

1,379,197. FLEXIBLE LUBRICANT-CONTAINER. JOHN FRANKLIN MACINDOE, Philadelphia, Pa. Filed Nov. 29, 1919. Serial No. 341,525. 1 Claim. (Cl. 221—60.)



A collapsible lubricant container, for use in filling grease cups, provided with a convex head engageable with the top of a grease cup and adapted to project thereinto so as to form a smooth surface to the lubricant filled into said cup and to leave a plunger space at the top of said cup free of lubricant, said head being provided substantially centrally with an inturned cross-sectionally annular flange providing a discharge opening, and a closure removably engaging said flange.

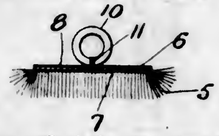
1,379,198. PHONOGRAPH-RECORD-RECEIVING ENVELOP AND METHOD OF MAKING THE SAME. MARC GILMORE MARKGRAF, Brooklyn, N. Y. Filed Jan. 27, 1920. Serial No. 354,380. 24 Claims. (Cl. 129—16.7.)



3. An envelop adapted for filing phonograph records made from a single sheet of paper of substantially even width and having its opposite ends provided with diagonally oppositely located projecting tabs and folded to form a plurality of compartments or pockets opening in different directions.

1,379,199. LUBRICATOR. FRANK MECKEL, Lakewood, Ohio. Filed May 11, 1918. Serial No. 233,822. Renewed Apr. 8, 1921. Serial No. 459,712. 23 Claims. (Cl. 184—1.)

22. An article of the character described subject to bodily movement or vibration comprising a reservoir provided below with a fluid discharge opening and above with an air vent opening, and a vibratorily displaceable valve at said air vent opening and adapted alternately to be seated whereby to limit the discharge of fluid when the parts are quiescent and to be unseated so as to restore atmospheric equilibrium when the parts are vibrant.

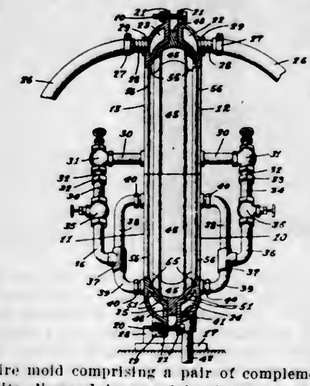


1,379,200. MELTING APPARATUS. ROBERT T. MORRIS, New York, N. Y. Filed Nov. 19, 1919. Serial No. 339,239. 1 Claim. (Cl. 126—256.)

In apparatus of the class described, in combination, a substantially cylindrical chamber for conducting a heating medium, means secured to and positioned at the lower portion of said chamber for producing said heating medium, a bail secured to said chamber at two substantially diametrically opposite points whereby said chamber may be tilted substantially about an axis passing through said points, a substantially cylindrical receptacle of lesser diameter than said chamber and of a length slightly less than that of said chamber provided with an outwardly extending lip and with a spout formed at its upper edge portion, a substantially annular member secured at the upper part of said chamber having an opening of slightly greater diameter than the diameter of said receptacle for loosely receiving said receptacle and supporting said receptacle entirely within said chamber by engagement with said lip, said annular supporting member being provided with a recess for accommodating said spout at a point in a vertical plane substantially at right angles to the vertical plane passing through said two diametrically opposite points, whereby the upper edge of said receptacle and

said spout is substantially flush with said annular supporting member and whereby, as said chamber is tilted about an axis through said two points and in the direction of said recess, said receptacle is permitted to swing in its annular supporting member and within and relative to said chamber in the direction of the tilting of said chamber to swing said spout away from, and out of flush relation with, said annular supporting member to permit pouring of the contents from said receptacle.

1,379,201. POWDER-PUFF. GUSTAVE MOSHEIM and ALBERT S. MOSHEIM, East Orange, N. J. Filed June 29, 1920. Serial No. 392,671. 2 Claims. (Cl. 15—72.)

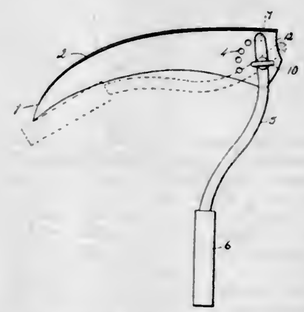


1. A powder puff of the class described comprising a puff body composed of a plurality of fabric strands, a backing member composed of flexible material, a fabric covering for one side face of said backing member, the periphery of said covering extending around the periphery of said member and secured to the other side face thereof, and said puff body being secured to the last named side face of said backing member by adhesive material.

1,379,202. MOUNT FOR SNAP-FASTENERS. ISIDOR MOSS, Brookline, Mass. Filed June 8, 1920. Serial No. 387,361. 1 Claim. (Cl. 211—34.)

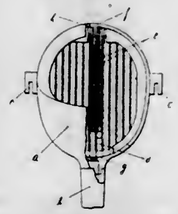
A mount for holding and separating snap fasteners composed of members having attaching bases and complemental stud and socket parts projecting from said bases, and adapted to be separately interengaged, said mount being composed of superimposed layers, the aggregate thickness of which is such that the mount may be interposed between the bases when the stud and socket parts are interengaged, said layers being provided with coinciding orifices formed to receive the said stud parts, the layers being separable from each other to separate the fastener members.

1,379,203. TIRE-MOLD. CLARENCE P. MUNDALE, Seattle, Wash. Filed July 27, 1920. Serial No. 399,267. 7 Claims. (Cl. 18—18.)



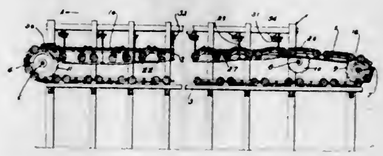
1. A tire mold comprising a pair of complementary annular units disposed in co-axial relation, each of which units comprise complementary semi-circular sections, hinge connections for the said sections, clamping means for the said sections, axial adjusting means for the said units and clamping means for the same.

1,379,204. PROCESS FOR CONTROLLING THE SETTING OF CEMENT PRODUCTS. CHARLES L. NORTON, Boston, Mass., assignor to Asbestos Shingle Company, a Corporation of New York. Filed Dec. 4, 1917. Serial No. 205,387. 6 Claims. (Cl. 18—47.5.)



1. The method of producing a flat relatively thin stone-like body of hydraulic cement of uniform exterior appearance and water absorbtive capacity which comprises confining the same during the setting operation between two opposite restraining surfaces and maintaining an atmosphere of approximately 90 per cent. humidity about the edges thereof.

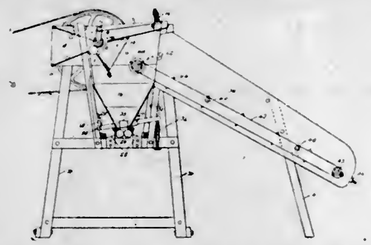
1,379,205. SICKLE. JOHN OGDEN, Philadelphia, Pa. Filed Apr. 18, 1919. Serial No. 291,024. 2 Claims. (Cl. 30—9.)



1. A tool comprising a blade having a concave recess at the heel thereof, a shank adjustably attached to said blade in the region of said heel, and a lug carried by the shank and adapted to enter the concave recess when the blade is in a closed position.

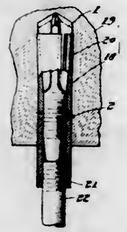
1,379,206. URINAL. TOMOSUKE OHARA, Tokyo, Japan. Filed Oct. 15, 1920. Serial No. 417,203. 3 Claims. (Cl. 4—12.)

1. A urinal having a number of cylindrical rods arranged side by side, leaving a little clearance between each other, in the vertical side of the urinal, against which side discharge is made.



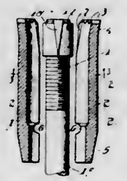
1,379,207. SIZER AND GRADER. ARTHUR M. O'QUINN, Miami, Fla. Filed July 30, 1920. Serial No. 400,059. 6 Claims. (Cl. 130—32.)

1. In a sizer and grader, a frame; a conveyer traversing the frame; members between which the material is



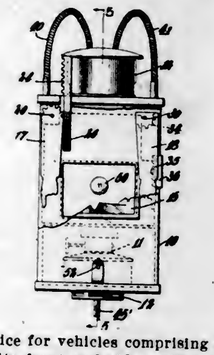
sized; means for suspending said members from the conveyer for up and down swinging movement; a track along which said members move; and means for adjusting the track to vary the sizing space between said members.

1,379,208. STRIPPING AND HUSKING MACHINE. ADOLFO F. PANDO, Buenos Aires, Argentina. Filed Nov. 4, 1916. Serial No. 129,601½. 5 Claims. (Cl. 130—5.)



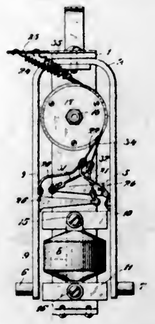
1. In an ear and stalk separating mechanism for corn husking machines, a fixed rotatable stripping roller, a second stripping roller co-acting therewith, a pivoted arm at the free end of which said second roller is rotatably supported, the pivotal axis of said arm being behind the line joining the centers of the two rollers and so positioned that the movement of the movable roller to and from the fixed roller is in a path nearly parallel to the path of movement of the stalks between the rollers, and means for feeding stalks between the rollers on the side in front of said line, whereby the rollers tend to approach one another when an ear reaches the point of tangency of the rollers.

1,379,209. ANCHOR-DRILL BOLT. JOHN H. PHILLIPS, Chicago, Ill. Filed June 21, 1919. Serial No. 305,882. 9 Claims. (Cl. 85—2.4.)



1. A drill bolt comprising a drill head provided with a shank, the drill tapering from adjacent the end of the head thereof to the shank, said shank provided with a therad thereabout.

1,379,210. ANCHOR-SHELL DRILL. JOHN H. PHILLIPS, Chicago, Ill. Filed July 21, 1919. Serial No. 312,243. 16 Claims. (Cl. 85—2.4.)

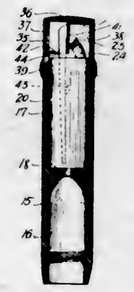


1. A drill comprising a plurality of coöperating similarly formed parts arranged together to provide a tubular shell, the parts at one end of the shell enlarged and provided with cutting teeth at the extreme end, said parts cut away at their juncture adjacent said end to provide substantially V-shaped recesses, the opposite end of said shell parts arranged for engagement with a coöperating chuck.

1,379,211. VEHICLE-SIGNAL. JOHN POPOWICH, Passaic, N. J. Filed Jan. 3, 1921. Serial No. 434,481. 3 Claims. (Cl. 116—45.)

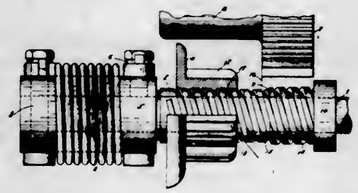
1. A signal device for vehicles comprising a casing having apertures in its front and side walls, a lamp in said casing, a pair of shutter plates vertically slidable adjacent the front wall of the casing, said plates having apertures formed therein and registering with the aperture in the front wall of the casing when the plates are in normal position, angular offsets on said plates registering with the apertures in the side wall of the casing when the plates are in normal position, a pair of signal arms normally concealed by the casing, and means whereby corresponding ones of said signal arms and plates may be moved in unison to operative position with the front aperture covered and the side aperture uncovered.

1,379,212. VIBRATION-MOTOR. GEORGE RAMSEY, Brooklyn, N. Y., assignor to Marguerite V. O'Leary, Montreal, Quebec, Canada. Filed Mar. 27, 1918. Serial No. 225,029. 13 Claims. (Cl. 74—53.)



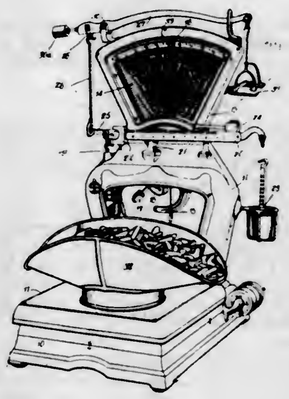
1. The method of producing rotary motion in a rotatable drum mounted in frictional engagement with a pair of flexible members; which comprises producing longitudinal vibrations in the said members by successively increasing and decreasing the tension on said members by forces applied to one end of the said members and in the direction of their lengths in such manner as to establish transverse waves in said members; and applying said forces in alternation whereby the tension on one of the members is increased when the tension on the other of said members is decreased.

10. In a motor of the character described, comprising a vibrating fork, an electromagnetic means for vibrating said fork, a transmission band, rotary means in operative relation to said transmission band, and securing devices operatively connecting said transmission band with both prongs of said fork in such manner as to establish wave motion in the band and so that said transmission band delivers power impulses to said rotary means from both prongs of said fork when the electromagnetic forces are maximum.



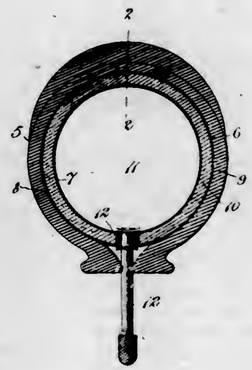
13. A motor of the character described comprising in combination a rotatable drum, a pair of bands in operative engagement with said drum, anchoring means for one end of said bands and vibrating means for the other end of said bands, with said vibrating means adapted to establish alternate vibrations in said bands substantially as described.

1,379,213. COMBINED PEN AND CIGAR-LIGHTER. FRANK RAUCH, Brooklyn, N. Y. Filed July 23, 1920. Serial No. 398,435. 6 Claims. (Cl. 67—7.1.)



1. A lighter comprising an inner and outer casing, pyrophoric material and a flat spring disposed longitudinally in said inner casing, a tip engageable with said outer casing, and a yieldingly mounted abrader carried by said tip adapted to operate under the tension of said spring upon said pyrophoric material, when the tip is being withdrawn.

1,379,214. ENGINE-STARTER. JULIUS H. RICHARDS, Springfield, Mass., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed Dec. 2, 1919. Serial No. 342,023. 9 Claims. (Cl. 74—7.)

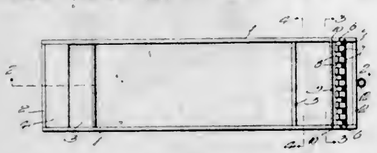


1. In an engine starter, a drive including a rotatable shaft, a driving member mounted thereon for longitudinal movement thereon and rotary movement therewith, said shaft having two separate means arranged in alinement and coöperating with the driving member, the first means being arranged to advance the driving member longitudinally to the zone of the second means and also permit the shaft to rotate freely within the driving member and without effect thereon when such member in its longitudinal movement encounters an obstruction, and the second means being arranged to positively engage such member to advance it into driving position and cause rotation thereof.

1,379,215. COMBINED COMPUTING AND COUNTING SCALE. CHARLES EDWARD RIEDEL, Detroit, Mich., assignor to Detroit Automatic Scale Company, Detroit, Mich., a Corporation of Indiana. Filed Aug. 11, 1917. Serial No. 185,667. 8 Claims. (Cl. 265—30.)

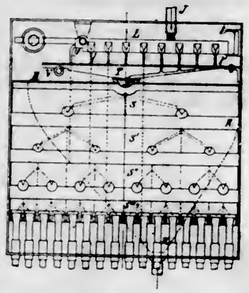
1. In a counting scale, the combination of a support for articles to be weighed, a main beam, means connecting the said support with the main beam, a supplementary beam, a detachable link connecting the supplementary beam to the main beam, and an article carrier on the supplementary beam adapted to receive one or more articles and through said link and main beam and connecting means to counterbalance a larger number of similar articles placed on the said support in a predetermined ratio.

1,379,216. ELASTIC BODY. CHARLES SATTLER, Brooklyn, N. Y. Filed June 30, 1919. Serial No. 307,745. 6 Claims. (Cl. 152—18.)



1. A tire structure consisting of a member formed of rubber, a fibrous constituent, and shellac.

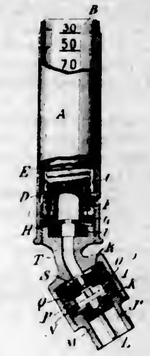
1,379,217. SALES-CHECK HOLDER AND NOTCHER. WALTER H. SAWYER, Philadelphia, Pa., assignor to Andrew Culver Boyd, Lansdowne, Pa. Filed May 26, 1920. Serial No. 384,404. 9 Claims. (Cl. 211—37.)



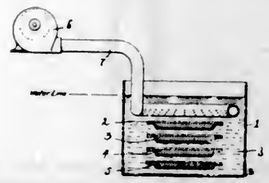
7. A device of the class described comprising a plate adapted to support a check pad, and a check notcher at the side edge of said plate lying within the contour of said plate and integral therewith.

1,379,218. GAME APPARATUS. JOSEPH F. SCHULTHEISS, Weehawken, N. J. Filed Dec. 22, 1919, Serial No. 346,506. Renewed Mar. 26, 1921. Serial No. 455,979. 5 Claims. (Cl. 46—62.)

4. A game apparatus comprising a guideway, counters pivotally mounted adjacent one end of the guide-way and extending transversely of the same and normally positioned out of a vertical position, and abutment rods extending transversely of the guide-way in front and to the rear of the counters and adapted for engagement by the counters to support the counters in an inclined position.



1,379,219. ECONOMICAL LUBRICANT-DISTRIBUTER FOR MECHANICAL INSTALLATION. EMILE JOSEPH AUGUSTIN SCHULTZ, Paris, France. Filed Oct. 22, 1918. Serial No. 259,243. 7 Claims. (Cl. 184—6.)

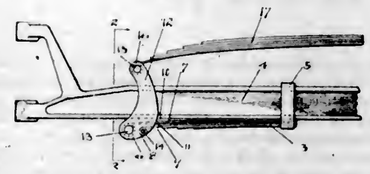


6. In an apparatus for distributing oil, the combination of a pivoted counter-weighted pan, adapted to receive oil from an oil delivery member having on one side of its pivotal point a plurality of openings from which the oil passes toward the elements to be lubricated and on the other side of the pivotal point an opening, the outlet end of which is raised above the outlet ends of the other openings, the excess oil in the pan flowing through said opening.

1,379,220. PRESSURE-GAGE FOR PNEUMATIC TIRES OR THE LIKE. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, and HENRY PHILLIP KRAFT, Ridgewood, N. J. Filed Dec. 16, 1916. Serial No. 137,326. 5 Claims. (Cl. 284—4.)

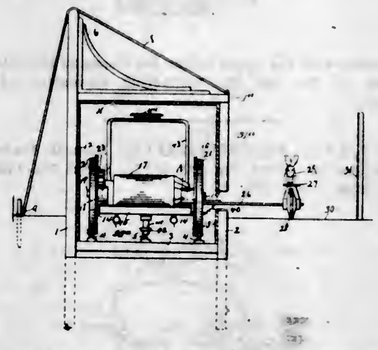
1. A gage for pneumatic tires or the like comprising a casing, a foot member T provided with means for connection with a tire valve casing, said foot member having a reduced neck between said casing and connection means, said neck being readily bendable, whereby in the manufacture of said gage said foot can be bent to a desired angle with relation to said casing, and whereby the desired angle may be changed by the degree of bending to which the neck is subjected.

1,379,221. PROCESS FOR PURIFYING AIR. HENRY P. SCOTT and WILLIAM G. BOND, Wilmington, Del. Filed July 23, 1915. Serial No. 41,458. 12 Claims. (Cl. 167—3.)



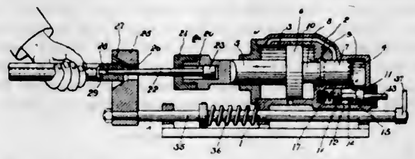
1. The process of regenerating air containing carbon dioxid, which consists in supporting two separate oxygen compounds within a body of water, passing the vitiated air through said water, the introduction of the carbon dioxid initiating chemical reaction which alters the oxygen content of each of said compounds and restores to the air as free oxygen an equivalent amount to that contained in the carbon dioxid.

1,379,222. PIGMENT CARBON DERIVED FROM VEGETABLE PITH. STEWART E. SEAMAN, New York, N. Y. Filed Nov. 3, 1919. Serial No. 335,374. 4 Claims. (Cl. 134—60.)



1. As a new product, pigment carbon derived from vegetable pith.

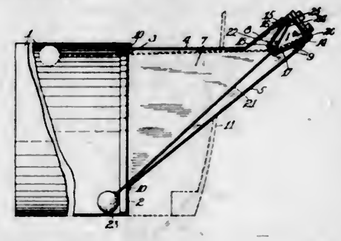
1,379,223. VEHICLE-SPRING. JOHN E. SIMMONS, Portland, Oreg. Filed June 17, 1920. Serial No. 389,789. 4 Claims. (Cl. 267—45.)



2. A laminated leaf spring adapted to be secured beneath a vehicle axle; an eye formed upon the outer end of the longest leaf of said spring; an eye formed upon the outer end of the second longest leaf of said spring; a shackle arm pivotally connected to each of said eyes and extending above said axle; and a laminated leaf spring pivotally connected to the upper end of said shackle arm.

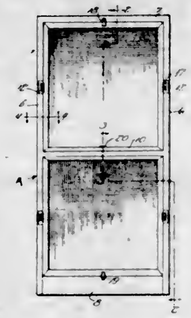
1,379,224. DOG-RACING AMUSEMENT. OWEN P. SMITH, Chicago, Ill. Filed Sept. 4, 1919. Serial No. 321,612. 4 Claims. (Cl. 46—73.)

1. In a dog racing amusement, a race course suited for dogs, a casing extending around the outer side of the race course and provided with a longitudinal opening, a mechanical conveyer including a track extending around the race course and located within the casing, and a conveyer car mechanically operated upon said track and provided with an arm extending through the longitudinal opening of the casing in a projecting position over the track and adapted to carry a lure, and a wheel rotatably mounted on and supporting the arm at the projecting end thereof.



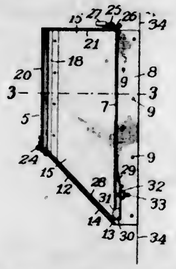
1,379,225. PINNING-OUT MACHINE FOR DRILL-STEELS. WILLIAM A. SMITH, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 14, 1919. Serial No. 310,750. 5 Claims. (Cl. 76—5.)

1. In a pinning out machine for drill steels, a cylinder and fluid operated reciprocatory hammer, a pin adapted to enter the drill steel, a support for the steel into which the pin is to be driven, and means whereby relative alining reciprocatory movement between the cylinder and the said support starts and stops the operation of the hammer.



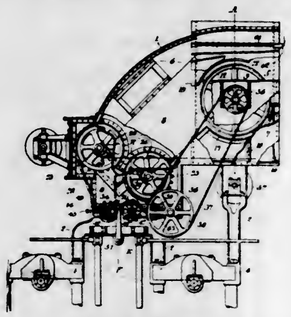
1,379,226. TANK-FILLER AND CONTENTS-INDICATOR. ALBERT STANLEY, Indianapolis, Ind. Filed Oct. 25, 1919. Serial No. 333,354. 5 Claims. (Cl. 220—86.)

1. A tank filler and contents indicator including a conduit having an inlet neck, the wall of the neck having a relatively thick portion provided with a vertical slot and also a hanger within the neck at one side thereof, a closure for the neck, an indicator plate secured upon the thick wall portion and covering the slot therein, a pointer pivotally connected to the hanger in the conduit neck and extending toward the indicator plate, a controlling rod fixed on the pointer and extending swingably through the conduit, and a buoyant device fixed on the controlling rod.



4. A tank comprising a horizontal shell and a plane vertical end, the end having a vertical slot therein, a filling conduit having a vertically flared outlet end and a relatively small inlet neck, the flared end being secured to said vertical plane end to cover said slot, the top of said conduit being approximately horizontal, the bottom of said conduit extending upwardly at an acute inclination from said tank end, said inlet neck having a mouth member secured thereto which has a filling orifice and also an indicator base, said base having an indicator slot therein and a hanger on the under side of the base, a closure for said orifice, a graduated indicator plate secured to the upper face of said base and covering the indicator slot, said plate being transparent, a pivot supported by the lower portion of said hanger, a pointer supported by said pivot and extending upward toward and nearly to said plate, a controlling rod fixed to said pointer and extending through the flared portion of said conduit and through said vertical slot, and a float fixed on said rod.

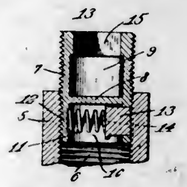
1,379,227. COMBINATION SCREEN AND STORM-SASH. WILLIAM R. STERMER, Chicago, Ill. Filed Oct. 23, 1919. Serial No. 332,665. 3 Claims. (Cl. 20—55.)



1. The combination with an outer open rectangular frame adapted to be permanently fastened in a door or window frame and having its inner edges rabbeted, and plates secured to the margins of said edges having transverse slots therein and slit vertically from said slots to form tongues, of an inner frame adapted to be seated in the rabbeted edges of the outer frame, and pins projecting laterally from the side edges of said inner frame that are adapted to be passed through said slots and confined in recesses in the outer frame back of said tongues, said tongues being adapted to guide said pins through said slots.

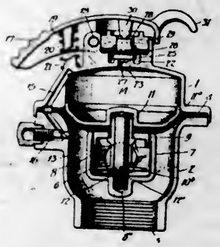
1,379,228. CABINET FOR PAPER DRINKING-CUPS. WILLARD E. SWIFT, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed June 15, 1912. Serial No. 703,807. 1 Claim. (Cl. 211—29.)

In a cabinet for a stack of collapsed drinking cups, a casing for inclosing the cups having an inclined bottom, and a slit between the lower edge of the bottom and one of the side walls of the cabinet, springs attached to said side wall, and rubber blocks carried by the free ends of said springs and bearing against the edges of the cups immediately above the lowermost cup in the stack, and means for varying the tension of said springs.



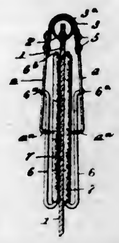
1,379,229. CONDENSER FOR COTTON-PRESSES. JOHN A. TAFT, San Antonio, Tex., assignor, by mesne assignments, to H. H. Dickson, Harris county, Tex., G. R. Bennett, Travis county, Tex., and J. M. Bennett and S. J. Brooks, Bexar county, Tex. Filed July 12, 1917. Serial No. 180,136. 39 Claims. (Cl. 13—17.)

35. In a lint condensing machine, the combination of a receiving drum, means for guiding disseminated lint to the peripheral surface thereof, means associated with the drum for receiving foreign matter from lint impinged thereon, a pair of coöperating accumulating rolls mounted to one side of and below the axis of the drum, said rolls having their peripheral surfaces tangent to an inclined plane facing the drum, and disposed in the zone of centrifugal projection from the drum, the casing inclosing portions of the drum and rolls and comprehending the path of centrifugal projection from the former to the latter, means for operating the drum to project lint gathered thereon to the rolls, and means for differentially and selectively operating the rolls to form lint accumulated thereon into a bat of uniform thickness and density.



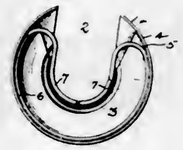
1,379,230. GREASE-CUP. NICHOLAS W. TRAUTNER, St. Paul, Minn. Filed Sept. 27, 1920. Serial No. 412,975. 2 Claims. (Cl. 184—48.)

1. In a device of the character described, a cup having internal threads, a plunger movable within the cup and having a lateral opening, a coiled spring disposed within the plunger, and means disposed within the opening and



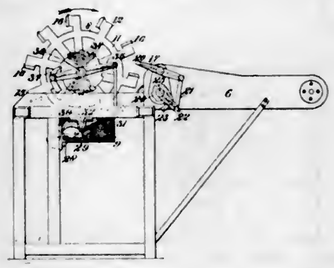
contacting with the coiled spring for engaging the internal threads of the cup for restricting movement of the plunger.

1,379,231. FLUSHING-VALVE. EARL G. WATROUS, Chicago, Ill. Filed Jan. 29, 1917. Serial No. 145,262. 8 Claims. (Cl. 137—93.)



2. In a flushing valve, the combination of a casing having water inlet and outlet openings, a diaphragm making constant division of the casing into a water-flow section and a control chamber, said casing having two by-passes through its wall from the control chamber respectively to the outlet portion and to the inlet portion of the water-flow section and also having internal walls dividing the water-flow section into inlet and outlet portions, one of them including a central chamber relatively deep along a line perpendicular to the diaphragm and having an opening toward the diaphragm for effecting communication between the inlet and outlet portions, a manual valve for the first-mentioned by-pass, a valve carried by the diaphragm extending through said opening into the central chamber and having two axially spaced valving portions either of which may control said opening accordingly as the diaphragm moves, and a guide member fixed within said central chamber and penetrating said valve.

1,379,232. WINDSHIELD-CLEANER. JOHN L. WEBB, Salt Lake City, Utah, assignor to Micajah M. Johnson, Salt Lake City, Utah. Filed Oct. 29, 1920. Serial No. 420,384. 5 Claims. (Cl. 15—59.)



1. A windshield cleaner comprising a saddle member adapted to be supported on a windshield, a yieldable wiper arm having one of its ends secured to the saddle member and extending therefrom for a portion of its length, thence inwardly toward the windshield glass, and thence toward the saddle and substantially parallel with said portion to provide a wiper portion, said wiper portion being provided with a wiping element, and means to press the arm against the glass.

1,379,233. PIPE-COLLAR. EUGENE WILCKE, Dayton, Ohio. Filed May 14, 1919. Serial No. 297,117. 13 Claims. (Cl. 126—317.)

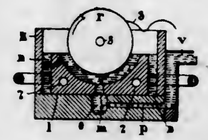
1. In a device of the character described, two relatively rotatable interconnected arcuate members, each having a lateral passage way, the open portions of the respective arcuate members being movable into and out of registry one with the other by the relative adjustment of said members.

1,379,234. APPARATUS FOR HANDLING EGGS. COLONEL J. WILLIAMSON, San Francisco, Calif., assignor to Williamson Machine Company, San Francisco, Calif., a Corporation of California. Filed Dec. 27, 1920. Serial No. 433,527. 16 Claims. (Cl. 146—14.)

14. An apparatus for receiving, wetting and discharging wetted eggs, the same comprising a reservoir adapted to contain a liquid body, a receiver associated with the reservoir for conveying eggs into, through and out of said liquid body, means for heating the liquid body, and mechanism for delivering eggs in timed relation to the egg receiver.

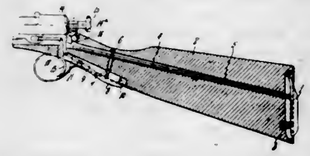
1,379,235. PAINT VEHICLE AND METHOD OF MAKING THE SAME. GEORGE WITTY, New York, N. Y. Filed June 18, 1920. Serial No. 389,976. 4 Claims. (Cl. 134—56.)

1. A paint vehicle consisting of a mixture of rosin, crude oil, paraffin oil, gasolene, Japan drier, sugar of lead, and sulfur.



1,379,236. HAIR-NET. DAVID WOLF, New York, N. Y. Filed Oct. 14, 1920. Serial No. 416,978. 4 Claims. (Cl. 132—49.)

A hair net made of metallic wire or filament formed into a mesh with adjacent meshes connected to each other, the filament being of such fineness as to have a hair-like

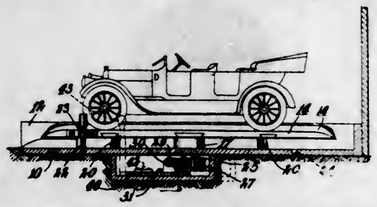


appearance and cause the net to be practically invisible when in position on the hair of a wearer.

1,379,237. DETINNING OF TINNED IRON-SCRAP. MATTHEW ATKINSON ADAM, JOHN STEVENSON, and ALAN THOMAS MABBITT, London, England; said Stevenson and said Mabbitt assignors to said Adam. Filed Aug. 31, 1920. Serial No. 407,250. 7 Claims. (Cl. 204—17.)

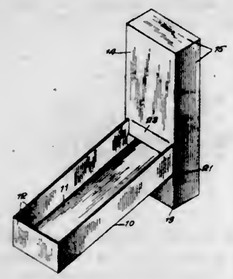
1. A process for the detinning of tinned iron scrap which consists in dissolving the tin in strong solutions of the chlorids of tin and iron approaching saturation and circulating the solution through an electrolytic cell operating at high current density and practically continuously removing the non-coherent deposit.

1,379,238. SAFETY DEVICE FOR FOWLING-PIECES, RIFLES, AND THE LIKE. ALFRED WALTER ALEXANDER BARNARD, Wellington, New Zealand, assignor of one-fourth to Stephen John Hartley, Main Road, Himatangi, Wellington, New Zealand. Filed May 9, 1919. Serial No. 295,918. 2 Claims. (Cl. 42—70.)



1. In a firearm, a safety device comprising a spring controlled lever pivoted to the end of the stock, a rod working through said stock pivoted to said lever, a spring controlled lever pivoted to the stock neck, an arm on said latter lever engaging a projection on the firearm trigger, a connecting arm between said rod and said last mentioned lever, and means for locking the firing mechanism actuated by said rod and adapted to unlock said firing mechanism on pressure being applied to said levers.

1,379,239. TURNTABLE FOR VEHICLES. JOHN BARWICKI, New York, N. Y. Filed Feb. 1, 1921. Serial No. 441,639. 5 Claims. (Cl. 104—36.)

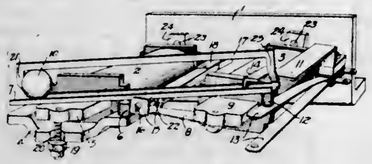


1. A device of the class described comprising a base, a turntable pivoted on said base, a worm gear fixed to said

turntable concentric to its pivot, a worm pinion meshing with said worm gear, means for rotating said worm pinion, manually operable means for moving said worm

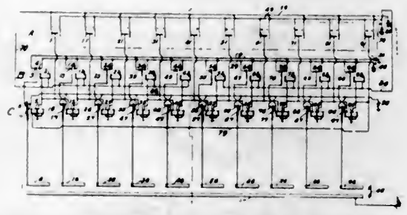
pinion bodily into and out of engagement with said worm gear and a handle fixed to said turntable for manual rotation thereof when said worm pinion is disengaged from said worm gear.

1,379,240. DISPLAY-BOX. CHARLES BASHWINER, Brooklyn, N. Y. Filed Mar. 23, 1920. Serial No. 368,042. 5 Claims. (Cl. 206—44.)



3. A cover of flexible material for a display box, having its central part slitted in substantially an H-shape to provide two opposed extensions which when bent one downwardly and the other outwardly of the cover provides an opening for reception of part of the body of the box, the extension which is bent downwardly serving to support the box body and the extension which is bent outwardly of the cover being adapted to be disposed within the body of the box over part of its wall.

1,379,241. METHOD OF PROTECTING SHIPS. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Feb. 19, 1920. Serial No. 359,911. 12 Claims. (Cl. 114—9.)



1. That method of protecting a vessel using mobile fuel comprising particles of carbonaceous substance and liquid hydrocarbon against shell or torpedo fire, which consists in congealing the fuel while in storage on the vessel and maintaining it so congealed.

1,379,242. ELECTROMAGNETIC DEVICE. WILLIAM O. BECK, Ridgefield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 21, 1919. Serial No. 332,215. 3 Claims. (Cl. 200—97.)

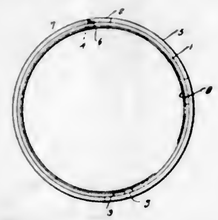
1. In an electromagnetic switch, an energizing winding, a core, circuit controlling means, a track transverse to the axis of said core, an armature normally in inoperative relation to said core movable on said track, and means for moving said armature along said track into operative relation to said core to control said circuit controlling means.

1,379,243. TELEGRAPH SYSTEM. JOHN H. BELL, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 3, 1918. Serial No. 210,148. 7 Claims. (Cl. 178—63.)

3. A telegraph system comprising a line, sources of current of opposite polarity, transmitting means, means controlled by said transmitting means for establishing permutations of current impulses with said line, and means rendered effective upon the operation of said means by successive current impulses of the same polarity for grounding said line in substitution of successive repetition of current impulses of the same polarity.

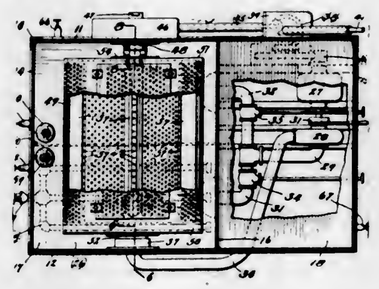
1,379,244. ELECTRICAL-CONNECTOR DEVICE. REUBEN B. BENJAMIN and ALBERT V. BOETTER, Chicago, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1918. Serial No. 232,436. 2 Claims. (Cl. 240—78.)

1. A stand lamp comprising a tubular vertical support forming a passage for the conductors, a bowl-shaped metal member secured to said vertical support into which the conductors lead, said bowl-shaped member having a plurality of circular openings therein, a plurality of lamp sockets, each having a substantially cylindrical casing, and means for connecting each of said sockets to said bowl-shaped metal member, comprising an integral tubular sheet metal member having a portion flanged over the edge of one of said openings, and a flange portion surrounding said socket casing and having a detachable connection therewith.



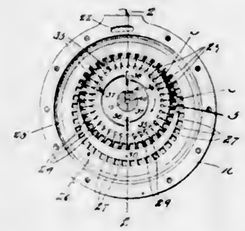
1,379,245. DIRECTION-INDICATOR FOR CLOSED AUTOMOBILES. WLADIMIR W. BUIMISTROFF, Washington, D. C. Filed Feb. 7, 1918. Serial No. 215,862. 2 Claims. (Cl. 116—50.)

1. An automobile direction indicator comprising a flat housing having a tube connected thereto, a circular housing connected to the tube, a signal slidable in said flat housing, a rod at one end connected to the signal slidable



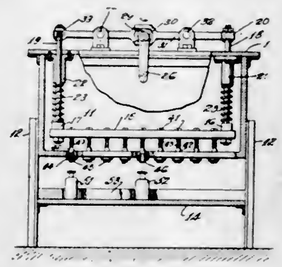
in the tube, means at the other end of said rod for limiting the outward movement of the signal, a shaft extending through the circular housing having a handle at one end and a wheel within the housing connected to the rod.

1,379,246. PISTON-RING. JAY EDGAR BUTLER, Baltimore, Md. Filed Apr. 8, 1920. Serial No. 372,295. 2 Claims. (Cl. 74—109.)



1. A piston ring comprising a one piece split ring member of cast metal having on its outer side a recess forming a circumferential shoulder so that the ring is of L shaped cross section, the said ring member having a positioning stop substantially opposite the ends of the ring member, a second one piece split ring member also of cast metal seated in the recess and having its ends adapted to engage the positioning stop, the outer faces of said ring members forming a single substantially cylindrical surface and a third member of spring metal also in the form of a split ring within and bearing on the inner face of said first ring member.

1,379,247. WASHING-MACHINE. SAMUEL D. CARPENTER, St. Louis, Mo., assignor of one-third to Frederick E. Lamb and one-third to Frank A. Campbell, St. Louis, Mo. Filed Oct. 11, 1920. Serial No. 416,124. 6 Claims. (Cl. 68—18.)



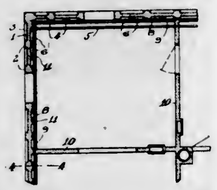
2. A washing machine comprising a housing having a washing compartment and a plurality of supply tanks positioned below said washing compartment, a cylinder arranged for operation in said washing compartment and adapted to receive fabrics, a plurality of hollow paddles disposed in said cylinder and arranged to lift said fabrics out of the liquid and then permit them to drop back when said cylinder is actuated, said hollow paddles being provided with discharge openings, a chamber in one end of said cylinder and communicating with said hollow paddles, said cylinder being removably journaled in said casing by trunnions, one of which is adapted to be seated in and have rotative engagement with the inner end of a driving shaft journaled in said casing, and the other trunnion being hollow and communicating with said cylinder chamber and adapted to be removably journaled in a bearing in said casing, connections between said hollow trunnion and said tanks, and means interposed in said connections for forcibly discharging the cleansing fluid through the discharge openings in said paddles.

1,379,248. ROTARY AIR-COMPRESSOR. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey Rotary Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 22, 1919. Serial No. 346,575. 3 Claims. (Cl. 230—30.)

1. In a fluid compressor, the combination of an external rotor and an internal rotor, a casing surrounding said external rotor, heads on each side of said casing, and a separate bearing ring loosely mounted for rotation between the periphery of said external rotor and said casing.

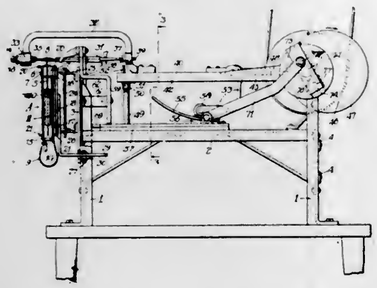
1,379,249. BOTTLE-FILLING MACHINE. GEORGE B. CHELIUS, Bayonne, N. J. Filed May 25, 1920. Serial No. 384,204. 1 Claim. (Cl. 226—126.)

In a machine of the class described the combination of a tank containing a fluid, a cover for said tank, a rectangular frame supported near the bottom of said tank, a plurality of spring controlled valves controlling openings in the bottom of said tank, a post secured to each corner of said frame, sleeves secured to said cover, said posts passing through said sleeves and maintained in alinement thereby, a handle, an eccentric operated by said handle and operating levers on the outside of said cover, said levers alternately elevating and lowering said frame as said handle is operated.



1,379,250. SKATE. CHARLES HASKELL CLARK, Berkeley, Calif., assignor to Clark Pedmobile Corporation, Brooklyn, N. Y. Filed Nov. 15, 1916. Serial No. 131,581. 2 Claims. (Cl. 46—51.)

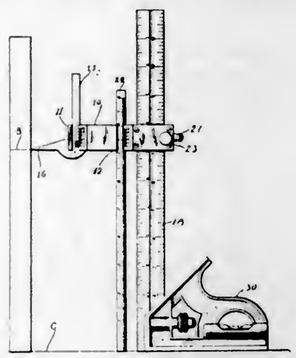
1. A skate comprising a pair of offset wheels, the rear wheel being on the outside and the front wheel being on the inside of the skate, and a pneumatic tire mounted on



the rear wheel and adapted to give laterally to pressure to pull the rear wheel laterally of the skate to shift the direction of the axial line of the skate.

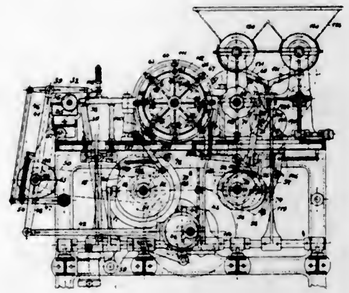
1,379,251. BUILDING-WALL. LOUIS DARGENTO, Rochester, N. Y. Filed Apr. 12, 1920. Serial No. 373,378. 1 Claim. (Cl. 72—127.)

A building wall comprising an outer cement layer formed *in situ* and having communicating spaces on its inner face, a water-proofing material bridging the spaces and covering those portions of the wall between the spaces, and a separately constructed inner layer of cement material formed *in situ* against the exposed face of the water-proof covering.



1,379,252. SAW-FILING MACHINE. WILLIAM DIEGEL, Manitowoc, Wis. Filed Jan. 16, 1920. Serial No. 351,965. 20 Claims. (Cl. 76—35.)

1. In a saw filing machine, the combination of a frame comprising saw supporting means, file supporting means comprising a slide, a base plate provided with bearings to which said slide is movably fitted, a shaft rotatably mounted in bearings on the machine frame, arms pivoted to said shaft to which said base plate is secured, connection between said shaft and file supporting slide adapted for imparting reciprocating movement to said slide, means associated with said reciprocating means for imparting pivotal movement to the base plate supporting arms, constructed and arranged for lifting said base plate on the back stroke of the file so that said file will clear the teeth of a saw supported in said machine and for releasing said base plate on the front stroke of the file to permit lowering thereof to effect engagement of the file carried thereby with the teeth of a saw being filed, and saw feeding means, substantially as described.

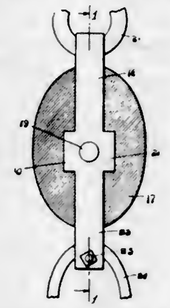


1,379,253. COMBINATION-GAGE. JOHN P. DORNEY, Watervliet, N. Y. Filed Dec. 3, 1919. Serial No. 342,162. 5 Claims. (Cl. 33—143.)

1. An attachment for measuring instruments comprising a body, said body being cut to form a large groove adapted to receive a supporting blade, and a small groove adapted to receive a measuring blade, a cover plate for said large groove, a cam journaled in said cover plate and body for securing said body in position and a rod

slidable longitudinally of said body and coöperating with said small groove for yieldingly holding said measuring blade in adjusted position.

1,379,254. MACHINE FOR MAKING CARTONS. GUNNAR CHRISTIAN EKSTRÖM, BROR ANDERS EMIL JOHNSON, and GUSTAF ÖRSTRÖM, Stockholm, Sweden, assignors To Aktiebolaget Gehr. Arehns Mekaniska Verkstad, Stockholm, Sweden, a Corporation of Sweden. Filed July 9, 1919. Serial No. 309,745. 10 Claims. (Cl. 93—44.)

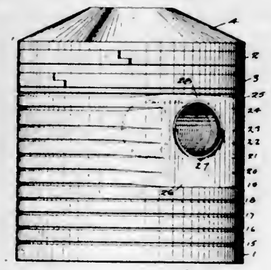


1. In a machine for making capsules from sheets of paper or the like and adapted to contain matches, cigarettes or similar articles, the combination with a fold table and side folders, of a plurality of mandrels, which are moved in an endless path and pass successively through the said fold table, a sheet of paper, etc., being folded around each of the said mandrels, a presser for each mandrel provided on the carrier of the mandrels, respectively and swingable around an axis extending longitudinally of the mandrel, said presser forcing the folded side edges of the sheet against the mandrel, means for forcing the presser against the mandrel and means for moving the presser from the mandrel, substantially as described and shown in the accompanying drawing.

1,379,255. PULLEY-BLOCK. JOHN H. FLYNN, Jr., Cincinnati, Ohio, assignor to The Eureka Tackle Block Company, Cincinnati, Ohio. Filed Mar. 1, 1920. Serial No. 362,491. 2 Claims. (Cl. 254—192.)

1. A pulley block construction comprising a substantially U-shaped sheet metal strap having lugs extending

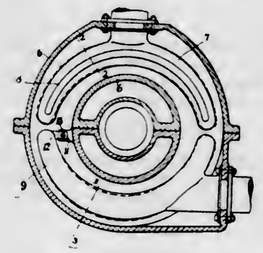
from the sides thereof, rope connecting elements at the ends of the strap, and a block having the material thereof



embedding the lugs and sides of the strap between the rope connecting elements attached thereto.

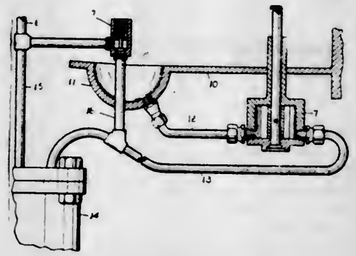
1,379,256. NECKTIE AND METHOD OF MAKING THE SAME. THEODORE FRUCHTMAN, New York, N. Y. Filed Apr. 27, 1920. Serial No. 376,945. 4 Claims. (Cl. 2—11.)

1. A method of making a necktie or the like which consists in sewing the longitudinal edge of a piece of filling material to a longitudinal edge of the rear surface of a facing, then doubling over the said facing and filling material so that the facing is folded inside out, then stitching together the edges of the doubled-over facing and filling, and then turning the article thus made inside out, a sufficient portion of the said filling being left unsecured to the said facing, so that the said filling material forms a loose, tubular structure within the said facing material.



1,379,257. PISTON. WILLIAM R. GORHAM, Alameda, Calif. Filed Apr. 23, 1917. Serial No. 163,817. 4 Claims. (Cl. 74—108.)

1. A piston having exterior depressions contiguous to the wrist pin bearings therein and grooves angular in cross section and oppositely disposed leading into said depressions.



1,379,258. STEAM-TURBINE. HENRY LEWIS GUY, Manchester, England, assignor to The British Westinghouse Electric and Manufacturing Company, a Company of Great Britain. Filed Nov. 16, 1918. Serial No. 262,877. 9 Claims. (Cl. 253—78.)

1. In combination in a steam turbine, a removable nozzle box stiffened longitudinally thereof, the stiffened portion being so located with relation to the box that the box when in position within the turbine will have greater

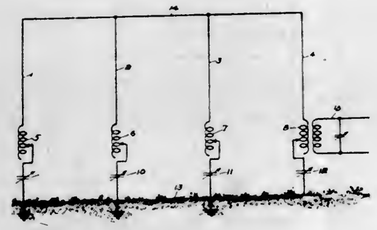
flexibility in a plane perpendicular to the turbine axis than in a plane parallel thereto.

1,379,259. FILTERING MEANS FOR LUBRICATING SYSTEMS. EDMUND E. HANS, Kalamazoo, Mich. Filed Apr. 19, 1920. Serial No. 375,033. 2 Claims. (Cl. 184—6.)

1. In a lubricating system for internal combustion engines, the combination with the parts to be lubricated, of a crank case constituting an oil reservoir adapted to receive the lubricant escaping from such lubricated parts, a sump, a filter, a pump with its intake connected to the sump and delivering to the said filter, a lubricant supply pipe from said filter to the parts to be lubricated, a by-pass from the delivery pipe of said pump to the said lubricant supply pipe, and a spring loaded valve in the said by-pass, whereby the by-pass operates automatically under abnormal pressure.

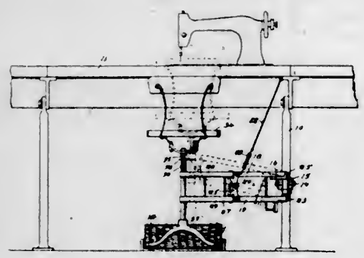
1,379,260. PROCESS FOR THE CONCENTRATION OF SULFURIC ACID. EINAR HANSEN, Paris, France. Filed Sept. 4, 1918. Serial No. 252,652. 2 Claims. (Cl. 23—1.)

1. The process of concentrating sulfuric acid which consists in bringing into direct contact with the sulfuric acid hot gas containing nitric oxid, subjecting the gas resulting therefrom to condensation and then conducting it into an absorption system for nitrous gas of a well-known kind.



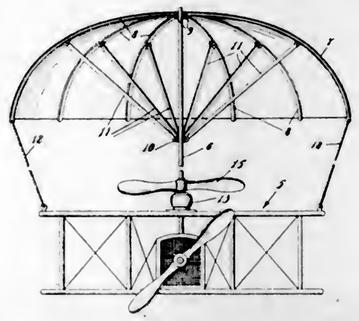
1,379,261. FIRE-BAR FOR FURNACES. JOSEPH ALBERT HILL, Sheffield, England. Filed Dec. 21, 1918. Serial No. 267,789. 1 Claim. (Cl. 126—167.)

A fire-bar for furnaces comprising a body portion of a general wedge-shaped formation in vertical section taper-



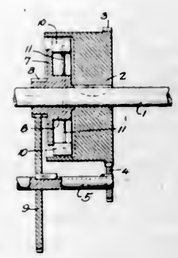
ing inward toward the bottom and having the lower edge of the central portion rounded, the body being provided with a longitudinal bore throughout its length and also provided with a plurality of vertical transverse bores communicating with the longitudinal bore and with the upper and lower surfaces of the bar, and depending end flanges upon said body portion having, the lower edges rounded and adapted to fit snugly in a supporting conduit so as to prevent longitudinal movement of the bar.

1,379,262. RADIO-RECEIVING ANTENNA. STANTON C. HOOPER and GEORGE H. CLARK, Washington, D. C. Filed Sept. 16, 1919. Serial No. 324,228. 3 Claims. (Cl. 250—11.)



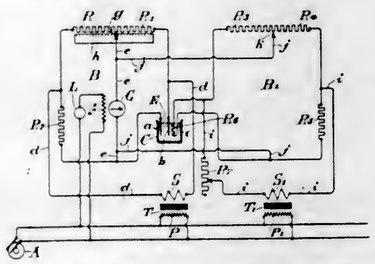
1. In a radio telegraphic and telephonic receiving system, the combination of a plurality of antennæ located at approximately equal distances apart on a line bearing in the direction of the distant transmitting station, means for tuning to resonance each antenna to the incoming wave length and a conductive connection joining the elevated extremities of said antennæ, the lower extremities of which are grounded and means for integrating the increments of energy collected by the individual antennæ in a receiving apparatus substantially as described.

1,379,263. CHAIR. CHARLES JELLINEK and DAVID STERN, New York, N. Y. Filed Aug. 9, 1919. Serial No. 316,305. 6 Claims. (Cl. 155—81.)



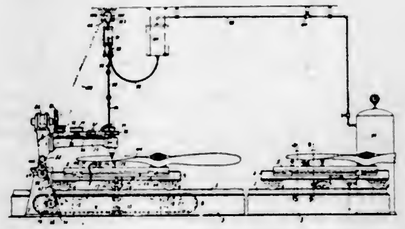
1. In a device of the class described, the combination of a bracket supporting member provided with an elevating cam, a chair elevating bracket pivoted for horizontal movement about a vertical axis and movable vertically in its swinging movement across said cam, said bracket formed of two vertically spaced arms with one end of each pivotally connected to the supporting member, an X-connection pivotally coupling the free ends of said arms, a swinging chair supporting arm pivoted to said X-coupling for horizontal movement relative thereto and a spring acting on said supporting arm and said bracket to swing the arm toward the supporting member.

1,379,264. AIRPLANE SAFETY APPLIANCE. HUBERT JULIAN, Montreal, Quebec, Canada. Filed Mar. 9, 1921. Serial No. 450,801. 4 Claims. (Cl. 244—21.)



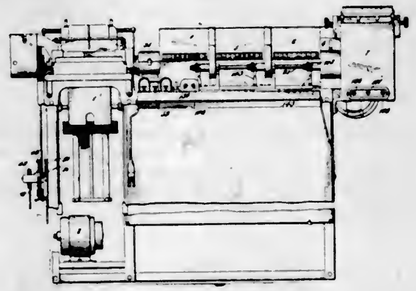
1. The combination of an airplane and an extensible safety attachment secured thereto, a fan for moving the safety attachment to its extended position, and an independent motor for actuating said fan.

1,379,265. GOVERNOR. FREDERICK J. KALTEYER, Philadelphia, Pa., assignor to Electrostrop Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 17, 1920. Serial No. 404,232. 3 Claims. (Cl. 188—185.)



1. A governor comprising a brake-drum, a hub mounted for free rotation within the drum, a disk connected with the hub and provided with dovetail tongues on its face, shoes mounted relatively to the hub and formed with dovetail grooves to receive the tongues of the disk, and springs connecting the shoes and hub.

1,379,266. COMPENSATION METHOD AND APPARATUS. EARL A. KEELER, Norristown, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 5, 1920. Serial No. 379,097. 26 Claims. (Cl. 175—183.)

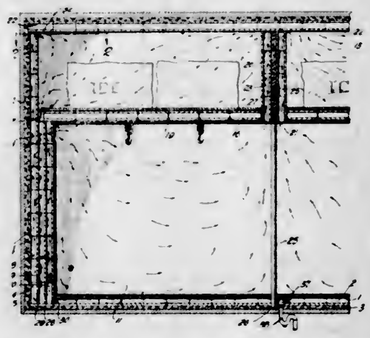


2. The method of measuring the conductivity of a material while at a temperature differing from a predetermined temperature, which consists in subjecting an indicating instrument to an electro-motive-force dependent upon the conductivity of said material, independently producing an electro-motive-force whose magnitude is dependent upon the departure of said material from said predetermined temperature, and impressing said second named electro-motive-force upon said instrument simultaneously with said first named electro-motive-force.

1,379,267. REPRODUCING-MACHINE FOR MAKING AEROPLANE-PROPELLERS AND THE LIKE. JOSEPH F. KELLER, New York, N. Y. Filed Jan. 11, 1918. Serial No. 211,368. 7 Claims. (Cl. 90—13.1.)

1. In a machine of the class described, a tracer and cutter frame having a pivotal axis, a tracer and cutter held in said frame, a track at right angles to said axis, a table for the pattern and work movable upon said track, supporting means for said axis entirely outside the path of the table, driving means for regularly moving the table to and fro upon the track adjacent to the tracer and cutter, mechanism for automatically and similarly moving the surfaces of the pattern and work past the tracer and cutter at the end of each to or fro movement of the table and in a direction parallel to the aforesaid pivotal axis, and manually controlled clutch means for connecting or disconnecting the driving means from the table.

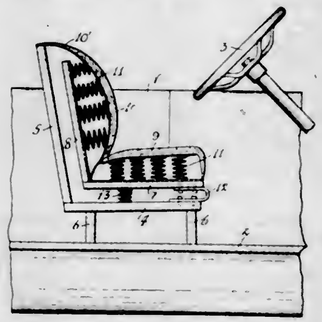
1,379,268. PRINTING-TABULATOR. CLAIR DENNISON LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, a Corporation of New Jersey. Filed Dec. 29, 1919. Serial No. 348,069. 14 Claims. (Cl. 235—58.)



1. The combination with a tabulating machine of a printing or listening attachment, intermediate mechanism for connecting it with or disconnecting it from the tabulator mechanism and means for causing the tabulator to run at reduced speed under the control of the means which connect the listing attachment with said tabulator.

3. The combination with a tabulating machine of a printing or listing attachment, intermediate mechanism for connecting the same with or disconnecting it from the tabulator mechanism, and means controlled by the listing attachment to prevent the tabulator from operating while said attachment is in operation for the printing or listing.

4. The combination with a tabulating machine of a printing or listing attachment, intermediate mechanism for connecting the same with or disconnecting it from the tabulator mechanism, and means for resetting the tabulator counter wheels to zero operated by and during the operation of the total printing means in said listing attachment.



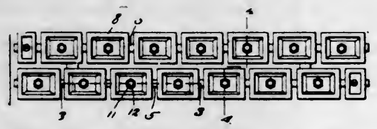
5. The combination with a tabulating machine of a printing or listing attachment, intermediate mechanism for connecting the same with the tabulator mechanism or disconnecting it therefrom, and mechanism in said attachment controlled by the tabulator counter wheels, and adapted to operate independently of the listing means for printing the totals indicated by the adjusted position of the tabulator counter wheels.

1,379,269. COLD-STORAGE STRUCTURE. ANDREW C. LEGG, Birmingham, Ala., assignor to R. D. Johnston, Jr., Birmingham, Ala. Filed Aug. 13, 1917. Serial No. 185,965. 13 Claims. (Cl. 62—46.)

5. In a refrigerating apparatus, a cold storage chamber, an overhead ice chamber, means to conduct cold air from the ice chamber to the base of walls of the storage chamber, two sets of conduits to split said cold air circulation at the base of said walls and return part of it through one set directly to the ice chamber and part of it through said walls into the upper part of the storage chamber, and warm air return ducts opening through the storage chamber roof and terminating in the top of the ice chamber.

1,379,270. AUTOMOBILE-SEAT. JAMES H. McCULLOUGH, Jr., San Jose, Calif. Filed Mar. 1, 1920. Serial No. 362,508. 3 Claims. (Cl. 155—54.)

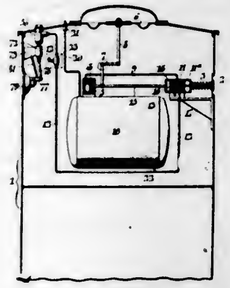
1. An automobile seat, comprising a fixed frame with bottom and back; a second frame with bottom and back



nested in and spaced from the fixed frame; a bendable U-strap connection between the forward edges of the two frames forming a horizontally disposed yielding joint therebetween; and a resilient member between said frames rearwardly of said connection.

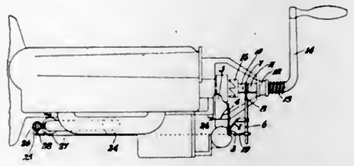
1,379,271. CONTENTS-INDICATOR FOR CONTAINERS. AUGUSTIN W. MALINOWSKY, Detroit, Mich. Filed Dec. 8, 1919. Serial No. 343,260. 2 Claims. (Cl. 73—82.)

1. In combination, a collar having a transverse diaphragm and a pair of parallel plates extending upwardly from the diaphragm, a pin extending across between the plates and a roller mounted on the pin, a tape extending over the roller, a float connected to one end of the tape and a weight connected to the other end, a cylindrical guide for the weight and a guide connecting to the lower end of the collar and having a partition to separate the weight and float, and a cap over the upper end of the collar and provided with a window through which the tape may be observed.



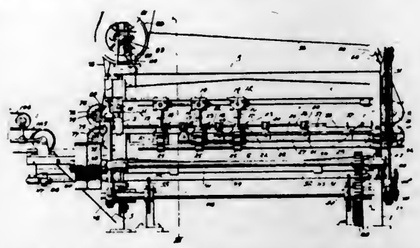
1,379,272. BOILER-GRATE. ARMANDO MASCI, Genoa, Italy. Filed July 23, 1920. Serial No. 398,501. 1 Claim. (Cl. 126—168.)

A grate comprising a plurality of parallel and laterally spaced grate bars, and fuel receiving pockets mounted on top of said bars, said pockets consisting of shallow trays having bottom recesses to straddle the bars, the top edges of the bars having recesses to seat bottom portions of the trays, stems carried by the bars and extending through the bottoms of the trays, said stems having heads at their lower ends, and the bars having recesses to seat the stems, said recesses opening into the second-mentioned recesses, and having enlarged bottom portions to seat the heads of the stems, and nuts screwed on said stems for clamping the trays down on the bars.



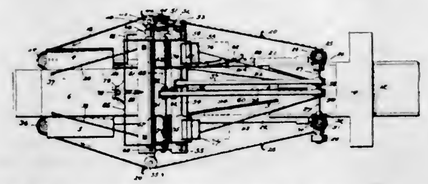
1,379,273. DEVICE FOR CAUSING SUBMERSIBLE BODIES TO RISE OR SINK. ELOF H. MEDÉN, Elizabeth, N. J., assignor to American Gas-Accumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 17, 1917. Serial No. 186,701. 20 Claims. (Cl. 102—3.)

1. In apparatus of the character described, the combination of a receptacle carried thereby which is adapted to contain a liquid under pressure, means for maintaining the said apparatus at predetermined depths below the surface of a body of water, means for connecting the interior of said receptacle with the said first named means,



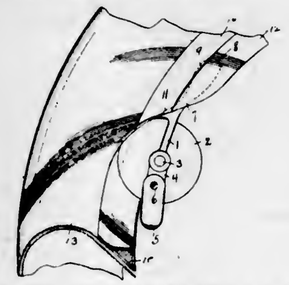
mechanism which is adapted to cause the said apparatus to rise or sink in the said body of water and means for supplying the said liquid under pressure to the said mechanism for causing the operation thereof.

1,379,274. AUTOMATIC CHOKE-VALVE-ACTUATING DEVICE. STEPHEN E. MERRILL, Port Richmond, N. Y. Filed June 9, 1920. Serial No. 387,704. 5 Claims. (Cl. 123—180.)



1. An attachment for automobile engines, provided with a choke valve and hand operated starting crank shaft, movable longitudinally into and out of operative relation with the engine shaft, comprising a supporting bracket provided with means for attaching it to a stationary part of the engine, a lever pivotally secured to said bracket, a yoke pivotally connected to one end of said lever, a sleeve engaged by said yoke, said sleeve being provided with means for securing it to the starting crank shaft, for rotation therewith, said lever being provided adjacent to its other end with means for connecting it to the choke valve operating connection, whereby the longitudinal movement of the starting crank shaft into operative relation with the engine shaft will automatically close the choke valve.

18,379,275. MACHINE FOR NOTCHING BOX-BLANKS AND THE LIKE. JOHN A. MOORE, Louisville, Ky., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed Jan. 5, 1920. Serial No. 349,584. 18 Claims. (Cl. 93—58.)

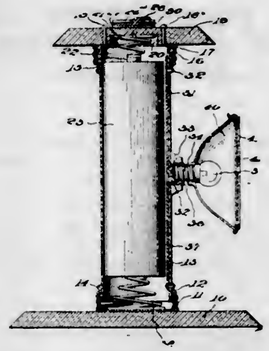


1. In a machine for notching blanks, the combination of a supporting frame; at least three cross beams supported for adjustment lengthwise of the frame; means for raising and lowering the beams; knives carried by the beams; a die underlying each knife and adjustable as to position with the knives; and means for feeding the blanks over said dies.

1,379,276. MACHINE FOR SEALING BOXES OR CARTONS. JOHN A. MOORE, Louisville, Ky., assignor to The Mengel Company, Louisville, Ky., a Corporation of New Jersey. Filed June 14, 1920. Serial No. 388,831. 13 Claims. (Cl. 93—7.)

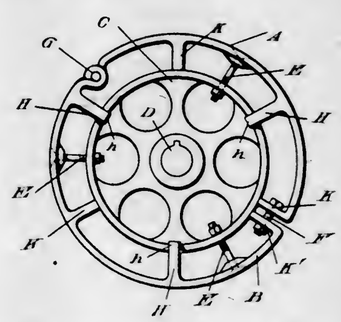
12. In a machine for sealing cartons having flaps, the combination of a runway; means for advancing the cartons therethrough; means for applying paste to the carton elements which are to be brought into adhesive relation; means for turning opposite flaps inwardly; a tongue lying in the runway beneath the path of the flaps to be inturned; and an upstanding bar carried by the tongue and preventing overlapping of the proximate edges of the flaps which are being inturned.

1,379,277. TURN-UP TOOL. CHARLES W. MORRIS, Youngstown, Ohio. Filed Feb. 27, 1920. Serial No. 361,625. 2 Claims. (Cl. 154—9.)



1. In a device of the class described, a body portion, a rotating disk secured to the underside of same, an arm with an operating handle attached thereon, a flattened downturned arm, a lip formed on the side of said arm, a turned up edge on the end portion of said flattened downturned arm, substantially as described for the purpose set forth.

1,379,278. MATTING. TOKUJI NAEMURA, Sanchome, Kobe, Japan. Filed May 15, 1920. Serial No. 381,678. 2 Claims. (Cl. 139—9.)

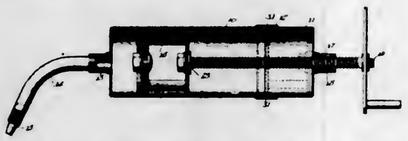


1. A matting woven with warps and wefts each of which consisting of a comparatively wide cord with cords for filling up interstices one on each side, each set of the three cords of the warp and weft being woven as one, and in which transverse strips are formed by replacing some of the wefts consisting of three cords with a number of single wefts, substantially as and for the purposes hereinbefore set forth.

1,379,279. LAMP. RALPH OSBORN, Randolph, Nebr. Filed May 29, 1919. Serial No. 300,642. 1 Claim. (Cl. 240—8.5.)

In an electric lamp, the combination of a relatively large base, a threaded socket securely attached to said base, a shell of insulating material adapted for engagement with said socket, a lamp socket intermediate the ends of said shell, a top detachably connected to said shell and of smaller diameter than the base, a battery within the shell, helical springs supporting said battery and engaging opposite terminals of said battery for conducting the current, a lamp bulb carried by the lamp socket, means for conveying the current to said lamp bulb, and a switch carried by said top for making and breaking the current.

1,379,280. ADDITIONAL PULLEY-RIM. GEORGE OTTE, Sand Springs, Mont. Filed June 2, 1920. Serial No. 385,879. 3 Claims. (Cl. 64—17.)

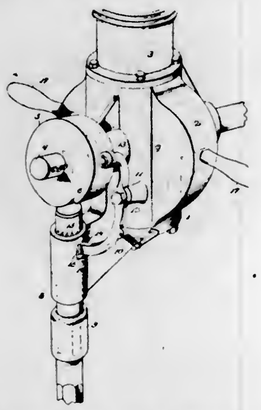


1. A pulley attachment of the class described comprising an auxiliary rim provided with spokes, having yoke shaped bearings adapted to bear upon the tread of a standard pulley and embrace its edges, said rim having also clamping bolts connecting said rim and tread and short spokes adjacent to said bolts adapted to bear upon the tread of the standard pulley.

1,379,281. GREASE-GUN. JOHN OWENS, Kingston, Iowa. Filed July 11, 1919. Serial No. 310,094. 2 Claims. (Cl. 221—79.)

1. A portable hand grease gun consisting of a barrel comprising a one-piece major part free of projections on its exterior adapting it when dipped into hard grease to be readily cleansed exteriorly and a one-piece head part with an opening through its top and a piston having a screw thread piston rod with a handle thereon for turn-

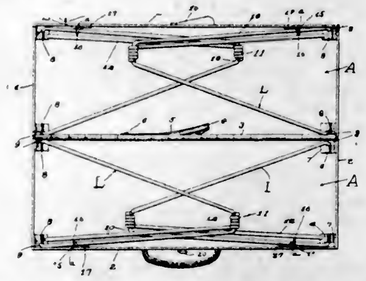
ing the same, the minor part of the barrel being sufficiently long to house the piston and being telescopically



connected to the major part of the barrel whereby the piston may be forced smoothly from the minor to the major part of the barrel by the screw.

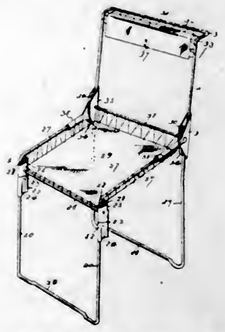
1,379,282. LUBRICATING MEANS. ROBERT JAMES PATON, Bedford Park, London, England. Filed Nov. 8, 1919. Serial No. 336,678. 7 Claims. (Cl. 184—1.)

6. The combination with a laminated spring, of an oil reservoir mounted on the spring and provided with an opening in one of its walls, a wick extending through said opening in the reservoir and having a portion thereof in contact with a side of the spring, an oil-proof cover for the wick and spring, and a gaiter inclosing the reservoir, wick and spring, the free edges of such gaiter being tubular and provided with laces that can be drawn tight to bring the tubular edges together and secure the gaiter in position.



1,379,283. ROCK-DRILLING MACHINE. EWART ELIAS PETERSON, Seattle, Wash. Filed Sept. 2, 1920. Serial No. 407,663. 5 Claims. (Cl. 255—41.)

1. An apparatus of the class described comprising a motor, a cam member operated thereby, an operating spindle arranged in line with the cam and maintained in contact with the cam through the weight of the apparatus, the cam being formed to impart an impact to the spindle through such weight in each rotation of the cam.

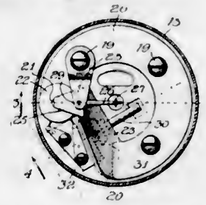


1,379,284. FOLDING TABLE. JUDSON C. PEWTHER, Denver, Colo. Filed Sept. 15, 1920. Serial No. 410,507. 3 Claims. (Cl. 45—116.)

3. A device of the character described comprising two hingedly connected sections foldable into closed relation or extended to bring the sections substantially into coplanar relation, a supporting leg operatively engaged with each end portion of each of the sections, said supporting leg being substantially V-shaped in form and having swinging movement with respect to the section, a brace

member having one end portion pivotally engaged with the apex portion of the leg, and coacting means carried by the brace member and the section whereby the same may be connected one to the other.

1,379,285. FOLDABLE ARTICLE AND JOINT THEREFOR. JUDSON C. PEWTHER, Denver, Colo. Filed Sept. 15, 1920. Serial No. 410,508. 9 Claims. (Cl. 155—148.)

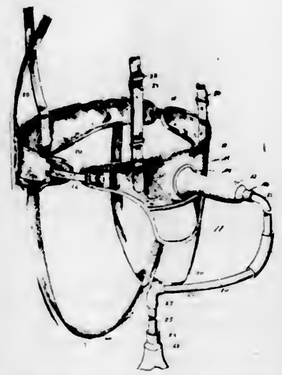


1. In a foldable article, a sheath approximately U-shaped in cross section and having a pivot member extending across it and spaced from the bottom thereof, two rods disposed at opposite ends of the sheath and in overlapping relation to each other, the rods at their adjacent ends being formed with elongated loops through which the pivot pin passes and whereby the rods may be shifted longitudinally with reference to the pivot pin or rotated thereon, the rods each having a diameter approximately equal to the distance between the pivot pin and the bottom of the sheath.

1,379,286. FOLDING COT. JUDSON C. PEWTHER, Denver, Colo. Filed Oct. 4, 1920. Serial No. 414,573. 10 Claims. (Cl. 5—5.)

1. A foldable cot comprising a body support foldable on transverse lines, a pair of side rails rotatably connected to said body support and formed of leg supported sections pivoted together on normally vertical axes, and releasable means for normally holding the two rails against either rotary or pivotal movement, said rails being rotatable upon release of said holding means to dispose their pivots horizontally for folding.

1,379,287. TELEPHONE INSTRUMENT. FRANK J. REICHMANN and JOHN PRESS, Chicago, Ill.; said Press assignor to said Reichmann. Filed June 21, 1918. Serial No. 241,134. 21 Claims. (Cl. 179—117.)

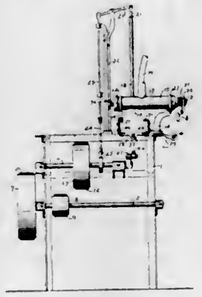


1. In a telephone instrument, a magnet, an armature movably supported upon one pole of the magnet and extending into operative relation with the other pole thereof, and means for changing the form of the magnet to alter the relative positions of the poles.

1,379,288. CUFF-HOLDER. EDWARD R. ROEHM, Detroit, Mich. Filed Oct. 2, 1919. Serial No. 327,913. 4 Claims. (Cl. 24—102.)

1. A device of the character described comprising means adapted to be engaged with the button holes of a cuff portion of a garment and a resilient loop attached at its ends to said button hole engaging means to extend inwardly therefrom in an inclined position with said loop embracing the wearer's arm and supported at its intermediate portion thereby independently of said garment and cuff portion, said loop being of a length to engage the garment at the side thereof opposite said button holes upon turning movement of said loop.

1,379,289. URINARY APPARATUS. EDWARD C. ROGERS, St. Louis, Mo. Filed Mar. 26, 1921. Serial No. 456,032. 1 Claim. (Cl. 128—295.)

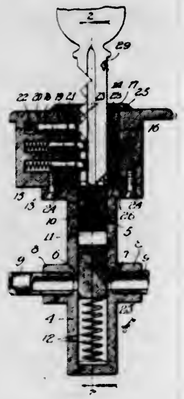


A urinary apparatus comprising a supporting belt, the front of which is formed with an opening, a stiff rubber nipple open at both ends and having a larger end provided with an annular internal groove, a soft rubber nipple detachably fitted on to the stiff nipple, connections between the soft nipple and a suitable container, the surrounding wall of the belt opening being disposed against the said wall of the opening and in the groove of the nipple whereby said nipple is firmly held to the belt by the water-tight joint.

1,379,290. PROPELLING MECHANISM FOR WATER-CRAFT. EDWARD J. SCHNEITER, Chicago, Ill. Filed Sept. 18, 1919. Serial No. 324,309. 4 Claims. (Cl. 170—153.)

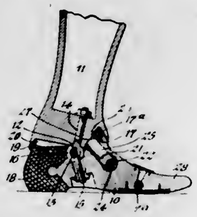
1. In water-craft propelling device, the combination of a drive shaft, a hub secured to said shaft, bearing sleeves on said hub, arms extending at right angles with said shaft and axially rotatable in said sleeves, blades secured at one edge to said arms, cam fingers extending from said arms, a stationary cam plate secured in the path of said cam fingers, the engagement of said fingers with said cam plate causing said arms to be held in position to hold the respective blades at right angles with the cam plate in propelling position, the pressure of the water against said blades causing them to trail through the water after release of the respective cam fingers from said cam plate.

1,379,291. DISPENSING APPARATUS. JOHN W. STIGLITZ, San Jose, Calif. Filed July 24, 1919. Serial No. 312,909. 9 Claims. (Cl. 226—94.)



1. A device of the character indicated, including a pair of telescoped hollow cylinders revolubly mounted with relation to each other, the outer cylinder having a discharge opening and an inlet opening formed therein and a pump operatively mounted thereon to coöperate with said openings for receiving and discharging material, and the inner cylinder having a discharge opening and an inlet opening formed therein and positioned to register alternately with the corresponding openings in the outer cylinder, means for causing the alternate registration of said openings, means coacting with said last mentioned means for positioning a receptacle in operative relation to the discharge opening of said outer cylinder, and means coacting with said last mentioned means for causing the discharge operation of said pump.

1,379,292. THEFT-PREVENTING MEANS FOR VEHICLES. MIECZYSLAW J. SZAMEIT, Chicago, Ill., assignor of one-half to John Stelk, Chicago, Ill. Filed Jan. 18, 1918. Serial No. 212,392. 11 Claims. (Cl. 251—6.)

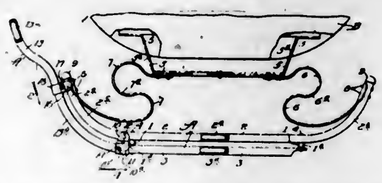


1. In a device of the character set forth, the combination of a casing adapted to be interposed in a fuel conduit,

a valve in said casing movable into and out of position for controlling the flow of fuel through said conduit, a key-controlled member containing a key-way and through

which a key is insertible into engagement with said valve for operating the latter by longitudinal movement of the key, and means operating when said key is turned to hold said valve in open position.

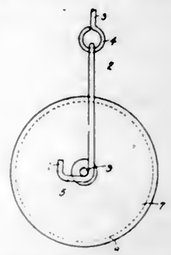
1,379,293. ARTIFICIAL LEG. CHESTER B. WINN, Buffalo, N. Y. Filed Mar. 12, 1920. Serial No. 365,202. 2 Claims. (Cl. 3—7.)



2. An artificial leg, comprising a leg-member, a foot joinated thereto by an ankle-journal, the foot being provided in front of said journal with a socket, a cushion seated in said socket, and a rigid plunger guided in said socket and interposed between said cushion and the lower front portion of the leg-member.

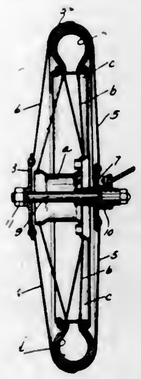
1,379,294. PREPARATION OF MEDIA FOR YEAST PROPAGATION AND FERMENTATION. ROBERT WAHL, Chicago, Ill. Filed Feb. 18, 1920. Serial No. 359,511. 8 Claims. (Cl. 195—32.)

1. The process of preparing media for yeast growth and fermentation, which consists in forming a malt containing mash, holding it at a temperature suitable for peptonization continually supplying thereto during peptonization lactic acid in amounts such that no free lactic acid remains in the mash during peptonization or at its termination, subsequently raising the temperature to a degree suitable for saccharification and saccharifying the mash.



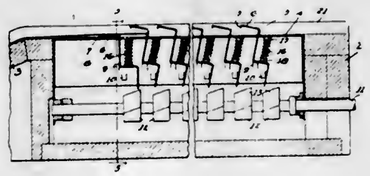
1,379,295. PERAMBULATOR. ARTHUR J. ADAMS, Bay City, Mich., assignor to The Fulton Company, Bay City, Mich., a Corporation of Michigan. Filed Feb. 12, 1919. Serial No. 276,585. 8 Claims. (Cl. 280—47.)

1. The combination of a running-gear frame equipped with axles and provided with spring-supports which extend rearwardly and upwardly from the rear axle, sockets permanently connected with the running-gear frame in the rear of the rear axle, a handle having side bars, whose lower ends extend into said sockets and are detachably connected therewith, clips permanently connected



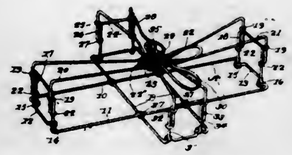
with the upper portions of said spring-supports, and devices mounted on the side bars of the handle and detachably connected with said clips.

1,379,296. BEARING. JOHN T. AUSTIN, Hartford, Conn., assignor to The Austin Organ Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 4, 1920. Serial No. 408,215. 2 Claims. (Cl. 64—21.)



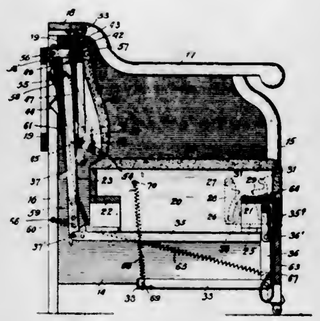
1. A bearing comprising a forked flexibly mounted bearing member the branches of the fork having arms, a roller situated between said branches, having a stud extending through it and supported for movement by said arms.

1,379,297. TIRE-CARRIER. EMIL R. DRAVER, Richmond, Ind. Substitute for application Serial No. 157,971, filed Mar. 28, 1917. This application filed Jan. 3, 1921. Serial No. 434,520½. 4 Claims. (Cl. 224—29.)



1. A tire carrier comprising a supporting member, a spindle fixed in relation thereto, a back plate having a curved peripheral flange adapted to fit about a tire, a front plate detachably applied to the projected end of said spindle, and having a curved peripheral flange adapted to telescope with the flange of said back plate, and means for securing said front plate in different lateral adjustments relative to said back plate.

1,379,298. BALLOT-ASSEMBLING MECHANISM. NILS F. GARBO, Minneapolis, Minn. Filed Mar. 20, 1916, Serial No. 85,524. Renewed Oct. 29, 1920. Serial No. 420,581. 8 Claims. (Cl. 129—35.)



1. The combination, with a casing having a flat surface upon which a series of flexible sheets may be placed, of a series of uniformly spaced, spring-controlled clamping dogs arranged to extend above said surface, and means for holding said dogs in an elevated position.

1,379,299. BILL-FILE. FRANK S. GRIZZEL, Sharps Chapel, Tenn. Filed Jan. 8, 1921. Serial No. 435,869. 2 Claims. (Cl. 24—17.)

2. A package binder comprising a pair of crossed rectangular frames of different dimensions secured together, yokes pivotally connected to the ends of the frames, yokes slidably adjustable on the first yokes, the bight portions of the second-named yokes extended angularly, and levers on certain of the second yokes having ends engageable with said bight portions.

1,379,300. SOFA-BED. JULIUS J. GRUENFELD, Jr., Chicago, Ill. Filed Feb. 5, 1917. Serial No. 146,596. 4 Claims. (Cl. 5—48.)

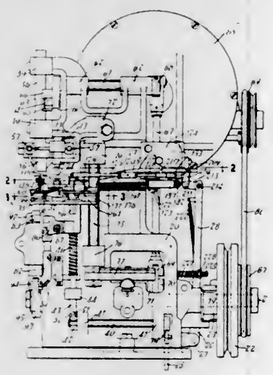
3. In a sofa bed, the combination of a sofa frame, a bed-frame formed of foldably connected sections, and a pivotal connection between the frames comprising a pair of pivot studs and a plate having intersecting arcuate slots therein for the studs respectively, formed so the studs will be caused to successively act as a stationary fulcrum for the bed, the upper ends of the plates being open for the insertion and removal of the studs.

1,379,301. BURNER. PAUL H. HAMILTON, Cleveland, Ohio. Filed Mar. 13, 1919. Serial No. 282,299. 1 Claim. (Cl. 158—112.)

A burner comprising a central element composed of a rectangular frame, the top side whereof is substantially V-shaped in cross section and from the opposed edges whereof rise diverging baffles, said element including a mixer which opens through the bottom side of the frame, the end walls of the frame having their middle portions inset to produce external transverse grooves, a recessed cheek plate applied to each side of the frame, the cheek plates having notches registering with the aforesaid grooves and having each a series of inwardly projecting vanes along its upper edge portion, the aforesaid baffles having vanes alining substantially with those of the cheek plates, and means extending through the aforesaid grooves and notches for holding the cheek plates together and in clamping relation to the frame, the cheek plates incorporating shields protecting the holding means from the heat of the flame.

1,379,302. ANTISANDER FOR PISTON-PUMPS. JOE H. HART, Fillmore, Calif. Filed Jan. 18, 1921. Serial No. 438,094. 4 Claims. (Cl. 103—64.)

1. The combination with a well casing having an imperforate portion and a perforate portion; of a pump having a foot valve and an orifice therefor; a shell connected to the pump and extending down below the pump within the imperforate portion of said casing, and having an inlet at its lower end, and being otherwise closed to the interior of the casing, and means arranged within the casing between said pump and said inlet and adapted to restrict the flow of liquid from the space within the shell to the foot valve orifice: said shell being of considerable length below the perforations of the casing to allow solids to settle inside the casing substantially as and for the purpose set forth.



2. The combination with a well casing having an imperforate portion and a perforate portion; of a pump

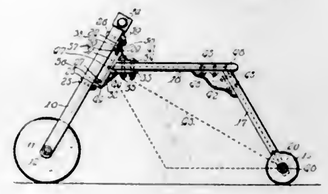
having a foot valve and an orifice therefor; a shell rounded at its lower end and connected to the pump and extending down below the pump within the imperforate portion of said casing, and having an inlet at its lower end, and being otherwise closed to the interior of the casing; and means arranged within the casing between said pump and said inlet and adapted to restrict the flow of liquid from the space within the shell to the foot valve orifice; said shell being of considerable length below the perforations of the casing to allow solids to settle inside the casing substantially as and for the purpose set forth.

3. An anti-sander comprising a shell having an inlet at the bottom; a sump inside the shell and closed at the bottom; a hood to which the shell and the sump are connected; there being a passage between the shell and the sump and an outlet from such passage into the sump; and a working barrel having a foot valve open to the sump; the orifice of the foot valve being of less cross-sectional area than the orifice of said outlet; and the cross-sectional area of the orifice of said outlet being less than the cross-sectional area of the orifice of the inlet at the bottom of the shell.

4. An anti-sander comprising a shell having an inlet at the bottom; a sump inside the shell and closed at the bottom; a hood to which the shell and the sump are connected; there being a passage between the shell and the sump and an outlet from such passage into the upper part of the sump; and a working barrel having a foot valve open to the sump.

1,379,303. LACING-STUD-SETTING MACHINE WITH AUTOMATIC STOP. ARTHUR R. HAVENER, Wayland, Mass., assignor to American Lacing Hook Co., a Corporation of New Jersey. Filed Nov. 23, 1918. Serial No. 263,833. 58 Claims. (Cl. 218—17.)

46. In mechanism for applying lacing studs to shoe uppers, means for imparting a step-by-step feeding movement to the upper, means for feeding a reinforcing strip a distance substantially different from the travel of each movement of said upper, means to secure studs to said upper and said strip, means for cutting the strip after each stud is applied, and means including said strip feeding means to automatically stop said machine at the end of a predetermined number of stud setting operations.

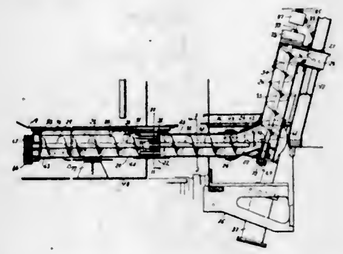


1,379,304. WINDOW-SASH. HARRY P. HOMERS, New Haven, Conn. Filed Oct. 11, 1920. Serial No. 416,114. 2 Claims. (Cl. 20—43.)

1. The combination with a bottom-hung window sash of a stop plate secured at the upper end of one side thereof, said stop plate formed on its inner edge with a series of stops, a plate secured to the window casing, a lever pivotally connected with said plate, provided at its lower end

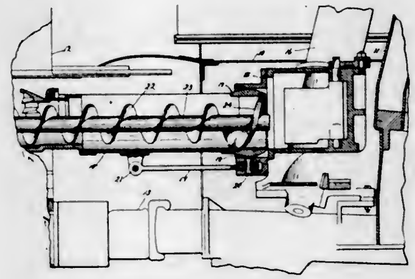
with a lug adapted to engage with the stops on the said stop plate to be entirely disengaged therefrom.

1,379,305. CHILD'S CONVERTIBLE VEHICLE. LUTHER JOHNS, Oak Park, Ill. Filed Mar. 19, 1920. Serial No. 367,103. 5 Claims. (Cl. 208—165.)



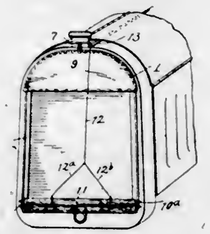
1. A convertible vehicle including a steering post, a front wheel mounted therein, rear wheels, an intermediate structure having two main parts in rigid and fixed angular relation to each other, one of said parts comprising a foot rest in one operative position of the structure and the other part comprising a seat in an operative position of the structure which is upside-down with respect to the firstly-mentioned operative position, and means for holding the intermediate structure in each of said operative positions, said means including pivoting elements permanently held on the steering post, pivoting elements permanently held on the front end of the seat part and which coöperatively interfit with the firstly-mentioned pivoting elements when the intermediate structure is in each of said operative positions, means for holding the interfitting pivoting elements coöperatively together when the intermediate structure is in each of said positions, and means for holding the rear wheels at the rear end of the intermediate structure.

1,379,306. LOCOMOTIVE-STOKER. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, Schenectady, N. Y., a Corporation of Pennsylvania. Original application filed Sept. 2, 1915, Serial No. 48,619. Divided and this application filed Feb. 19, 1917. Serial No. 149,564. 12 Claims. (Cl. 193—13.)



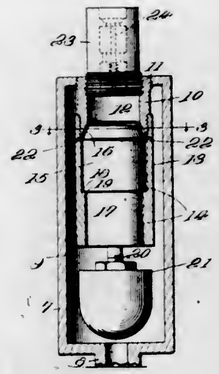
1. In combination, a locomotive having a firebox, a tender having a fuel bin, a continuous conduit leading forward horizontally below the bin and upwardly and delivering in to the fire box through the rear wall thereof,

transferring screws in each of the named sections of the conduit the shaft bearings of the screws being outside of



the conduit passage, and means for driving the screws and being connected therewith exteriorly of the conduit.

1,379,307. LOCOMOTIVE-STOKER. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Aug. 1, 1918. Serial No. 247,762. 6 Claims. (Cl. 193—13.)

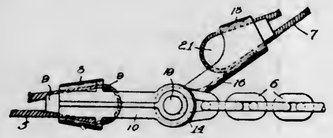


1. In combination, a locomotive, a tender, a fuel transfer conduit comprising two telescopically and flexibly related sections, the inner portion of the entering sections having its outer surface longitudinally convex, the inner surface of the receiving section of the joint being longitudinally straight, and a link holding the two sections in engagement and being pivotally attached to each section.

1,379,308. AIR-CONTROLLING DEVICE FOR AUTOMOBILE-RADIATORS. GEORGE G. MARSHALL, Cleveland Heights, Ohio. Filed Dec. 26, 1918. Serial No. 268,378. 3 Claims. (Cl. 257—132.)

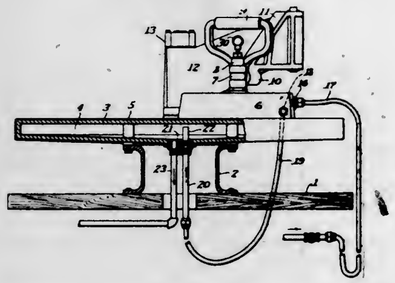
1. In a device of the character described, the combination with a frame of a collapsible member secured to said said frame at the lower portion thereof, cross members extending between the side members of the frame and slidably mounted upon said side members of the frame, the said cross members being secured to the collapsible member, the collapsible member leaving the frame entirely open when at the bottom thereof and covering portions of said frame in intermediate positions between the bottom and the top, and means secured to the collapsible member for raising and lowering the collapsible member.

1,379,309. AUTOMATIC AIR AND GAS RELIEF VALVE FOR OIL-DISTRIBUTING SYSTEMS. HENRY GRADY MOBLEY, Valley Mills, Tex. Filed Apr. 16, 1920. Serial No. 374,455. 3 Claims. (Cl. 137—69.)



1. In an oil distributing system, the combination of an oil pump discharging oil to any desired point, a suction line connected to said pump, a gravity line having connection with an oil reservoir and the suction line, a discharge line adapted to force oil under pressure to said suction line, and automatic means in said suction line permitting the escape of air or gas and not oil.

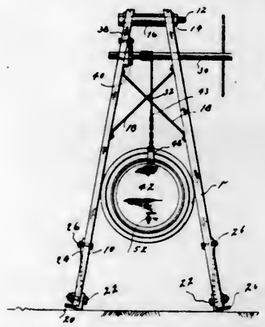
1,379,310. VALVE-SPRING COMPRESSOR AND VALVE-GRINDING TOOL. JOSEPH EUGENE O'SULLIVAN, North Madison, Ind. Filed Dec. 18, 1919. Serial No. 345,693. 1 Claim. (Cl. 51—29.)



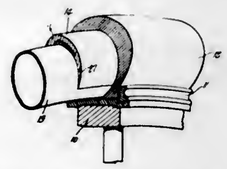
A tool as herein characterized and comprising a shank member and a transverse head member rigidly connected with the said shank at one end and projecting to each side thereof, said head serving as a handle, said shank having its opposite end bifurcated and defining spaced arms of equal length and a relatively deep recess extending into the shank, the outer faces of the ends of the spaced arms being flat, defining shoulders adapted to abut the conventional valve spring retaining washer, whereby such spring may be compressed longitudinally, said shank being concaved on opposite faces at the side edges of said recess, said concaveties adapted to permit the fingers to grip and remove the conventional spring washer retaining cross pin from the valve stem, the stem of the valve adapted to be disposed within the recess between the before mentioned arms, and said arms having alined lateral perforations through the same adjacent their free ends for the reception of a pin projecting laterally from the valve stem to couple the same with the shank, whereby the tool may be used to grind or regrind the valve and its seat.

1,379,311. EXCAVATING-SHOVEL. JOHN W. PAGE, Chicago, Ill. Filed Mar. 17, 1919. Serial No. 283,030. 5 Claims. (Cl. 37—40.)

1. In combination, a casting comprising a body portion having a wedge shaped tubular opening therethrough, a pair of arms extending from said body portion, each of said arms being bifurcated at its outer end, a hauling line bent upon itself and passing through said tubular opening, a wedge coöperating with said tubular opening to hold the hauling line therein, a holding line, means for retaining said holding line and means carried by the arms to support said holding line retaining means.



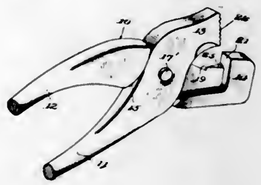
1,379,312. METHOD OF PRESSING. HERMAN W. PETH, Rochester, N. Y., assignor to Peth Pressing Process, Inc., Rochester, N. Y., a Corporation of New York. Filed June 13, 1917. Serial No. 174,479. 2 Claims. (Cl. 68—9.)



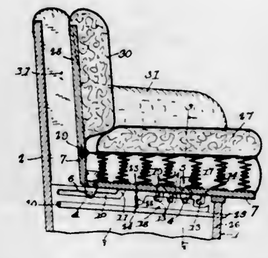
1. The method of pressing goods which consists in providing a fabric covered bed and a shiftable iron whose ironing surface is perforated and is less in area than that of the bed, heating the iron and the bed both to temperatures less than that which would burn the goods if the iron and the bed were held in contact with the goods simultaneously for an extended length of time, and pressing the goods by moving the iron to different portions of the goods on the bed and by issuing steam through the perforated ironing surface of the iron, while the iron is in engagement with the goods in the different positions so that steam is caused to pass through the goods and the fabric-covered bed to issue about the edges of the iron without material condensation, the iron after such issuing of the steam in any one position being held at such position until that portion of the goods under the iron is dry.

1,379,313. BARREL-LIFTER. FRANK L. SCHNEIDER, Shellrock, Iowa. Filed Oct. 14, 1920. Serial No. 416,819. 1 Claim. (Cl. 254—146.)

A lifting device for barrels comprising a pair of inclined standards, spacing means connecting the upper ends of the standards, a drum carried by said standards, means whereby the drum may be secured in a set position, base members each secured midway its ends to the lower end of a standard, braces secured to said base members and the adjacent standards, a flexible element wound about and secured to said drum, said flexible element being provided at its lower end with a loop, a chain passed through said loop, a barrel engaging hook carried by one end of said chain, a second barrel-engaging hook having an opening slidably receiving said chain, and a holding member carried by the slidably received end of the chain and adapted for engaging the links of the chain whereby the effective length of the chain may be varied.

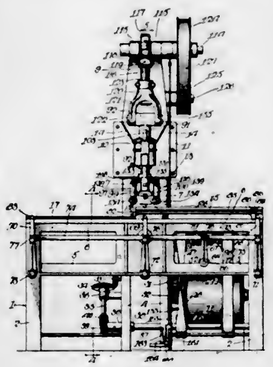


1,379,314. INNER LINER FOR TIRES. ARTHUR L. SEWELL, Chicago, Ill., assignor of one-third to Edward J. Moran and one-third to James A. Greeley, Chicago, Ill. Filed June 16, 1920. Serial No. 389,373. 1 Claim. (Cl. 152—18.)



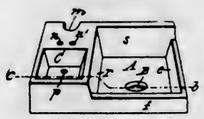
An inner liner for tires comprising a substantially crescent-shaped member having embedded therein a series of overlapping, spaced and elongated reinforcing elements disposed in sequence throughout the entire length of said member, each of said reinforcing elements being transvrsely arranged with reference to the said member and provided with corrugated edges to prevent creeping.

1,379,315. PLIERS. KSERTY SHANER, Washburn, Me. Filed Feb. 19, 1920. Serial No. 359,821. 1 Claim. (Cl. 81—198.)



A tool consisting of two pivotally connected members, the portions of the members at one side of the pivot forming handles and the portions at opposite sides of the pivot forming coöperating jaws, the jaws being reduced longitudinally on their opposed edges at opposite sides whereby they may lie side by side and the outer faces of the reduced portions of the jaws being beveled to form coöperating cutters, one of the cutters being provided in its cutting edge with a notch to receive work and to resist movement of the same outward between the jaws and being further provided outwardly beyond said notch with a work-supporting shoulder disposed in a plane parallel to the longitudinal axis of one of the jaws.

1,379,316. ADJUSTABLE SEAT ATTACHMENT FOR AUTOMOBILES. ALFORD A. SMITH and RAY JORGENSEN, Milwaukee, Wis. Filed July 6, 1920. Serial No. 394,060. 6 Claims. (Cl. 155—14.)

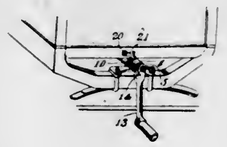


1. The combination with the main front seat of a motor driven vehicle, of an auxiliary seat adjustably mounted thereon, and adapted to be interlocked with the base portion of the main seat, a latch for holding the adjustable seat in such interlocked relation, the base portion of the main seat having risers provided with horizontal channels, and a vertical channel communicating with each horizontal channel at one end, the adjustable seat having depending brackets provided with lugs to engage in said channels by movement through the vertical portions thereof, and along the horizontal portions to interlocking position.

1,379,317. MACHINE FOR MAKING STEREOTYPE-MOLDS. CHRISTIAN N. SMITH, Elgin, Ill. Filed July 5, 1917. Serial No. 178,855. 10 Claims. (Cl. 101—12.)

1. In a machine of the class described, the combination of a main frame, a reciprocating form-supporting table mounted on the main frame, a reciprocating tamping tool mounted above and movable upward and downward with respect to the table, for forming a mold, a reciprocating plunger, a tool supporting member mounted upon and in movable relation to the plunger and in supporting engagement with the tamping tool, spring mechanism in engagement with the plunger and operatively connected with said last mentioned tool-supporting member and acting to move the latter upward with respect to said plunger member, plunger-operating means for positively operating the plunger, and means for moving the table alternately in opposite directions beneath the reciprocating tamping tool, during the operation of the latter.

1,379,318. BATH-ROOM FIXTURE. GEORGE F. STEINKAMP, Cincinnati, Ohio. Filed Jan. 13, 1920. Serial No. 351,234. 1 Claim. (Cl. 4—1.)

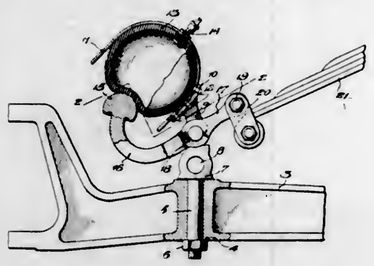


A bath-room or lavatory fixture comprising a stationary wash-stand, a horizontal bath-slab extension arranged laterally to said wash-stand but at a lower level than the top of the latter, an enlarged combined bath-discharge and toilet opening in said bath-slab extension, a flushing-tank, and a toilet or water-closet, the latter alined beneath the said office, substantially as shown and described.

1,379,319. CASE-HARDENING PREPARATION. CLAUDE AUGUSTUS STEWART, Willoughby, Sydney, New South Wales, Australia. Filed Aug. 9, 1918. Serial No. 249,155. 1 Claim. (Cl. 148—19.)

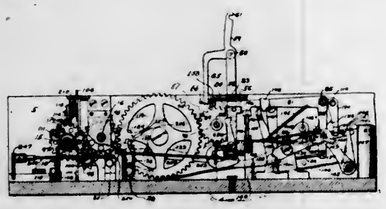
The process of preparing a case hardening compound, consisting in immersing a predetermined quantity of charcoal granules in a less quantity than the charcoal is capable of absorbing, of an aqueous solution of a member of the alkali group; mixing the same; allowing the mixture to stand until the point of impregnation is reached, and expelling the contained moisture by heat.

1,379,320. AUTOMOBILE SAFETY-CRANK. ORIEN S. STRICKLAND and GEORGE WILLIAM WOOD, Portales, N. Mex. Filed Aug. 19, 1920. Serial No. 404,705. 1 Claim. (Cl. 123—185.)



The combination with a motor car, of a safety crank for the shaft of the explosive engine thereof, consisting of a stub shaft having fast engagement with the end of the engine shaft, a sleeve rotatably mounted upon said stub shaft and having an inner series of ratchet teeth and an outer series of ratchet teeth, a ratchet wheel fast upon said stub shaft and having its teeth in line with and similar in number to said outer series of teeth, a crank arm rotatably engaging said stub shaft, a pivoted spring pressed pawl carried by said crank arm and engaging the said ratchet wheel and engaging also the said outer series of teeth, and a pawl pivoted to the radiator of the car and engaging said inner series of teeth, whereby in case of back fire, said first named pawl will be automatically released from said sleeve and said ratchet wheel to thereby release said crank arm.

1,379,321. VEHICLE-SPRING. LEWIS IRVINE THOMPSON, Portland, Oreg. Filed July 22, 1920. Serial No. 398,055. 7 Claims. (Cl. 267—18.)

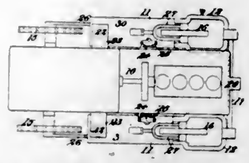


7. A spring device comprising a support having a shank arranged to be connected in an axle of a vehicle and an arm substantially coaxial with said shank formed with an enlarged head, a housing on said head, a fluid-

inflated resilient casing in said housing, and a lever fulcrumed on said support, said lever having a terminal

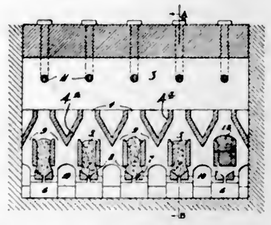
arranged to bear against said casing and being arranged on the opposite side of the fulcrum for connection with a load-sustaining member of the vehicle.

1,379,322. CALCULATING ATTACHMENT FOR TYPEWRITING-MACHINES. FERDINAND J. TILLMAN, St. Louis, Mo., assignor to Typewriter Calculating Attachment Company, a Corporation of Missouri. Filed Mar. 12, 1917. Serial No. 154,196. 53 Claims. (Cl. 235—59.)



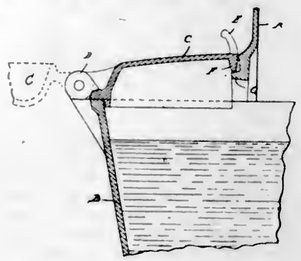
1. The combination with the traveling platen carriage and key levers of a typewriting machine, of calculating mechanism operable by said key levers and comprising an accumulator having a series of transmission wheels, a traveling master wheel shiftable step by step from one to another of said transmission wheels, and power transmission means driven by the traveling platen carriage to shift said traveling master wheel step by step, locking means whereby said power transmission means is locked when disengaged from said traveling platen carriage, and unlocking means whereby said power transmission means is unlocked to permit the master wheel to be shifted by said traveling platen carriage.

18. The combination with the platen carriage and key levers of a typewriting machine, of calculating mechanism comprising integer wheels, slide bars for operating said integer wheels, connectors, pivoted to said slide bars, movable into and out of engagement with said key levers, and mechanism operable by said platen carriage by which all of said connectors are moved simultaneously into and out of engagement with said key levers, said mechanism comprising a rockable device having parallel rods between which the lower ends of said connectors are positioned, and a shift bar interlocked with said rockable device.



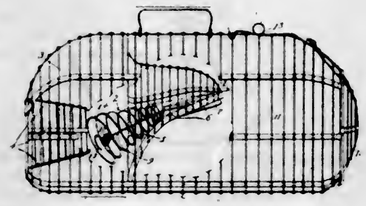
38. In a calculating machine, the combination of registering mechanism, an integer wheel shaft, integer wheels fixed to said shaft, transmission mechanism operable by said integer wheels and shaft for operating said registering mechanism, integer wheel operating members, a series of bell cranks operable directly by said integer wheel operating members, a locking member for engagement with an element of said transmission mechanism, means for operating said locking member operable by said bell crank levers, and a latch under the control of said bell crank levers for holding said locking member in active position pending the operation of said integer wheels.

1,379,323. SELF-LAYING-TRACK VEHICLE. WILLIAM TURNBULL, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Dec. 11, 1916. Serial No. 136,209. 22 Claims. (Cl. 305—9.)



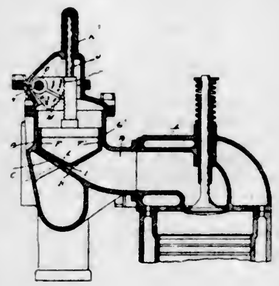
22. In a vehicle, the combination with a main frame, an endless track structure at each side of the main frame including an idler at the front of said structure and an extension projecting beyond the idler, means connected centrally to the forward end of the main frame and to each of the said extensions for equally distributing the weight of the forward end of the main frame, and a load supporting connection between the main frame and the other end of each of the said track structures.

1,379,324. DOWNDRAFT-KILN. ALOYSIUS WILHELMUS FRANCISCUS WEYERS, Tilburg, Netherlands. Filed Apr. 24, 1920. Serial No. 376,343. 5 Claims. (Cl. 25—137.)



1. In a kiln, independent adjoining apartments with intervening walls between them, passages in said walls, fire chambers arranged in the apartments having air admitting openings in their lower portions and open upper ends, said fire chambers being arranged in spaced relation to provide vertical air passages therebetween.

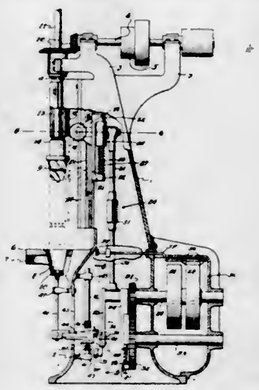
1,379,325. WATER-PAN FOR HOT-AIR FURNACES. HARRY L. WOOD, Dowagiac, Mich., assignor to Premier Warm Air Heater Company, Dowagiac, Mich., a Corporation of Michigan. Filed June 25, 1920. Serial No. 391,763. 1 Claim. (Cl. 126—113.)



In a device of the character described, the combination with the wall of a hot air furnace, of a water pan projecting exteriorly therefrom, a closure for said projecting portion hinged at its outer edge to the outer edge of said exteriorly projecting portion and provided with a flange around its entire inner edge, and means adjacent the wall of said furnace forming a seat for the closure.

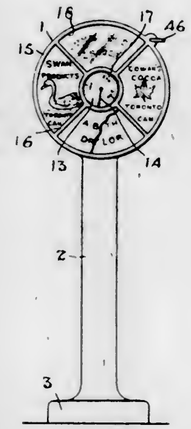
1,379,326. ANIMAL-TRAP FOR CATCHING RATS, MICE, AND THE LIKE. ALFRED M. WORCESTER, Cincinnati, Ohio. Filed Mar. 5, 1921. Serial No. 449,984. 1 Claim. (Cl. 43—65.)

In an animal or rat trap comprising a body-portion having an open or preliminary rear chamber or playground and a closed or final fore chamber or imprisoning-inclosure separated or divided by a partition or wire-work having mounted therein a tiltable trap-door for the ensnaring and onward passage of the outside animals from said play ground or chamber into the adjoining imprisoning chamber, a rearwardly-projecting balance-arm attached to the said trap-door and adapted to keep it automatically closed, and a guard or coil of wire or the like surrounding said balance-arm in the play-chamber and adapted to protect said balance-arm from the movements or interference of the animals in the play-chamber and the return of the caught or captured animals backwardly through the trap-door from the imprisoning-chamber.



1,379,327. INTAKE-MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. ANDREW BACHLE, Detroit, Mich. Filed Sept. 9, 1918. Serial No. 253,346. 4 Claims. (Cl. 123—52.)

1. In an internal combustion engine of the multi-cylinder type, the combination with an intake manifold extending to a plurality of cylinders, of an adjustable wall for said manifold, said wall and manifold having coöperating V-shaped portions of slightly different angle, there being a space between the apices of said portions, and means for adjusting said wall to vary the cross sectional area of said manifold.

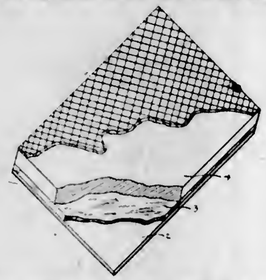


1,379,328. MOLDING-MACHINE. WILLIAM J. BAIRD, Detroit, Mich. Filed Apr. 9, 1920. Serial No. 372,732. 9 Claims. (Cl. 25—26.)

1. In a molding machine, the combination with a frame, of a mold mounted on said frame, a former longitudinally movable within said mold, a rack connected to said former, a second rack upon said frame, a gear meshing with said racks, and means for relatively moving said gear

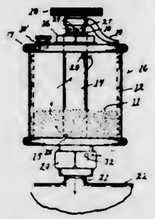
and second rack to thereby longitudinally move said first mentioned rack.

1,379,329. ADVERTISING DEVICE. RICHARD THOMAS BELL, Toronto, Ontario, Canada, assignor of one-fourth to Robert J. Copeland, Toronto, Ontario, Canada. Filed Feb. 25, 1920. Serial No. 361,148. 10 Claims. (Cl. 40—28.)



9. In an advertising scale, the combination with a dial scale, of means for locking said scale, a rotatable display member, a spring motor operatively connected to said display member, means for governing the movement of the display member, a lever operatively connected with said locking means to release same, a shaft geared to said motor, ratchet means connected with said lever adapted to rotate said winding shaft, a spirally grooved member arranged adjacent to said lever, and a pin on said lever engaging said spiral groove.

1,379,330. OUTSIDE FINISH FOR FRAME HOUSES. JOHN BUDINICH, West New York, N. J. Filed Mar. 26, 1920. Serial No. 368,913. 1 Claim. (Cl. 154—45.9.)

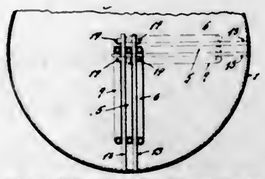


An outside finish for frame houses comprising a composite sheet composed of a layer of paper, a layer of hair

felt over the paper, a layer of waterproofing material over the felt, and a layer of wire lath over the waterproof ma-

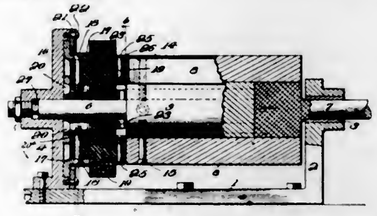
terial united toform an integral sheet of several distinct layers.

1,379,331. LUBRICATING APPARATUS. CHARLES H. BUETTNER, Cincinnati, Ohio. Filed July 3, 1919. Serial No. 308,492. 5 Claims. (Cl. 184—59.)



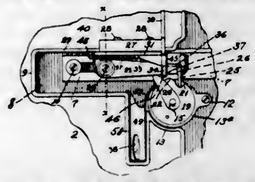
1. A lubricating apparatus comprising a chamber to contain a supply of pulverulent lubricant, a fluid and lubricant exit port leading therefrom above the upper surface of the lubricant therein to the place where the lubricant is to be applied, a gas port leading from the exterior of said chamber to a point within said chamber below the upper surface of said lubricant supply and to carry lubricant in suspension to the entrance to said lubricant exit port, and means exteriorly of said chamber to regulate the gas supply to said chamber.

1,379,332. EXPANSION-BIT. GEORGE P. BUTLER, New Haven, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Apr. 12, 1920. Serial No. 373,047. 5 Claims. (Cl. 145—127.)



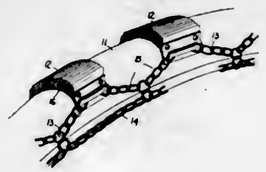
1. An expansion bit, having a head, a laterally adjustable cutter mounted therein, a forwardly inclined cutter-locking wedge mounted in the head in position to have its lower end engaged with the flat rear face of the cutter, and a wedge-operating screw transversely mounted in the rear face of the head and co-acting with the upper end of the said wedge for forcing the lower end thereof into engagement with the flat rear face of the cutter.

1,379,333. ART OF CRACKING HYDROCARBONS. JOHN W. COAST, Jr., Tulsa, Okla., assignor to The Process Company, Tulsa, Okla., a Corporation of Maryland. Filed May 22, 1917. Serial No. 170,148. 1 Claim. (Cl. 196—25.)



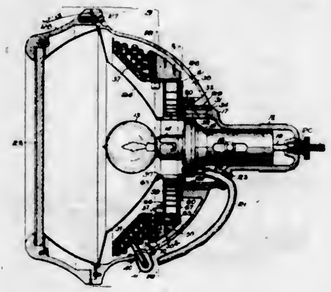
In the art of cracking liquid hydrocarbons, the method of removing liquid and solid residual matter from cylindrical cracking stills which comprises removing the free liquid portions of the residue, leaving a wet mass of residual coke or carbon in the still, then drying and at the same time stirring the coke or carbon by sweeping it back and forth transversely of the arcuate bottom of the cylindrical still, and thereafter removing the dry coke or carbon from the still.

1,379,334. IGNITION-GENERATOR. WILLIAM WARREN DEAN, Stamford, Conn., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 22, 1916. Serial No. 116,356. 8 Claims. (Cl. 171—252.)



1. A magneto electric machine comprising a multipolar permanent magnet rotor having a plurality of spaced prongs forming the poles of the magnet, said prongs being parallel to the axis of the rotor, a non-magnetic block connecting the outer ends of said prongs, a shaft supporting said prongs for rotation, a supporting base, an upright formed integral therewith and having a bearing for said shaft, a non-magnetic upright mounted on said base and forming the other bearing for said shaft, a plurality of stationary current-generating coils carried by said non-magnetic upright, a core for each coil, said cores being disposed endwise of and in inductive relation to the poles of the magnet and adapted to receive the flux therefrom, means carried by said non-magnetic upright for adjusting the shaft endwise to vary the air gap between the poles of the magnet and the ends of the cores.

1,379,335. AUTOMATIC COIN CONTROLLED DEVICE FOR PERMUTATION SAFE LOCKS OR THE LIKE. EDWIN L. DODSON, Covington, Ky. Filed Mar. 26, 1917. Serial No. 157,467. 3 Claims. (Cl. 194—74.)



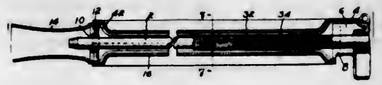
1. In a coin-controlled lock-mechanism for safe-doors, the combination of a lock-chamber, lock-bolts, a slotted rearwardly-extending bolt-bar, permutation-tumblers, a driver-tumbler, a pivotal-arm mounted on said slotted bolt-bar, a dog-member mounted at the fore-end of said pivotal-arm and adapted to engage the said tumblers, spring-latch detaining means for said dog-member to prevent its engagement with the said tumblers until the latter are in due alinement, lock-operating means including an arbor or spindle, and coin-controlled means adapted to be released for, in turn, releasing the dog-member when the inserted coin has reached in the lock-chamber and the said arbor or spindle turn, and then the said lock-operating means adapted to be actuated so that said dog-member may drop into the notches of said tumblers for engagement therewith and then followed by the retraction of said lock-bolts, substantially as shown and described.

1,379,336. TRACTION-TREAD. EMIL ERIK, Ossining, N. Y., assignor of one-half to John Fetto, Ossining, N. Y. Filed Oct. 15, 1920. Serial No. 417,261. 2 Claims. (Cl. 152—14.)

1. A non skid device comprising a series of independent tread elements each of which consists of metal end pieces partially curved to engage a portion of the tire and an upstanding portion, a length of annular flattened fabric folded upon itself held between the upstanding portions of said metal end pieces, a bolt passing through said end pieces and also through each fold of the fabric, and means for securing said tread to said tire.

1,379,337. LIGHTING APPARATUS. JOHN H. GEORGE and ELLSWORTH A. HAWTHORNE, Bridgeport, Conn.; said George assignor to said Hawthorne. Filed Jan. 18, 1919. Serial No. 271,858. 14 Claims. (Cl. 240—7.)

12. A lighting apparatus comprising, in combination, a light reflecting unit having a drum housed therein, a light-source unit comprising a light-source normally housed in said light-reflecting unit but removable therefrom and from said drum for use as a portable lamp, and a flexible light source supply conductor wound on said drum, attached to said light-source unit, and arranged to be wound onto and unwound from said drum in moving said light source unit as a portable lamp.



1,379,338. PHONOGRAPH. CHARLES HANSEN, San Jose, Calif. Filed June 28, 1920. Serial No. 392,319. 15 Claims. (Cl. 274—25.)

1. A device of the character indicated including a vibrating arm arranged in a vertical plane, a record engaging point operatively mounted in one end thereof, means for mounting said arm and point in operative relation to

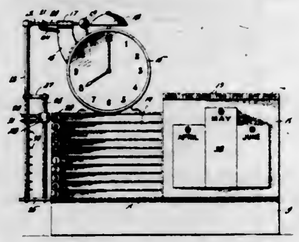
a record, and a wing-like member mounted on said arm and extending laterally therefrom.

1,379,339. MACHINE-GUN. GEORGE D. HASKELL, Concord, Mass., assignor to United States Machine Gun Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 10, 1917. Serial No. 195,812. 4 Claims. (Cl. 89—1.)

1. A gun having in combination, a barrel, a casing surrounding the same and extended forwardly beyond the muzzle of the barrel, air ports entering said casing near its opposite end, whereby firing of the gun will cause a a current of air to enter the casing at said port, flow along the barrel to cool the same and escape at the outer end of the casing, said casing having outwardly extended heat radiating ribs thereon, the casing split longitudinally through a plurality of said ribs, and hinged to open along one of the rib ends, recesses in two of the split portions of said ribs and beads on the opposite split portions of said ribs to enter the recesses whereby the casing may be opened throughout its length to further admit air within the same.

1,379,340. FLOWER-HOLDER. EDGAR D. HEGAMIN, St. Louis, Mo. Filed Jan. 7, 1921. Serial No. 435,680. 7 Claims. (Cl. 24—6.)

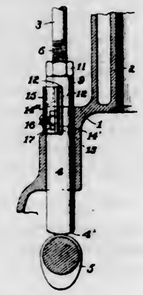
4. A device of the character described including a receptacle, a stem receiving closure cap therefor, and means engaged with said closure cap for detachably securing the device to a garment and providing a reinforcement for the closure cap.



1,379,341. MANUFACTURE OF HATS. LEWIS HERMAN, Jr., Summer Hill, New South Wales, Australia. Filed June 30, 1919. Serial No. 307,847. 2 Claims. (Cl. 91—68.)

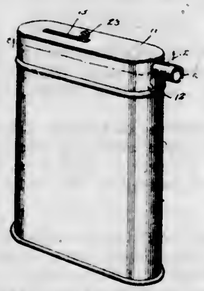
2. In the manufacture of hats the method of preparing a foundation material consisting in treating a fabric, first with a solution of sugar of lead, alum and water, and subsequently with another of wood spirit and shellac.

1,379,342. TIME-CONTROLLED DESK-MEMORANDUM. JOSEPH A. HOWELL, Dover, Ohio. Filed Dec. 13, 1920. Serial No. 430,303. 1 Claim. (Cl. 161—6.)



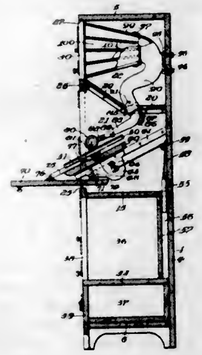
A device as specified including superposed compartments representative of the different hours of the day and adapted to receive notes or memorandums of business to be

transacted at said different hours, a clock mounted upon said compartments and equipped with a clapper and a bell, indicating means operated by movement of said clapper to successively pass from one compartment to the



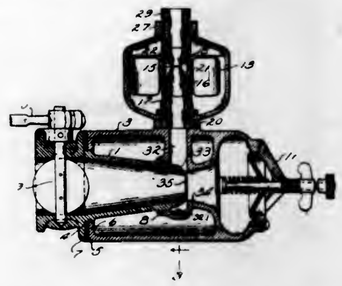
other during the different hours of the day to designate business to be transacted at the particular hour referred to by the indicator, said clapper likewise contacting with said bell, after having imparted movement to the indicator, to audibly call attention to the position of the indicator.

1,379,343. PUSH-ROD CONNECTION FOR AUTOMOBILE-ENGINE VALVES. ROBERT L. HUGHENS, Atlanta, Ga. Filed Jan. 17, 1920. Serial No. 352,020. 6 Claims. (Cl. 123—90.)



1. A push rod connection for automobile valves comprising push rod sections, an adjustable connection between them and a coupling member having flanges engaging parts of the push rod sections and other flanges engaging the outer face of the cylinder block, with means for adjusting the said coupling member to take up looseness in the connection, substantially as described.

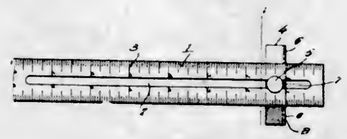
1,379,344. CIGARETTE-FORMER. GEORGE E. JACKSON, Brooklyn, N. Y., assignor of forty-nine one-hundredths to William B. Evans, Montclair, N. J. Filed July 22, 1919. Serial No. 312,502. 2 Claims. (Cl. 131—5.)



2. The combination with a tobacco container having a cover member provided with an opening, of a device for forming cigarettes comprising a plunger member, a slide having formed thereon a nozzle adapted to be projected through the opening in said cover, a shoulder formed on said slide for limiting the outward movement of the nozzle, a flanged slotted portion formed on said slide constituting a guide for said plunger and a lug on said slide serving as a stop for the plunger.

1,379,345. TALKING-MACHINE. ELDRIDGE R. JOHNSON, Merion, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Oct. 2, 1914, Serial No. 864,564. Renewed Oct. 9, 1919. Serial No. 329,646. 15 Claims. (Cl. 274—2.)

1. In a talking machine, the combination with a cabinet, sound reproducing means arranged therein, of a rotary record support movable independently of said cabinet from an inoperative non-playing position within said cabinet to an operative playing position extending outwardly from said cabinet.

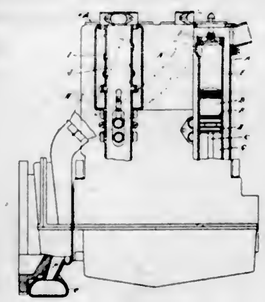


1,379,346. CARBURETER. THOMAS W. KINGS, Chicago, Ill. Filed Nov. 9, 1918. Serial No. 261,796. 6 Claims. (Cl. 261—76.)

1. In a carbureter, a casing forming a fuel chamber, a vertical tube communicating with said chamber, a Venturi tube located in said vertical tube and forming an air intake passage, said Venturi tube comprising two parts separated near the smallest diameter of the venturi, one of said parts having threaded engagement with said vertical parts so as to be adjustable toward and away from the other of said parts, the inner adjacent ends of said venturi parts being smalled in external diameter than said tube to provide a chamber between the venturi and said vertical tube, and a fuel passageway in said vertical tube providing communication between the fuel chamber and the chamber formed between said vertical tube and venturi.

4. In a carbureter, a tube having fuel and air inlets, a casing communicating with the outlet end of said tube, and a venturi comprising two parts separated near the smallest diameter of the venturi, said venturi communicating with said casing at the inner adjacent ends of said parts, one of said parts being supported on said casing so as to be longitudinally adjustable toward and away from the other of said parts for regulating the flow of fuel through said venturi.

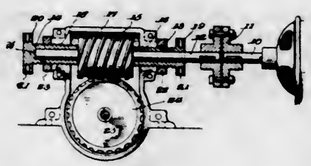
1,379,347. HEM-GAGE. RUTH J. KLATH, Adams, N. D. Filed May 19, 1917. Serial No. 169,754. 3 Claims. (Cl. 33—169.)



1. A hem gage comprising a plate, a slide associated therewith, and teeth on the slide extending laterally from the plane of the slide.

2. A hem gage comprising an elongated plate, a slide associated therewith, an angularly disposed flange carried by said slide, and said flange having teeth on its free edge.

3. A hem gage comprising an elongated plate having a slot therein, a slide arranged transversely of said plate and having each end projecting beyond the longitudinal edges of said plate, said slide having teeth projecting angularly therefrom at opposite ends of the slide, and one between its ends to project through said slot.



1,379,348. INTERNAL-COMBUSTION ENGINE. WILLIAM H. KNOWLES, Detroit, Mich. Filed July 20, 1916. Serial No. 110,285. 3 Claims. (Cl. 123—59.)

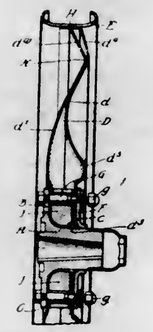
1. In an internal combustion engine, the combination with a plurality of power cylinders, of a valve cylinder, means within said power cylinders for compressing gases and means within said valve cylinder for transferring said compressed gases, said gases being temporarily stored within said valve cylinder, and for controlling the admission and exhaust of said cylinders.

1,379,349. MOTOR-DRIVE FOR LOOMS. DON C. LEONARD, Greenville, S. C. Filed Feb. 14, 1920. Serial No. 358,589. 1 Claim. (Cl. 74—36.)

In power transmission mechanism, a casing having communicating gear chambers, a worm gear rotatably mounted in one of said chambers, the other chamber having oppositely located end walls formed with alined correspondingly threaded bores of equal diameter and length, exteriorly threaded bearing sleeves adjustably fitted in said bores with their inner ends projecting into the last-mentioned gear chamber beyond the planes of the end walls thereof, the outer ends of the sleeves projecting exteriorly of the end walls of the chamber and being provided with means whereby the sleeves may be rotatably adjusted, the

said sleeves having alined bores, a shaft rotatably journaled in the bores of the sleeves, and a worm upon the shaft meshing with the worm gear, the said inner ends of the sleeves bearing at the opposite ends of the worm.

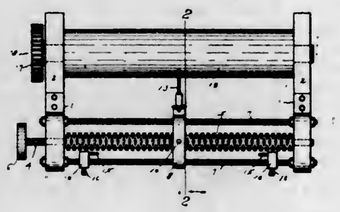
1,379,350. DEVICE FOR INDICATING THE LEVEL OF OIL IN ENGINE CRANK-CASES. ALFRED T. LE VESCONTE, Anona, Fla. Filed Apr. 3, 1920. Serial No. 371,061. 2 Claims. (Cl. 221—26.)



1. The combination with the crank case of an engine provided at one end and near its bottom with a screw threaded opening, of a valve casing having a tubular extension inserted within the screw threaded opening, said valve casing having a bore extending transversely of the crank case, a valve body pivoted within the bore and extending transversely of the crank case, said valve body having a longitudinal port with its outer end passing through the upper side of the valve body exteriorly of the valve casing, said valve body having a segmental opening in communication with the inner end of the longitudinal port, said segmental opening being adapted for movement into and out of registration with the tubular extension, an upstanding spout connected with the valve body and leading into the outer end of said port, said spout being so correlated with the segmental opening, that when the spout is moved to an approximately vertical position the segmental opening is out of registration with the tubular extension, said spout swinging longitudinally of the crank case toward and away from the end thereof, a plate having a scale and adapted to be secured to the dust guard of the automobile, a rock shaft extending transversely of the automobile and having its inner end secured to the outer end of the valve body and its outer end extending through said plate, and a pointer rigidly mounted upon the outer end of the rock shaft in advance of the plate and adapted to travel in proximity to the scale.

1,379,351. PROCESS OF MAKING CELLULOSE XANTHOGENATE SOLUTIONS AND PRODUCT PRODUCED. LEON LILIENFELD, Vienna, Austria, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 16, 1914, Serial No. 839,079. Renewed Sept. 24, 1919. Serial No. 325,963. 4 Claims. (Cl. 106—40.)

1. A process of making pure cellulose xanthogenate solutions from viscose solution which comprises heating the



viscose solution alone to a temperature capable of precipitating a water-insoluble xanthogenate without adding other materials capable of acting as precipitants, washing the precipitate thoroughly with water, and thereafter dissolving the washed precipitate in a solution of caustic alkali substantially as described.

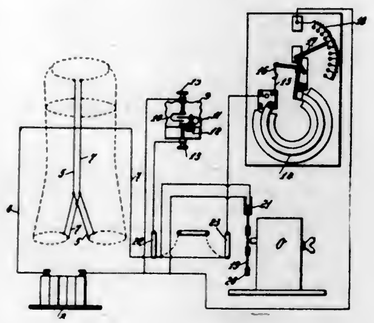
1,379,352. DISK-WHEEL ASSEMBLY. VICTOR LOUGHEED, Santa Barbara, Calif., assignor to Duodisk Steel Wheel Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed Nov. 26, 1920. Serial No. 426,546. 6 Claims. (Cl. 301—63.)

1. In a demountable disk wheel, a hub having a radial clamping flange; a web-member constructed for radial bearing upon the hub and axial abutment against its flange, comprising resilient disks fixedly united in an annulus radially remote from the hub, and initially held yieldingly spaced apart adjacent to the hub; filling means between the yieldingly spaced portions of the disks, of less axial dimension than the distance between the disks; and bolts releasably clamping the web to the hub-flange, passing through and deflecting the disks, drawing them together upon the filling means and holding the clamped parts under stress.

1,379,353. INK-DISTRIBUTER FOR PRINTING-PRESSES. ECTOR F. MARCEAU, East Hartford, Conn. Filed Feb. 12, 1921. Serial No. 444,561. 1 Claim. (Cl. 101—364.)

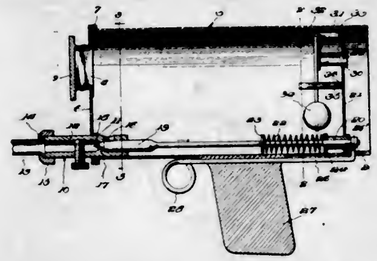
An ink distributer, comprising brackets, rods connecting the brackets, a shaft provided with reverse spiral grooves supported by the brackets, means for rotating the shaft, a yoke movably supported by the rods, a distributing arm projecting from the yoke, a block swiveled to the yoke, and extending into the grooves in the shaft, a finger extending from said block, collars adjustably secured to one of said rods, and stop pins projecting from the collars and adapted to engage said finger and turn the block for reversing the travel of the yoke and distributing arm.

1,379,354. TIRE-SPREADER. ABRAHAM MARKS, Elizabeth, N. J. Filed Dec. 27, 1920. Serial No. 433,153. 3 Claims. (Cl. 152—27.)



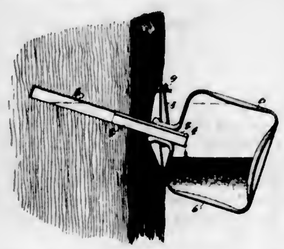
2. A one-piece tire spreader formed of a bar with a handle portion and a spreader portion, said spreader portion having recessed ends, one of said ends connecting the spreader portion with the handle.

1,379,355. METHOD FOR THE MANUFACTURE OF IGNITING COMPOSITIONS FOR MATCHES. OLOF JONATHAN MELLGREN, Gottenborg, Sweden. Filed Nov. 11, 1919. Serial No. 337,140. 5 Claims. (Cl. 52—27.)



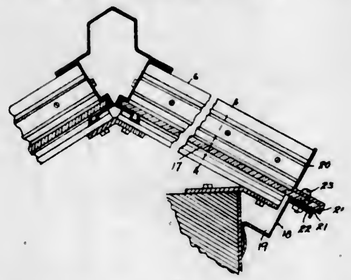
1. In the manufacture of igniting composition for matches, the substituting of part of binding materials hitherto used as part of the igniting composition for matches by the powder of tree bark which in every respect has the properties for substituting gluey substances, and at the same time supplying the igniting composition with air, for the purpose set forth.

1,379,356. ELECTRICALLY-HEATED COAT. ANTONANGELO NEGROMANTI, Milan, Italy. Filed Apr. 4, 1919. Serial No. 287,427. 4 Claims. (Cl. 219—46.)



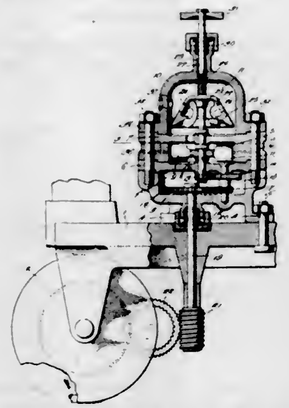
1. The combination of an electrically heated aviator's garment having heat producing electric wires embedded in the fabric thereof; a source of current connected to the wires of said fabric; current controlling means interposed between the source of current and the wires of said garment; and a barometer connected to said current controlling means to automatically operate the same.

1,379,357. LIQUID-DISPENSER. STERLING E. NORMAN, Franklin, Mass. Filed Nov. 14, 1919. Serial No. 338,080. 6 Claims. (Cl. 221—41.)



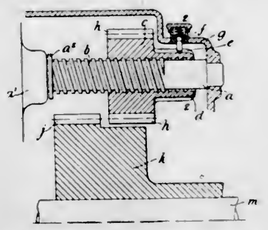
1. A device of the class described including a receptacle having a top, a spout extending through said top and engaged with one side of the receptacle, the inner portion of said spout being provided with a valve seat and an inlet opening beyond said valve seat, a plunger adapted for engaging said valve seat for closing said opening, and an operating device for said plunger.

1,379,358. APPARATUS FOR COLLECTING OLEO-RESIN. SAMUEL E. OLIVER, Vancouver, British Columbia, Canada. Filed Dec. 10, 1919. Serial No. 343,900. 3 Claims. (Cl. 47—40.)



1. In apparatus for collecting oleo-resin, an outwardly expansible tubular member adapted to be inserted into the auger hole in the trunk of the tree to be tapped and a suitable container into which said outwardly expansible tubular member is partly inserted, and means for supporting the container on the tree.

1,379,359. PUTTYLESS STEEL SKYLIGHT. LOUIS PARTZSCHEFELD, Jr., New York, N. Y. Filed Dec. 13, 1918. Serial No. 266,623. 5 Claims. (Cl. 108—16.)

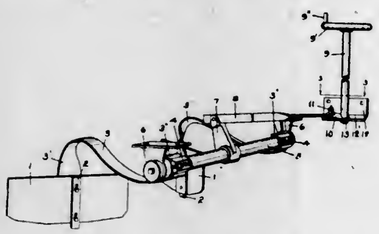


5. In a skylight the combination of a glass-supporting bar, a clip secured thereto and providing a stop for the glass of the skylight, and an adjustable apron secured to said clip and coöperating therewith to weatherproof the eaves of the skylight.

1,379,360. BLOWPIPE APPARATUS. RAYMOND B. PICKERING, Alameda, Calif. Filed Oct. 12, 1917, Serial No. 196,213. Renewed Feb. 14, 1921. Serial No. 445,011. 2 Claims. (Cl. 266—23.)

1. In blowpipe apparatus of the class described, the combination of a carriage, a torch supported thereby, a supply of gas under pressure, a casing on the carriage provided with three chambers, a shaft journaled in the casing and passing through the center chamber with its end projecting into the upper and lower chambers, blades carried by the shaft and located between the center chamber, governor means located in the upper chamber and connected with the upper end of the shaft, a pinion on the lower end of the shaft within the lower chamber, a driven shaft extending through the lower part of the casing and having its upper end located in the lower chamber, gearing within said lower chamber connecting said shaft with the pinion, means for connecting said shaft with the drive wheel of the carriage and means for directing some of the gas on its way to the nozzle against the blades in the center chamber.

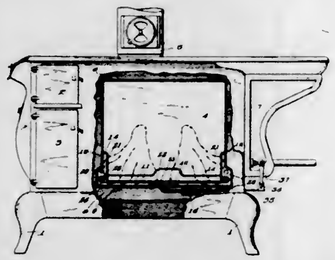
1,379,361. DEVICE FOR STARTING INTERNAL-COMBUSTION ENGINES. SIDNEY LEOPOLD PRICE, London, England. Filed Dec. 15, 1920. Serial No. 430,986. 3 Claims. (Cl. 74—7.)



1. A starting device for internal combustion engines, comprising, in combination, a threaded spindle, an internally threaded pinion in engagement with said spindle and provided with an exteriorly grooved axial extension, and a spring-pressed plunger in position to engage the grooves of said extension for preventing rotation of the pinion with said spindle.

1,379,362. PROCESS OF MAKING WOOD ALCOHOL FROM METHANE. ERNST HERMANN RIESENFELD, Freiburg, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Oct. 4, 1918. Serial No. 256,928. 6 Claims. (Cl. 23—24.)

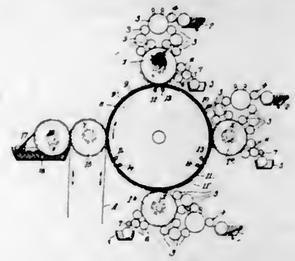
1. The process of making wood alcohol from methyl chlorid, consisting in converting methyl chlorid in an-



hydrous alcoholic solution into dimethyl ether by heating with caustic alkali under pressure, and subsequently hydrolyzing the dimethyl ether under pressure, the hydrolysis being accelerated by the presence of free acid.

1,379,363. TRACK SCRAPER OR CLEANER. FRED N. ROOT, Kalamazoo, Mich. Filed Apr. 27, 1920. Serial No. 377,134. 6 Claims. (Cl. 37—64.)

1. In a track scraper, the combination of a scraper shoe, a blade spring carrying the same having a vertical portion to which the said scraper blade is attached and a substantially horizontal portion, a rock shaft, means for securing the end of said spring to said rock shaft, an actuating arm on said rock shaft, a connecting link to said arm, a vertical control column, and an arm at the lower end of said column, pivotally connected to said link to form a toggle joint, arranged to pass the dead center, said link being notched to permit the pivot to pass the dead center to hold the scraper in its up or down position, coacting as specified.

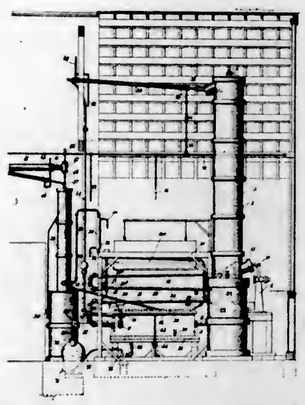


1,379,364. STOVE OR RANGE. FRED J. SASS, Peoria, Ill., assignor to Culter & Proctor Stove Co., Peoria, Ill., a Corporation of Illinois. Filed Sept. 7, 1918. Serial No. 253,073. 3 Claims. (Cl. 126—36.)

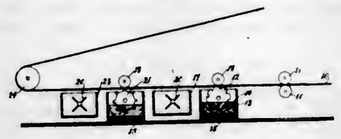
1. In a stove or range, an oven having a supplemental bottom spaced from the main bottom and provided with a plurality of perforations, gas burners on either side of said oven, a gas supply pipe connected with said burners and provided with a controlling valve, a valve in the main bottom of the oven, an operating means, operating connections between said operating means and said controlling valve in the supply pipe, and between said operating means and said valve in the oven bottom.

1,379,365. METHOD OF AND APPARATUS FOR MAKING MULTICOLOR PRINTS. OSWALD R. SCHULTZ and OTTO KIRSCH, New York, N. Y. Filed Nov. 13, 1920. Serial No. 423,889. 12 Claims. (Cl. 101—137.)

1. In a press for making color prints, the combination comprising a main impression cylinder, blanket means supported thereby, a plurality of offset color-printing cylinders and a supplemental impression cylinder adapted to yieldingly support a sheet to be printed all geared to said main cylinder, the periphery of said latter cylinder being at least the equal of the combined peripheries of all the other cylinders aforesaid, an intaglio printing cylinder in gear with such supplemental cylinder and adapted to have impression contact with such sheet when the same is supported on said supplemental impression cylinder and means for supplying ink to said offset printing cylinders.

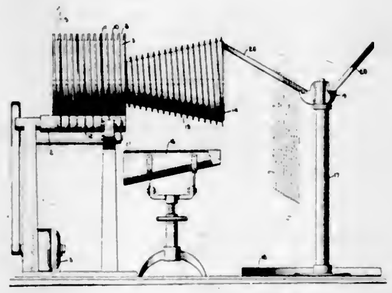


1,379,366. PROCESS OF PRODUCING ELECTRICAL CONDUCTORS. RALPH L. SEABURY, Toledo, Ohio. Filed Mar. 17, 1919. Serial No. 283,185. 13 Claims. (Cl. 171—325.)



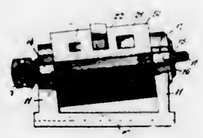
13. The process of making graphitic electrical conductor bodies, which consists in mixing pitch with flaky graphite in a quantity which is less than one-third of the graphite, compressing the mixture under high pressure into blocks, firmly packing the blocks in spaced relation to forcefully resist expansion, and subjecting the packed blocks to a rapidly rising baking temperature.

1,379,367. PROCESS OF CHLORINATION. FIN SPARRE and WALTER E. MASLAND, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 31, 1912, Serial No. 728,887. Renewed Mar. 1, 1917. Serial No. 151,845. 38 Claims. (Cl. 23—24.)



1. The process which comprises chlorinating a body of liquid in such a manner as to avoid the maintenance of a body of gas over the same.

1,379,368. METHOD AND APPARATUS OF COATING MATERIAL. ALEXANDER S. SPEER, Chicago, Ill., assignor, by mesne assignments, to The Roofing Patents Company, a Corporation of Delaware. Filed June 10, 1919. Serial No. 303,079. 10 Claims. (Cl. 91—67.9.)

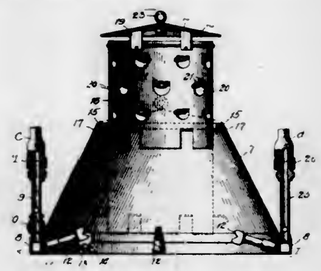


1. The method of coating material which comprises bringing the surface to be coated into contact with surfaces on an apparatus adapted to produce separated areas of sticky material on the surface, applying granular material of a distinctive character to the surface whereby the granular material will adhere only to the separated areas, allowing the non-adhering material to fall off, bringing the surface under treatment into contact with surfaces on a second apparatus complemental to said first named surfaces whereby the area of the surface under treatment not yet affected will have sticky material applied thereon, and applying granular material of a different distinctive character to said complemental surfaces.

1,379,369. BEAD-CEMENTING APPARATUS. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 15, 1920. Serial No. 381,595. 15 Claims. (Cl. 91—46.)

1. In an apparatus for treating annular bodies, a drum, rollers supporting said drum, a spiral groove in the drum and a dipping drum supported wholly by said first named drum.

1,379,370. ATTACHMENT FOR GRINDING THREAD-CUTTING TOOLS. JACOB SZATMARY, New York, N. Y. Filed May 13, 1919. Serial No. 296,798. 3 Claims. (Cl. 51—220.)

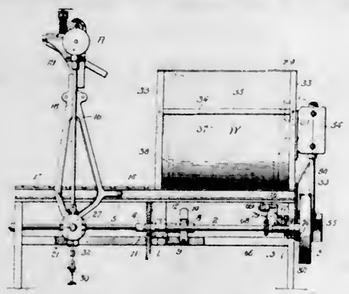


1. An attachment of the kind described, comprising a support, a tool holder journaled thereon so as to be rotatably adjustable relatively to said support, the axis of said holder being inclined with respect to said support, means on said holder whereby the tool to be ground is supported thereon in a position radial and at right angles to the axis of said holder and means for securing said holder at any point of its rotary adjustment whereby said tool may be fixed in registry with any of the imaginary radii which may be projected from said axis.

1,379,371. LOCK-NUT. JOHN D. TOSCAS, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 337,048. 1 Claim. (Cl. 151—5.)

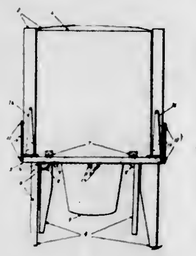
In combination with a nut, having a plurality of large uniformly tapering openings extending through the wall of the nut and a plurality of smaller bores in diametrical opposition of said opening, a cotter pin having a uniformly tapering head adapted to have a wedging fit within the tapering opening in the nut and the opposite end of the cotter pin extending through the diametrical opposite bore with its extreme free ends bent against the side wall of the nut.

1,379,372. PORTABLE GAS-LIGHTING OUTFIT. CHARLES E. VERHUNCE, Chicago, Ill., assignor to R. Williamson & Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1918. Serial No. 213,121. 7 Claims. (Cl. 67—87.)



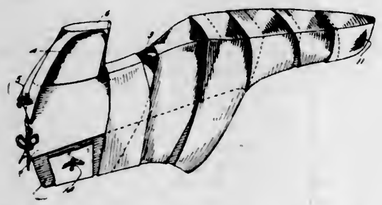
1. In a portable gas lighting outfit, the combination of a reflector having an open bottom, one or more gas burners adjacent the bottom of the reflector, a gas supplying connection for the burners, and a hood slidably connected to the reflector and adapted to pass into the reflector.

1,379,373. WASHING-MACHINE. WILLIAM H. VOSS, Davenport, Iowa. Original application filed Dec. 26, 1913, Serial No. 808,765. Divided and this application filed Sept. 9, 1916. Serial No. 119,154. 1 Claim. (Cl. 74—7.)



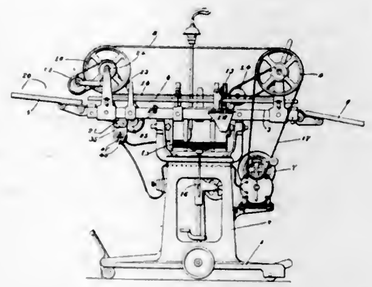
In a device of the class described, a platform, a horizontally arranged driven member above said platform near one end thereof, driving mechanism for said driven member, said mechanism being located beneath said platform and having a portion extending up, parallel with the outer end of said driven member, a frame movably mounted on said platform, an operated member carried by the frame, operating connections between the last named member and the driving mechanism, control mechanism operatively connected with said frame and having a pedal projecting laterally from said platform below the level thereof, to a position easily accessible to the foot of an operator so that the operator standing at the side of

the machine may readily control the working thereof, said driving mechanism for the driven member having an operating connection to the outer end of said driven



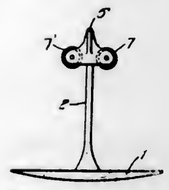
member at the adjacent end of the platform where it is out of the way of an operator standing at the side of the platform to control the operation of the frame and driven member, substantially as described.

1,379,374. FOLDING COMFORT-CHAIR FOR CHILDREN. PAUL R. WAGNER, Los Angeles, Calif., and CARL T. GROVE, Great Falls, Mont. Filed June 14, 1920. Serial No. 388,963. 1 Claim. (Cl. 155—31.)



An article of the class described comprising a seat member, a cover hinged to swing forwardly on said seat member, a back hinged to swing forwardly on said cover, straight, rigid, slotted braces pivoted to the back member and slidably connected to a pin on said seat member, legs each hingedly connected to the seat member to swing individually and at right angles to the next legs, adapted to have the seat member rest upon the upper ends or top ends of the legs, when same are in an open, vertical position, in which position each leg is held by engagement with a bent rod turnably fastened in a groove on the under side of said seat member.

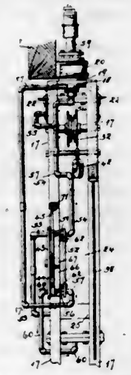
1,379,375. METHOD OR PROCESS OF LAYING AND SECURING SOLES TO UPPERS. PEARL J. WENTWORTH, Fort Thomas, Ky. Filed June 8, 1917. Serial No. 173,476. 2 Claims. (Cl. 12—142.)



1. A method or process of laying and securing soles to uppers, including providing a lasted upper, placing an outsole thereon with an adhesive therebetween, and wrapping an elastic member about the sole and upper beginning at the heel portion of the upper, extending along the sole and around the edge of the ball and toe portion of the sole so as to engage both the sole and upper, then around the entire lasted shoe and over the toe portion thereof and thence spirally around the lasted shoe to the rear end thereof, so as to apply a continuing pressure.

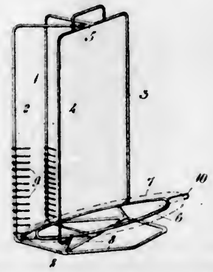
1,379,376. LABELING-MACHINE. CHARLES H. WILD, Baltimore, Md., assignor to Burt Machine Company, Incorporated, a Corporation of Maryland. Filed Aug. 7, 1920. Serial No. 401,860. 2 Claims. (Cl. 216—44.)

1. In a labeling machine, an electric circuit including an electric motor for driving the machine; a cement pot and electric heating means therefor, also included in the circuit, with a switch and connections providing a high, low and medium condition of the heating means, said switch and connections also serving to cut out the motor automatically at the high position of the heating means.



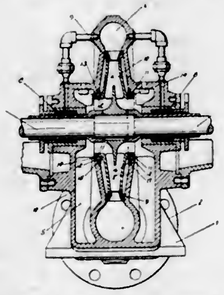
1,379,377. COLLAR-BUTTON. JOHN WUNDER, New York, N. Y. Filed May 27, 1920. Serial No. 384,614. 8 Claims. (Cl. 24—101.)

1. A collar button or the like having a nose for entering the buttonhole and a drum presenting a rotatable surface adjacent to said nose adapted to engage the edge of the buttonhole and to be moved thereby to guide the button into position in the buttonhole.



1,379,378. CRANE. GEORGE W. ZASTROW, Windsor Hills, Md., assignor, by mesne assignments, to Zastrow Machine Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed Aug. 15, 1917. Serial No. 186,397. 2 Claims. (Cl. 121—46.)

1. In a valve control mechanism for cranes the combination with a crane having a flexible load-carrying element, of a cylinder having a piston and rod which latter is operatively engaged with the said flexible element; a supply pipe to the cylinder; an exhaust pipe from the cylinder; a valve in each pipe and each valve having a stem; a bar pivotally sustained between its ends and having one end attached to the stem of one valve and its other end attached to the stem of the other valve; an oscillating valve-plate having two contact devices,—one to engage the said bar at one side of its pivot and the other

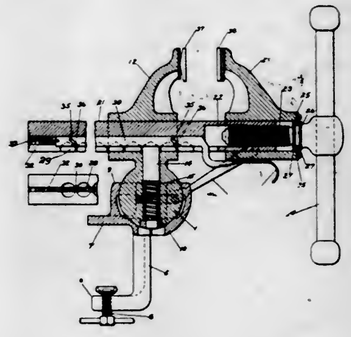


to engage said bar at the other side of its pivot; a single operating lever on the crane and a bar connecting said lever with the said oscillating valve-plate.

1,379,379. APPARATUS FOR HOLDING PLATES AND THE LIKE DURING WASHING UP AND RINSING. CARL HERMAN VALFRID ABRAHMSÉN, Stockholm, Sweden. Filed Jan. 4, 1921. Serial No. 435,003. 1 Claim. (Cl. 141—9.)

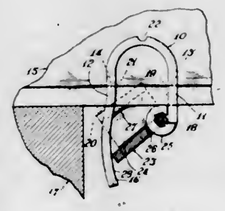
A holder for plates and the like, intended to be moved with an up-and-down motion in a washing or rinsing liquid, and comprising vertically placed rods, united at the top and bottom, said holder having at the bottom thereof an inclined base on which the plates are intended to be piled up with separating means between them, the vertically placed rods being disposed in position to serve as lateral supports for the pile.

1,379,380. CENTRIFUGAL PUMP. GEORGE H. ANDERSON, Battle Creek, Mich. Filed Nov. 21, 1918. Serial No. 263,448. 4 Claims. (Cl. 253—192.)



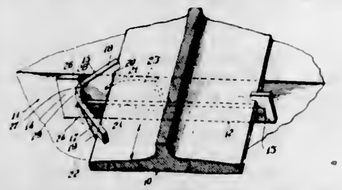
1. In a centrifugal pump, the combination with a casing, of a rotary impeller having outwardly tapered annular flanges at each end, said casing having cylindrical shoulders spaced from said impeller flanges, and floating annular members beveled on their inner sides to correspond to the taper of said flanges and peripherally shouldered to coact with said shoulders on said casing, as specified.

1,379,381. TREATMENT OF TEXTILE FIBERS AND FABRICS. CARL BENNERT, Coepenick, near Berlin, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Oct. 19, 1916. Serial No. 126,533. 7 Claims. (Cl. 8—5.)



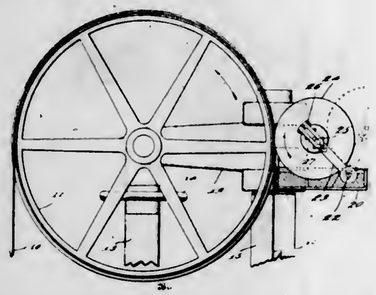
3. The process of cleansing textile fabric which comprises immersing said fabric in a solution consisting of an albumose cleansing compound derived from casein.

1,379,382. VISE. FRANS ELOF BERGSTEDT, Racine, Wis. Filed May 3, 1920. Serial No. 378,362. 5 Claims. (Cl. 81—24.)



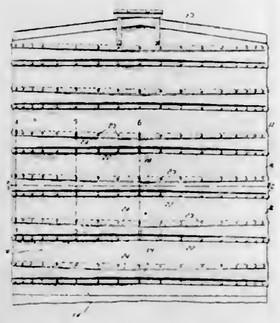
3. In a vise, a sliding bar having a series of plunger seats arranged longitudinally thereof, a plunger adapted to engage said seats, a trip rod embodying a trigger extending longitudinally of said bar and through said seats, an adjusting screw in the end of said bar, a vise-jaw mounted on said screw, and means for operating said screw to adjust said jaw on said bar.

1,379,383. RAIL-ANCHOR. LAURENCE J. BERKELEY, Milwaukee, Wis., assignor to The P. & M. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1920. Serial No. 410,287. 18 Claims. (Cl. 238—329.)



1. A rail anchor comprising a rail base engaging member provided with recesses which fit over one edge of a rail base and formed with a tie-abutting portion; said member being adapted to be strained in its application to a rail to bring said recesses into gripping contact with the rail base.

1,379,384. RAIL-ANCHOR. LAURENCE J. BERKELEY, Milwaukee, Wis., assignor to The P. & M. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1920. Serial No. 410,288. 14 Claims. (Cl. 238—329.)

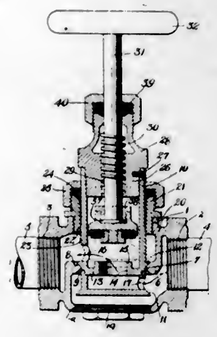


1. A rail anchor comprising a yoke member and a tie-abutting member, one being a spring adapted to be strained during the application of the device to a rail, and to be further strained during the presence of a creeping pressure to increase the grip of the device on the rail.

1,379,385. BAND-SAW LUBRICATOR. ROBERT C. BERRY, Indianapolis, Ind., assignor to E. C. Atkins & Company, Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 8, 1919. Serial No. 281,416. 1 Claim. (Cl. 143—158.)

In a band-saw machine, the combination with the band wheels and their supporting frame, of a lubricant-applying wheel for engaging at one of the band wheels the band saw carried by said band wheels, a swinging arm in which said lubricant-applying wheel is mounted, and a lubricant-containing pan into which said lubricant-applying wheel dips when it bears against the band saw.

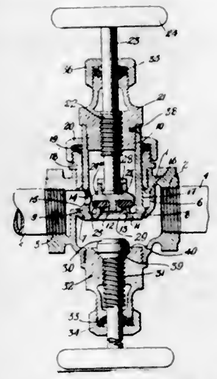
1,379,386. RAILWAY-CAR-WALL CONSTRUCTION. CHARLES D. BONSALL, Parnassus, Pa., assignor to Walter P. Murphy, New York, N. Y. Filed Mar. 25, 1920. Serial No. 368,516. 11 Claims. (Cl. 105—410.)



1. In a railway car, a wall comprising a plurality of overlapping plates, said plates having channels pressed therein in their overlapping portions, said channels increasing in depth and decreasing in width toward the center of the wall and forming together box ribs, said plates being riveted together on both sides of said ribs.

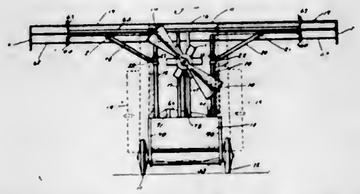
1,379,387. MANUFACTURE OF OXIDS OF NITROGEN. CARL BOSCH, ALWIN MITTASCH, and CHRISTOPH BECK, Ludwigshafen-on-the-Rhine, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Feb. 25, 1915. Serial No. 10,627. 2 Claims. (Cl. 23—1.)

1. The process of producing oxids of nitrogen by passing a mixture of ammonia and an oxygen-containing gas at a raised temperature over a granulated catalyst containing a molten and again solidified oxid of a metal of the iron group.



1,379,388. VALVE. WILLIAM B. BRASSINGTON, Port Richmond, N. Y. Filed Feb. 13, 1920. Serial No. 358,507. 3 Claims. (Cl. 277—68.)

1. The combination with a valve casing provided with inlet and outlet apertures, a partition having a communicating aperture therein and valve seats on its upper and lower faces surrounding said aperture, said casing being provided with a sleeve aperture coaxial with said communicating aperture, of a sleeve closed at its lower end and extending through said sleeve aperture, and communicating aperture, and provided with an annular valve portion above said partition normally engaging the upper valve seat thereof, and an annular beveled valve portion below said partition for engaging the lower valve seat thereof, but normally out of engagement therewith, said sleeve being provided with lateral apertures communicating respectively with the inlet and outlet apertures of the casing, and an intermediate main valve aperture and seat, a main valve carried by said sleeve for engaging said main valve seat, and a packing gland for effecting a tight joint at all times between the sleeve and the valve casing, while permitting the longitudinal movement of the sleeve to bring one or the other of its said valve portions into engagement with its respective seat.



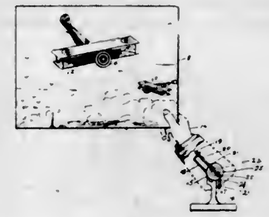
1,379,389. VALVE. WILLIAM B. BRASSINGTON, Port Richmond, N. Y. Filed Feb. 13, 1920. Serial No. 358,508. 7 Claims. (Cl. 277—68.)

1. The combination with a valve casing provided with inlet and outlet apertures, and a partition provided with a communicating aperture, of a longitudinally movable sleeve extending into said casing, and having a part fitting in said aperture, said sleeve being provided with a transverse wall having an aperture therein surrounded by a valve seat, and being provided with an aperture forming a communication between the interior of the sleeve and interior of said casing, of a main valve carried by said sleeve for engaging said valve seat, and a normally open

auxiliary valve independent of said sleeve movable longitudinally into and out of engagement with the aperture in said sleeve, which is closed by the main valve.

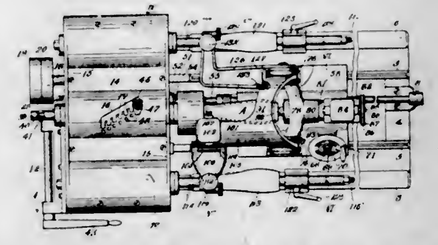
1,379,390. AEROPLANE. FRED W. BRAUNSCHWEIG, Milwaukee, Wis. Filed Aug. 11, 1919. Serial No. 316,814. 4 Claims. (Cl. 244—12.)

1. An aeroplane including a body, wing panels hingedly connected with said body, substantially rigid brace members for maintaining said wing panels in operative position and having their inner ends connected with the body and their outer ends connected with the under sides of the wing panels, said brace members providing means for supporting the wing panels when the aeroplane is in the air and on the ground, and means connected with said brace members for permitting the folding of said wing panels to a position against the body.



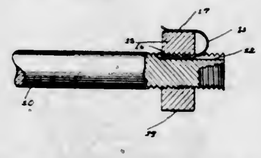
1,379,391. VULCANIZING-PAD. FRANK A. BROWN, Indianapolis, Ind., assignor to G. & J. Tire Company, a Corporation of Indiana. Filed Sept. 14, 1920. Serial No. 410,221. 3 Claims. (Cl. 154—43.)

1. A pad for shaping articles of fabric coated with vulcanizable composition consisting of layers of fibrous material and non-vulcanizable adhesive binding intermingled and united together and a non-adhesive covering.



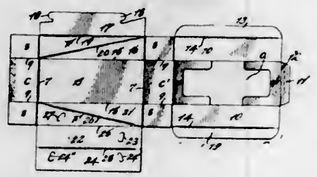
1,379,392. ADVERTISING-CARD. JOHN P. BUCKLEY, Capitol View Park, Md. Filed Sept. 27, 1919. Serial No. 326,991. 1 Claim. (Cl. 40—125.)

In cards, as an advertising medium, an image printed thereon in which appearing are one or more objects having a rotatable member or members as a part of their construction, a series of circles radiating from a common



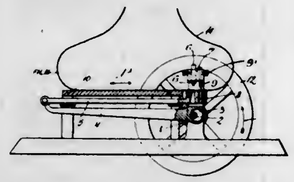
center representing such rotatable member or members and means for giving the card a circular motion, as described and shown.

1,379,393. LATHE. WILLIAM T. CARNES, Kansas City, Mo., assignor to Carnes Artificial Limb Co., Kansas City, Mo., a Corporation of Missouri. Filed Sept. 17, 1918. Serial No. 254,411. 3 Claims. (Cl. 142—7.)



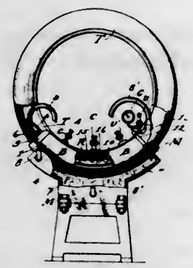
1. In a lathe, the combination of a driven chuck for supporting a block, a pair of driven shafts at opposite sides of and parallel with the chuck, a bore contouring form on one of said shafts and an exterior contouring form on the other shaft, a carriage for travel in a direction parallel with said shafts, a driven cutter carried by said carriage for boring said block, means engaging and controlled by the form for determining the boring by said cutter, for oscillating the latter during the boring operation, an oscillatory yoke mounted upon the carriage and engaging the form for determining the external shaping of the block, and a driven cutter carried by said yoke, engaging the exterior surface of said block to externally contour the same.

1,379,394. NUT-LOCK. GEORGE HOLMES COCKS, Adrian, Mich. Filed Sept. 18, 1920. Serial No. 411,241. 3 Claims. (Cl. 151—23.)



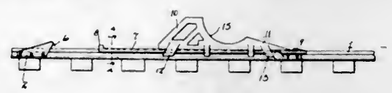
1. The combination with a screw-threaded member and a nut engaging therewith, the screw-threaded member having a longitudinally extending key seat, of a key for the nut comprising a strip of resilient metal bent upon itself to provide a portion adapted to be inserted in said key seat, and a portion adapted to bear upon the outside face of the nut, the portion inserted within the key seat having corrugations approximately fitting the threads of the nut, the resilience of the key when in place causing this corrugated portion to bear against the threads of the nut.

1,379,395. COUNTER DISPLAY FOLDING BOX. FRANCIS D. DEVLIN, New Haven, Conn., assignor to National Folding Box Company, New Haven, Conn., a Corporation of New Jersey. Filed June 11, 1920. Serial No. 388,225. 3 Claims. (Cl. 206—44.)



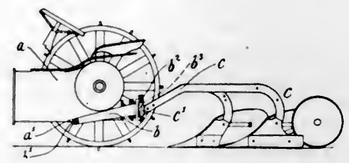
1. A rectangular collapsible paper box having in its top an opening for display therethrough of the contents, and a bottom carrying a pair of flaps projecting therefrom and dimensioned and shaped to fold in one direction and overlap each other as a cover for said opening, and in the opposite direction as a support for the box in inclined position; and means carried by said flaps to interlock them in each of their said respective positions.

1,379,396. APPARATUS FOR PERFORATION OF CINEMATOGRAPHIC FILMS. ERNST GUSTAV WILHELM DITTMER, Charlottenlund, near Copenhagen, Denmark. Filed Sept. 18, 1919. Serial No. 324,641. 4 Claims. (Cl. 164—88.)



1. In an apparatus for perforating films, the combination of a punch, a die, a guide-pin for advancing the film, a head on which said guide-pin and punch are mounted, and means for imparting circular movement to said head carrying said punch and guide-pin so as to cause said punch and guide-pin to both perforate and by steps advance the film.

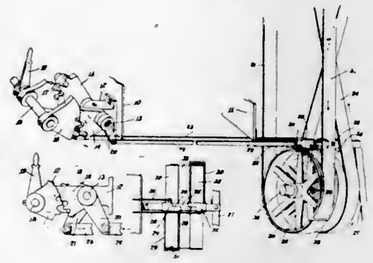
1,379,397. VULCANIZING AIR-BAG. OTTO W. DOLPH, Los Angeles, Calif. Filed June 11, 1920. Serial No. 389,761. 15 Claims. (Cl. 18—18.)



1. In a device of the character described, a flexible air bag closed at the ends and having a steam passage therethrough and closed against communication therewith.

1,379,398. CAR-STOP. JAMES U. DUFFY, Cleveland, Ohio. Filed Oct. 10, 1919. Serial No. 329,724. 6 Claims. (Cl. 104—260.)

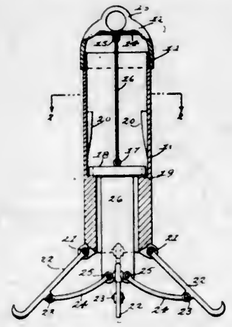
1. In a car stop, the combination of two stop blocks attached to the rail, a channel iron slidably mounted on said rail between said blocks, a shoe slidably mounted on said channel iron and adapted to receive a car wheel, said shoe being adapted to slide in either direction with the car wheel and engaging with said stop block to limit its movement.



1,379,399. TRACTOR-HITCH. HARRY FERGUSON, Belfast, Ireland. Filed Dec. 30, 1919. Serial No. 348,438. 3 Claims. (Cl. 213—67.)

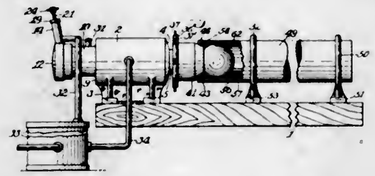
1. For connecting a tractor, having front and rear axles to an implement, or load, to be hauled thereby, a draft attachment comprising a support arranged forwardly of the rear axle and below the level thereof and a ball connected with the implement, or load, and also pivotally connected with said support so that it has vertical freedom of movement.

1,379,400. [WITHDRAWN.]



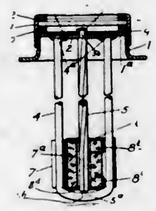
1,379,401. BELT-SHIFTER. GIACOMO FUMAGALLI, CARMINE SURICO, and PAUL CARDONE, New York, N. Y., assignors to Claremont Machine Co., New York, N. Y., a Corporation of New York. Filed May 13, 1920. Serial No. 381,096. 5 Claims. (Cl. 64—4.)

1. In a device of the character described, the combination with a pair of belt guides, of slide blocks supporting said belt guides and provided with interlocking recesses, means for shifting said guides comprising engaging complemental mutilated gear sectors, and means for actuating said sectors to shift either guide independently of the other.



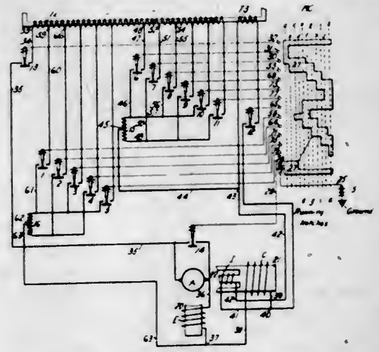
1,379,402. FISHING-TACKLE. KAROL GORLACH, New York, N. Y. Filed Jan. 21, 1921. Serial No. 438,867. 3 Claims. (Cl. 43—36.)

1. A device of the character described comprising a hollow sleeve, a headed element movably secured in said sleeve, guide elements within said sleeve normally holding said headed elements frictionally within said sleeve, hooks pivotally secured to said sleeve, links pivotally secured



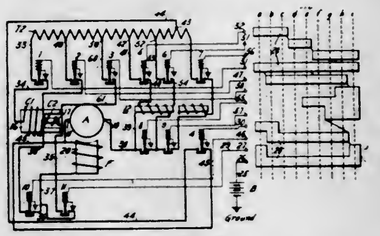
to said hooks and said headed element, and means for allowing a withdrawal of said element from said sleeve by an animal swallowing said hooks to spread the same in the mouth of the animal.

1,379,403. PNEUMATIC BALL-PROJECTOR. CHARLES R. GREEN, Indianapolis, Ind. Filed July 13, 1920. Serial No. 395,971. 7 Claims. (Cl. 124—8.)



1. A pneumatic ball-projector including a rotatably-supported barrel and a breech block fixedly connected thereto, the barrel having a longitudinal groove in the inner side thereof, the breech block having a plurality of channels extending obliquely toward the groove, and means to control admission of a forceful fluid to the channels.

1,379,404. FLUID-GAGE. HERBERT HASTINGS, Brighton, N. Y. Filed Apr. 9, 1919. Serial No. 288,839. 6 Claims. (Cl. 73—82.)

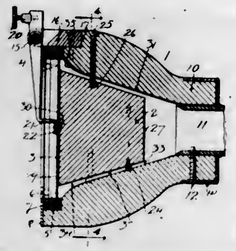


1. In a fluid gage, a tubular casing with an inturned flat flange provided with depressions separated by undepressed portions, a plate provided with ears adapted to seat in said depressions, a float mechanism supported on one side of said plate, a dial attached to the other side of said plate resting on said flange outside of the depressions and means for maintaining the dial on the flange and the plate in the depressions.

1,379,405. DYNAMO-ELECTRIC MACHINE AND SYSTEM OF CONTROL THEREFOR. RUDOLF E. HELLMUND and LAURENCE M. PERKINS, Swissvale, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 16, 1917. Serial No. 202,316. 7 Claims. (Cl. 171—228.)

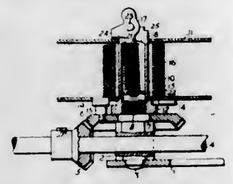
1. In a system of control, the combination with a source of energy and a single-phase commutator motor comprising an armature, an exciting field winding and an inducing field winding having a larger number of turns than said armature and also having a large-span compensating coil and a more localized commutating coil located nearer the armature, of means for impressing voltages from said source upon the inducing-field-winding parts at times in such ratio that one of said parts carries a relatively high proportion of the total "magnetizing" current.

1,379,406. DYNAMO-ELECTRIC MACHINE AND SYSTEM OF CONTROL THEREFOR. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1917. Serial No. 202,700. 9 Claims. (Cl. 172—276.)



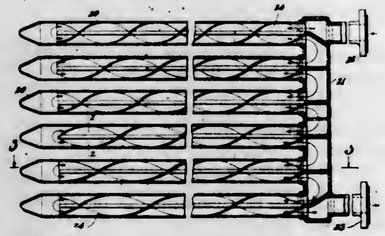
8. A single-phase commutator machine having a plurality of inducing-field-winding sections, said sections being differently distributed around the circumference of the field member, and means for connecting one of said sections in circuit during a certain condition of machine operation and for connecting all of said sections in circuit during a different condition of machine operation.

1,379,407. REPRODUCER FOR PHONOGRAPHS. CHARLES G. HENSLEY, Brooklyn, N. Y. Filed May 20, 1916, Serial No. 98,723. Renewed Oct. 4, 1919. Serial No. 328,608. 11 Claims. (Cl. 274—35.)



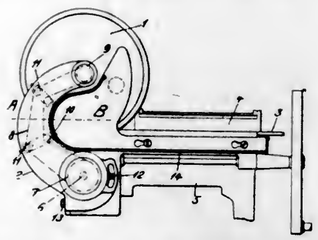
3. In a device for reproducing sounds, a wooden shell, a diaphragm for creating sound waves therein and an inner wooden member in said shell and spaced therefrom and from the diaphragm, whereby all waves created by the diaphragm will pass outwardly in the space between the diaphragm and said inner member and pass from the outer portion of the diaphragm between said shell and said inner member.

6. In a device for reproducing sound, a shell of wood and having a conically shaped interior chamber, a diaphragm, an inner member of wood of conical shape, arranged in said chamber and spaced from said shell, said inner member being solid and having a substantially flat face close to and parallel with the diaphragm.



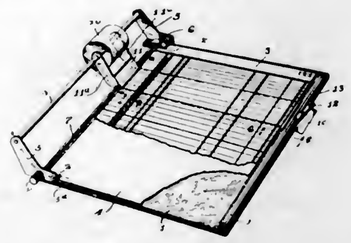
11. In a device for reproducing sound, a shell made of soft wood and having a tapering inner chamber and an outlet, a diaphragm for creating sound waves in the shell and a solid member of soft wood in the shell and spaced therefrom whereby waves produced by said diaphragm will travel around said inner member and between the latter and said shell and through said outlet.

1,379,408. RIBBON-SPOOL HOLDER FOR TYPEWRITING-MACHINES. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Original application filed Mar. 2, 1920, Serial No. 362,675. Divided and this application filed Jan. 5, 1921. Serial No. 435,222. 4 Claims. (Cl. 242—70.)



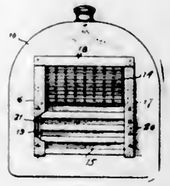
2. The combination of a ribbon spool, a hollow post on which said spool is journaled, a latch in said hollow post and projecting above said post, a spring tending to draw said latch down into said post, said latch being movable transversely of the axis of said post to bring a part of said latch over said ribbon spool to retain the latter in place and movable in the opposite direction to release said spool, and an abutment on the top of said post to hold said latch yieldingly in its spool-retaining position.

1,379,409. STEAM-SUPERHEATER. CHARLES A. HORN, Woodhaven, N. Y., assignor of one-fourth to W. Everitt Rundle, East Orange, N. J., and one-fourth to Harold E. Lombard, Bloomfield, N. J. Filed Sept. 13, 1919. Serial No. 323,508. 4 Claims. (Cl. 122—459.)



1. In a steam superheater, two tubes through which the steam flows in succession, and each having a twisted or helical partition to provide helical steam passages, the pitch of the partition in the second tube being greater than the first, and means serially connecting said tubes.

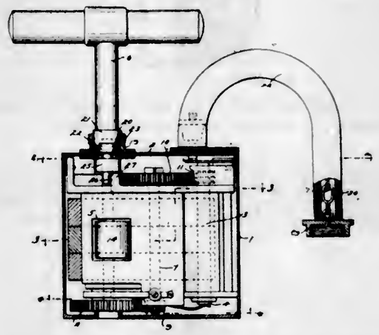
1,379,410. MEAT-SLICING MACHINE. CORNELIUS JOB LENSVELT, Zurich, Switzerland. Filed July 19, 1920. Serial No. 397,337. 4 Claims. (Cl. 17—24.)



1. A meat slicing machine comprising in combination a frame, a reciprocating slide on said frame adapted to receive the meat to be sliced, a rotary knife, means to reciprocate said slide and to rotate said knife, a bracket having a journal in which said knife rotates, said bracket having an arcuated form, a rest adapted to receive a plate shaped in conformity to said bracket.

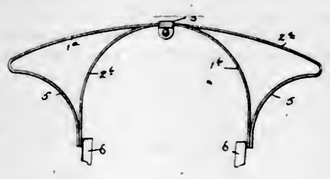
1,379,411. DEVICE FOR FORMING POSTING-SLIPS. FRED. L. MANNY, Benton Harbor, Mich., assignor to Baker-Vawter Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Oct. 2, 1917. Serial No. 194,350. 8 Claims. (Cl. 282—3.)

1. A device for forming posting slips comprising a platen arranged to support an entry sheet and an impression sheet, a rod adjacent the left hand margin of the margin of said platen, a second rod mounted on said platen adjacent said first-mentioned rod, said second rod being arranged to support a paper roll slidingly mounted thereon, a sliding guide engaging said rods and arranged to also engage said paper roll, and guide means adjacent the right hand margin of the platen for supporting the end portion of the paper of said roll transversely of the entry sheet.



1,379,412. RADIATOR-COVER. EUGENE R. MERTENS, New York, N. Y., assignor to Detroit Cadillac Motor Car Company, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1919. Serial No. 273,197. 1 Claim. (Cl. 257—132.)

A radiator closure device for automobiles, comprising a frame adapted to fit around the radiator opening, and



comprising lateral guide-ways, a collapsible bellows-like curtain positioned in collapsed condition at the bottom of the radiator opening, a weight bar arranged at the upper margin of the curtain to insure its collapse by gravity, guide means at the side of said curtain running in the lateral guide-ways of the frame, flexible lifting strands attached to the side margins at the top of the curtain for raising and lowering the latter, said strands lying within the lateral guide-ways of the frame, and means operable from the driver's seat for operating said strands to lift or lower the curtain in front of the radiator opening.

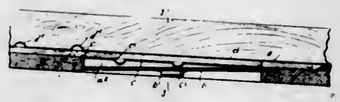
1,379,413. MAGNETO. EDWARD ALBERT NEW, Great Barrington, Mass., assignor to William W. Nicoll, New York, N. Y. Filed Nov. 28, 1919. Serial No. 341,108. 5 Claims. (Cl. 171—76.)

1. The combination with a magneto, a spring operating the magneto, and a shaft for winding the spring, of a handle adapted to turn the shaft, and a cam compelling longitudinal movement of the handle to release the same from the shaft when the latter reaches a predetermined position.

1,379,414. AUTOMOBILE-BUMPER. RICHARD T. NEWTON, New York, N. Y. Filed Mar. 12, 1920. Serial No. 365,188. 12 Claims. (Cl. 293—55.)

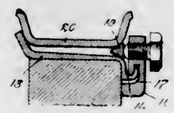
8. An automobile bumper comprising a pair of impact bars each having two supporting legs, each of said legs being offset intermediate its associated impact bar and ts point of suppórt.

1,379,415. NUT-LOCK. ALBERT O'CONNOR, Detroit, Mich. Filed Oct. 11, 1920. Serial No. 416,272. 2 Claims. (Cl. 151—29.)



1. The combination with a threaded member and a nut for engaging the same, of a locking device formed of sheet metal having a slot extending inwardly from one side thereof of a width slightly less than the diameter of said threaded member at the bottom of the thread, said threaded member being provided with a single transverse slot adjacent to one face of the nut permitting the entrance thereof in the slot of the locking member, one side of which will lie parallel with the face of the nut and the other side of which will follow the channel of the thread at an angle thereto, one of said sides having a bendable portion for engaging the side of the nut.

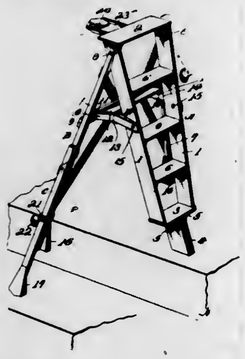
1,379,416. BRASSIÈRE. ISIDORE PANES, New York, N. Y. Filed Aug. 3, 1920. Serial No. 400,946. 4 Claims. (Cl. 2—73.)



1. A brassière comprising a body, means connecting the lower part of the body to a person, and a pair of adjustable suspenders for supporting the upper part of the body, each of said suspenders having at one end a pair of strips, a link adapted to be pivotally connected with said body through which one of said strips is adapted to be passed, said last mentioned strip being looped back upon itself, a plurality of eyelets arranged on said looped back portion, and a hook secured to the other of said strips, said hook being adapted to interlock with any of said eyelets according to the length of shoulder strap desired.

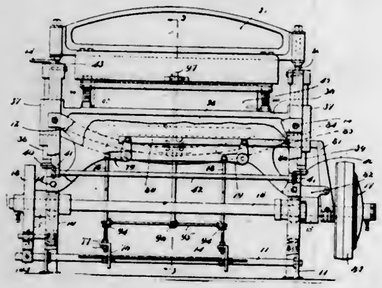
1,379,417. CONCENTRATOR. JOHN W. POLLOCK, Sawtelle, Calif. Filed Jan. 22, 1920. Serial No. 353,375. 4 Claims. (Cl. 83—68.)

1. A concentrator comprising a longitudinally inclined sluice having a transversely inclined, longitudinally horizontal cavity in its bottom wall and a discharge passage in one of its side walls at the lower side of said cavity, an amalgamating tray disposed in said inclined cavity to permit of the discharge therefrom, through said discharge passage and to effect an equal distribution of values deposited thereon, and a riffled screen covering the cavity and superposed to the amalgamating tray.



1,379,418. DEMOUNTABLE RIM FOR AUTOMOBILE-WHEELS. JOHN N. POWERS, Washington, D. C., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed Aug. 13, 1919. Serial No. 317,136. 9 Claims. (Cl. 301—20.)

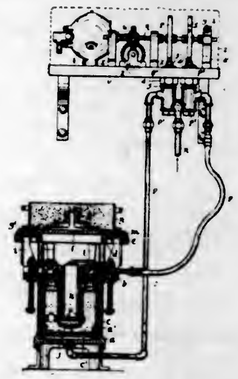
5. In a vehicle wheel, the combination of a fixed rim having a hook-shaped extension at one side, a removable



rim, members each having recesses receiving the hook-shaped extension to interlock the members to the fixed rim and permitting adjustment of the members circumferentially of the rim, and means carried by each member operable transversely of the fixed rim against an element to set and lock the removable rim in position.

1,379,419. STEPLADDER. MADISON W. REEVES, Sayre, Pa. Filed June 16, 1920. Serial No. 389,317. 5 Claims. (Cl. 228—61.)

1. A step ladder of the class described, having an extension leg, said leg provided at one end with an L-shaped plate and a flat plate attached to opposite edges thereof, and the other end of said leg provided with a clamp for embracing both the extension leg and the ladder leg.

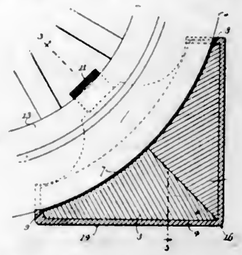


1,379,420. LEATHER-CUTTING MACHINE. CHARLES ADRIAN SAWYER, Jr., Newton, Mass. Filed May 12, 1920. Serial No. 380,799. 3 Claims. (Cl. 164—23.)

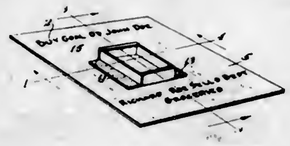
1. In a leather working machine of the kind described, the combination of a reciprocable cutter head, a rotatable shaft for reciprocating said head, a slidable carrier for positioning a sheet of sole leather in the path of movement of said head, means for intermittently connecting said shaft to a source of power, and a safety device for said means operable by the slidable carrier only when the sheet of leather is in position under the cutter head.

1,379,421. CONTROL MEANS FOR MOLD-MAKING MACHINES. CHARLES G. SHAFFER, Paterson, and GEORGE TREFS, Montville, N. J. Filed Jan. 14, 1921. Serial No. 437,344. 4 Claims. (Cl. 22—45.)

1. In combination, with the fluid actuated moving element of a mold making machine, a fluid source and means to transmit fluid from said source and cause it to actuate said element including a fluid conductor, means to alternately check and release the flow through said conductor including a constantly going master member.

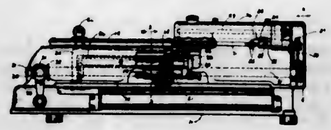


1,379,422. FISHHOOK. ALFRED FERDINAND THORSTEN, Brooklyn, N. Y. Filed June 5, 1920. Serial No. 386,736. 7 Claims. (Cl. 43—34.)



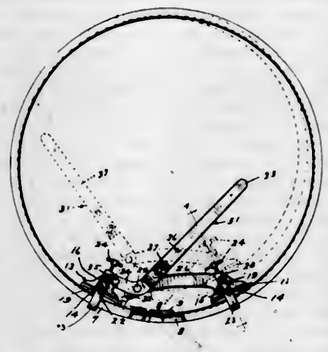
1. A device of the class described, including a pair of shanks of rigid material arranged adjacent one another, one or said shanks being formed with a plurality of loops, the second of said shanks being slidably mounted within said loops, and hooks secured one to each of said shanks.

1,379,423. AUTOMOBILE-WHEEL-LOCKING DEVICE. LESLIE E. TRIMM, Brooklyn, N. Y. Filed Sept. 18, 1919. Serial No. 324,358. 2 Claims. (Cl. 70—90.)



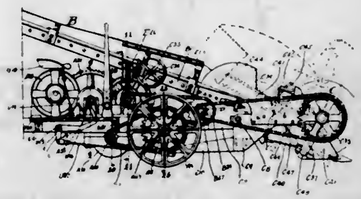
1. A chock block for automobiles comprising, a metal casing having a pair of right angular elongated faces, and vertical sides, a filler of wood in the casing and having an arc-shaped face, a metal arc-shaped plate secured to the casing in engagement with the arc-shaped face of the wooden filler, and means for securing the casing to the rim of a wheel.

1,379,424. SAFETY-MATCH TRAY. ANTHONY A. TUBBS, Hammond, Ind. Filed Oct. 13, 1919. Serial No. 330,355. 4 Claims. (Cl. 206—31.)



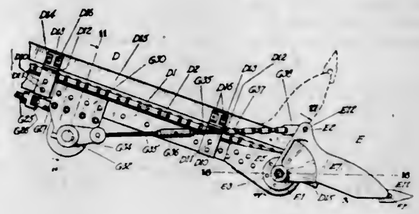
1. A safety match tray comprising a flat metal sheet having relatively wide marginal portions and having a pair of uprights struck up from the central portion of the metal sheet, said uprights being spaced apart and being parallel with each other and each being provided with a flange at its upper end extending toward the opposite upright, the openings formed by the struck up portions separated by an intervening integral portion of the plate, and an open box having its ends extending underneath said flanges for holding a sheet containing striking portions in position.

1,379,425. CHECK-WRITER. WILLIAM UHL, Rochester, N. Y., assignor to Todd Protectograph Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 22, 1919. Serial No. 325,503. 12 Claims. (Cl. 101—351.)



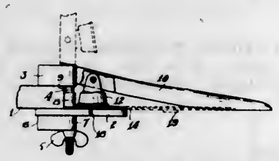
1. In a machine of the class described, the combination with a printing couple, of an ink reservoir, means comprising a member having a reciprocatory movement for drawing ink from the reservoir and feeding it to the printing couple, a movable element provided with a cam groove, a pin engaging said groove and rigid with the reciprocatory member, and means for actuating said movable element by operations of the printing couple.

1,379,426. RIM CONTRACTOR AND EXPANDER. OSCAR H. UVAAS, Kensington, Minn. Filed Jan. 12, 1918. Serial No. 211,644. 12 Claims. (Cl. 157—1.)



1. A rim contractor and expander comprising rim-engaging members adapted to engage the ends of a transversely divided rim, an arm rigid with one of the rim-engaging members, and an operating lever pivoted to the other rim-engaging member and to the free end of the rigid arm for imparting radial and circumferential movements to the rigid arm with respect to the rim center.

1,379,427. LOADING-MACHINE. WILLIAM WHALEY, Knoxville, Tenn. Filed Nov. 26, 1917. Serial No. 204,032. 6 Claims. (Cl. 214—90.)



1. In a loading machine, the combination of supporting wheels, a motor, means controlled by the operator for placing said motor into operative relation with a portion of said wheels for driving the latter, power-driven means controlled by the operator for varying the direction of a portion of said wheels for steering the machine, a conveyer extending from the forward part of the machine upward and rearward beyond the rear end of the body of the machine, an elevated magazine supported by the upper end of the conveyer in position to receive material from the conveyer, a yoke hinged to and supported by the body of the machine, and projecting forward of said body and rearward of the hinge and under said body, an upright, non-rotatable screw shaft coupled to the rear part of the yoke, nut mechanism surrounding said shaft above the yoke and seated on a relatively stationary part of the machine, manual means located on the body of the machine and comprising gearing for actuating said nut mechanism for raising and lowering said screw shaft, and means at the front of said yoke for taking material from the floor and discharging it upon the conveyer, substantially as described.

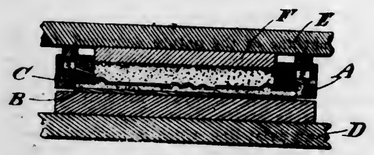
1,379,428. SHOVELING-MACHINE. WILLIAM WHALEY, Knoxville, Tenn., assignor to said William Whaley, trustee. Filed Sept. 8, 1919. Serial No. 322,263. 15 Claims. (Cl. 214—90.)

1. In a machine of the nature described, the combination of a conveyer hinged on a horizontal axis to the body of the machine rearward of its forward end and having its forward end extending forward of the body of the machine and near the floor level, a shovel hinged to said end of the conveyer on an axial line which is horizontal and transverse to the conveyer and is stationary relative to the conveyer, and operator-controlled power means for turning the shovel upward and permitting it to descend by gravity to a chosen position and there arresting and supporting the shovel, substantially as described.

1,379,429. BOTTLE-CAPPING DEVICE. FREDERICK G. YAWMAN, Rochester, N. Y. Filed Jan. 12, 1920. Serial No. 350,787. 4 Claims. (Cl. 226—84.)

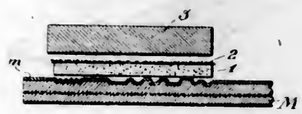
1. In a bottle capping machine, the combination with a plate provided with a recess, of a holding lever pivoted to the upper side of the plate to bridge the recess and to project from one edge of the plate, and means mounted on said plate for capping a bottle.

1,379,430. PRINTING-PLATE AND METHOD OF MAKING THE SAME. WILLIAM J. YEOELL, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Aug. 12, 1913. Serial No. 784,456. 21 Claims. (Cl. 101—395.)



1. A printing plate comprising a laminated body composed of layers of different materials, one of said layers comprising a hard, set and substantially infusible reacted plastic, one face of the laminated body having printing characters thereon to constitute a printing face.

1,379,431. PRINTING-PLATE MATRIX AND METHOD OF MAKING THE SAME. WILLIAM J. YEOELL, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Apr. 25, 1916. Serial No. 93,493. 8 Claims. (Cl. 46—25.)



1. A matrix comprising a body portion, including a layer of fibrous material and a layer of hard and set synthetic resin imposed upon the fibrous layer, and a metallic molding face imposed upon the layer of synthetic resin.

1,379,432. PRINTING-PLATE AND METHOD OF MAKING THE SAME. WILLIAM J. YEOELL, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Original application filed Apr. 25, 1916, Serial No. 93,493. Divided and this application filed Dec. 2, 1920. Serial No. 427,831. 10 Claims. (Cl. 101—395.)

1. A composite printing plate comprising a printing face section of a hard synthetic resin provided with printing characters, and a non-resinous, non-flowing backing section permanently united with said face section.

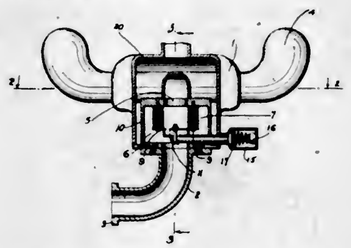
1,379,433. WOODEN-BACK PRINTING-BLOCK. WILLIAM J. YEOELL, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Original application filed Apr. 25, 1916, Serial No. 93,493. Divided and this application filed Dec. 2, 1920. Serial No. 427,832. 9 Claims. (Cl. 101—395.)

1. A printing block comprising a base of wood and a printing plate of synthetic resin imposed upon the wood base with a portion of the synthetic resin penetrating the pores of the wood base and uniting said plate and base.

1,389,434. PRINTING-PLATE MATRIX AND METHOD OF MAKING THE SAME. WILLIAM J. YEOELL, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Original application filed Aug. 12, 1913, Serial No. 784,456. Divided and this application filed Dec. 2, 1920. Serial No. 427,833. 16 Claims. (Cl. 41—25.)

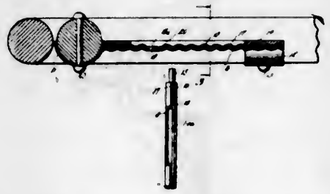
1. A matrix for making printing plates comprising a sheet metal molding face, a fibrous blanket treated with a shellac substance applied to the back of the sheet metal molding face, and a layer of hard cementitious material applied to the back of the blanket, said blanket and hard cementitious layer forming a backing for the sheet metal molding face.

1,379,435. COMBINATION SCRAPER, CHARGER, AND TAMPER. THOMAS JAMES AVERY, Albia, Iowa. Filed Aug. 4, 1920. Serial No. 401,260. 4 Claims. (Cl. 86—21.)



1. A device of the character described comprising a cylindrical non-ferrous barrel, a non-ferrous plunger slidable in said barrel and provided with a rearwardly extending shank, a non-ferrous sleeve, a non-ferrous coupling carried at the forward end of said sleeve, a rod extending through said sleeve and having its forward end hinged to the end of the plunger shank, means for hingedly connecting the rearward end of said cylinder to said coupling to permit said cylinder to be swung upwardly into a position at right angles to said coupling when said plunger is in its retracted position, a tamping member having a stem removably secured to the rearward end of said rod, a stud projecting from the last named stem at a spaced distance from the end thereof, a coupling carried on the rearward end of said sleeve, said coupling being formed with a slot through the wall thereof adapted to receive said stud when the rod is moved forwardly through the sleeve, said slot being extended longitudinally a spaced distance and then circumferentially wherefor the plunger may be moved forwardly through the cylindrical barrel until the forward end thereof projects beyond the end of the latter, and spring means carried by the stem of said tamping member for engaging with the walls of the slot to normally maintain the stud in the circumferentially extending portion thereof.

1,379,436. FUSE-PLUG. ERNEST H. BAXTER, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 336,910. 15 Claims. (Cl. 200—130.)



1. A fuse plug of the character described comprising a body member, a removable cover therefor, a screw threaded sleeve on said body member, and means to clamp a fuse mounted between said sleeve and said body member.

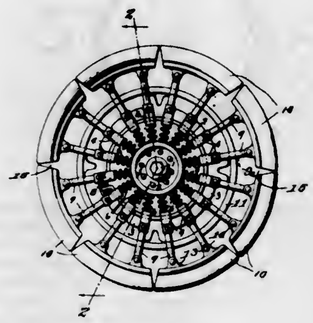
1,379,437. GAS-MIXER. CLARENCE H. BENNETT, Jamesburg, N. J. Filed Apr. 1, 1919. Serial No. 286,642. 10 Claims. (Cl. 48—180.)

1. A vaporizer comprising a casing having a mixture inlet and outlet opening, a series of similar annular plates within the casing and arranged in such proximity to each other as to effect a fine breaking up and vaporizing of the mixture on its passage between them, the said annular plates being formed with central openings coinciding with each other and with the outlet opening forming a central space in communication with the said outlet opening, the outer edges of the plates being spaced from the casing to permit the passage of the mixture between the outer edges of the plates and thence into the central chamber, the end of said central chamber opposite the outlet opening being closed against the passage of the carbureted mixture whereby to force the passage of such mixture between the outer edges of said plates in its course to the central chamber and thence to the outlet.

1,379,438. AUTOMOBILE-PLATE AND HOLDER. JOSEPH BILLINGS, Brooklyn, N. Y. Filed July 8, 1920. Serial No. 394,690. 5 Claims. (Cl. 40—61.)

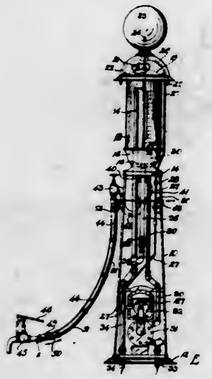
1. As a new article of manufacture, a stop-thief attachment for vehicles including a combined rigid plate and holder therefor, the plate presenting a front adapted to display warning matter, and a cover slidably fitting said holder to conceal said matter, said holder having guide members for the sliding engagement of the cover and presenting a space of irregular form for the latter, said cover having members mating with the irregular form of the holder.

1,379,439. WIND-WHEEL. JOSEPH—BOTT, Rochester, N. Y., assignor to Bastian Bros. Company, Rochester, N. Y., a Corporation. Filed Sept. 22, 1919. Serial No. 325,391. 6 Claims. (Cl. 170—8.)



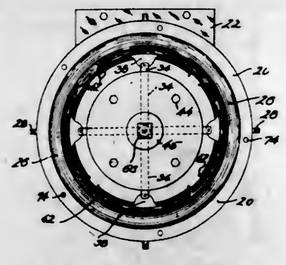
1. A wind wheel formed from a blank of sheet material having between its blade producing portions slits with curved parallel walls.

1,379,440. PAVING-BLOCK. FRANK E. BRAINERD, Stony Creek, Conn. Filed July 29, 1920. Serial No. 399,968. 1 Claim. (Cl. 94—11.)



A paving block having its corners inwardly tapered and formed in its side walls with V-shaped tapered notches widest at their lower ends and also formed with a series of openings extending through the body of the block.

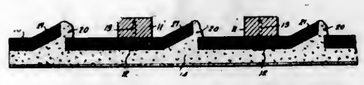
1,379,441. VEHICLE-WHEEL. JAMES A. CARTER, St. Louis, Mo. Filed Nov. 15, 1919. Serial No. 338,175. 5 Claims. (Cl. 152—31.)



4. A wheel comprising a hub, a radially grooved annular web upon the hub, an annular series of springs carried by the hub on each side of the web, saddles seated upon the springs and disposed for yielding movement in the grooves of the web, radial spokes fixed to the saddles, an annular series of tread-members carried by the spokes, bands embracing all the saddles for preventing displacement of the saddles relatively to the web and springs, and an annular band engaging all the spokes for retarding lateral movement thereof and their carried tread-members relatively to the hub.

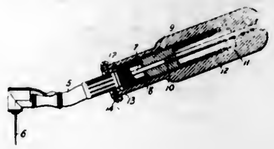
1,379,442. GASOLENE-DISPENSER. EMORY CROUSE, Wichita, Kans. Filed Feb. 12, 1921. Serial No. 444,387. 3 Claims. (Cl. 221—99.)

1. A liquid dispensing apparatus comprising a container, a liquid supply from which to fill said container, means operable to cause liquid to be moved from said supply to the container, a flexible conduit for discharge of liquid from said container, a valve on the outer end of said conduit to control said discharge, and means adjacent said valve to control said operable means, whereby filling of said container may be controlled from said outer end of said flexible conduit.



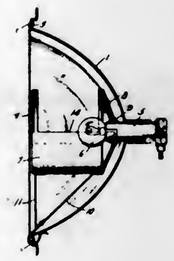
1,379,443. SHOCK-ABSORBING MECHANISM. TIMOTHY C. DOBBINS, Los Angeles, Calif., assignor of one-half to David H. Roby, Denver, Colo. Filed Apr. 26, 1920. Serial No. 376,511. 5 Claims. (Cl. 267—9.)

5. In combination, a shell member having a bearing face therewithin, resilient means engaging said bearing face, a rotatable member within said shell member, blocks radially positioned on said rotatable members, shoes pivotally mounted on the outer ends of said blocks and engaging said resilient means, the inner ends of said blocks being tapered, and an axially mounted tapered pin adjustable axially to adjust the position of the blocks and the pressure of the shoes on the resilient means, means for connecting one member with a support and means for connecting another support with the other member.



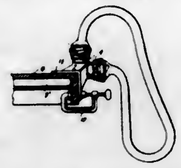
1,379,444. PLASTER-BOARD. THOMAS H. A. HOWLEY, New York, and JOHN J. DOOLEY, Brooklyn, N. Y. Filed Oct. 25, 1919. Serial No. 333,215. 3 Claims. (Cl. 72—124.)

1. A plaster board provided with slits in spaced relation and forming tongues, the slits extending through the board and the tongues being normally flush with the faces of the plaster board and lying within the openings defined by the slits, the tongues moving into an angular position on the back of the plaster board on applying plaster to the face thereof, each of the said tongues on assuming an



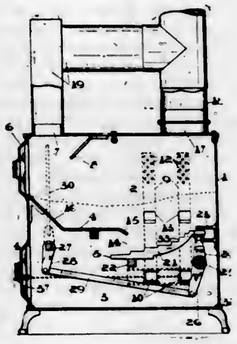
angular position forming a keyway in the corresponding opening, the wall of each opening forming with the edge of the corresponding angular tongue, a locking means for the plaster passing through the opening onto the back of the plaster board and onto the edge of the tongue.

1,379,445. DENTAL TOOL. FELICIANO GONZALEZ, New York, N. Y. Filed Mar. 9, 1921. Serial No. 451,066. 6 Claims. (Cl. 32—11.)



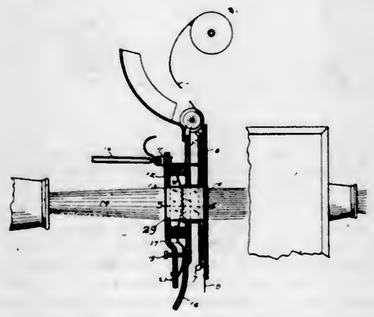
5. A dental tool, including a handle, a sleeve forming a part of said handle, said sleeve presenting cutout portions, means attached to said sleeve for engaging a normally mechanically driven chuck, and a stem rotatably secured to said handle and engaging a cap having a portion of its body lying within said sleeve, said cap engaging the stem of said chuck.

1,379,446. HEADLIGHT. HARRY F. HAMMOND, South Shaftsbury, Vt., assignor to Nicholas A. Siraco, Whitehall, N. Y. Filed Mar. 29, 1920. Serial No. 369,723. 4 Claims. (Cl. 240—48.2.)



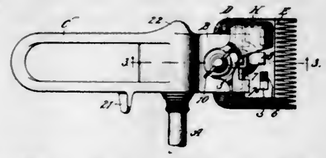
1. An attachment for headlights comprising a body of general cylindrical form including a tapering inner end adapted to inclose a lamp, said body composed of colored transparent material, said body having a semi-cylindrical cutaway portion in its upper side, and having a semi-circular opening in the lower half of the outer end.

1,379,447. VULCANIZER. EDGAR D. HOSTLER, I. J. HAMIEL, and CARL H. MATHER, Tipton, Iowa, assignors of one-half to said Hostler, one-fourth to said Hamiel, and one-fourth to said Mather. Filed Aug. 4, 1920. Serial No. 401,099. 8 Claims. (Cl. 18—42.)



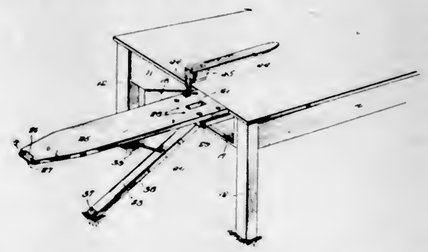
1. A vulcanizer, comprising a heating base, an upwardly projecting tubular portion on the base having an exterior vulcanizing surface, and said tubular portion having an entrance thereto for the accommodation of a tube section to be vulcanized.

1,379,448. FURNACE. ROBERT W. KING, Toronto, Ontario, Canada. Filed Nov. 1, 1919. Serial No. 334,912. 6 Claims. (Cl. 110—24.)



1. In a furnace the combination of an imperforate primary fuel support; a secondary fuel support behind the primary fuel support; means for admitting air into the body of the fuel on the secondary fuel support; means for supplying air above the fuel at the rear of the furnace; and a smoke outlet at the front of the furnace above the primary fuel support.

1,379,449. COMBUSTION-ARRESTER FOR MOVING-PICTURE MACHINES. REINHART J. KOEPP, Cleveland, Ohio. Filed Sept. 1, 1920. Serial No. 407,519. 12 Claims. (Cl. 88—17.)



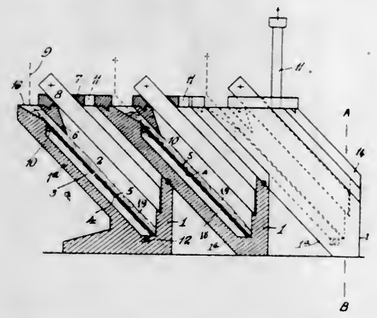
1. The combination with a film projection means, of a flame arrester comprising a box having open ends and adapted to surround the projection rays, the inner end of the box being adjacent the film, and a pair of flaps at the inner end of the box extending therefrom adjacent to and longitudinal of the film.

1,379,450. POWER-OPERATED HAIR-CLIPPER. WALTER F. KOKEN and GEORGE G. ANDERSON, St. Louis, Mo., assignors to Koken Barbers' Supply Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 12, 1919. Serial No. 289,544. 6 Claims. (Cl. 30—1.)

1. A power operated hair clipper provided with a body portion, a movable cutter arranged at the front end of said body portion, an operating mechanism for said movable cutter comprising a rotatable drive shaft that extends laterally or sidewise from said body portion at a point between said handle and movable cutter, and means operated by said rotatable drive shaft for actuating said movable cutter.

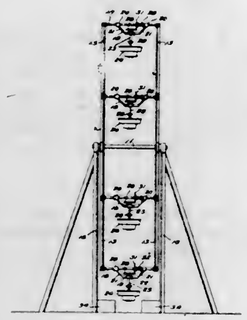
1,379,451. COMBINED TABLE AND IRONING-BOARD. OTTO F. KRAHN, Loyal, Wis. Filed Apr. 28, 1919. Serial No. 293,145. 4 Claims. (Cl. 68—10.)

3. A device of the character described including a table, an ironing board, spaced blocks carried by the board near its inner end, means adjustably connecting said blocks to the board, and means engaged with the blocks and pivotally connecting the board with the table for movement to inactive position lying therebeneath or for movement to active position projecting from the table.



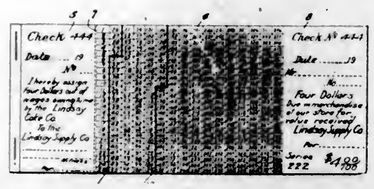
1,379,452. DETACHABLE HEEL. MOSES LAMPKIN, St. Louis, Mo. Filed May 7, 1920. Serial No. 379,564. 1 Claim. (Cl. 36—42.)

The combination with a shoe heel having an undercut socket or seat formed in the bottom surface thereof, said seat having an entrance opening at the front wall of the heel, of a heel lift conforming in shape to the bottom of the heel and having a projection on the top thereof, said projection having a peripheral outstanding, locking flange to be engaged in said seat, the front end of the lift lying



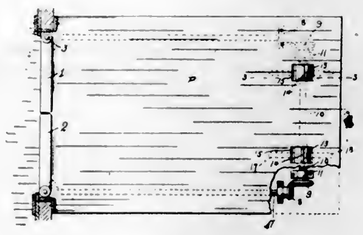
substantially flush with the front of the heel, and a keeper-plate adapted to bear against the front of the projection to hold the lift in said seat, said plate having an upstanding arm with a longitudinal slot for the reception of a screw entering the front wall of the heel to bind the plate in position.

1,379,453. APPARATUS FOR THE ELECTROLYSIS OF SOLUTIONS OF METAL SALTS. JOHANN KONRAD LANGHARD, Fredriksstad, Norway, assignor to Fredriksstad Elektrokemiske Fabriker A/S., Fredriksstad, Norway. Filed Feb. 6, 1920. Serial No. 356,652. 9 Claims. (Cl. 204—58.)



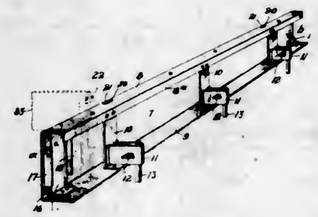
1. In an electrolytic cell, a layer of loose granulated material separating the anode and cathode chambers, and supporting means for said material arranged at such an angle of inclination that granular material supplied thereto is distributed by gravity over the lower parts thereof.

1,379,454. AMUSEMENT DEVICE. ROY S. LINDAMOOD, Galveston, Tex. Filed Mar. 12, 1920. Serial No. 365,212. 1 Claim. (Cl. 46—27.)



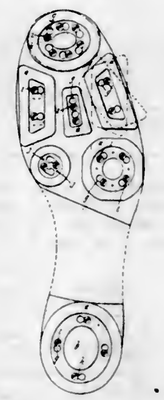
An amusement device comprising a rotatably mounted main frame including transversely disposed horizontal shafts arranged around said frame in spaced relation, a suspending frame carried by and capable of rotation about said shaft, a car supported by the suspending frame, a shaft having a bearing in the suspending frame and connected to said car, a slidably mounted spring actuated gear mounted against rotation upon the transverse shaft and a gear secured to the car carrying shaft, whereby rotation of the main frame will impart a horizontal rotary movement to the car, and means for tensioning the spring to control the speed of rotation of the car.

1,379,455. STORE COUPON-CHECK. FRANKLIN G. LINDSAY, Dunbar, Pa., assignor to Mardorff Printing Company, Inc., Brownsville, Pa. Filed July 26, 1919. Serial No. 313,455. 1 Claim. (Cl. 283—60.)



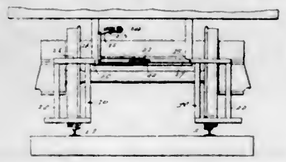
A store coupon check comprising a merchant's stub, a due bill, and coupons between the stub and due bill, said coupons being arranged in blocks formed by vertical and transverse lines to constitute vertically arranged columns in which the units of the sum total for which the check is made are successively imprinted, the smallest unit being arranged in the upper block next to the merchant's stub, and the largest unit being arranged in the lower block of the last column next to the due bill, the coupon sheet designed to be detached by severing the coupon sheet on the vertical divisions of the columns and on the transverse division at the lower edge of the block in which there is designated the unit indicating the sum of a purchase drawn by the holder of the due bill from a merchant, the due bill and the portion of the severed coupons being retained by the holder and maker of the check, while the stub and the remaining coupons thereon being retained by the merchant, whereby both the merchant and the maker of the check will have knowledge of the transaction, and additional coupons detached from the sheet held by the maker of the check designed to be attached to or arranged with the coupons on the stub held by the merchant, whereby both parties to the transaction will have knowledge of the sum still due the holder of the check and the amount payable thereon by the holder of the stub and detached coupons.

1,379,456. DOOR-OPENING MECHANISM. JOSIAH LINVILL, Bethany, Mo. Filed Aug. 3, 1920. Serial No. 401,035. 3 Claims. (Cl. 268—8.)



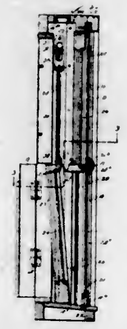
1. A door opener of the class described comprising a rotatably mounted shaft having lugs extending radially therefrom, a sleeve encompassing said lug carried portion of the shaft and provided on its inner face with recesses to receive the lugs, said recesses being of a length greater than the width of the lugs to permit the sleeve to move independently of the shaft, an arm extending radially from said sleeve and adapted to be positioned in the path of a passing vehicle, springs supporting said sleeve and operable to return it to initial position after actuation, and door actuating means connected with said shaft operable by the depression of said arm.

1,379,457. ROAD RAIL OR FORM. HOWARD B. LOXTERMAN, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 7, 1919. Serial No. 295,282. 20 Claims. (Cl. 25—118.)



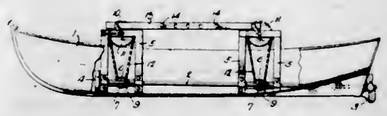
1. A road rail or form comprising a channel having upper and lower flanges and a stiffening means interposed between and secured to the flanges and spaced away from the web of the channels.

1,379,458. BOOT-PROTECTOR. THOMAS RICHARD LULHAM, Johannesburg, South Africa. Filed Oct. 23, 1919. Serial No. 332,808. 8 Claims. (Cl. 36—36.)



1. A boot protector comprising pad and clamping elements separable from each other and having co-acting apertures therein, said elements being secured to the boot by a plurality of screws passing through said apertures, and the apertures in the clamping elements being in the form of key-hole shaped slots, substantially as described.

1,379,459. SAFETY AIR-BRAKE DEVICE. FLOYD B. MCDANIEL, Salem, Va. Filed Oct. 21, 1919. Serial No. 332,264. 1 Claim. (Cl. 246—171.)

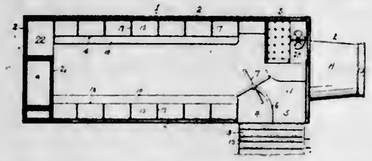


In a safety device, the combination with a car having a train pipe release valve, of shoes consisting of open frames disposed in transverse planes relative to the car track and car wheels adjacent the planes of the latter and having their lower edges disposed slightly above the planes of the rail treads, the upper sides of the shoes being extended laterally to provide overlapping levers, one of which carries a laterally projecting pin and the other of which is formed with a longitudinal slot in which the said pin engages, an arm connected with the release valve for the operation thereof, and a link having one end pivotally connected to said arm and the other end pivotally connected to one of the lever extensions from said shoes.

1,379,460. WINDOW. ARCHIBALD MACKINNON, Tuckahoe, N. Y. Filed June 3, 1920. Serial No. 386,213. 10 Claims. (Cl. 20—43.)

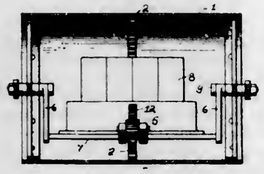
1. A window including a frame, sliding sashes therein, and suspension means pivotally connected with the sashes to permit the latter to turn about horizontal axes, said frame having parting strips formed with recesses at the sides toward the lower sash to permit the latter to be turned at an angle to its normal plane of movement to provide thereby a ventilating opening between the meeting rails of said sashes.

1,379,461. PROPELLER-ROTATING DEVICE. JOHN E. MANAS, Princeton, N. J. Filed Apr. 5, 1920. Serial No. 371,319. 2 Claims. (Cl. 115—24.)



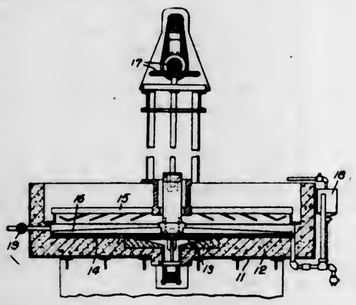
1. Propelling means for boats comprising a propeller shaft, a propeller thereon, upright frames in the boat, a stub shaft journaled in the lower part of each frame, gears connecting each shaft with the propeller shaft, a crank shaft journaled in the upper part of each frame, means for driving the stub shafts from said crank shafts, a longitudinally extending rod connected with the cranks of the crank shafts, and handles engaging parts of said rod for reciprocating the rod.

1,379,462. GAS-PURIFYING COMPOSITION AND METHOD OF MAKING SAME. HUBERT CLIFTON MARRIS, Bolton, England, assignor to William Walker and Sons Limited, Bolton, England, an English Company. Filed Sept. 15, 1920. Serial No. 410,554. 5 Claims. (Cl. 183—118.)



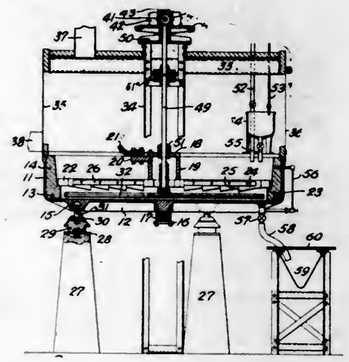
1. The method of preparing a purifier for gas which comprises precipitating an iron compound on a fibrous cellular support by an alkaline solution containing a dissolved colloid.

1,379,463. PORTABLE GROCERY-STORE. CLYDE W. MARTIN, Little Rock, Ark., assignor of one-half to Leonard E. Hoffman, St. Louis, Mo. Filed June 18, 1920. Serial No. 389,908. 1 Claim. (Cl. 296—24.)



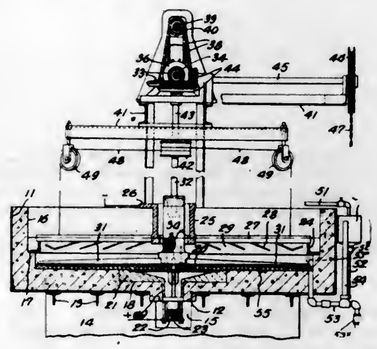
A portable automobile store including a compartment having a central aisle with article supporting means on opposite sides thereof, a driver's compartment at the front corner of said store, a customer's entrance and exit passages parallel with each other at the corner opposed to said driver's compartment and opening through the side of the main compartment, the exit passage being arranged adjacent the driver's compartment with a cash counter and checking table between it and said compartment whereby the driver may serve as a chauffeur, a checker and a cashier and a common turnstile across the inner ends of said passages controlling said entrance and exit.

1,379,464. TRACTOR. JOHN J. MARTIN, Dallas, Tex. Filed Dec. 19, 1919. Serial No. 345,954. 2 Claims. (Cl. 180—10.)



1. In a tractor, the combination of a cylinder, crossbars formed on the cylinder, shafts secured to the bars, a frame suspended in the cylinder by the shafts, a power plant mounted on the frame, pinions arranged on the frame, a gear extending around the interior of the cylinder and adapted to mesh with the pinions, gears arranged adjacent the frame and adapted to be driven by the power plant and adapted also to mesh with the pinions to impart motion thereto and a bar journaled on the shaft.

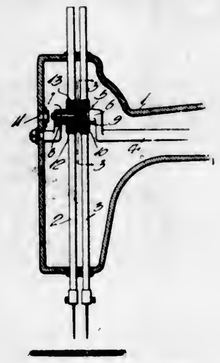
1,379,465. PROCESS OF OXIDIZING MERCURY. HOWARD W. MATHESON, Shawenegan Falls, Quebec, Canada. Filed Dec. 4, 1917. Serial No. 205,378. 4 Claims. (Cl. 204—9.)



1. A process of oxidizing mercury which comprises using metallic mercury as the anode of an electrolytic cell in connection with a cathode formed of a metal of the iron family and a continuously agitated electrolyte, and periodically agitating the electrolyte with increased violence.

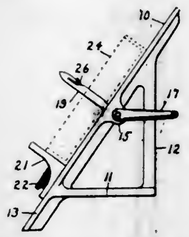
1,379,466. ELECTROLYTIC CELL. HOWARD W. MATHESON, Shawenegan Falls, Quebec, Canada. Filed Apr. 15, 1918. Serial No. 228,675. 10 Claims. (Cl. 204—5.)

3. In a device of the class described, an electrolytic cell, a measuring tank mounted on the cell having a valve controlled discharge leading thereinto, drainage outlet from the cell and a fluid level gage between the outlet and the upper portion of the cell arranged to indicate the level of liquid admitted from the tank.



1,379,467. ELECTROLYTIC CELL. HOWARD W. MATHESON and FREDERICK T. KAELIN, Shawenegan Falls, Quebec, Canada. Filed Apr. 15, 1918. Serial No. 228,677. 12 Claims. (Cl. 204—5.)

1. In a device of the class described, a receptacle, an anode in the bottom thereof, a cathode supported in the shell above the anode, and means for raising and lowering the cathode including a winding drum, a plurality of cables connected to said drum and to equidistant points on the cathode, and means for rotating the drum.

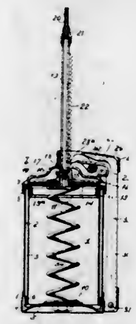


1,379,468. SEWING-MACHINE. EDGAR C. MATSON, Handley, W. Va., assignor to J. A. B. Holt, Pratt, W. Va. Filed Feb. 12, 1920. Serial No. 358,304. 5 Claims. (Cl. 112—221.)

1. In a multiple needle sewing machine, a support, a rotary shaft journaled therein and provided at one end with a crank-pin, a member rotatable in said support, its axis of rotation being in alinement with that of the shaft and it being provided with a crank-pin adapted to aline with the first named crank pin, needle bars carried by

said crank pins, and means also carried by one of the crank-pins for coupling it with the other crank-pin to cause both needle bars to operate in unison or one of them alone.

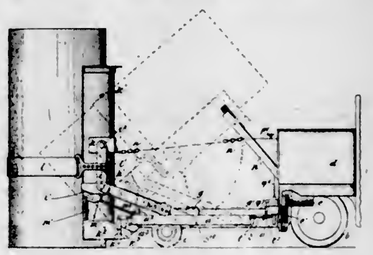
1,379,469. BOX-TAPING MACHINE. LOUIS P. MILLER and FRANK E. JOHNSTON, Phoenixville, Pa. Filed Oct. 16, 1920. Serial No. 417,494. 6 Claims. (Cl. 93—36.)



1. A box taping machine comprising a slotted face plate, a screw journaled on the face plate, blocks carried by the screw to be moved toward or away from each other in the operation of the screw, said blocks operating in said slots, needles carried by the blocks and projecting upwardly beyond the slots and the face plate, and a rest adjustably mounted on the face plate.

1,379,470. ART OF CONCENTRATING GRAPE-JUICE. EUDO MONTI, Turin, Italy. Filed Mar. 28, 1919. Serial No. 285,905. 7 Claims. (Cl. 99—5.)

1. The process of treating grape juice, which comprises concentrating a quantity of juice to a specific weight of the order of 1380 grams per liter at a temperature not exceeding 40° C., concentrating another quantity of juice to a specific weight of the order of 1200 grams per liter by freezing it in contact with air, keeping said last-mentioned quantity of juice subjected to a cold temperature and in contact with air until set, and then mixing together the two quantities of juice and allowing the mixture to set.

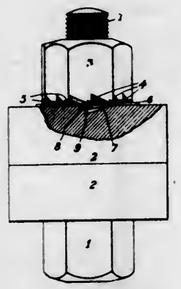


7. The process of treating grape juice, which comprises concentrating the juice to a specific weight of the order of 1200 grams per liter by freezing it in contact with air, keeping the juice subjected to a cold temperature and in contact with air until set, further concentrating a portion of the juice to a density of the order of 90% dry extract at a temperature not exceeding 40° C., mixing the remainder of the juice first mentioned with the syrup formed by the last-mentioned step of the process so as to produce a mixture comprising 75 to 80% of dry extract, and permitting the mixture to crystallize out in a product having the consistency of honey and the flavor of grape juice.

1,379,471. HAND-OILER. GEORGE M. MOOD, Charleston, S. C. Filed Aug. 9, 1920. Serial No. 402,203. 4 Claims. (Cl. 221—47.)

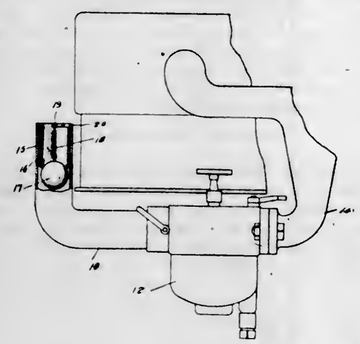
1. A hand oiler comprising a container, a piston therein, a tubular stem carried by said piston and adapted to communicate through the latter with the interior of the container, a check-valve for controlling the duct through said stem, and manually operable rack and pawl means carried by the container for depressing said piston step-by-step, said check valve being operable to cause the piston to be retained approximately in the position to which it may be depressed at each step.

1,379,472. FREIGHT-HANDLING TRUCK. JAMES C. MORGAN and CHARLES S. SCHROEDER, New Brighton, N. Y., assignors, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed May 8, 1920. Serial No. 379,776. 16 Claims. (Cl. 214—77.)



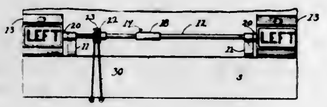
2. The combination of a supporting frame, a carrier pivoted on the frame, devices to secure to the carrier the article to be handled and means acting upon and through said devices to cause said devices to bind the article to the carrier and to tilt the carrier on the frame.

1,379,473. NUT-LOCK. ORRIN E. G. OLMSTED, Denver, Colo. Filed July 29, 1920. Serial No. 399,780. Renewed Apr. 12, 1921. Serial No. 460,659. 3 Claims. (Cl. 151—13.)



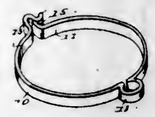
2. A nut lock comprising a plate having a bolt hole and a radial notch with an inclined bottom adjacent

thereto, a washer slotted and having a radial upturned locking tongue and a nut having a plurality of radial ratchet slots on its lower face, said slots being alternately and relatively deep and shallow, the washer being



of a thickness equal to the depth of the shallow slots, the notch in the plate, and the deep slots being twice as deep as the shallow slots and the locking tongue three times as long as the depth of the shallow slots.

1,379,474. AUTOMATIC AIR-VALVE FOR CARBURETERS. CLARENCE E. OSBORNE, Portland, Oreg. Filed Apr. 13, 1920. Serial No. 373,511. 2 Claims. (Cl. 251—121.)



1. An attachment for carbureters comprising a tubular valve casing, cylindrical in configuration, a valve seat connected with the walls of the casing, a ball valve cooperating with the seat, a spring connected with the valve, one end of the casing being slit circumferentially and the strip formed thereby being deflected inwardly to form a transverse element extending across the valve casing, said spring being connected with the transverse element.

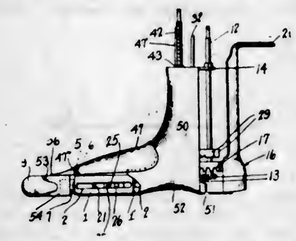
1,379,475. VEHICLE-SIGNAL. CHARLES H. OSMAN, San Francisco, Calif. Filed July 16, 1920. Serial No. 396,725. 1 Claim. (Cl. 116—48.)

A device of the character described including a shaft mounted on a vehicle, a sleeve member embracing and permitting various adjustments of said shaft, signal boxes provided with warning plates positioned on said shaft, a grooved element mounted on said shaft, mechanism mounted on the steering post of said vehicle and endless connecting means for conveying movement from said mechanism to said shaft to cause movement of said boxes into signaling position.

1,379,476. NIPPLE-CLASP. ALBERT PARR, Baltimore, Md., assignor of one-half to Frank H. Ahl, Baltimore, Md. Filed Jan. 29, 1920. Serial No. 354,892. 1 Claim. (Cl. 24—259.)

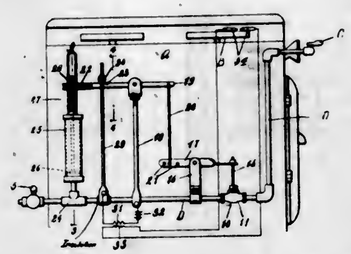
A nipple clasp consisting of a resilient band having its extremities provided with interlocking means comprising an outwardly directed loop on one extremity terminating in a cam-faced lip, and an outwardly directed ear on the other terminal for traversing the cam face of said lip and engaging the seat formed by said loop.

1,379,477. SAND-EXCLUDER. JOHN J. PERRY, Bosworth, Mo. Filed Jan. 11, 1919. Serial No. 270,653. 1 Claim. (Cl. 103—64.)



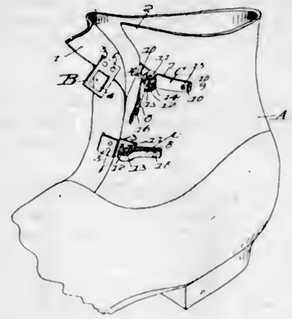
A sand excluder comprising a cylinder having its lower end closed and its upper end open and externally screw threaded, means for admitting fluid to the interior of the cylinder adjacent its upper end, a coupling cap threaded to the upper end of the cylinder, an internal shoulder formed in said cap and spaced from the upper end of said cylinder, a valve seat secured between said shoulder and the upper end of the cylinder by the attaching of the cap to the latter, said seat having a centrally arranged screw threaded bore, a check valve for said seat, and a tube threaded in said bore and extending downwardly in the cylinder to a point adjacent the closed end thereof and of a diameter considerably less than the diameter of the cylinder.

1,379,478. EXPANSIBLE SHOE-LAST. CARL SCHEVITZ, Jacksonville, Fla. Filed July 30, 1920. Serial No. 400,018. 5 Claims. (Cl. 12—130.)



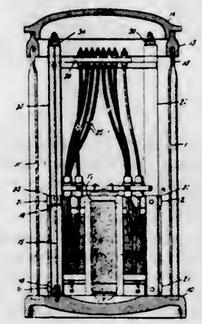
1. An expansible shoe last comprising a main frame having a contracted central portion, an upright member secured thereto at the rear thereof, slidable members in said frame, operating shafts for said members journaled

in the upright member, a casing secured to the upright member and surrounding the shafts and provided with



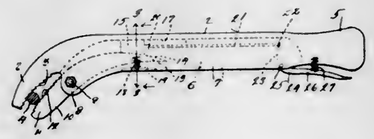
curved lower portions for conforming to the shape of the shoe and shoe expansion members connected with the slidable members.

1,379,479. AUTOMATIC LIGHTING DEVICE FOR GAS-STOVES. WALTER E. SCHNEIDER, Pryor, Okla. Filed July 6, 1920. Serial No. 394,155. 2 Claims. (Cl. 175—115.)



1. An igniting device comprising the combination with a gas conducting pipe, of a cutoff valve located within said pipe, a pivoted lever connected with said cutoff valve whereby to open and close the same, a support carried by the pipe, a lever pivoted upon said support and connected with said first named lever, a cylinder connected and having communicating with said pipe and having a piston movable therein, a rod connected with said piston, said rod being connected with said second named lever whereby upon movement of the piston said cutoff valve will be opened, and a contact disposed in the path of and engageable by said second named lever.

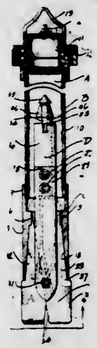
1,379,480. CLASP. PETER SCHNURR, Chicago, Ill. Filed Mar. 22, 1918. Serial No. 224,019. 1 Claim. (Cl. 24—69.)



The combination with an eye, of a clasp member consisting of a plate having upturned ears on its opposite longitudinal edges, a pin fixed to and connecting said ears, and a second plate also provided with ears inturned from its opposite longitudinal edges, the said latter ears having pivotal engagement with the pin, the said second plate on one side of the ears being bent into substantially semi-circular shape to provide a toe which bears against the top face of the first said plate, the said second plate on the other side of the ears being formed to provide a bill which engages the first said plate and is held against the latter by the toe when the said toe bears against the first said plate on the opposite side of the pin from the bill, the bill being adapted for withdrawing from engagement with the first said plate against pressure exerted by the toe upon the first said plate.

1,379,481. INCASED ELECTRICAL APPARATUS. IVANHOE H. SCLATER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 25, 1920. Serial No. 391,769. 7 Claims. (Cl. 175—361.)

1. In incased electrical apparatus, the combination with a casing comprising a base, side wall and cover, of a plurality of rods disposed vertically in the base of said casing and spaced a predetermined distance apart, and an apparatus provided with a clamping structure having adjustable means for engaging said rods and adapted to accommodate themselves to the distance between said rods throughout a predetermined range in size and rating of said apparatus.



1,379,482. WRENCH. GEORGE H. SPONG, Portsmouth, Va. Filed Apr. 18, 1919. Serial No. 290,956. 1 Claim. (Cl. 81—116.)

A wrench comprising a handle of U-shaped formation in cross section, a fixed jaw projecting from one end of the handle, a movable jaw pivoted on the same end of the handle and having a curved surface projecting within the handle, a transverse plate extended across the open side of the handle, a spring bearing upon said plate and connected with the adjacent end of the movable jaw for holding the latter normally spaced from the fixed jaw, a wedge slidably mounted within the handle, a bell crank lever pivoted on the handle adjacent the opposite end thereof and having one branch projecting within the

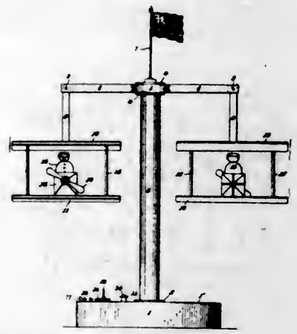
handle, yieldable means for normally holding the other branch spaced from the handle, and a connecting rod joining the first mentioned branch with said wedge whereby the latter is operated to close the jaws when the bell crank lever is moved toward the handle.

1,379,483. DRILL AND UNDERREAMER. JOHN C. STOKES, Shreveport, La. Filed Apr. 6, 1920. Serial No. 371,608. 16 Claims. (Cl. 255—78.)

1. A drill comprising a tool holder having an inwardly extending annular rib formed on its inner surface adjacent to the upper end thereof and inwardly extending diametrically disposed longitudinally extending ribs, a bit carrier, a pair of blades pivotally carried by the carrier, having outwardly extending shoulders formed thereon arranged to engage the upper surface of the annular rib, the opposite outer edges of the blades being arranged to engage the longitudinally extending ribs when the shoulders on the blades engage the annular rib.

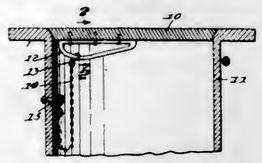
1,379,484. MAGAZINE ATTACHMENT FOR STOVES. HUGH A. STORER, Alton, Kans. Filed July 12, 1920. Serial No. 395,605. 1 Claim. (Cl. 126—73.)

A magazine attachment for stoves comprising a tubular body adapted to extend through an opening in a stove, a collar clamped on the body and engaging the stove top for limiting the distance the magazine extends within the stove, a double clamping ring for clamping the upper portion of the magazine to a stove pipe and a cover for the upper end of the magazine.



1,379,485. EMERGENCY DEVICE FOR USE WITH AUTOMOBILES. GEORGE S. STUART, Bradford, Pa. Filed Jan. 7, 1920. Serial No. 350,000. 1 Claim. (Cl. 213—67.)

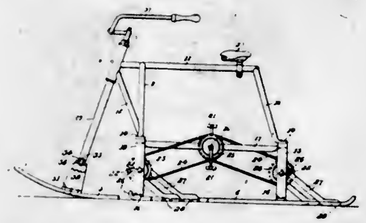
A towing device comprising a single continuous flexible connector having free ends adapted to be folded over and to engage, respectively, a part of the framework of the towing and the towed vehicle, clasps carried by the said connector near the free ends thereof and adapted to engage the said free ends respectively, said clasp having side bars, transversely disposed end studs spanning said bars, and an intermediate lug having a laterally pro-



jecting tongue, a loop provided in said connector intermediate of said clasps, and a spring buffer arrangement spanning said loop and serving as a shock absorber to the device, substantially as described.

1,379,486. TOY ROUNDABOUT. ANDRO SVEC, Ashley, Pa. Filed Nov. 9, 1920. Serial No. 422,888. 1 Claim. (Cl. 46—27.)

A toy of the type described comprising a casing, a vertical shaft rotatably supported therein, motor mechanism within the casing for rotating the shaft, a cross arm supported on the upper end of the shaft and rotating therewith, a carriage swingingly mounted upon the outer ends of the cross arm, said motor mechanism including a train of gears communicating with the rotatable shaft, one of said gears carrying a shaft extending upwardly through the casing, a spring connected at one of its ends to said shaft and at the other end to the inner wall of the casing, means for placing the spring under tension, a toothed wheel carried by said shaft above said casing, a sliding dog adapted to engage said toothed wheel to control rotation of the shaft, said casing having an elongated slot in the upper wall thereof, a block carried by one of said gears and extending upwardly through said slot, and an adjusting screw associated with said block for shifting the block and gear carried thereby to disengage the same from the train of gearing whereby the rotatable shaft will remain stationary when the spring gear is being placed under tension.



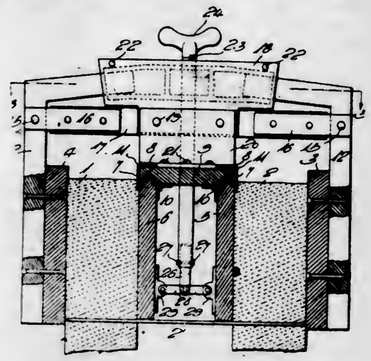
1,379,487. SAFETY DEVICE FOR MANHOLES. OLAF JOHAN SWANSON, Chappaqua, N. Y. Filed May 19, 1920. Serial No. 382,475. 2 Claims. (Cl. 94—34.)

1. A safety device for manhole covers having a looped guide or keeper arranged radially with respect to the cover,

and an anchoring chain adapted for terminal attachment to the manhole casing and provided with a traveler for traversing said guide or keeper.

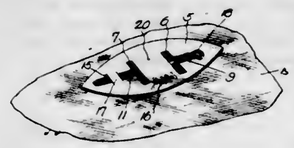
1,379,488. ICE-VELOCIPEDE. JOHN SZYWKA, Albany, N. Y. Filed Sept. 7, 1920. Serial No. 408,569. 3 Claims. (Cl. 208—159.)

1. The combination with a frame including downwardly diverging front and rear pairs of uprights, transversely arranged inverted U-shaped frame members having the lower ends of said uprights rigidly fastened thereto, upper bars connecting said uprights, a lower bar connecting said frame members, a steering head arranged forwardly of the front upright and connected to the latter by means of said upper bar and a pair of downwardly diverging dingonal braces each connected to the lower ends of said front uprights, of a steering post extending through said steering head, a front runner connected to the lower ends of the steering post, spaced rear runners connected to the lower ends of said frame members, and pedal operated means supported by said lower bar and said frame members and including spur carrying propelling rods for propelling the device across ice, said front runner being of substantially V-shaped formation with its intermediate portion forward and upwardly curved and its ends arranged to bear upon the ice at spaced points.



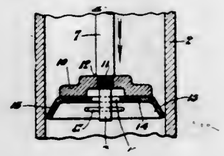
1,379,489. METHOD OF FILLING TEETH AND DENTAL MATRIX FOR USE THEREIN. DANIEL EVERETT TAYLOR, Willimantic, Conn., assignor to The L. D. Caulk Co., Milford, Del., a Corporation of Delaware. Filed Jan. 19, 1917. Serial No. 143,378. 6 Claims. (Cl. 32—17.)

1. A dental matrix of the character described comprising companion thin flexible strips of malleable metal and cement-protecting material, said strips being fitted against one another whereby the cement-protecting strip may be placed against the tooth to be filled to form a temporary wall of the cavity and the malleable strip may be burnished to cause the companion strip uniformly to contact the adjacent tooth surface.



1,379,490. CONCRETE-MOLD. JACOB M. THOMPSON, Fond du Lac, Wis. Filed July 29, 1920. Serial No. 399,675. 4 Claims. (Cl. 25—131.)

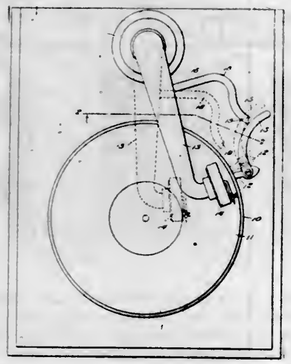
1. A mold having side walls, a core having a head strip and walls hingedly connected with the head strip for swinging movement transversely in the mold, brackets carried by the head strip, cross bars carried by the brackets, side plates extending above the cross bars, a housing positioned above each cross bar, bearing strips carried by the cross bars, hanger arms for the side walls of the mold pivotally connected with the bearing strips and having their upper end portions extending inwardly and fitting



into pockets formed in the housing, bracket plates carried by the walls of the core, adjusting rods threaded through openings in the cross bars and extending through the head strip and housing, links connected with the bracket plates, stems connected with the inner ends of the links and rotatably connected with the adjusting rods, and abutments carried by the rods and engaging the housing.

1,379,491. IDENTIFICATION-TAG. JAMES J. TOY, Washington, D. C. Filed Apr. 2, 1920. Serial No. 370,677. 1 Claim. (Cl. 40—25.)

An identification tag for marking laundry comprising a substantially broad flat disk of flexible sheet material, said disk having spaced transverse slots therein, and longitudinally disposed grooves communicating with said slots and a headed pin adapted to be threaded through said slots and seated in said grooves, whereby said pin may be removed and the pin and disk again used.

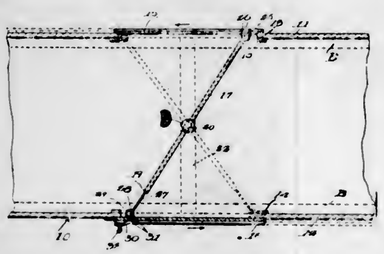


1,379,492. PUMP-VALVE. MICHAEL WAGNER, Pittsburgh, Pa., assignor of one-third to Louis Broida and one-third to Isidor Weinberg, Pittsburgh, Pa. Filed July 28, 1919. Serial No. 313,773. 1 Claim. (Cl. 230—27.)

In a pump, the combination with a pump barrel, of a plunger having a substantially central recess, and a sealing washer loosely mounted on the plunger and movable to and from a seating position thereagainst, the peripheral

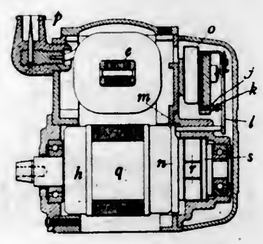
portion of the washer coöperating with the barrel and said washer having a substantially central circulation opening of less diameter than the recess of the plunger, the inner margin of said sealing washer overlapping the said recess.

1,379,493. STARTING DEVICE FOR TALKING-MACHINES. FRANK A. WALKER, Niagara Falls, N. Y. Filed July 31, 1920. Serial No. 400,353. 1 Claim. (Cl. 192—116.)



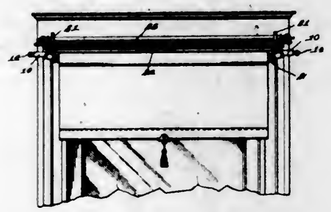
The combination with a phonograph having a tone arm and a brake, of a curved arm secured to the brake and an arm secured to the tone arm and engageable with the brake arm for automatically releasing the same when the tone arm is moved in a direction toward the starting point of a record, the last mentioned arm including a downwardly extending vertically arranged portion having one end secured to the tone arm, a laterally extending substantially right angular extension located at the opposite end and a lip carried at the free end of the lateral extension for engagement with the brake arm.

1,379,494. PROCESS FOR TREATING BRAN. THERESIA J. WALTERSKIRCHEN, Missoula, Mont. Filed May 11, 1920. Serial No. 380,476. 1 Claim. (Cl. 99—10.)



A cereal composed of untreated toasted bran.

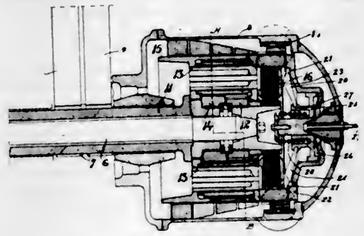
1,379,495. COMBINATION LOCK AND CONTROLLER FOR SIDE DOORS OF BOX-CARS. FRED HELL WARD, Washington, D. C. Filed June 29, 1920. Serial No. 392,767. 7 Claims. (Cl. 20—22.)



6. In a device of the character described including oppositely sliding doors, controlling means for said doors including telescopic rods, and means for connecting the free end of each of said telescopic rods to its respective door.

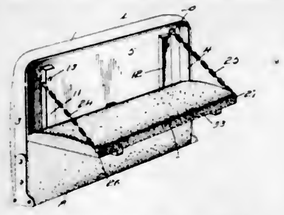
1,379,496. MAGNETO-ELECTRIC MACHINE. ERNEST ANSLEY WATSON, Coventry, England, assignor to The C. L. I. Manufacturing Company Limited, Birmingham, England. Filed Mar. 23, 1921. Serial No. 454,839. 2 Claims. (Cl. 171—209.)

1. In magneto electric machines, the combination of a pair of straight bar magnets forming a pair of parallel sides of the machine, a single pole piece connecting one pair of ends of the magnets, a pair of pole pieces connected to the opposite ends of the magnets, a cross piece joining the said pair of pole pieces, a rotary armature, a laterally projecting cam on the rotary armature, an interrupter on a stationary part of the machine including a contact supporting spring lever, and a slidable rod maintained in engagement with the cam by the spring lever and operated by the cam to actuate the interrupter, substantially as described.



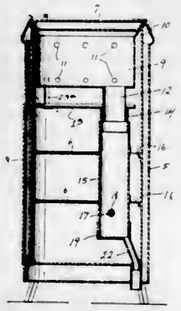
1,379,497. WINDOW-FIXTURE. MICHAEL WENZOWITZ, Chicago, Ill. Filed Feb. 28, 1920. Serial No. 362,022. 1 Claim. (Cl. 156—24.)

In combination, an elongated member, a bracket slidably mounted upon said member and including an attaching portion terminating to provide a flange overlying one of the longitudinal edges of the member, said attaching portion being arranged at right angles to the body of the bracket, a lug projecting from one edge of the attaching portion, an element pivoted between the lug and the body portion of the bracket, and adjustable elements threadedly associated with the pivoted member and bearing against the attaching portion of the bracket as and for the purpose specified.



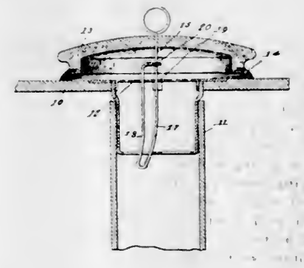
1,379,498. POWER-TRANSMISSION DEVICE. OSCAR ANTON WIBERG, Finspong, Sweden. Filed Apr. 8, 1920. Serial No. 372,312. 2 Claims. (Cl. 74—34.)

1. In a device of the kind described, the combination with a rotary shaft, of another rotary shaft, tubular in shape and surrounding the said first mentioned shaft, a system of sun and planet wheels between said shafts, a rotary drum surrounding said sun and planet wheels and carrying the planet wheels, a stationary drum, surrounding said rotary drum, means for locking the rotary



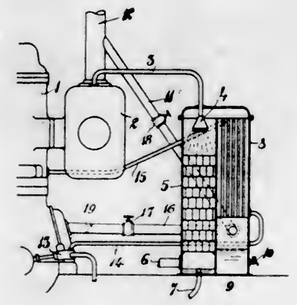
drum to the stationary drum, and means for locking the rotary drum to one of said shafts, substantially as described.

1,379,499. ATTACHMENT FOR THE BACKS OF SEATS. ELLA WILLIFORD, Detroit, Mich. Filed Oct. 7, 1920. Serial No. 415,364. 1 Claim. (Cl. 155—188.)



The combination with the back element of a railway seat, or chair, a sectional back, a central partition, attaching members secured within recesses in said partition, abutments on the ends of said attaching members, a vertically movable section supported by said abutments, slotted attaching members also secured to the movable section, links pivoted to said attaching members, studs carried by said links and slidable within the slotted attaching members whereby the movable section may be moved at right angles to the partition, auxiliary supporting chains connecting said movable section with said partition, and locking means for said movable section.

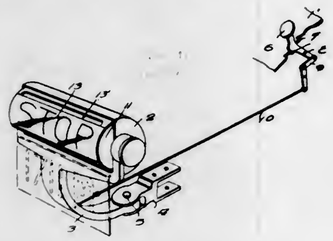
1,379,500. REFRIGERATOR. FRED JOSEPH WILLIAMSON, Dover, Ohio. Filed Aug. 27, 1919. Serial No. 320,219. 1 Claim. (Cl. 62—46.)



A refrigerator of the character described comprising a refrigerating chamber, an ice receiving receptacle having its upper marginal edge engaged with the upper edge of the refrigerating chamber and its body portion disposed in spaced relation to the walls of said chamber, an ice receiving outlet casing projecting from the bottom of said receptacle, a supporting member depending from said receptacle, a pan disposed in spaced relation to the bottom of the receptacle and having one portion thereof supported by said supporting member, an outlet casing projecting from said pan remote from the supporting member and adapted to receive the end of the first mentioned outlet casing, said first mentioned outlet casing being disposed in spaced relation to the inner surface of the second mentioned casing, and an ice receiving outlet casing extending to the lower portion of the refrigerating chamber, and being detachably connected to the wall of the chamber in spaced relation to the bottom thereof, the upper portion of the last mentioned casing being adapted to frictionally engage and support the end portion of the second mentioned casing whereby said pan is held in the proper position.

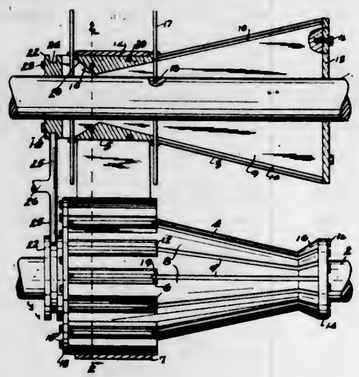
1,379,501. SINK-SEAL. WILLIAM G. WILSON, West New Brighton, N. Y. Filed Sept. 29, 1919, Serial No. 327,036. Renewed Mar. 23, 1921. Serial No. 454,903. 7 Claims. (Cl. 4—35.)

1. A seal or cover for the outlet of a sink, comprising a buoyant body normally covering said outlet, means carried by said cover and designed to engage the sink for holding the cover immovably positioned above the outlet opening, and said means being adjustable relative to the cover for permitting free movement of the cover to float upon the water admitted to the sink as described.



1,379,502. METHOD OF AND MEANS FOR DISTILLING WATER. BROR ALGOR DE WOERN, Lysekil, Sweden. Filed June 10, 1920. Serial No. 388,030. 3 Claims. (Cl. 203—5.)

1. In a method of distilling water, passing the heated water discharged from the cooling jackets of an internal combustion engine, the crank case of which is used as a pump chamber, through a scrubber in one direction, forcing air through said scrubber in the opposite direction,

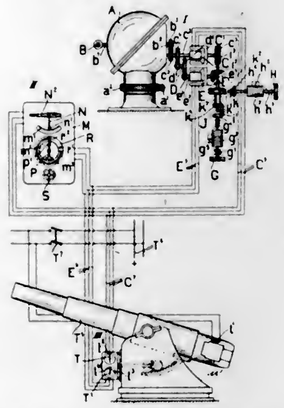


then cooling the air and condensing the vapor mingled therewith, and introducing the cooled air into the said crank case, substantially as and for the purpose set forth.

1,379,503. AUTO SIGNALING DEVICE. HERBERT A. WRIGHT, Clarence, Mo., and CHARLES W. KENNEDY, Benton, Mont. Filed Sept. 18, 1919. Serial No. 324,305. 1 Claim. (Cl. 116—48.)

In a direction indicator a substantially T-shaped member, the head of which includes a semi-cylindrical hood with its flat portion open and facing rearwardly, the shank of said member being hollow and curved forwardly with its free end adapted for connection to an attaching bracket, an indicia carrying drum mounted to rotate in said hood, a spring winding drum connected with the indicia carrying drum to rotate it, a cable attached at one end to said spring drum to be wound thereon, pulleys mounted in said head and shank over which said cable passes, and actuating mechanism connected to unwind said cable to rotate said drum.

1,379,504. VARIABLE-SPEED TRANSMISSION. JOHN YOUNG, Mount Vernon, N. Y. Filed May 20, 1920. Serial No. 382,734. 4 Claims. (Cl. 64—8.)

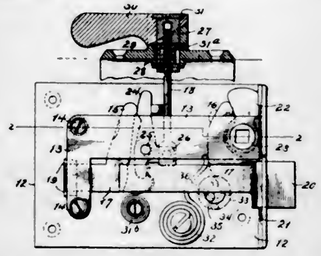


1. A variable speed transmission comprising conical members arranged side by side with their apexes extending in opposite directions; arcuate members mounted upon and projecting beyond said conical members to form expansible rings; resilient members extending circumferentially of said rings and through said arcuate sections so as to permit of circumferential expansion and contraction of said rings; a driving connection between said expansible rings; and means for jointly moving said conical members lengthwise of said expansible rings for proportionately expanding and contracting the respective rings.

1,379,505. LUBRICATING-RING. HENRY L. ZABRISKIE, Westfield, and FREDERICK DIEHL, Elizabeth, N. J., assignors to Diehl Manufacturing Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 10, 1919. Serial No. 276,019. 7 Claims. (Cl. 64—31.)

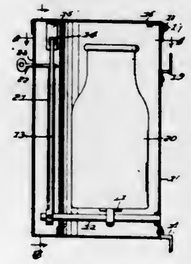
3. A lubricating ring comprising a continuous circular substantially U-shaped metal channel open at one side to facilitate the flow of oil to the shaft, the U-shaped channel extending parallel with the axis of the ring and being formed from a continuous ring of stamped sheet metal.

1,379,506. FIRE-CONTROL APPARATUS FOR NAVAL GUNS. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,074. 7 Claims. (Cl. 49—41.)



1. An apparatus of the class described which comprises a sighting device, a gyroscopic apparatus for stabilizing said device, an electrical long distance controlling apparatus embodying transmitters and a range device, two sets of receivers in circuit with said electrical controlling apparatus, two sets of pointers operatable by said receivers, marks coöperating with one set of pointers arranged at the gun and operatively connected to the gun, and indicating its position of elevation, a mark coöperating with a pointer of the other set of pointers, and marks adjustable to correspond to the angle of roll of the ship.

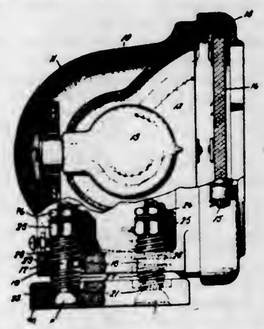
1,379,507. WHEEL. GEORGE E. ALEXANDER, New York, N. Y. Filed Apr. 10, 1920. Serial No. 372,879. 4 Claims. (Cl. 64—17.)



1. A wheel comprising a pair of side elements each having a flat disk portion, a raised central hub and an offset rim, one of said sides having a plurality of circular openings in the disk portion thereof, a corresponding number of integral tubular rivets formed with the other of said sides engaged in the mentioned openings whereby said sides are held in engagement, a sleeve passing through axial openings in said wheel sides, and means extending oppositely outward between said sides for securing said sleeve therein.

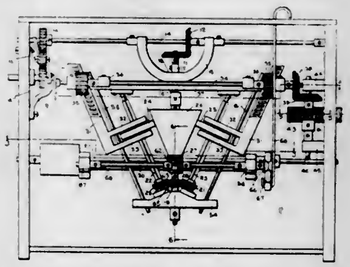
1,379,508. LOCK FOR AUTOMOBILE-DOORS. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Oct. 1, 1920. Serial No. 414,105. 7 Claims. (Cl. 292—164.)

1. In a lock for automobile doors, the combination of a latch bolt normally projected by a spring and having a projecting lug, a bell crank lever one arm of which is adapted to engage said lug, a spring for normally holding the arm of the bell crank away from the lug, a lifting rod connected with the other arm of said lever, and a cam handle mechanism connected with said rod for lifting the same.



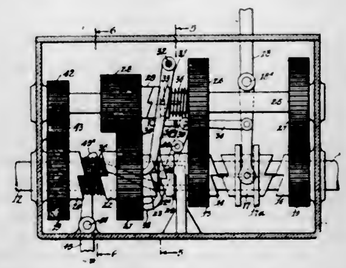
1,379,509. MILK-BOTTLE RECEPTACLE. ELMER E. BAIL, Pittsburgh, Pa. Filed Sept. 2, 1920. Serial No. 407,710. 2 Claims. (Cl. 232—41.)

1. A milk bottle receptacle having a casing provided with a movable lid or cover, a pivotal latch arm for engaging said lid or cover and yieldingly held in its inoperative position, and a pivotal platform or trap arranged in the casing and connected with the latch arm for supporting a milk bottle, and movable by a filled bottle in opposition to the tension of said latch actuating spring for disposing the latch in engaging relation with the lid or cover.



1,379,510. UNIVERSAL JOINT AND SHOCK-ABSORBING SPRINGS FOR HEADLIGHTS. PERCY S. BAILEY, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 24, 1920. Serial No. 426,163. 3 Claims. (Cl. 240—90.)

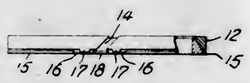
3. The combination with a headlight having a supporting platform, of a shock absorbing support comprising a base, spherically headed bolts connecting said base and supporting wall arranged to permit relative lateral movement between these parts, springs on said bolts located on both sides of the supporting platform arranged to



cushion said platform therebetween, and sockets in said base arranged to receive said spherically headed bolts and thereby permit said bolts to move universally.

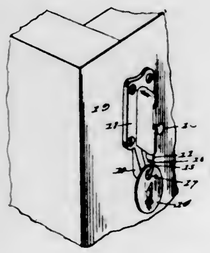
1,379,511. SLUBBING-MACHINE. MARVIN K. BALLARD, Belmont, N. C. Filed Oct. 1, 1920. Serial No. 414,029. 8 Claims. (Cl. 74—26.)

5. In a machine of the class described, a shaft, a cone loosely mounted thereon, a gear wheel rigid with the cone, a shaft and a gear wheel thereon meshing with the gear wheel first named, a gear wheel rigid with the shaft first named, a shaft inclined at an angle with reference to the shaft first named, means for gearing the inclined shaft with the shaft first named, a friction wheel on the inclined shaft, rotatable therewith, and coöperating with the cone, and means for shifting the friction wheels longitudinally of the cone, for contacting with the latter at points of various diameters, and a rack bar and frame for shifting the friction wheel longitudinally of the inclined shaft.



1,379,512. TRANSMISSION-GEAR. CLAUDE BEARENS, New York, N. Y. Filed May 8, 1920. Serial No. 379,848. 12 Claims. (Cl. 74—59.)

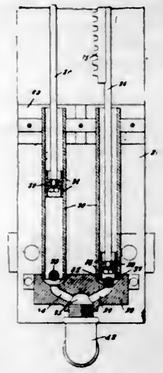
12. A drive gear comprising a drive shaft and a driven shaft, a shift gear element on the driven shaft to slide



thereon and to turn therewith, said driven shaft having a spirally disposed key with which the shift gear element is engaged, spring means tending to engage said shift gear with the drive shaft for direct drive, a counter-shaft, a gear element on the drive shaft, a gear element on the counter-shaft meshing with the element on the drive shaft, and a gear element on the counter-shaft and in constant mesh with the shift gear element.

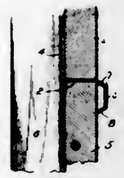
1,379,513. PACKING-RING FOR PISTONS AND THE LIKE. THEODORE BEAUDOIN, St. Johns, Quebec, Canada. Filed Mar. 27, 1919. Serial No. 285,666. 1 Claim. (Cl. 74—109.)

A piston ring comprising inner and outer split rings arranged with the split ends of one ring diametrically opposite the corresponding ends of the other ring, an annular flange projecting outwardly from the lower edge of the inner ring and provided with spaced recesses located diametrically opposite the split in said ring, and a depending projection carried by each split end of the outer ring adapted to be received into one of said recesses, said recesses being located close together with the part of the flange dividing the recesses alined with the split of the outer ring.



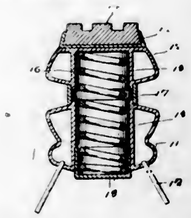
1,379,514. MINE-CAR TAG-HOLDER. KENNUS F. BEGLEY, White Star, Ky. Filed Sept. 23, 1920. Serial No. 412,178. 3 Claims. (Cl. 40—15.)

1. A tag holder for mine cars having a hook provided with a yielding closure pin or bolt provided at its inner side with a shoulder for engagement by a tag and disposed in the path of disengaging movement of the latter.



1,379,515. DOUBLE-ACTION PUMP. WILLIAM F. BELL, Canton, N. C. Filed Dec. 14, 1917. Serial No. 207,148. 1 Claim. (Cl. 103—69.)

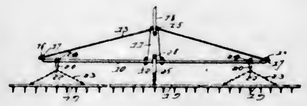
In a device of the class described, a support; a block carried by the support and provided in its upper face with countersinks and having a countersink in its lower face, there being first ducts in the block connecting the upper countersinks with the lower countersinks, the block being supplied with a bore in its forward face, and with second ducts connecting the upper countersinks with the bore, the block having openings communicating with the second ducts; ball valves in the openings and coöperating with the second ducts; closures in the openings and adjustable to vary the travel of the valves; ball valves in the upper countersinks and coöperating with the upper ends of the first ducts; cylinders communcating with the upper countersinks; a discharge pipe communicating with



the lower countersinks; pistons mounted to reciprocate in the cylinders; and means on the support for operating the pistons.

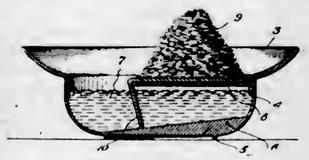
1,379,516. WEATHERPROOF CONSTRUCTION FOR BUILDINGS. WALTER R. BENJAMIN, Chinook, Mont., assignor of one-half to Thomas O'Hanlon Co., Inc., Chinook, Mont., a Corporation of Montana. Filed Feb. 26, 1920. Serial No. 361,548. 1 Claim. (Cl. 20—4.)

The combination with two adjacent boards placed edge to edge, of a metallic strip having a flat intermediate portion extending longitudinally throughout its length and adapted to fit between the opposed edges of said boards, a perpendicularly disposed flange extending from the inner edge of said portion and fitting against the rear face of one of the boards, and another flange extending from the outer edge of the intermediate portion in a direction opposite to the first-named flange, said last-named flange being bowed outwardly and having its lower edge bearing against the other board at a point remote from the meeting edges of said boards.



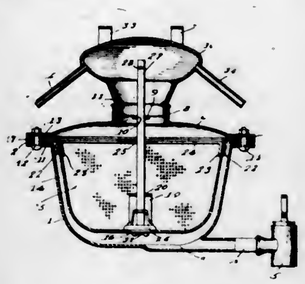
1,379,517. SPRING-WHEEL. FRED BENTLEY, Detroit, Mich. Filed June 20, 1919. Serial No. 305,475. 1 Claim. (Cl. 152—32.)

A resilient wheel comprising a hub, a felly having openings therein, a tire carrying rim, tubular members radiating from the felly from the walls of said openings,



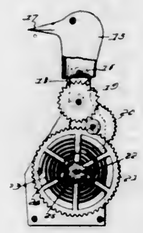
said tubular members being open at both ends, tubular members projecting inwardly from the tire carrying rim in alinement with the first mentioned tubular members, coiled springs fitted within the tubular members carried by the felly through the openings therein, the tubular members forming integral parts of the felly and rim, cup-shaped members threaded into the said openings of the felly and also into the tubular members formed therein, and constituting bottoms for said tubular members, said springs being received by the tubular members formed on the tire carrying rim and spacing the latter from the felly, and a flexible band interposed between each pair of alined tubular members inclosing the space between the latter for the purpose specified.

1,379,518. DRAFT APPLIANCE FOR HARROWS. JOSEPH BERGER, Spalding, Nebr. Filed May 1, 1920. Serial No. 378,161. 3 Claims. (Cl. 55—84.)



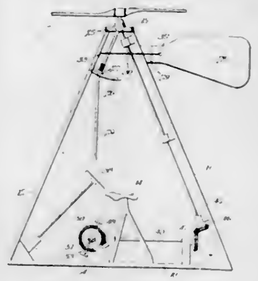
1. A draft appliance having a transverse draft bar and an intermediate forwardly extending draft block connected at its forward end to the extremities of the draft bar by tension rods, a draft link being connected with the said block.

1,379,519. CEREAL-DISH. JOHN BJORNSEN, Philadelphia, Pa. Filed Nov. 1, 1920. Serial No. 421,072. 4 Claims. (Cl. 65—15.)



1. A cereal dish comprising a body having the upper side of its bottom inclined and also having at the inner side of its side wall a ledge, and a cereal support, of less area than the interior of the body, superimposed on the said ledge and having on one edge a skirt that is inclined at an acute angle to the major portion of the support and has its lower edge spaced from the body bottom.

1,379,520. STILL. NEKIFOR BOLOGA, Cleveland, Ohio. Filed Jan. 16, 1920. Serial No. 351,807. 1 Claim. (Cl. 195—12.)



A still comprising a casing body having a drainage channel in its bottom, a valved drainage pipe carried by the body and communicating with said channel, a foraminous receptacle supported in the casing body in spaced relation thereto and having a discharge opening in its bottom, an apertured bridge loop and an apertured cross-bar detachably secured in the foraminous receptacle, a gravitational valve complementary to the discharge aperture in the foraminous receptacle and having a stem guided in the apertures of the bridge loop and cross-bar, loops or eyes secured to the foraminous receptacle and arranged within the same, and means closing the casing body and inclosing the receptacle therein and having vent means.

1,379,521. TOY WOODPECKER. LESLIE E. BOWSER, Hobart, Okla. Filed Apr. 1, 1920. Serial No. 370,500. 1 Claim. (Cl. 46—40.)
